In actual practice this means that in range management, stocking levels and seasons of use must be considered in relation to watershed functioning as well as to sustained production of forage. In timber management it means that logging methods, logging roads, and skid trails must be designed and treated to prevent site deterioration and to kept silt and logging debris from reaching streambeds in harmful amounts. It means taking special precautions in roadbuilding, prompt restocking of burned areas, and improvement of stream channels.

We have not always been fully successful in either preventive or rehabilitation measures. Sometimes it is because we lack the necessary technical know-how. Sometimes, even though we know what to do, we lack the money to do it. Sometimes poor management or lack of any management on intermingled lands not under our control defeats our best efforts on national forest lands. And sometimes we make mistakes through ignorance or through carelessness.

Our accomplishments fall short of our desires and we feel this more keenly than anyone outside the Forest Service possibly could. At the same time, in fairness to the many people struggling with these problems, I must also say that the accomplishments are very substantial and that there is much good work to which we can point with pride.

The important thing is to have a definite policy and program for integrated management of these public properties. Equally essential is positive action to carry out the policy. Since we are meeting in the Southwest I shall conclude my comments by quoting one paragraph of Forest Service watershed management policy as it relates to management of national forests in this region:

"Protection of the watershed and water quality will continue to be a primary objective. Water yields will receive major consideration in the multiple-use management of national forests in the Southwest. Modification of management practices to improve water yields will be undertaken when proved practicable by research and trial application and when overall public benefits will be enhanced. Although the general policy will be to favor water in applying the multiple-use principle, this does not mean that in every locality water will be given first priority or that land management always will be oriented toward maximum development of the water resource. For example, in some places recreational values will be dominant, as at camping and picnicking spots or in wilderness and wild areas. In other localities the preservation of natural streamside vegetation for benefits to fish and wildlife would be of first importance.

"In all instances the relative importance of other resources will be carefully weighed against the public benefits to be gained by modifying land use practices to enhance water yield. The overall objective is to manage the national forest lands so as to obtain the optimum combination of uses which will benefit the public as a whole."

Economist's Prescription Was Wrong

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. ALGER. Mr. Speaker, before accepting, without question, the proposals to change our economic system being offered by administration spokesmen, it seems to me we should check the record to determine the quality of the advice we are being given. The following editorial is graphic testimony of what happened to Germany by ignoring the advice of one of the President's top economic advisers. It makes thoughtful reading:

[From the Chicago Tribune]

GERMANY IGNORED ECONOMIST HELLER AND PROSPERED

Imposing evidence has only recently come to light to show that leading New Deal economists, including Prof. Walter W. Heller, are capable of giving some mighty bad advice. This is important because Mr. Heller is now chairman of President Kennedy's Council of Economic Advisers.

The State Department has declassified a 1951 report in which Mr. Heller, Prof. Alvin Hansen, and several others solemnly warned that the German economy could not possibly improve without a thorough immersion in Keynesian-New Deal philosophy (reported in Human Events March 17, 1961). Events have proved that the forecast was silly.

The professors were members of a Marshall plan team whose mission was to tell the new German Government how to manage its economy. Their 400-page report, said to be largely the work of Mr. Heller, expressed the opinion that the German economy was bogged down on a sort of plateau and that "proper measures must be taken if the possibilities (of further progress) are to be realized."

Fortunately for Germany, the Bonn Government disregarded the report. In every important matter it kept on doing precisely what Mr. Heller and his colleagues said it should stop doing, and Germany has wound up better off than the report considered possible even if its recommendations had been followed.

The report said Germany would never achieve the necessary rate of industrial expansion if it continued to worry about inflation; that it should not "confuse wartime inflation with the normal operations of peacetime credit"; that it had an "excessive concern for price stability"; and that it was "overly timid" in allowing the creation of new credit.

Germany has continued to guard against inflation (as successfully, in fact, as any industrial country) and has kept a tight rein on the expansion of credit.

The report called for easy money and said that "a rate of interest high enough to stimulate any large volume of personal savings would seriously curtail investment."

Germany has kept a high rate of interest.

The report said that tax concessions granted to industry, such as depreciation allowances, were being abused and that in any case they represented only "an expenditure of tax funds which would otherwise have been collected by the Government." Accordingly, the report said, a "compulsory investment program" would be more effective. Under the recommended program, all industries were to be assessed for the fund and the Government was to distribute the money to industries where there was "a crying need for expansion."

The Government did nothing of the kind.

The key bottleneck in German industrial expansion, the report said, was an inadequate supply of coal. It recommended vast government programs for stimulating the production of coal.

Little was done along this line. Coal has become a drug on the market and the problem has been how to dispose of the surplus.

The report proclaimed that "the nostalgic hopes * * * looking toward a revival of the 19th century role of the capital market are doomed to disappointment. The capital market plays no such role in any modern country and there is no prospect that it will."

The capital market is still functioning much as it always did, here as in Germany, in spite of persistent attempts to dislodge it.

Finally, the report drew a distinction between Germany, squeezed between too great a demand for imports and not enough exports, and the United States, "where there has never been any fear of a squeeze or an external drain."

Today, having disregarded all of Mr. Heller's recommendations, Germany has turned the tables on us. It has built up an enormous trade surplus, accumulated nearly $8 billion in reserves, and the squeeze is on the United States—to such an extent, indeed, that we are begging Germany to help us out.

What actually happened just couldn't happen, according to Mr. Heller and others. They go on pretending that the United States must take the same medicine they prescribed for Germany even though Germany recovered precisely because it poured the nasty stuff down the drain.

Cattlemen Oppose Controls

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. DORN. Mr. Speaker, acreage controls and price supports have failed to solve the farm problem. It would be tragic to put our healthy livestock industry under Federal control. The following statement was made by the American National Cattlemen's Association before the House Committee on Agriculture on H.R. 6400, May 3, 1961:

The American National Cattlemen's Association is composed of 33 affiliated State cattlemen's and cattle feeder organizations, more than 100 affiliated regional, local, and cattle breed associations, and thousands of individual cattle producers and feeders from throughout the Nation. We sincerely appreciate the opportunity to appear before your committee and speak in behalf of the beef cattle industry on title I of H.R. 6400.

The value of all cattle and calves sold from ranches has exceeded $7.5 billion annually in recent years, or about 20 percent of the total cash income of agriculture. Cattle and calves produce more cash farm income than all 6 basic crops combined, and more than the combined sales of hogs, sheep, wool, and poultry and eggs. Moreover, the rising quantity and value of cattle and calves produced and sold annually have made the cattle industry not only the largest but also one of the most rapidly growing segments of American agriculture.

Because of the relative shrink in the national dairy herd during the postwar years, and the considerably more than offsetting increase in beef cattle numbers, sales of cattle of beef breeding have approached four-fifths (80 percent) of the total annual sales of all cattle and calves for meat. Thus the annual production and sale of beef cattle alone has become a $6 billion industry, producing $1 in $6 of total farm income.

The American National Cattlemen's Association has traditionally and vigorously opposed legislative proposals that would bring cattle under any form of artificially maintained prices, or controlled marketings, or continued subsidies. This position of the association has been adopted by formal action of its governing body and by resolution at its annual meetings. The position is supported by the overwhelming majority of the individual members and the affiliated regional, State, county, and breed associations.

At the present time, this traditional position of the association applies specifically to the provisions of H.R. 6400 that conceivably could result in controlled production and marketings of cattle and artificially maintained prices for cattle if certain procedures as outlined in the measure were to be set in motion.

The association respectfully requests, with all the vigor at its command, that this committee and the Congress proceed forthwith to delete from H.R. 6400 all provisions that would bring the beef cattle industry under any form of production or marketing controls, continuing subsidies or compensatory payments, and so forth.

We do not consider the planned scarcity that is inherent in the provisions of H.R. 6400 to be in the best interests of our customers, the consuming public. We do not believe that the potential expansion of the market for beef, the continued improvement of the product we raise, and our own long-term well-being as producers and feeders are favored by the restrictions, the planned scarcity, or the artificial prices that H.R. 6400 could impose.

We respectfully and forcefully request the committee to understand our views and to honor the wishes of our industry.

Like any other sellers in the market, cattlemen would be happy to receive higher prices for what they have to sell. However, experience with supported prices and controlled production on other commodities has taught us that these are not the roads to maximum service to consumers or to the fullest potentials of economic well-being for our industry. We do not believe the complex cattle business can fully serve its market or advance its own welfare under any system of restrictive Government licensing.

Beef is the preferred meat of the American people. Because of improvements which ranchers and feeders have achieved in the beef-making quality of their cattle, and because of the progressiveness of the processors and distributors of beef, consumer demand for beef has been increasing. Consequently, the cattle industry has been expanding its annual production in order to serve its expanding market.

We believe the market for beef can be expanded much more in the years ahead if the cattle industry continues to be responsive to market forces and aggressively strives to improve still further the quality of beef offered to the public.

These potentials will be lost to us in proportion as we permit our industry to be brought under the umbrella of guaranteed prices and restricted output. Over the years ahead, for both the present generation of cattlemen and for our children to come after us, this is too great a price to pay for the questionable benefits of a subsidized cattle market.

Historically the cattle business has experienced periodic economic difficulties coinciding with shifts in the cattle cycle. At times it might seem pleasant for us to unload these problems onto the taxpaying public. The price we must pay to have a free and competitive market for cattle and beef is at times an income position lower than is easily accepted. But we know there is a price also on the other side. We consider that price to be higher. We do not want the restricted opportunity for our industry that is inevitable in limited markets and guaranteed price.

Beef cattle are now selling for something less than 90 percent of parity ($20.90 per hundredweight, national average March 15, versus $23.80 full parity). A higher guaranteed price, from the current level or any other would be possible only from public subsidy or from restricted volume of marketings. Any price that is higher than efficient cattlemen would find normally profitable would rapidly be capitalized into the values of cattle-raising lands. In other words, it would be built into the cost structure of the industry and thus, in income

terms, would do cattle producers little good. We do not want artificial land values based on public subsidy, because such values would be uneconomic for the country and, in the end, for ourselves.

There are sections of H.R. 6400 to which we specifically object. For example, the so-called National Farmer Advisory Committees may well end up being anything except recognized, statesmanlike spokesmen for any specific commodity. The committee members would not be elected by the producers of the commodity. Rather, two-thirds of them would be nominated by the county ASC committees and the other third by farm organizations. And there is no assurance that the Secretary of Agriculture need accept any of these nominations. Moreover there is no guarantee that a commodity program shall be developed in accordance with producer recommendations since the Secretary need not accept the advice of the advisory committee. As a matter of fact, this whole program could be set in motion by the action of the Secretary without the request or desire of any particular commodity group.

Secondly, the provision for congressional review of policy recommendations submitted by the President circumvents the traditional legislative processes of congressional hearings and public debate. The Congress is called upon to abdicate its legislative responsibility and to become hardly more than an acquiescent tool of the executive branch. We view any such proposal with alarm for the future of our cherished governmental system of checks and balances. The wisdom of the founding fathers in providing the checks and balances has stood up well under the test of time, and cattlemen will not willingly be parties to changing the system. We do not believe that Congress should be neutralized into an ineffectual body.

Other specific objections to proposals in the bill might be further detailed. We prefer, however, only to reiterate our request that cattle be specifically deleted from coverage by the bill. We have confidence in the market to direct us always toward the production of a product that consumers accept and want. We know that restricted production and artificial price is not good for our customers—the consumers and we know that, in the end, what is not good for our customers is also not good for us.

Unrealistic Gold Restriction Would Be Removed by H.R. 6900

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. MULTER. Mr. Speaker, I have introduced H.R. 6900, a bill which would remove the 25 percent gold reserve requirement. The following article, which appeared in the New York Herald Tribune of May 21, 1961, reflects the general approval of those who have thought this matter out. I commend it to the attention of our colleagues:

CONGRESS SHARPENING AX FOR GOLD SUPPORT

(By Joseph R. Slevin)

WASHINGTON.—Congress is getting set to knock out an anachronistic carryover from the days when the United States was on the gold standard.

The throwback law is a requirement that the Government hold 25 cents in gold for every dollar in Federal Reserve Bank notes and deposits.

The House Banking Subcommittee will begin hearings on a repealer bill next month. Hearings had been scheduled to start this week but jammed-up congressional schedules forced a delay.

The repealer bill commands support from Democrats and Republicans alike. The only opposition is expected to come from a stanch but rapidly shrinking gold bloc that still believes that currency expansion should be limited by a rigid requirement that the Government holds $1 in gold for every paper dollar it issues.

The chief objection to the gold law is that it weakens foreign confidence in the value of the dollar.

UNITED STATES BACKS PAPER

The United States stands ready to give $1 in gold to foreign governmental creditors for every dollar they hold in American paper obligations. But some foreigners fear the gold law could keep them from collecting.

The United States has just over $17 billion of gold, and foreigners hold an almost identical quantity of short-term claims that they theoretically could present for payment.

Only one-third of our gold hoard is currently available for meeting the foreign claims, however, since the outdated gold law requires that the remaining two-thirds be held as backing for the bank notes and deposits.

The repealer bill is being sponsored by Representative ABRAHAM J. MULTER, Democrat, New York. It includes a controversial provision to remove Federal limits on the interest rates that banks may pay on foreign deposits. Representative WILLIAM B. WIDNALL, Republican, New Jersey, has introduced a straight repealer that would get rid of the gold backing without changing the interest rate provision.

Secretary of the Treasury Douglas Dillon will be the opening witness and will give his full indorsement to the repeal plan. Federal Reserve Board Chairman William McChesney Martin, Jr., will throw the central bank's support behind the proposal.

SIMILAR POSITIONS

Mr. Dillon will tell the committee that he hopes that Congress will quickly approve the repealer now that Mr. MULTER has taken the first step. Mr. Martin will take a similar position when he testifies.

It's a tricky business. If Congress were to reject the repeal bill, foreigners would conclude that Congress does not want the gold released and that their claims may not be honored after all.

The blow to foreign confidence quickly could lead to a run on the U.S. gold reserve as foreign holders of short-term claims raced to collect gold before the Treasury exhausted its supply.

The first public call for repeal of the outmoded gold law came about 18 months ago from Roy L. Reierson, vice president of New York's Bankers Trust Co. Henry C. Alexander, board chairman of Morgan Guaranty Trust Co., endorsed the plan last November.

"We should make clear—to our own people and to the world—what our gold is for, namely, for making international settlements, not for redeeming our currency and deposits," Mr. Alexander declared.

A three-man task force recommended repeal to President Kennedy in a special report immediately after inauguration day. The task group was headed by Allan Sproul, former president of the New York Federal Reserve Bank.

And the research and policy committee of the nationwide committee for economic development declared last week that repeal "should further strengthen international confidence in the dollar."

A Selected Chronology on Cuba and Castro

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. SHORT. Mr. Speaker, in view of the verbal beating the United States has taken around the world in the wake of the Cuban defeat, I feel we should soberly assess in the Congress and in this country America's foreign relations. I realize this is now being attempted by the semisecret hearings which have been taking place in the Senate Foreign Relations Committee, and the not-so-secret comments being made by many public officials, commentators, columnists, and so on.

In an effort to keep the facts straight and to help me in a personal evaluation, I some time back asked the Legislative Reference Services to provide me with a chronological listing of the sequence of events in Cuba which brought us to this sorry state of embarrassment.

The latest addition to this chronology, of course, is the present blackmailing exchange of prisoners for 500 bulldozers program suggested by Castro over the past weekend. Needless to say, I feel this would be compounding all our former errors were we to do this as an official act of our Government.

I would like to ask special permission that this chronology of events, as prepared by the Library of Congress, be inserted in the RECORD in toto—for the enlightenment and use of those concerned with this problem. It most emphatically tells a story—a continued story—and should prove to be a convincer—as well as a shocker—to many who lost sight of what was transpiring, and who we feel should not have done so. We of the Congress who are not privileged to sit in on the private councils, and the general, do not wish a repeat performance.

The chronology follows:

A SELECTED CHRONOLOGY ON CUBA AND CASTRO [1]

March 10, 1952: Fulgencio Batista ousts President Prio Socarras (elected on June 1, 1948) in a military coup. Batista was a candidate for the presidential elections scheduled for June 1952.

July 26, 1953: A band of rebel youths (led by Fidel Castro Ruiz) attacks the Moncado Barracks in Santiago de Cuba. About 100 students and soldiers are killed. (This is the origin of the name of the "26 de Julio" movement.) Castro is sentenced to 15 years in prison (for his release, see below Nov. 1, 1954; for the revolt led by Castro, see below Nov. 30–Dec. 4, 1956).

November 1, 1954: General Fulgencio Batista is elected President (inaugurated on Feb. 24, 1955) for another 4 years. (He was the only candidate.) Presidential amnesty lets Castro out of prison. He goes abroad, where he begins to organize the "26 de Julio" movement (see below Nov. 30–Dec. 4, 1956).

[1] Based chiefly on excerpts from Deadline Data; reproduced with the permission of Deadline Data on World Affairs.

April 29, 1956: Government forces put down an uprising in Cuba. (A group of rebels try to seize an army post in Matanzas, 60 miles east of Havana.) President Batista suspends constitutional guarantees for 45 days, and imposes press and radio censorship.

June 2, 1956: President Batista announces that press and radio censorship will be terminated as of June 3, 1956.

November 30-December 4, 1956: Revolutionary uprising against the Batista regime, in the Cuban Province of Oriente. Fidel Castro, at the head of a group of approximately 40 rebels, lands in Cuba from Mexico. The uprising is reported crushed by the Cuban Army and Castro killed. A number of rebels retreat to the Sierra Maestra (at the southern tip of the island). Hundreds of opposition leaders are arrested. "Fidel Castro and his 26th of July movement are the flaming symbol of opposition to the regime. The organization is formed of youths of all kinds. It is a revolutionary movement that calls itself socialistic. It is also nationalistic, which generally in Latin America means anti-Yankee. The program is vague and couched in generalities, but it amounts to a new deal for Cuba, radical, democratic and therefore anti-Communist. The real core of its strength is that it is fighting against the military dictatorship of President Batista." (Herbert L. Matthews in New York Times, Feb. 24, 1957).

December 18, 1956: New wave of terrorism breaks out throughout Cuba. By January 18, 1957, the violence results in 70 deaths and hundreds of arrests.

March 11, 1957: New wave of violence breaks out in Oriente Province.

July 31, 1957: Anti-Government demonstrations in Santiago de Cuba (capital of Oriente Province), during a visit by U.S. Ambassador Earl T. Smith. Ambassador Smith is reported to have described as "excessive police action" the use by police of fire hoses to disperse the demonstrators.

August 1, 1957: Constitutional guarantees suspended for 45 days throughout Cuba. Censorship of the press and radio is imposed. A general strike is called in Santiago de Cuba in protest against the dispersal of the demonstrators on July 31.

August 9, 1957: Cuban Army announces that two encounters have taken place between rebels and Government troops in Las Villas Province (central Cuba). "This is the first time there has been an official report of rebels operating in Las Villas." (New York Times, Aug. 10, 1957).

September 4, 1957: President Fulgencio Batista reaffirms his decision to hold general elections on June 1, 1958.

September 5-6, 1957: Units of the Cuban Navy and maritime police revolt in Cienfuegos. The uprising is suppressed by the Cuban Army, supported by tanks and aircraft, after a 2-day battle. One hundred persons are reported killed.

September 12, 1957: President Batista announces he will not be a candidate for reelection. On the same day, Cuban Government extends the suspension of constitutional guarantees (imposed on Aug. 1, see above, July 21 and Aug. 1, 1957).

November 1, 1957: Cuban Liberation Council consisting of the seven major groups opposing Batista formed in Miami.

November 19, 1957: U.S. customs authorities seize a yacht loaded with arms and medical supplies, in Florida. Thirty-one Cubans are arrested aboard the yacht, which was preparing to sail for Cuba.

November 29, 1957: U.S. customs authorities in Miami seize another arms shipment destined for Cuba.

December 30, 1957: Letter from Castro (dated Dec. 14) to Cuban Liberation Council in Miami made public. Castro asserts that the 26th of July Movement is alone in carrying on the entire revolutionary struggle inside Cuba and calls the unity pact signed by the council "fraudulent." He insists on naming Dr. Manuel Urrutia provisional president (the council had previously excluded Urrutia from its list of candidates) and calls for elections within 18 months. Orthodox Party follows 26th of July Movement's walkout from council. Authentic Party, principal remaining force in the council, soon agrees to accept Castro's terms.

January 14, 1958: Rebels raid the port of Manzanillo in Oriente Province.

January 25, 1958: Constitutional guarantees are restored, except in Oriente Province.

February 3, 1958: Censorship of press and radio is lifted in Oriente Province.

February 13, 1958: Former Cuban President Carlos Prio Socarras and eight other Cubans are indicted by a U.S. Federal grand jury on charges of conspiring to set up a military expedition to invade Cuba.

February 20, 1958: Rebel leader Fidel Castro declares (to a correspondent of the New York Times), that he would be ready to end the civil war and agree to general elections under President Batista under the following two condition: if military forces are withdrawn from Oriente before the elections, and if the elections are supervised by the Organization of American States.

March 14, 1958: U.S. Government imposes embargo on shipment of arms to Cuba.

March 17, 1958: Rebel leader Fidel Castro issues a manifesto setting April 1 as the date for commencement of total war against the regime of President Batista. According to the manifesto, a strike, backed by armed action, is to be called at a later date, to lead to overthrow of the Government.

March 20, 1958: Superior Electoral Tribunal Cuba announces postponement of presidential elections (scheduled for June 1) until November 3.

April 2, 1958: Communists issue manifesto stating intention to join with "all Cubans to end tyranny."

April 9, 1958: Rebels to call for general strike and clash with armed forces in Havana and other sections of Cuba.

June 26–July 1, 1958: Cuban rebels in Oriente Province kidnap 3 Canadian and 45 United States citizens, including 30 sailors and marines from the U.S. Guantanamo Naval Base.

July 28, 1958: Marines from the U.S. Guantanamo Naval Base land in Cuba (with approval of the Cuban Government) to guard a pumping station, 6 miles away, which supplies the base with water. (The pumping station is in an area from which Cuban Government forces have been withdrawn.)

July 30, 1958: Rebel leader Fidel Castro demands "immediate withdrawal" of U.S. Marines.

August 1, 1958: U.S. Marines are withdrawn from Cuban territory.

August 2, 1958: Cuban Government announces its forces have resumed guard duty at the pumping station.

August 28, 1958: Outlawed Cuban Communist Party issues open letter to Cuban rebels, calling for "united front" against the Batista regime.

October 20, 1958: Rebel leader Fidel Castro orders confiscation of property of British companies and citizens in territories controlled by the rebels, in reprisal for the sale of jet planes by Britain to the Batista Government.

On the same day, October 20, Cuban rebels kidnap (near Santiago de Cuba) two Americans and seven Cubans employed by the Texas Oil Co. (For previous kidnappings of U.S. citizens by the rebels, see above 1958, June 26–July 1.) All nine men are released 3 days later.

October 23, 1958: U.S. Government orders evacuation of dependents of U.S. employees working at U.S.-owned Nicara nickel plant in Oriente Province.

November 3, 1958: Elections for President, Vice President, Senate, one-half of the House of Representatives, and Governors of the six provinces. Andres Rivero Aguero, candidate of the four-party government coalition, is elected president. (Voting in Cuba is obligatory, however, approximately 40 percent of the electorate failed to vote.)

November 12, 1958: Cuban rebels announce beginning of an offensive in Oriente Province.

November 27, 1958: Government forces announce offensive in Oriente Province.

December 1, 1958: Rebel forces cut off water supply of the Preston sugar mill, owned by the United Fruit Co.

December 24, 1958: Rebel forces capture Sancti Spiritus in Las Villas Province.

December 30, 1958: House-to-house fighting between rebel and government forces in Santa Clara, capital of Las Villas Province. On the same day, a powder magazine explodes in Havana.

January 1, 1959: President Fulgencio Batista resigns and appoints a ruling junta, headed by Gen. Eulogio Cantillo, which designates Dr. Carlos Piedra, the oldest judge of the supreme court, as provisional president in accordance with the constitution of 1940. General Cantillo assumes duties as chief of staff of the armed forces. On the same day, General Batista flees to exile in the Dominican Republic. Mob violence breaks out in Havana.

January 2, 1959: Castro proclaims Manuel Urrutia Provisional President of the Cuban Republic.

January 3, 1959: Urrutia is sworn in as Provisional President in Santiago (provisional capital of the rebel Government). On the same day, Urrutia appoints Fidel Castro commander in chief of Cuban armed forces, and announces composition of new Cabinet.

January 6, 1959: Provisional President Manuel Urrutia dissolves Cuban Congress and assumes legislative powers until new elections are held. On the same day, Urrutia orders the removal from office of all Governors of provinces, mayors, and aldermen.

January 23, 1959: Public trial of Major Jesus Blanco opens in Havana sports stadium. Since the beginning of the new regime large-scale summary trials by military tribunals and executions of ex-Batista officials have taken place. By mid-January the published total of executions reached 150. Castro, in reply to statements made in United States deploring these executions, charged that the protesters never voiced any objections to the years of killing and torture by the Batista regime and insisted that the trials would continue.

February 16, 1959: Fidel Castro is sworn in as Premier (replacing Jose Miro Cardona).

April 15, 1959: Premier Castro arrives in the United States on an 11-day unofficial visit (by invitation of the American Society of Newspaper Editors). The unofficial total of executions in Cuba reaches 509.

May 13, 1959: Cuban Government orders the confiscation of the holdings of 117 companies and 18 individuals charged with crimes against national economy and with enriching themselves illegally under the Batista regime.

May 17, 1959: President Manuel Urrutia Lleo signs into law the agrarian reform bill. (The law is published in the Official Gazette on June 5.) The law provides for distribution of unused lands.

June 11, 1959: U.S. note to Cuba delivered: the Cuban agrarian law "gives serious concern to the Government of the United States with regard to the adequacy of the provision for compensation to its citizens whose property may be expropriated."

June 29, 1959: Chief of Cuban Air Force, Maj. Pedro L. Diaz Lanz, resigns. He charged

"there was Communist influence in the armed forces and Government." (N.Y. Times, July 1, 1959).

July 14, 1959: President Manuel Urrutia in a press conference states: "I reject the support of the Communists, and I believe that any real Cuban Revolutionary should reject it openly."

July 17, 1959: Fidel Castro announces his resignation as Premier. On the same day, President Manuel Urrutia resigns after being accused by Castro of actions "bordering on treason." Also on July 17, the Cabinet appoints Osvaldo Dorticos Torrado as new President.

July 18, 1959: Osvaldo Dorticos Torrado is sworn in as President. He announces that the Council of Ministers has refused to accept Fidel Castro's resignation.

July 26, 1959: Fidel Castro resumes duties as Premier.

October 21, 1959: Two unidentified planes fly over Havana dropping anti-Castro leaflets. One person is killed and several wounded in bomb explosions in Havana.

October 22, 1959: Premier Fidel Castro declares (in a television broadcast) that the planes involved in the October 21 "bombing" are based in the United States. Castro calls the "attack" "base and unpardonable."

October 26, 1959: Mass rally (attended by an estimated 300,000) to protest U.S. "aggression." Premier Castro (in a speech) attacks the United States, announces the reestablishment of military courts to try "traitors" and "counter-revolutionaries."

October 28, 1959: President Eisenhower declares (at a news conference) that the United States is using "every single facility that is available" to prevent illegal flights from the United States to Cuba.

November 2, 1959: Government seizes nearly 75,000 acres of foreign-controlled agricultural and mineral lands in Oriente Province. "The seizures included nearly 10,000 acres on which the Bethlehem Steel Corp. held mineral concessions." (AP, November 2, 1959).

November 10, 1959: U.S. Department of State issues statement on Cuban campaign of "inaccurate, malicious and misleading reports" on the alleged bombing of Havana October 21.

November 22, 1959: Cuban Confederation of Labor withdraws from the Inter-American Regional Organization of Labor (a branch of the International Confederation of Free Trade Unions).

November 26, 1959: Maj Ernesto Guevara is appointed president of the National Bank of Cuba.

November 30, 1959: Trials by military courts are resumed in Cuba.

January 11, 1960: United States note to Cuba delivered, protesting against "numerous actions" taken by the Cuban Government "which are considered by the U.S. Government to be in denial of the basic rights of ownership of U.S. citizens in Cuba—rights provided under both Cuban law and generally accepted international law." According to the note, these actions "involve principally the seizure and occupation of land and buildings" of U.S. citizens "without court orders and frequently without any written authorization whatever."

On the same day (January 11), Cuban Government rejects the U.S. note and states that "* * * the revolutionary Government [will] accelerate the works of agrarian reform, applying equal methods of expropriation and indemnification to nations and foreigners." Hundreds of millions of dollars worth of American property has already been seized with little or no formality."

January 21, 1960: U.S. Ambassador Philip Bonsal was ordered back to Washington for consultation by Secretary of State Herter after Premier Castro accused the United States of waging a campaign of hostility against Cuba. Secretary Herter characterized the speech as Castro's "most insulting" attack on "the American Government and the American people" since he came to power a little more than a year ago.

January 26, 1960: President Eisenhower (at a news conference) rejects Cuban charges against the United States, reaffirms U.S. policy of nonintervention in Cuban domestic affairs and declares that "We are not going to be a party to reprisals or anything of that kind." "The President underlines U.S. amity for Cuba in reply to a question whether it would be desirable to cut the quota of Cuban sugar imported to the United States. This quota amounts to a third of U.S. consumption." (New York Times, Jan. 27, 1960.)

February 4–13, 1960: Soviet First Deputy Premier Anastas I. Mikoyan in Cuba. (Cuba does not have diplomatic relations with the Soviet Union.)

February 5, 1960: Mikoyan opens Soviet cultural exhibition in Havana.

February 10, 1960: Military court in Havana sentences 104 persons to prison terms ranging from 3 to 30 years on charges of conspiracy against the Cuban Government.

February 12, 1960: Mikoyan announces that the Soviet Union is willing to sell military aircraft to the Cuban Government.

February 13, 1960: Mikoyan and Premier Castro sign an agreement under which the Soviet Union is to buy 5 million tons of sugar at world market price, over a 5-year period, and to grant Cuba a credit of $100 million "for the acquisition of equipment, machinery, and material." The credit is repayable in 12 years at 2½ percent interest. (The sugar agreement makes the Soviet Union the second largest buyer of Cuban sugar, after the United States.)

February 18, 1960: Premier Castro announces (in a television-radio address) that two American flyers were killed (on Feb. 18) in a crash on Cuban soil of a U.S.-based plane which attempted to attack a sugar mill in Matanzas Province.

February 19, 1960: U.S. Department of State acknowledges that the plane took off from Florida and relays "sincere regrets" over the incident to the Cuban Government. "The United States welcomed Cuba's acceptance of Washington's offer to send technical experts to help determine the cause of the crash [Department of State spokesman], Mr. White said. * * * [The incident] lent considerable weight to numerous past charges by Cuba that planes from [the United States] had been setting fire to sugarcane fields on the island." (New York Times, Feb. 20, 1960.)

February 20, 1960: Central Planning Board is established by the Government. Its function is to supervise and coordinate the economic affairs of Cuba and to fix the general regulations of guidance for private enterprise. The board is headed by Premier Castro.

February 21, 1960: Unidentified plane drops several bombs on an industrial suburb of Havana, according to a statement by the Cuban Government. The windows of an Esso oil refinery are damaged.

February 22, 1960: Cuban Government (in a note delivered to the U.S. chargé d'affaires in Havana) expresses its willingness to renew negotiations through diplomatic channels concerning the differences between Cuba and the United States—the Cuban Government stated that it wished to clarify that the negotiations would be contingent on abstentions by the United States from any unilateral action that would prejudge the results of these negotiations or might cause damage to the Cuban economy or the Cuban people. Unilateral action refers to any possible reduction of Cuba's sugar quota at approximately 2 cents above the world market rate. (New York Times, Feb. 23, 1960.)

February 25, 1960: Premier Castro announces that the Cuban Government will spend 152 million pesos ($152 million) in 1960 on the first phase of a program to industrialize Cuba and make it economically independent.

February 26, 1960: Ernesto Guevara, president of the National Bank of Cuba, declares (in a speech to cane planters) that the Cuban Government intends to use a system of cooperatives, as opposed to individual effort, in the development of Cuban economy.

March 4, 1960: French freighter loaded with ammunition and explosives for the Cuban Army explodes in Havana Habor. Seventy-five to 700 persons were killed and more than 200 injured.

March 5, 1960: Premier Castro, at the mass funeral of 27 dockworkers killed yesterday, implied that the United States was involved in the sabotage of the munitions ship which exploded in Havana Harbor. The United States issued a vigorous protest against the Premier's accusation.

March 7, 1960: Secretary of State Herter told Cuba's chargé d' affaires that Premier Castro's implication that the United States was involved in the munitions ship explosion was baseless, erroneous, and misleading. Mr. Herter protested strongly against the Premier's unfounded and irresponsible attitude and added that such statements could only contribute further to the unhappy deterioration of United States-Cuban relations.

March 8, 1960: Cuba rejects the U.S. protest as "insulting," made in an "aggressive tone," and "derogatory to our national dignity."

March 16, 1960: President Eisenhower submits to Congress proposals for new legislation to replace the Sugar Act (due to expire at the end of 1960).

March 17, 1960: On the same day (Mar. 17), Rufo López-Fresquet resigns as Finance Minister. The resignation removes the last anti-Communist from the Castro Cabinet.

March 20, 1960: U.S. Secretary of State Christian A. Herter declares (in a television interview) that although some Communist sympathizers hold high offices in Cuba, and some of Premier Castro's acts appear to follow a Communist pattern, "I don't think anyone could say affirmatively that Cuba is Communist at the present time."

U.S. Ambassador to Cuba Philip W. Bonsal returns to Havana.

March 21, 1960: A U.S.-based private plane is shot down over Cuban territory by Cuban Government troops. The American pilot and copilot are captured.

March 29, 1960: Premier Castro announces that he will not send the Cuban Ambassador back to Washington unless the United States modifies its unfriendly policies toward Cuba.

Premier Castro announces (in a television address) that his Government will "not be bound by the inter-American pact against communism because it did not sign the pact."

March 31, 1960: Poland and Cuba sign a trade agreement under which Cuba is to receive industrial plants, and equipment, ships, planes, and helicopters on credit and in exchange for goods. The agreement also provides for technical and scientific assistance to Cuba by Polish experts.

April 8, 1960: U.S. Secretary of State Herter declares (at a news conference): "There is one very disturbing development that is taking place in Cuba, and that is that anti-communism is now being made synonymous with antirevolution, and that those who express concern about Communist influence are now being accused of being antirevolution, and anti-Castro. This is obviously an effort to stop any anti-Communist criticism that might arise within the country itself." "Asked later whether he felt his anti-anti-communism was being done with the active support and aid of some of the officials of the Cuban Government, Mr. Herter replied, 'Yes, I think very definitely.'"

April 25, 1960: Agrarian Reform Institute expropriates more than 170,000 acres owned by the United Fruit Co. in eastern Cuba.

On the same day Guatemala asked the Organization of American States to investigate Cuban charges that Guatemala is planning an invasion of Cuba.

April 28, 1960: Guatemala severs diplomatic relations with Cuba.

April 29, 1960: Cuban police announce arrest of opposition leaders accused of a conspiracy to overthrow the Castro government.

May 8, 1960: Foreign Ministry announces that the Soviet Union and Cuba have renewed diplomatic relations at Embassy level.

May 11, 1960: Two progovernment unions seize the Diario de la Marina, Cuba's oldest and largest newspaper.

May 16, 1960: Presna Libre, a Havana daily, is seized by union workers.

May 17, 1960: Archbishop of Santiago de Cuba, Enrique Perez Serrentes, attacks communism in a pastoral letter. Referring to communism, he says: "It cannot be said that the enemy is at the gates because in reality it is within the gates."

May 23, 1960: United States and British oil companies in Cuba will be required (according to Cuban official sources) to refine Soviet crude oil, instead of the crude hitherto obtained from Venezuela.

May 27, 1960: U.S. State Department announces that the U.S. economic aid program to Cuba (which has been running at between $150,000 to $200,000 a year) will be terminated on December 1, 1960. U.S. military aid (presently consisting of training of a few Cuban air cadets in Texas) will be terminated in June 1960.

June 1, 1960: U.S. House of Representatives' Agriculture Committee rejects the administration request (see above March 16, 1960) to authorize the President to cut Cuba's share of U.S. sugar imports, and votes a 1-year extension of the present sugar act, which authorizes cuts in the Cuban sugar quota only if Cuba fails to fill its quota of sugar imports to the United States. The committee chairman declares that the administration proposal would enable the President to commit "an act of economic aggression against Cuba" which would endanger U.S. relations with the rest of Latin America.

June 7, 1960: United States and British oil refineries in Cuba reject Cuban Government's demand that they refine Soviet crude oil.

June 10, 1960: Czechoslovakia and Cuba sign trade agreement providing for the building of eight factories in Cuba by the end of the year, each costing about $4 million. The factories are to turn out refrigerators, sewing machines and other consumer goods. Under the agreement Czechoslovakia will grant Cuba credits of about $20 million, repayable in 10 years at 2½ percent interest.

June 11, 1960: Cuban Government seizes four hotels, among them the American-operated Nacional and the Havana Hilton, the two largest luxury hotels in Havana. The Tropicana nightclub is also seized.

June 16, 1960: Cuban Government orders two attachés of the U.S. Embassy in Havana to leave the country within 24 hours. They are accused of "conspiring with counter revolutionaries."

June 18, 1960: U.S. Government orders two Cuban consular officials to leave the country within 48 hours. They are Carlos Manuel Lazaro Feliz Sanchez y Basquet, assistant to the Cuban Consul at Miami, and Dr. Berta Luisa Pla y Badia, Cultural Attaché at the Cuban Consulate in New York.

June 26, 1960: Army ammunition dump in the Havana Harbor area explodes, killing 2 and injuring at least 200 persons.

June 27, 1960: U.S. House of Representatives' Agriculture Committee unanimously approves a 1-year extension of the present Sugar Act and includes authority for the President to reduce the Cuban sugar quota in 1960 and to eliminate it in 1961.

On the same day, U.S. Government submits memorandum to the Inter-American Peace Committee, a unit of the Organization of American States. In the memorandum (made public on June 29) the United States accuses the Cuban Government of contributing to tensions in the Caribbean by waging a campaign of lies and slander against the United States. Stating that it had responded to "hostile attitudes and actions of the Cuban Government with patience and forbearance," the U.S. Government declares that this "exercise of restraint, however, has been in vain," and goes on to present an inventory of aggressive acts and statements of the Cuban Government. The memorandum ends with the remarks that "the Cuban Government's systematic and provocative campaign of slander and hostile propaganda against the United States, of which various examples have been cited in this memorandum, is a major contributor to international tensions in the area of the Caribbean and of the hemisphere as a whole."

June 29, 1960: Cuban Government seizes Texas Co. petroleum refinery in Santiago de Cuba.

July 1, 1960: Cuba seizes the United States-owned Esso oil refinery and the British-controlled Shell refinery, the last two foreign-owned oil refineries in Cuba.

July 3, 1960: U.S. Senate and House of Representatives pass a compromise sugar bill which authorizes the President to "determine the quota for Cuba for the balance of the calendar year 1960 and for the 3 months period ending March 31, 1961, in such amounts as he shall find to be in the national interest."

July 5, 1960: The Cuban Ambassador-designate to the United States, José Miro Cardona (who was first Cuban Premier of the Castro regime), resigns because of "ideological divergencies" with the Castro government, and takes refuge in the Argentine Embassy in Havana.

July 6, 1960: The Cuban Cabinet authorizes the expropriation of all United States-owned property in Cuba, "when deemed necessary in the national interest."

July 9, 1960: Soviet Premier Khrushchev threatens the United States with rockets if the United States intervenes militarily in Cuba. President Eisenhower declares that the United States will not "permit the establishment of a regime dominated by international communism in the Western Hemisphere." He also says: "There is irony in Mr. Khrushchev's portrayal of the Soviet Union as the protector of independence of an American nation when viewed against the history of the enslavement of countless other peoples by Soviet imperialism."

July 10, 1960: President Osvaldo Dorticos announces that the Soviet Union has offered to buy the 700,000 tons of sugar which the United States cut from Cuba's quota for the rest of the year.

July 11, 1960: Cuba asks the U.N. Security Council to take action on her charges that the United States has been guilty of "repeated threats, harassments, intrigues, reprisals, and aggressive acts" against Cuba.

July 12, 1960: Soviet Premier Khrushchev declares that the Soviet Union will support Cuba in any attempt to oust the United States from its naval base at Guantanamo. He denounces President Eisenhower's declaration that the United States will prevent the establishment of a regime dominated by international communism in the Western Hemisphere, and says: "We consider that the Monroe Doctrine has outlived its time, has died."

July 13, 1960: Peru calls for a meeting of the foreign ministers of the Americas to consider the Soviet threat to inter-American unity.

July 14, 1960: Argentine Note to Cuba calls on the Castro Government to dissociate itself from the Khrushchev offer to protect Cuba with rockets in the event of U.S. aggression. (The Note is vehemently rejected by the Cuban press and radio as "Argentine meddling.")

July 15, 1960: Two Latin American members of U.N. Security Council (Ecuador and Argentina) recommend that the Security Council refer to Cuba's charges against the United States to the Organization of American States. On the same day, the Brazilian Foreign Ministry recommends the same procedure.

July 16, 1960: OAS Council meeting in Washington. 16 out of 17 delegates who speak (including the United States and excluding only Cuba) favor the Peruvian call for a "coordination of will to reject the interference of any extracontinental power or of any totalitarian ideology."

July 18, 1960: OAS Council (meeting in Washington) agrees unanimously to hold a foreign ministers' meeting on the United States-Cuban dispute.

July 19, 1960: UN Security Council refers Cuba's charges against the United States to the Organization of American States. The vote on the Argentine-Ecuador resolution is nine to zero, with the Soviet Union and Poland abstaining.

July 21, 1960: Defense Minister Raul Castro leaves Moscow after a 4-day visit. In a joint statement with Premier Khrushchev, Raul Castro expresses "the profound gratitude" of the Cuban Government and people for Soviet support. Khrushchev promises that the Soviet Union will deliver "oil and other goods in amounts fully meeting the requirements of Cuba" in order to surmount the United States "economic blockade."

July 23, 1960: Communist China signs agreement (in Havana) with Cuba to buy 2.5 million long tons of sugar during the next 5 years, at an average of 500,000 tons a year. Communist China agrees to grant Cuba a credit (reported to be about $70 million) to buy "complete factories" in China.

July 29, 1960: OAS Council (in Washington) votes to hold a meeting of American Foreign Ministers in San José, Costa Rica, beginning August 16. The agenda will include the Venezuelan charges against the Dominican Republic, the United States-Cuban dispute, and the threat of Communist interference in the affairs of the Western Hemisphere.

August 7, 1960: Premier Castro nationalizes all remaining U.S.-owned property in Cuba.

On the same day, the United States (in a memorandum to the Inter-American Peace Committee) makes a violent attack against the Cuban Government, and declares that it is "now in open league with the Soviet Union and Communist China."

On the same day (August 7), the Roman Catholic hierarchy of Cuba expresses concern (in a pastoral letter read in all Cuban churches) over "the increasing advance of communism" in Cuba and over the close relations between the Soviet Union and Cuba.

August 8, 1960: OAS Council (in Washington) adopts by a vote of 20 to 1 over Cuban objections the revised agenda for the American Foreign Ministers' meeting in San José, on August 16. A new agenda item will be the "defense of the democratic American institutions against the subversive activities of any organization, government or their agents."

August 16–29, 1960: Conference of OAS Foreign Ministers in San José, Costa Rica, to consider the Dominican and Cuban questions.

August 19, 1960: U.S. Government announces it will not allow other countries to use U.S. loans to buy sugar from Cuba.

August 24, 1960: In an address to the OAS conference, U.S. Secretary of State Herter declares that Cuba is being led "in the Communist direction." He declares that what is happening in Cuba is "part of a determined effort by the Sino-Soviet powers to extend their control over an American state," and he asks the conference to take "the necessary positive decisions to meet the threat."

August 28, 1960: Cuban delegation walks out of the OAS meeting prior to a unanimous vote of the remaining Foreign Ministers approving the Declaration of San José, which condemns Sino-Soviet intervention in the affairs of any American state. Cuba is not mentioned specifically in any part of the declaration.

September 5–13, 1960: Inter-American Economic Conference in Bogotá. Cuba is represented by her Minister of Economy. On September 11, the Act of Bogotá, which incorporates a wide-ranging U.S. social and economic development aid plan for Latin America, is signed by 19 American republics. (The Dominican Republic did not attend the conference.) Cuba alone refuses to sign the act. On September 7, the Cuban delegate attacks the U.S. aid plan as an attempt "to silence the militant hope awakened in the people of Latin America by the Cuban revolution."

September 13, 1960: Cuban Government announces that Premier Castro and Foreign Minister Raul Roa will attend the U.N. General Assembly session which opens in New York on September 20. Foreign Minister Roa declares that Cuba will support the following aims in the U.N. General Assembly: A U.N. seat for Communist China; Algerian independence; the position of Patrice Lumumba as premier of the Congo; denunciation of U.S. "imperialistic policies."

September 14, 1960: United States restricts Premier Castro to Manhattan during his proposed visit to the U.N. General Assembly—the same restriction as that imposed on Soviet Premier Khrushchev.

September 16, 1960: The Cuban Government seizes control of the tobacco industry and of all U.S. banks in Cuba.

September 18, 1960: Premier Castro arrives in New York for the U.N. General Assembly session.

September 20, 1960: Soviet Premier Khrushchev pays a call on Castro in Harlem.

September 24, 1960: Cuba formally recognizes Communist China and North Korea (the first Latin American state to do so).

September 25, 1960: President Nasser of the United Arab Republic calls on Castro in Harlem.

September 29, 1960: United States advises American citizens in Cuba to send home their wives and children.

October 9, 1960: Cuban Government announces that it has crushed an anti-Castro revolt in south-central Cuba, and accuses the United States of supplying the rebels with arms and ammunition.

October 14, 1960: Cuban Government nationalizes all major companies and banks.

October 18, 1960: Cuba asks the U.N. to consider the question of U.S. "aggression" against Cuba.

October 19, 1960: United States puts an embargo on all exports to Cuba, except medical supplies and various food products. The State Department announcement declares that "this step has been reluctantly taken by the United States in order to carry out the responsibility of this Government to defend the legitimate economic interests of the people of this country against the discriminatory, aggressive and injurious economic policies of the Castro regime."

October 20, 1960: U.S. Ambassador to Cuba, Philip W. Bonsal, is recalled to Washington for "an extended period of consultations."

October 25, 1960: Cuban Government nationalizes 166 more United States-owned enterprises, valued at about $250 million.

October 28, 1960: U.S. note to the Organization of American States asks for an investigation of large-scale arms shipments to Cuba. The note says: "With the notorious assistance of extracontinental powers, specifically those of the Soviet bloc, Cuba is expanding rapidly its capacity to give armed support to the spread of its revolution in other parts of the Americas."

November 1, 1960: President Eisenhower issues a statement reiterating U.S. determination to defend the Guantanamo Naval Base. He declares that "because of its importance to the defense of the entire hemisphere, particularly in the light of the intimate relations which now exist between the present Government of Cuba and the Sino-Soviet bloc, it is essential that our position in Guantanamo Bay be clearly understood."

November 1, 1960: On the same day, the U.N. General Assembly rejects Cuban and Soviet-bloc demands for an immediate Assembly debate on "U.S. aggression." The Assembly votes to send the Cuban complaint to the Assembly's Political Committee.

November 9, 1960: Premier Castro informs a mass meeting in Havana that Cuba has prevented the United States from attacking the island by denouncing U.S. aggression in the U.N., by making great military preparations, and by alerting world opinion.

November 14, 1960: Cuba withdraws from the World Bank.

November 18, 1960: U.S. State Department issues statement: "Since Fidel Castro came into power, Cuba has created and armed a military force 10 times the size of that of ex-President Fulgencio Batista and far larger than any army in Latin America. Total Soviet-bloc arms provided to the Castro government amount to at least 28,000 tons."

November 27, 1960: Premier Fidel Castro (in a speech at a student rally in Havana University) makes a bitter attack against the Roman Catholic clergy in Cuba, accusing them of being "counterrevolutionaries."

November 30, 1960: Communist China agrees to buy a million tons of Cuban sugar in 1961, thereby doubling the annual amount in the earlier agreement. Communist China also provides Cuba with an interest-free loan of 240 million rubles (about $60 million). The agreements are announced at the end of a visit of Maj. Ernesto Guevara, head of Cuba's National Bank, to Communist China.

December 2, 1960: U.S. Government officially designates Cuba for the first time as "Communist-controlled." This was done when the White House made a determination that refugees from Cuba from now on qualify under that section of the Mutual Security Act which provides assistance for persons displaced from Communist-ruled lands. A White House announcement said that President Eisenhower had released $1 million worth of mutual security funds for assistance of 30,000 Cuban refugees in Florida." (New York Herald Tribune, Dec. 3, 1960.)

December 3, 1960: Roman Catholic hierarchy of Cuba (in an open letter to Premier Castro) rejects Castro's attacks against the Church. The letter also declares that the Government's revolutionary indoctrination has been following "purely Marxist lines."

December 8, 1960: Cuba nationalizes the Royal Bank of Canada (in Cuba), which has 23 branches in the country.

December 10, 1960: Major Ernesto Guevara, head of the Cuban National Bank, declares (in Moscow) that the Cuban Government "wholeheartedly" endorses the Communist manifesto, drawn up by the leaders of 81 Communist parties at their recent meeting in Moscow. He declares that in accordance with the manifesto, Cuba will serve as a model for armed revolution in Latin America.

December 16, 1960: President Eisenhower cuts to zero the import of Cuban sugar into the United States for the first 3 months of 1961.

December 19, 1960: Soviet-Cuban communique is signed (in Moscow) by Soviet First Deputy Premier Anastas I. Mikoyan and Major Ernesto Guevara, head of the Cuban National Bank. The Soviet Union promises to help Cuba build an iron and steel mill, an oil refinery, electric power stations and other industrial units. The communique says that the Soviet Union will buy from Cuba "2,700,000 tons of sugar if the United States carries out its threat not to purchase Cuban sugar."

December 21, 1960: Government decree dismisses 17 out of 32 justices of the Cuban Supreme Court.

December 31, 1960: Foreign Minister Raul Roa flies to New York and calls for an immediate meeting of the UN Security Council, to take action on a Cuban charge that the United States is ready to "carry out, within a few hours, direct military aggression" against Cuba.

January 1, 1961: Security Council agrees to meet on January 4 to consider the Cuban charge against the United States.

January 2, 1961: Premier Castro declares (in a speech to a crowd of over 100,000 in Havana) that the U.S. Embassy will have to reduce its staff within 48 hours to 11, the number in the Cuban Embassy in Washington.

January 3, 1961: United States severs diplomatic and consular relations with Cuba, and asks Cuba to withdraw all its diplomatic and consular personnel from the United States. President Eisenhower issues a statement, in which he declares: "The Government of Cuba has decided to limit the personnel of our Embassy and consulate in Havana to 11 persons. Forty-eight hours was granted for the departure of our entire staff with the exception of 11. This calculated action on the part of the Castro government is only the latest of a long series of harassments, baseless accusations, and vilifications. There is a limit to what the United States in self-respect can endure. That limit has now been reached. Our friendship for the Cuban people is not affected. It is my hope and my conviction that in the not-too-distant future it will be possible for the historic friendship between us once again to find its reflection in normal relations of every sort. Meanwhile our sympathy goes out to the people of Cuba now suffering under the yoke of a dictator."

January 4, 1961: Swiss Government agrees to handle U.S. diplomatic and consular affairs in Cuba.

January 5, 1961: U.N. Security Council declines to act on Cuba's charge that the United States plans a military invasion of the island.

January 15, 1961: Press reports from Havana indicate that Premier Castro's armed forces have launched a major offensive against anti-Castro insurgents in the Escambray mountains in south-central Cuba.

January 16, 1961: United States bans travel of American citizens to Cuba except by special permission of the State Department.

January 30, 1961: Kennedy declares (in his state of the Union message): "In Latin America, Communist agents seeking to exploit that region's peaceful revolution of hope have established a base on Cuba, only 90 miles from our shores. Our objection with Cuba is not over the people's drive for a better life. Our objection is to their domination by foreign and domestic tyrannies.

"Cuban social and economic reform should be encouraged. Questions of economics and trade policy can always be negotiated. But Communist domination in this hemisphere can never be negotiated."

February 3, 1961: Cuban Government dismisses 119 judges in a purge of the courts.

On the same day (Feb. 3), President Kennedy allocates $4 million to help Cuban

refugees in the United States up to the end of the fiscal year on June 30.

February 11, 1961: Premier Castro denounces U.S. aid for "Cuban counterrevolutionary exiles." He says that "if the United States believes it has the right to promote a counterrevolution in Cuba, Cuba believes it has the right to promote a revolution in Latin America." He accuses the United States of parachuting large quantities of arms and food to anti-Castro rebels in the Escambray mountains.

February 14, 1961: Premier Castro declares (in a press interview) that he would like to "normalize" relations with the United States, but that this would depend on the United States ending its "direct military support" of his opponents.

February 24, 1961: U.S. State Department declares that there can be no improvement of relations between Cuba and the United States until "the Cuban people may freely choose their own destiny."

On the same day, Cuban Government transmits notes to all Latin American Governments with which Cuba maintains relations, urging them to resist any U.S. attempts to induce them to break relations with Cuba, and assuring them that Cuba does not intend to export its revolution to other Latin American countries.

Cuban Government announces administrative reorganization. A central planning junta is set up, headed by Premier Castro and with his brother, Raul (Armed Forces Minister), as vice president of the junta. Maj. Ernesto Guevara, president of the National Bank of Cuba, is given effective control over Cuba's economy by his appointment as head of a new Ministry of Industry, which will direct a 4-year industrialization plan. New Ministries of Foreign Trade and Interior Commerce are also established.

February 26, 1961: Government sources in Havana declare that the rebel movement in the Escambray Mountains has been crushed.

March 1, 1961: El Salvador announces it has severed relations with Cuba, effective January 25. El Salvador is the eighth nation of the Western Hemisphere to sever relations with Cuba.

March 22, 1961: Anti-Castro Cuban exile groups in the United States announce formation of a "Revolutionary Council" headed by Dr. José Miró Cardona, who was the first Premier of the Castro regime in Cuba. The Council issues a statement calling on Cubans "to overthrow the Communist tyranny."

March 29, 1961: U.S. Congress agrees to extend the President's authority to prohibit Cuban sugar imports until June 30, 1962 and to share its quota among other foreign and domestic producers.

April 3, 1961: U.S. State Department issues pamphlet on Cuba which declares: "We call once again on the Castro regime to sever the links with the international Communist movement, to return to the original purposes which brought so many gallant men together in the Sierra Maestra, and to restore the integrity of the Cuban revolution. If this call is unheeded, we are confident that the Cuban people, with their passion for liberty, will continue to strive for a free Cuba."

April 5, 1961: Foreign Minister Raul Roa (in a press interview in New York) denounces the State Department's pamphlet on Cuba as a "formalization of the undeclared war which the United States is making against us." He also accuses the United States of arming and training in Florida and Guatemala a "so-called liberation army of 4,000 to 5,000 counterrevolutionaries, mercenaries and adventurers."

April 8, 1961: Dr. José Miró Cardona, head of the Cuban Revoluntionary Council, issues a statement (in New York), calling all Cubans to arms to overthrow the regime of Premier Fidel Castro. He declares that the revolt must come from within the country.

April 12, 1961: President Kennedy declares (at a press conference) that U.S. Armed Forces will not intervene "under any conditions" in Cuba, and that the U.S. Government "will do everything it possibly can to make sure that there are no Americans involved in any actions inside Cuba." He says that he would be opposed to any attempt by Cuban exiles to mount an anti-Castro offensive from the United States.

April 15, 1961: Three Cuban military air bases are attacked by three bombers manned by anti-Castro personnel. Seven Cuban militiamen are reported killed and 47 wounded. An arms dump is hit at Camp Libertad near Havana. One of the rebel pilots lands at Miami International Airport, and declares (in a statement issued to the press) that the three planes belonged to the Cuban Air Force and were manned by Cuban pilots who defected from the Cuban Air Force.

On the same day, Premier Castro orders a general mobilization of the armed forces and civilian militia. In a communique issued after the bombing attack, he declares: "Our country has been the victim of a criminal imperialist aggression which violates all norms of international law. If this air attack is a prelude to an invasion, the country, on a war basis, will resist and destroy with an iron hand any force which attempts to disembark upon our land."

At an emergency session of the U.N. General Assembly's Political Committee, Foreign Minister Raul Roa accuses the United States of having instigated the bombing attack on Cuba. He denies that the pilots defected from the Cuban Air Force and asserts that they were "mercenaries bought by the United States." U.S. delegate to the U.N., Adlai E. Stevenson, denies the Cuban accusations, and reasserts that the United States will not intervene in Cuba. Soviet Delegate Valerian A. Zorin expresses "deep indignation" over the "barbarian attacks" launched against Cuba by the United States.

April 16, 1961: Premier Castro accuses the United States of responsibility for the air raid on Cuba and of deliberately trying to deceive world opinion by declaring that the fliers were defectors. He challenges President Kennedy to present before the U.N. the fliers who bombed Cuba.

On the same day, the United States grants political asylum to the three fliers, but the identity and whereabouts of the three men are kept secret.

April 17, 1961: Invasion of Cuba by anti-Castro forces begins. Rebel troops land on the southern coast in Las Villas Province. Rebel landings are also reported in Oriente Province in the southeast and in Pinar del Rio Province in the extreme west.

U.S. Secretary of State Dean Rusk (at a press conference in Washington) expresses the sympathy of the American people for the anti-Castro movement, but reiterates that U.S. forces will not intervene in Cuba.

In the U.N. General Assembly's Political Committee, Foreign Minister Raul Roa declares that Cuba has been invaded "by a force of mercenaries, organized, financed, and armed by the Government of the United States." He says that the attacks were launched from the United States and Guatemala. Both countries deny this assertion.

President of the Cuban Revolutionary Council, Dr. José Miró Cardona, issues a statement in New York, calling on "freedom-loving peoples" of the Western Hemisphere to support the attack on Cuba.

April 18, 1961: Soviet Premier Khrushchev sends a message to President Kennedy in which he charges the United States with responsibility for the invasion of Cuba. He warns that the Soviet Union will "render the Cuban people and their government all necessary assistance in beating back the armed attack on Cuba."

On the same day, President Kennedy sends a reply to Khrushchev in which he states: "I have previously stated and I repeat now that the United States intends no armed intervention in Cuba. In the event of any military intervention by outside force we will immediately honor our obligations under the inter-American system to protect this hemisphere against external aggression. I have taken careful note of your statement that the events in Cuba might affect peace in all parts of the world. I trust that this does not mean that the Soviet Government, using the situation in Cuba as a pretext, is planning to inflame other areas of the world. I would like to think that your government has too great a sense of responsibility to embark on any enterprise so dangerous to general peace. I believe that you should recognize that free peoples in all parts of the world do not accept the claim of historical inevitability for Communist revolution. The great revolution in the history of man, past, present, and future, is the revolution of those determined to be free."

April 19, 1961: Cuban rebel invading forces give up their beachhead on the southern coast of Cuba, in an attempt to join guerrillas in the nearby Escambray Mountains. Rebel communique announces that the invaders have suffered "tragic losses" while being attacked by "Soviet tanks and artillery [and] Russian MIG aircraft."

April 20, 1961: President Kennedy declares (in a speech to the American Society of Newspaper Editors) that U.S. "restraint is not inexhaustible," and that the United States does not intend to abandon Cuba to communism. He says: "Should it ever appear that the inter-American doctrine of noninterference merely conceals or excuses a policy of nonaction; if the Nations of this hemisphere should fail to meet their commitments against outside Communist penetration, then I want it clearly understood that this Government will not hesitate in meeting its primary obligations, which are the security of our Nation."

On the same day, April 20, Prime Minister Nehru of India accusses United States (in a statement in the Indian Parliament) of having encouraged the invasion of Cuba.

April 21, 1961: U.N. General Assembly's Political Committee adopts (by a vote of 61 to 27 with 10 abstentions) a resolution sponsored by seven Latin American Nations (Argentina, Chile, Colombia, Honduras, Panama, Uruguay, and Venezuela) which calls on members of the Organization of American States "to lend their assistance with a view to achieving a settlement [of the United States-Cuban crisis] by peaceful means." The 7-power proposal is supported by the United States, its Western European allies, most of the Latin American States, and 15 Afro-Asian States. The only two Latin American countries to vote against it are Cuba and Mexico. The committee also endorses (by a vote of 42 to 31 with 25 abstentions) a Mexican proposal which would call on all states to "insure that their territories and resources are not used to promote a civil war in Cuba."

April 22, 1961: U.N. General Assembly eliminates the reference to the OAS in the 7-power resolution, and approves a resolution (by a vote of 59 to 13 with 24 abstentions) which calls on all U.N. member states "to take such peaceful action as is open to them to remove existing tensions" between Cuba and the United States.

April 22, 1961: Former President Eisenhower confers (at Camp David, Md.) with President Kennedy on the Cuban situation. Eisenhower says to newsmen after the meeting: "I am all in favor of the United States supporting the man who has to carry the responsibility for our foreign affairs."

On the same day (April 22), Soviet Premier Khrushchev sends President Kennedy a reply to Kennedy's message on the Cuban situation. Khrushchev declares that in spite of all official U.S. denials, "it has now been proved beyond doubt that it was precisely the United States that prepared the intervention [in Cuba], financed the invasion and transported the gangs of mercenaries, which invaded the territory of Cuba. U.S. Armed Forces also took a direct part in the realization of the gangster attack on Cuba. American bombers and fighters supported the operations of mercenaries who landed on Cuban territory, and took part in military operations against the armed forces of the lawful government and the people of Cuba."

April 23, 1961: Premier Fidel Castro (in a 4½-hour television speech in Havana, his first public appearance since the invasion of April 17) declares that no clemency will be shown to the 458 rebel prisoners captured in the April 17 landings, unless the United States ceases its aid to Cuban rebels. He warns the United States that if it tries to intervene directly in Cuba, "a conflagration of incalculable proportions" will be started which will be the "beginning of the end of the Yankee empire," Castro says: "We shall not fight alone."

April 24, 1961: U.S. Presidential Press Secretary Pierre Salinger declares (in a statement to the press) that President Kennedy assumes "sole responsibility" for the U.S. role in the action against Cuba.

On the same day, Honduras becomes the eighth Latin American State to sever diplomatic relations with Cuba.

April 26, 1961: Inter-American Defense Board (composed of military representatives of the 21 American Republics) votes to bar the Cuban representative from all secret sessions of the Board and to deny him access to all classified documents dealing with hemispheric defense plans, "as long as there exists the present evident alliance of Cuba with the Soviet bloc." The ban (proposed by the United States) is approved by a vote of 12 to 1 (Cuba) with 4 abstentions (Chile, Ecuador, Mexico, Venezuela) and one vote reserved (Brazil).

April 30, 1961: State Department advises all U.S. citizens in Cuba to leave the island.

May 1, 1961: Premier Castro in a May Day speech in Havana declared Cuba a Socialist nation and said there would be no more elections. He asserted that henceforth his revolutionary government would rely on the direct backing of the people as expressed in such demonstrations as the May Day rally.

On the same day Secretary of State Dean Rusk told the Senate Foreign Relations Subcommittee on Latin American Affairs that the United States had no plans now "to proceed in any way in armed intervention in Cuba" but if the Castro regime engaged in acts of aggression this country "will defend itself."

May 2, 1961: U.S. State Department described Cuba as a full-fledged member of the Communist bloc. The statement said: "Let there be no confusion regarding Castro's use of the word "Socialist" instead of "Communist." The use of the word "Socialist," in fact, meant that "Castro considers Cuba further along the Communist road than other countries in the bloc."

May 3, 1961: Twenty-two rebels, including Capt. Manuel Artime, a leader of the April 17 invasion attempt, were captured by Cuban Government troops. The Government announced that this brought the number of captured rebels to 1,122.

May 5, 1961: An anti-Castro Cuban volunteer declared that the Central Intelligence Agency had held him and 16 others prisoner and incommunicado for 11 weeks before and during last month's abortive invasion.

May 9, 1961: Cuban Revolutionary Council declares that its forces in last month's action had been "overcome by Soviet tanks and MIG's; that is to say, by the Russian empire," and that it was "preparing new plans" to win its fight.

May 17, 1961: Premier Castro offers to exchange his prisoners of the April 17 invasion of Cuba for 500 bulldozers from the United States, or else they would be sentenced to hard labor. "Of course," Castro said, "those among them who have committed murder cannot be exchanged for anything."

The Cuban Revolutionary Council called on the United States and Latin America to "take effective action" under inter-American pacts to support the council's efforts to overthrow Premier Castro.

On the same day, the U.S. House of Representatives passed a resolution declaring Cuba to be a "clear and present danger" to this hemisphere and urged the Organization of American States to take collective action against Castro.

Michigan Has More To Brag About Than Any Other State in the Union

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the CONGRESSIONAL RECORD a communication by Mr. Howard W. Martin of Acme Quality Paints, Inc., on why we in Michigan are proud of our State and on the tremendous natural advantages which we possess in that wonderful area. The article is entitled "Michigan Has More To Brag About Than Any Other State in the Union." I am hopeful that a reading of this fine commentary will help our fellow Americans to realize why we in Michigan celebrate Michigan Week not only during the official time May 21 to May 27 but all during the year.

MICHIGAN WEEK—MAY 21 THROUGH MAY 27, 1961

Each of you have seen the publicity concerning the promotion of Michigan Week, which starts May 21 and runs through May 27, 1961. We are sending to your branch 10 window posters, 11 by 14 inches, 100 metal lapel tabs for give-away, 10 shelf or countertop cards and a supply of cocktail napkins that we thought you would use in conjunction with your colorometer mixing machine.

We want to tie your branch in with this promotion. It is designed to acquaint you with the many wonderful things that are right here in our State of Michigan.

Make sure that these promotion pieces are put into use starting on Monday, May 21.

I found it was a difficult task to put in two or three pages some of the many wonderful things that we have and enjoy and live with from day to day here in the wonderful State of Michigan.

I have sent a copy of the attached to all of our branch managers and we here at Acme Quality Paints sincerely hope that there will be many of them take advantage of our invitation to come and bring their families to not only visit the State of Michigan, but to see our fine Acme Quality Paint plant here and get acquainted with our Acme family.

P.S.—Here's a memo for each of you who work, live, and sell in Michigan:

HERE'S YOUR TREMENDOUS MICHIGAN MARKET

Over 2,453,000 working in stores, offices, factories—today.

Their annual income is over $18 billion.

Your customers total 7,825,000 men, women, and children.

They own 2,876,000 cars.

PERSONAL SAVINGS IN ALL FORMS AT RECORD LEVEL—OVER $6.8 BILLION

Over 2 million (2,060,000) families—all are prospects for new home appliances, furnishings, and Acme Quality Paint.

Average annual income per family is over $8,000.

Over 1,400,000 own homes—vast market for improvements.

Retail sales topped $9.6 billion in 1960.

MICHIGAN HAS MORE TO BRAG ABOUT THAN ANY OTHER STATE IN THE UNION: YOU DON'T BELIEVE IT?—I'LL PROVE IT—MICHIGAN WEEK, MAY 21–MAY 27, 1961—THIS IS OUR MICHIGAN

Early Indians called it Mishigamaw—meaning "Great Water."

From the word—sometimes spelled Michigama or Michiguma—comes the name of our Michigan.

Michigan—visited by white men years before the Pilgrims touched Plymouth Rock.

Michigan—In the 350 years that have elapsed since the first explorers stepped foot on Michigan territory, the flags of France, England and Spain have also fluttered over our soil.

Michigan—is the biggest State east of the Mississippi River. Ironwood in the Upper Peninsula is farther west than St. Louis, Mo., and Port Huron is as far east as Greenville, S.C. Detroit, for example, is farther from Houghton, Mich., than it is from Baltimore or Washington.

Michigan—The flag of Michigan proclaims dominion over 57,022 square miles of land and nearly 40,000 square miles of water surface—a total of 96,791 square miles. Just so you can get this picture in your mind as to what these figures mean, the State of Georgia has 58,876 square miles of territory. Our land area of 36,494,000 acres is larger than England or Austria—twice the size of Ireland—five times as big as Switzerland. Our Upper Peninsula is as big as Connecticut, Deleware, Massachusetts, and Rhode Island, all rolled together.

Michigan—Our 3,121-mile shoreline is equal to the Atlantic coastline all the way from Maine to Florida and longer than the Pacific coastline from Southern California to the Northernmost point of Washington. The shoreline in the Upper Peninsula alone is 1,114 miles which would stretch farther than a direct route from New York to Kansas City.

Michigan—We have 11,037 inland lakes—ranging from small bodies of 10 acres of water surface (the smallest we count as a lake) to the 33.3 square-mile Houghton Lake. The average size of our inland lakes is 67 acres and 411 are over 200 acres in size.

Michigan—"Water Wonderland"—No point in the State of Michigan is more than 85 miles from one of the Great Lakes and hardly a community is farther away than 6 miles from inland lakes or rivers.

Michigan—Thomas Jefferson, the Nation's third President, named the first territory governor of our Michigan—Gen. William Hull, who in the War of 1812 surrendered Detroit to the British. Can you imagine that?

He was replaced in 1812 by Brig. Gen. Lewis Cass.

Michigan—Was inhabited by Indian tribes long before Columbus discovered America in 1492. Three great tribes shared dominion over Michigan Territory. The Potawatomis

in the south, the Ottawas in the north, and the Ojibwas (also called Chippewas) in the Upper Peninsula. The Menominees, Hurons, Sauks, Miamis, and Mascoutens occupied villages throughout this vast territory.

Michigan—Cities such as Grand Rapids, Kalamazoo, Jackson, Saginaw, Pontiac, Niles, Escanaba, and Marquette were originally Indian villages.

Michigan—the land of Hiawatha; seventh in population; automakers for the world; first successful refrigerator car was made in Michigan; as well as the first traffic light; world's largest cement plant; world's largest concentration of gray-iron foundries; largest paper book mill; largest horsehide tannery; world's largest factory for making billiard tables and bowling alley equipment; insecticides, furniture, auto tires and tubes, drugs and medicines, atomic plants—two; paint.

Here's a sample—Dow Chemical at Midland, Mich., chemicals—600 buildings occupy its 4,500 acre site. World's largest producer of chlorine. This is where your aspirin tablets come from.

Michigan—farming? Ranks first in producing pie cherries; raises 95 percent of all the white pea beans; Kellogg's cereal plant uses 14 million bushels of corn a year in their products. We rank second in production of spearmint, strawberries, asparagus, plums; rank ninth in the production of corn yield—averages 26 bushels to acre. Wheat averages 38 bushels to acre, 98 percent of our Michigan farms have electricity; 75,000 people are engaged in farming. Michigan was the first State to require pasteurization of all milk sold for public marketing. Cattle ranches?—biggest one is 5,800 acres.

Michigan—mining, we have three iron-ore ranges, produces over 13 million tons a year; Copper, some mines are 9,000 to 9,500 feet deep; produce around 115,000 pounds of copper per year; salt, we have 100 different types—produces 5 million tons a year. Salt deposits are 500 feet thick in places. Sand and gravel, petroleum, stone, clay products, and natural gas. Coal, our reserves are estimated at 8 billion tons.

Michigan has everything.

Michigan.—Lumber, we have 85 varieties of trees and here is a sample. These beautiful trees are standing now:

White pine, 17 feet, 10 inches in circumference.

Tulip poplar, 16 feet 8 inches in circumference.

Black walnut, 12 feet 8 inches in circumference.

Sassafras, 11 feet, 3 inches in circumference.

Butternut, 11 feet in circumference.

Hemlock, 10 feet, 8 inches in circumference.

English walnut, 10 feet in circumference.

Red maple, 9 feet, 6 inches in circumference.

Balm of gilead, 8 feet, 3 inches in circumference.

Bigtooth aspen, 7 feet, 4 inches in circumference.

Black ash, 7 feet, 4 inches in circumference.

Shadblow, 7 feet in circumference.

More than half of Michigan's "Water Wonderland" is blanketed with cool green forests whose tree-canopied trails leads to thrilling adventure and rugged natural beauty. The white pine alone which has been cut in Michigan exceeds by 10 times the value of all the gold ever taken out of Alaska and is triple the value of all the gold found in California.

Michigan.—We have the world's busiest waterways. There is more tonnage goes through the Soo Locks at Sault Ste. Marie than the Panama, Welland, and the Manchester canals combined.

Michigan.—Detroit ranks among the top three ports in the world. When we talk about ships, we are talking about a ship that would answer these specifications: (1) Let's take the *John A. France*. It is 730 feet long and last year on one trip it cleared Detroit with 859,000 bushels of wheat in her holds—the yield of nearly 43,000 acres of land, which would fill 780 freight cars of 15 medium-sized trains.

Here is another one: (2) The *Edmund Fitzgerald* clearing last year on July 8 with 23,061 tons of metal pellets (iron ore). The *Fitzgerald's* capacity is more, but the depth of the water channels limit the load.

Michigan—vacation paradise; "Water Wonderland"; 11,037 lakes; all but 2 of Michigan's 83 counties have inland lakes. Seven counties have more than 300 lakes. Marquette County has 835 lakes in it. Average size of our 11,037 inland lakes is 67 acres; 411 of them are over 200 acres in size; 15 are over 18 square miles. Two of the big ones are Houghton Lake 31.3 square miles and Torch Lake 28.6 square miles.

Michigan—You name it vacationwise, Michigan offers it—archery, fishing, swimming, canoeing, sunbathing; yachting, picnicking, picturetaking, golf, hikes, mountain climbing, water skiing, camping, visiting historical sites, wilderness exploring in spring and summer—and hunting deer and bear, exciting college and professional football games in fall—and ice fishing, snowshoeing, tobogganing, bobcat and rabbit hunting, skating and sleigh rides in the winter.

Michigan—5 national forests with 62 picnic and camping grounds, 22 State forests, 48 modern State parks, 13 fully equipped recreation areas, 99 roadside parks, 3,500 highway picnic sites, and 156 county parks.

Michigan leads the Nation in the number of State parks and camping sites—5,200 available for your use.

This is a big State.

Michigan issues over a million fishing licenses and over one and a quarter million hunting licenses each year. We have 800,000 or more in our deer herd and just for the sake of argument, 28 different families of fish. Don't get me started.

Michigan—Education? University of Michigan, Michigan State, Wayne State, Western Michigan, Northern Michigan, Albion—all fine public and private schools.

Michigan—our State seal bears the legend, "Si Quaeris peninsulam anoenam circumspice." It means, "If you seek a pleasant peninsula, look around you," a motto written in 1835 before the State of Michigan had its upper peninsula. On the seal are the words "Tuebor" meaning "I will defend" and "E pluribus unum" which means "From many, one."

Michigan—and it's all yours—for the biggest vacation you will ever have. There is no place in the world where you and your family could spend a finer vacation.

Michigan—favored vacation land—has something for everyone. Here is an entire State uniquely favored by nature for carefree vacationers, with 3,121 miles of Great Lake shoreline, thousands of crystal-clear inland lakes and fast-running fishing streams and vast forests—all air conditioned by the surrounding blue waters of four of the Great Lakes.

So, why not come and enjoy as many of our wonderful attractions as you can and at the same time get acquainted or reacquaint yourself with all of our home office personnel here at Acme Quality Paints?

Come and see "Michigan the Beautiful"—it is so easy to reach, and so much fun when you get here.

End of the Communes

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mrs. DWYER. Mr. Speaker, we all know that the nations of the free world are engaged in a vital struggle to earn the respect and support of the so-called uncommitted nations. Perhaps one of the most decisive factors in this endeavor is the use of propaganda, or, in other words, the demonstration that one system works better than another. The ultimate criterion of acceptance of a way of life for the developing nations is pragmatic: "Does it work? Will it continue to work?"

Most of the developing nations are highly agrarian and are attempting to transform themselves as quickly and as effectively as possible into industrial economies. They are, therefore, quite often guided by the experiences of other nations in similar circumstances.

One such example has been that of Communist China's commune system. The communes have been praised loud and long in Communist propaganda and their avowed success has been constantly displayed to the new nations. Because the communes are easily understandable and seemingly compatible with the needs and ideologies of these new nations, the Communist Chinese advisers and technicians have flocked to those nations and have been greeted eagerly due largely to the so-called success of the communes.

Mr. Speaker, the famine and crop shortages this year in Red China, however, were too great to be kept out of the news. But until quite recently the blame was attributed to unforeseeable natural conditions, rather than to any flaws in the system itself. Such explanations, however, are distasteful to the Communists because their ideology ascribes to the inexorable workings of economics and denies any greater forces.

The truth of the matter is that the communes did not and could not work. The Red Chinese themselves have scrapped the system, an obvious admission of failure. This failure must not be allowed to go unnoticed in the free world. We here in the United States have proven that the free enterprise system can be successful, and we must do everything in our power to help these new nations provide for their citizens that which our forefathers so painstakingly won for us, freedom and opportunity.

Mr. Speaker, the importance of the failure of a Communist idea was shown in an article entitled "Total Communism Flops in Red China" in the March 27, 1961, U.S. News & World Report. Under leave to extend my remarks in the RECORD, I include the article, as follows:

[From the U.S. News & World Report, Mar. 27, 1961]

END OF THE COMMUNES—TOTAL COMMUNISM FLOPS IN RED CHINA

HONG KONG.—China's Communist bosses have suffered a major defeat.

The rural communes, designed by Mao Tse-tung to turn China into the world's first absolute Communist state, are being downgraded to the point where they are nearly extinct. The village, traditional center of life in rural China, is coming back into its own.

The communes still exist on paper. But a series of directives issued in recent weeks shows that for all practical purposes the grandiose scheme to mobilize China's millions of peasants into a giant, disciplined labor force is going out of business.

Large-scale cultivation of fields by huge masses of men, women, and children is being abandoned. Big labor gangs working under centralized command and switching from area to area at the whim of local party bosses, are being broken up. Individual communes have lost the ownership of what the Communists call "the four fixed things"—manpower, land, animals, and implements.

Instead, each village in rural China is being organized into a "small production brigade" which will arrange its own work, control its own tools and animals, and almost certainly get a larger share of its own farm produce.

POTS, PANS GONE

Community messhalls will stay as they are. Most peasants had already been forced to give their pots and pans to the communes, and they now have nothing to cook with. Villages will continue maintaining their nurseries and kindergartens. The Communists have no intention of putting mothers back into their homes, because their labor is still needed in the fields.

But you can see the end of the huge, centrally directed communes in this: The Communist government has directed that 95 percent of all rural labor must be in "small brigades." That leaves only 5 percent of the manpower for the big production brigades and communes.

Arguments over the communes started in August 1959. By midsummer of 1960, the Communist bosses realized something was wrong. Farm production was dropping instead of increasing.

Huge irrigation and drainage canals, dug by labor brigades, had upset the water level. Indiscriminate deep plowing and close sowing ruined vast areas of farmland. Party bosses watched helplessly as production fell off.

At first the Communists tried to stave off disaster by sending millions of office workers, students, Government officials and city laborers into the countryside. Then they ordered thousands of dedicated Communists into the communes in an effort to revitalize the system. Nothing seemed to work.

The peasants were worn out by 2 years of forced labor. They were fed up with the blunders of local party hacks. There was little or no incentive to work on the land when the peasants were likely to be hauled away for emergency jobs elsewhere—at no pay.

"A GAY SIGHT, BUT"

Peasants let their farm tools rust in the rain, or broke them through careless handling. Sabotage of the system increased at a rapid pace last year. An investigation in Kwangtung Province showed it had taken 20 days to plant 7 acres of rice. A Communist newspaper reported from Hupeh that "commune members were massed together in the fields. It was a gay sight to see man next to man, foot next to foot; but the return in work done was not high."

Finally, last November, the Communists gave up. The rush to dismantle the communes got underway. Peasants were told to take up their tools and work as they had before the communes came into existence. They were told that no longer would the Government take them away from their own villages to work in labor brigades, unless their own small brigades agreed to it.

Actually, the Communists are not giving back to the peasants the freedom of the past. The party still holds a firm grip and determines what each village must produce, sets the time of delivery and sets the price the state will pay. But, by breaking up the 24,000 communes and restoring a measure of village life, the Reds are confessing, in effect, that the Chinese peasant knows best how to work his own land.

How To Get More Gold

EXTENSION OF REMARKS
OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 23, 1961

Mr. ENGLE. Mr. President, anyone interested in gold—and who is not?—should read the story told to the Mining Subcommittee of the House Interior Committee recently by Congressman HAROLD T. JOHNSON, of California.

It clearly shows, as I have often argued, that one good way to correct our troublesome international gold imbalance is to produce more gold at home. It can be done. Congressman "BIZZ" JOHNSON, who represents the Mother Lode District of California, tells how and why it should be done.

His statement relates specifically to House Joint Resolution 185, of which he is the author. It is equally pertinent to Senate Joint Resolution 44, of which I am the author with the cosponsorship of Senator CASE, of South Dakota, and Senator KUCHEL, of California. I ask unanimous consent that the statement of Congressman JOHNSON be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF HON. HAROLD T. JOHNSON, MEMBER OF CONGRESS, OF CALIFORNIA, BEFORE MINES AND MINING SUBCOMMITTEE OF HOUSE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS

Mr. Chairman, the Second Congressional District of California contains the mother lode and major California gold-producing counties which made our State famous in the days of the forty-niners. For myself and on behalf of the gold-mining industry of California, I want to express my sincere appreciation for the opportunity to be heard and discuss with you the critical conditions which exist in the gold-mining industry.

Gold was one of the first metals used by man and has been valued above all others because of its beauty, scarcity, and imperishability. It has become the standard of our world monetary systems. The search for gold has led to the settling of new lands. As I mentioned a moment ago, discovery of gold in California gave tremendous impetus to the great westward movement in our own country.

During the last half of the 19th century, the United States was the leading producer of gold in the world. Yet today it produces only 3 percent of the world's gold.

What happened to change the picture so drastically? Several things happened. The goldfields of Africa developed rapidly, and this restless nation became the world's leading producer of gold in 1905. The United States held onto second place until about 1930, when it was displaced by Canada, and then a few years later the Soviet Union became the world's second largest producer of gold, relegating this country to fourth place.

This was a relative comparison, because the U.S. production continued to climb through the years spurred by President Roosevelt's proclamation of January 31, 1934, increasing the price of gold from $20.67 to $35 per ounce. Production reached an all-time record of 4,869,949 ounces in 1940. This record was achieved even though at that time—two decades ago—profit margins had become so narrow that extremely efficient operations were required.

Gold mining became a casualty of World War II. War Production Board Order L–208 and other official restrictions denied gold-mines equipment, supplies, and manpower. Mines were closed down. When order L–208 was lifted on July 1, 1945, 2½ years of idleness had left its toll. Many of the mines had watered up. Equipment had deteriorated from lack of use, and rehabilitation required great investment. Companies with closed mines had suffered financial losses from which they never were able to recover. Higher prices for equipment, and supplies, and higher wages combined with the difficulties of recruiting efficient labor forces made former operators reluctant to reopen mines, especially when profit margins were even narrower than those existing in 1940.

During the war years of 1943–45, for the first time on record, over half of the domestic gold output was recovered from base-metal ores, and a pattern was established. Today 28 percent of our gold production still is the byproduct harvest of the base-metal industry. The Nation's second largest individual gold producer is a copper mine.

In spite of these difficulties, production staged a modest comeback from the depths of 1945 when the yield was only one-fifth of the 1940 record, until the critical year of 1947 when domestic production reached 2.1 million fine ounces. From that time on, the trend has been downward due to continuously rising costs of gold-mine operations and cutbacks in base-metal production. The production dropped to 1.7 million ounces, valued at about $58 million in 1960. This is only 3 percent greater than the 1959 production, which was the peacetime low of the century.

Mr. Chairman, we hear much of depressed industries. I think you would have to agree that the gold mining industry of the United States is one of the most depressed industries in our Nation's economy. Throughout the gold producing areas of the United States, and especially in the gold producing areas of California, the number of producers has declined steadily as more and more go out of business. Two decades ago there were 4,000 placer mines in operation in this country; by 1958 there were only 250. In 1940 there were about 5,000 lode mines; in 1958 there were only 300. World production has been following the opposite trend—upward. In 1959, alltime record yields were realized throughout the world. A total of 42.8 million ounces valued at nearly $1.5 billion was produced.

Mr. Chairman, the trends are shown by the following production chart:

Year	U.S. mine production	World production
	Fine ounces	*Fine ounces*
1945	954,572	26,100,000
1946	1,574,595	27,500,000
1947	2,109,186	28,900,000
1948	2,014,257	29,600,000
1949	1,991,783	31,000,000
1950	2,394,231	32,700,000
1951	1,980,512	33,500,000
1952	1,893,261	34,300,000
1953	1,958,293	33,700,000
1954	1,837,310	35,100,000
1955	1,880,000	36,300,000
1956	1,827,000	38,400,000
1957	1,794,000	39,600,000
1958	1,739,000	40,600,000
1959	1,604,000	42,800,000

Source: Minerals Yearbook, Department of the Interior, Bureau of Mines.

You will note that when our national production of gold started its postwar downturn, world production continued to climb. About the same time other major gold producing nations realized the seriousness of this situation and took action.

Canada, for instance, adopted a subsidy program which went into effect January 1, 1948. The immediate result was a 15-percent increase in production. Production of gold in Canada has been stable throughout the postwar years with the result that today the United States is buying nearly $275 million worth of gold annually from Canada. You will note this is five times the amount of our domestic production. United States mines could produce much of this supply if our domestic mining industry was given the opportunity.

In this country, however, the opposite approach was taken. In 1947, the Treasury Department established new regulations under the Gold Reserve Act of 1934 with a view of curbing international gold transactions by domestic producers who could receive premium prices at international free markets. This was done at the request of the International Monetary Fund, although most other major gold producing countries of the world did and still permit a limited amount of this premium business in order to meet costs of operations.

I might note here also that the International Monetary Fund, in its annual report of April 30, 1948, took a dim view of subsidies being initiated in Canada. The Fund expressed a fear that the subsidy would undermine the exchange relationships. After 12 years of operation, it appears that the Canadian program improved the Canadian balance of payment situation.

On the other hand, it would seem to me that the requirement which the United States has placed upon itself by restricting domestic production of gold to such a point that the United States must import the great preponderance of the gold it uses, has harmed the United States balance of payment situation.

I believe it would be far more appropriate to correct our balance-of-payment problems by increasing the production of domestic gold mines than by any proposal to prevent families from joining servicemen overseas, or by making more restrictive import duties on travelers returning home to the United States, or even by spending millions to attract foreign visitors to our shores.

This then is the situation the mining industry finds itself in.

I would like to emphasize that this is not the result of a reduced demand for gold. The steadily increasing amounts of gold being imported into this country are proof of this.

Gold imports to United States

Year:	*Ounces*
1955	2,930,000
1956	3,730,000
1957	7,701,000
1958	8,120,000
1959	8,485,000

Source: Minerals Yearbook, 1959.

Consumption in this country is increasing steadily. In 1959 gold used by the arts and industries increased 38 percent over the previous year, reaching a total of 2½ million ounces. This is 57 percent more than the total domestically mined production. This has been due to increased uses in the markets of jewelry, art, dental supplies and others, along with a tremendous increase in industrial use of gold.

There are ever increasing national defense and scientific uses of gold. Gold coatings on missile and aircraft sections are unequaled for reflecting infrared radiation. A gold solution sprayed on vulnerable surfaces and baked to form a thin metallic film reduces the rate of heat transfer on engine shrouds, drag-chute containers, tailcone assemblies and blast shields. A gold solution is applied to porcelain-enamel, stainless steel, fiberglass laminates, and other heat-resistant materials.

A transparent conductive film of gold deposited electrically on safety glass was developed to overcome the hazards of obstructed vision caused on occasion by fog and frost on windows in transport vehicles. Increased quantities of high-purity gold are employed in fabricating silicon transistors and diodes for use in computers, aircraft missiles, and satellites. For silicon devices, gold in alloyed with silica, antimony, germanium, and other elements. Gold plating applied to microwave vacuum tubes improves the operation of communications equipment. Radioactive gold is used as a source of heat in a thermionic converter to produce an electric current for use in space vehicles.

In view of the increasing importance of gold for scientific and defense uses, I would call to your attention once again the fact that the Soviet Union and Africa, whose political future is anything but stable, are the leading producers in the world.

If there is a demand for this precious metal, why is production steadily decreasing? An artificial price of $35 per ounce has been maintained since 1934. None of us has to be told how much the cost of operation, labor and materials has increased since 1934. Thus, the gold industry is faced with fixed prices and rising costs, with constantly declining reduction resulting. At the same time, we have had a substantial increase in the demand, due to these new industrial uses, many of them required for the defense of our Nation.

In the words of your own committee (H. Rept. No. 708, 86th Cong.; 1st sess., "Depressed Domestic Mining and Mineral Industries" p. 53):

"Whereas gold mines in some countries have been aided by subsidies, tax concessions, currency devaluation, and/or sales of their product at premium prices on the 'free market,' domestic miners have been held down to a price which brought prosperity to the industry through the 1930's but which does not reflect inflationary trends of later years."

That same report (p. 55) quotes one of the most distinguished gold mining experts from the mother lode district I represesent, L. L. Hueisdonk, of Downieville, Calif., as pointing out that the U.S. Treasury still sells gold to industrial consumers at approximately $35 per ounce whereas the cost of producing gold has increased 300 percent since that price was established.

And again, that report takes note of evidence that the $35 an ounce price—while it may have to be maintained for world monetary and economic reasons—is not realistic when it comes to the actual production of gold.

Barron's (July 6, 1959) quotes a Soviet economic journal statement that the cost of Russian gold runs to about 660 rubles per ounce. This is equivalent to $165 at the official rate of exchange, $66 at the tourist rate.

It would seem appropriate at this point to comment on what some of the other gold-producing nations are doing to keep their gold industries alive.

The nearest and most important country, of course, is Canada. The Emergency Gold Mining Assistance Act was first enacted in 1948 and has operated continuously ever since. It has been extended until 1963.

To be classified as a gold mine under the act, a mine must meet the following requirements:

1. The value of gold produced must be 70 percent or more of the total value of output of the mine.

2. The mine or operation must produce at least 50 troy ounces of gold in a designated year.

3. The cost of production, computed on all ounces of gold produced from the mine during a calendar year or less, must exceed C$26.50 per ounce.

In a designated period, e.g., a quarter, the mine must sell all its production to the mint to qualify for aid. Exporting the gold is considered the same as sale to the mint for the purposes of the act. The mine cannot both sell to the mint and to the free domestic market in the same designated period if it is to receive aid.

The formula for calculating assistance payable under the act consists of two factors: the "rate of assistance" and the "assistance ounces." The rate of assistance factor is based on the cost per ounce of gold produced while the assistance ounces factor is a specified proportion of the total ounces of gold produced.

The rate of assistance factor is determined by taking two-thirds of the amount by which the cost to produce an ounce of gold exceed C$26.50 up to a maximum of C$12.33. The number of assistance ounces factor equals two-thirds of the total ounces produced. The amount of assistance payable is calculated by multiplying the rate of assistance by the assistance ounces.

To the foregoing, the 1958 extension of the act added an extra 25 percent of the amount payable in computing the final amount to be paid. This extra 25 percent is continued in the present bill.

The Minister of Mines and Technical Surveys, Paul Comtois, says that the Canadian gold mining industry employs over 16,000 men directly in dependent communities with population in excess of 70,000 persons. In 1958 the industry expended C$106 million in salaries and wages, fuel, electric power and supplies and equipment, and produced a total of C$155 million in gold, most of which was sold to the United States.

A summary of the payments made during 1959 under this program follows:

Cost per ounce	Number of mines	Percentage of total production	Assistance payable	Assistance payable per ounce produced
A. Lode gold mines:				
$26.50 to $34	10	53.35	$3,548,901.97	$3.32
$34 to $41	12	24.45	2,776,600.43	5.69
$41 to $45	7	10.52	1,837,545.39	8.68
$45 and over	11	11.57	2,337,313.88	10.27
	40	99.89	10,500,361.67	5.26
B. Placer gold mines	2	.11	23,590.05	10.27
Total	42	100.00	10,523,951.72	5.26

Source: Department of Mines and Technical Surveys, Government of Canada, "Report on Administration of the Emergency Gold Mining Assistance Act."

Australia, whose production (1.07 million ounces in 1959) nearly equalled that of the United States in 1959 extended its Gold Mining Assistance Act for 3 more years. At the same time, the maximum assistance was raised from $7.70 an ounce to $9.10 an ounce. Gold output in the Philippines (402,600 ounces in 1959) is supported at the price of 150 pesos per ounce, equivalent to $75. In the Union of South Africa, the world's leading producer of gold, tax concessions are extended as additional amortization allowances to deep mines. The Ghana gold fields are benefitted directly through a program of financial assistance to mining companies for development of new properties and expanding operations and through a 3-year mines training course supported by the government to educate Africans in mine operation. Ghana also is reported considering a subsidy program.

Colombia, the major South American gold producer which had a 397,900 ounce yield in 1959, also has a subsidy program in effect.

In international gold production, subsidy or incentive payments are not uncommon. In fact, it appears this is the only way that production levels can be maintained.

Certainly, in our own national picture, subsidies are no strangers. In addition to the more common agricultural subsidies, there are Federal assistance programs for many industries, including transportation by air, rails and sea, and many others.

The Joint Economic Committee prepared a report on subsidy and subsidylike programs of the U.S. Government" during the 2d session of the 86th Congress. In reporting the scope of subsidies, this report included a list of the types of subsidies granted by the Federal Government. These cover seven full pages, listing everything from school lunch programs to disaster loans for small businesses.

So broad and complex is the scope of the subsidy program, that the committee report (p. 18) states "It is probably impossible to make an estimate of the total subsidy payments of the Federal Government during any single year that would receive general acceptance."

The committee did, however, attempt to make an estimate covering agriculture, business, labor, homeowners, tenants and civilian and national defense stockpiles. These added up to $7,460 million in 1960.

In the minerals subsidy review, the Joint Economic Committee listed many commodities, from aluminum to zinc. Gold was not among the minerals whose industries were receiving benefits through tax amortizations, loan guarantees, subsidy or other assistance programs.

This study concluded: "It is apparent from the foregoing discussion that, in the course of our history, the Federal Government has engaged in a great variety of subsidy and subsidylike programs. Originally they were limited substantially to assistance to transportation interests, to encourage foreign trade and domestic expansion and development; more recently subsidies have expanded to the point where few segments of our economy are completely unaffected by them. Diverse as these subsidy programs are, it is unrealistic either to condemn or to praise Federal subsidies as such. Each particular program which is determined to contain an element of subsidy must be judged independently, taking into account the economic, social, and political conditions prevailing at the time."

And in conclusion, I would like to point out an indirect subsidy we are making to the economies of foreign nations. Some of this economic assistance, I am sure, will find its way to the mining industries.

I speak now of our Public Law 480 grants to other countries. Two examples are the recently approved agreement with Brazil whereby that nation acquires some $70 million worth of grain from this country. All of the grain will be paid for in Brazilian currency and all the Brazilian cruzeiros will stay in Brazil.

Twenty percent of the $70 million—some $14 million—will be given back to the country as a direct grant for economic development. Sixty-five percent—$47,500,000—will be loaned back to Brazil for economic development.

A similar situation exists in India where $1 billion in farm commodities has been authorized for delivery. Of the $1 billion India is paying for these farm commodities, $420 million is being given to India as an economic development grant. Another $427 million is being loaned to India for similar economic development.

The cost of this gold mining incentive program, which would benefit one of our own industries, would help our own economy, would be slight compared to these tremendous and great grants and loans.

In return for our investment, this country would be aiding unemployment in reviving a badly distressed industry, would be stabilizing our own economy and would be building up our own gold reserves.

This is a statement by Congressman HAROLD T. JOHNSON supporting House Joint Resolution 185 and H.R. 6734.

Award to Alfred D. Stedman, Retired Associate Editor of the St. Paul Pioneer Press and Dispatch

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23, 1961

Mr. HUMPHREY. Mr. President, recently one of Minnesota's leading citizens, Mr. Alfred D. Stedman, retired associate editor of the St. Paul Pioneer Press and Dispatch, was awarded the J. S. Russell Memorial Award for superior service to agriculture.

Mr. Stedman is one of the most noted and famed reporters on the agricultural economy of the Nation. He has a fine record of accurate, objective reporting relating to American agriculture and the social and economic problems of our agricultural economy.

Minnesota is proud to claim Mr. Stedman not only as a great journalist, but above all, as a distinguished citizen.

I ask unanimous consent that the article entitled "Farm Editors Give Award to Stedman," published in the Washington Post of May 17, 1961, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FARM EDITORS GIVE AWARD TO STEDMAN

The Newspaper Farm Editors Association yesterday selected Alfred D. Stedman, retired associate editor of the St. Paul Pioneer Press and Dispatch, as the first winner of the J. S. Russell Memorial Award for superior service to agriculture.

The award was established by the association, which wound up it's annual 2-day spring meeting here yesterday, as a memorial to the late J. S. Russell, first president of the group and farm editor of the Des Moines Register and Tribune.

Stedman, 68, was born near Boone, Iowa, and graduated from Hamline University. After service on the Pioneer Press and the South St. Paul Reporter, he came here in 1929 as correspondent for both papers.

In 1933, he was appointed Assistant Administrator of the Agricultural Adjustment Administration, the agency that operated the New Deal farm programs. He served in the Agriculture Department until 1939.

In 1945, after a period on the board of editors of the United States News here, he returned to St. Paul as associate editor of the Pioneer Press and Dispatch, concentrating on news of agriculture.

Stedman's agricultural news reporting won honors from groups including the American Dairy Association.

Presentation of the J. S. Russell Award was made at a lunch meeting of the Farm Editors Association by James B. Hasselman, retired information chief of the Agriculture Department's Commodity Stabilization Service, and Rex Conn, farm editor of the Cedar Rapids Gazette.

President Kennedy at the Opening Game

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. PRICE. Mr. Speaker, President Kennedy inspired both young and veteran baseball fans by sticking to the finish, despite inclement weather, at the opening game of the new baseball season at Griffith Stadium on April 10.

Baseball's bible, the fine sports publication, the Sporting News, took note of the incident and the Nation's No. 1 baseball expert, J. G. Taylor Spink, publisher, penned the following editorial tribute to President Kennedy:

KENNEDY SETS FINE EXAMPLE FOR GAME

The Sporting News joins respectfully and happily in welcoming to the major leagues a 43-year-old pitcher who didn't even have to go to training camp to draw the starting assignment in Washington on opening day.

President John F. Kennedy handled the traditional inaugural ceremony with all the good humor of his predecessors, starting with William Howard Taft, and with considerably more power behind his throw than most of them displayed.

In this time of heaviest concern and almost daily crisis, baseball should be especially grateful to the Chief Executive for this annual endorsement of the part the game plays in the lives of millions of Americans.

Young, in excellent physical and mental health, and urging that his fellow citizens keep themselves in the best possible condition for the uncertain future, Kennedy sets a good example for all of us. His appearance at Griffith Stadium, April 10, was a most appropriate reminder of the sport's own new-frontier expansion which eventually will give as many cities as possible the higest caliber of baseball.

We like the way the President stuck to the finish in spite of weather which drove less stouthearted fans from the park. The old game needs that kind of perseverance in its own ranks if it is to solve its problems. It was a good day. Thank you, Mr. President.

Dr. Edward Cristy Welsh

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 23, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Behind the Space Scene," published in the New York Times of May 10, 1961, relating to Mr. Edward Cristy Welsh. Mr. Welsh has performed outstanding service for Congress. For years, he was associated with the distinguished Senator from Missouri [Mr. SYMINGTON] and is now executive secretary of the National Aeronautics and Space Council.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BEHIND THE SPACE SCENE—EDWARD CRISTY WELSH

WASHINGTON, May 9.—For nearly 20 years Dr. Edward Cristy Welsh has belonged to the legion of public servants who from behind the scenes influence and direct public decisions but never receive public recognition.

The postwar reorganization of Japan's industry was largely the result of the handiwork of the 51-year-old economist, who started off as a university teacher and turned to Government service in World War II. The attacks of Senator STUART SYMINGTON of Missouri and his fellow Democrats on the defense policies of the Eisenhower administration were often based on the ideas and facts furnished by him.

Recently Dr. Welsh moved into a more open role as executive secretary of the National Aeronautics and Space Council. As the principal assistant to Vice President JOHNSON, the council chairman, he has been given the responsibility for drafting an expanded space budget, which is to accelerate the Nation's efforts in space.

As the alter ego for public officials, Dr. Welsh has two necessary attributes for any good staff assistant—a gluttony for work and an incisive mind which can digest vast amounts of material and then present it in condensed form for an official.

A slight man 5 feet 11 inches, 140 pounds, Dr. Welsh has a reservoir of energy that permits him to work up to 90 hours a week when a lively issue is boiling. As a physician told him after a recent physical examination, "You seem to be strung together with electrical wires."

In recent years, Dr. Welsh has been legislative assistant to Senator SYMINGTON—a job that has permitted him to become one of the best informed military experts on Capitol Hill.

His association with Senator SYMINGTON dates back a decade, when Mr. SYMINGTON, after resigning as Secretary of the Air Force, became Chariman of the National Security Resources Board, and hired Dr. Welsh as his assistant.

Mr. SYMINGTON took Dr. Welsh along when he moved over to become Administrator of the Reconstruction Finance Corporation and when he was elected to the Senate in 1952.

Dr. Welsh started his Government career in 1942 as regional price executive of the Office of Price Administration's headquarters in Cleveland, Ohio. After 2 years he was brought to Washington to become Director of Field Operations for Price Control and then Deputy Administrator for Price Control.

Early in 1947, at the invitation of General of the Army Douglas MacArthur, he became chief of the antitrust occupation government in Japan. Among his responsibilities were the dissolution of the Japanese cartels and financial reorganization of most of Japan's major companies.

At the conclusion of his work in 1950, he was cited by General MacArthur for laying the foundation for private competitive enterprise in Japan.

Dr. Welsh, who was born in Long Valley, N.J., in 1909, began his career as a university teacher and economist. After graduating from Lafayette College in 1930, he taught at Tufts College, the University of Cincinnati and 8 years at Ohio State University, where he received his Ph. D. in economics.

It was while on the faculty of the University of Cincinnati that he met his future wife, Carolyn B. White of Cincinnati. They were married in 1935. The Welshes, who have no children, are a working team, with Mrs. Welsh serving as his secretary.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Nineteen Hours In Wasteland

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. ASHLEY. Mr. Speaker, a great deal has been said lately about the distressing quality of television in this country. Most noteworthy, perhaps, was the speech 2 weeks ago by FCC Chairman Newton M. Minow, in which he described network programing as a "vast wasteland." It was in this address, it will be recalled, that Mr. Minow challenged the Nation's broadcasters "to sit down in front of your television sets when your station goes on the air and stay there without a book, magazine, newspaper, profit and loss sheet or rating book to distract you—and keep your eyes glued to that set until the station signs off."

It would have been difficult for Mr. Minow to come up with a more unpromising proposal and it is doubtful if even the staunchest network executive has summoned sufficient courage to accept Mr. Minow's challenge.

But I am proud to say, Mr. Speaker, that the entertainment editor of the Toledo Blade, Ray Oviatt, did have the intestinal fortitude and stamina to undertake and survive a 19-hour nonstop trip through television's wasteland.

I am also pleased to report, Mr. Speaker, that after a day or two, Mr. Oviatt recovered sufficiently to give us the following account of his grisly journey:

NINETEEN HOURS IN "WASTELAND"
(By Ray Oviatt)

I have returned, somewhat the worse for wear on my posterior, the strain on my eyes and the dulling of my senses, from a nonstop journey through that territory recently described by FCC Chairman Newton N. Minow as a "vast wasteland."

My odessy was inspired by Mr. Minow's recent challenge to the Nation's broadcasters "to sit down in front of your television set when your station goes on the air and stay there without a book, magazine, newspaper, profit and loss sheet or rating book to distract you—and keep your eyes glued to that set until the station signs off."

"You will see," he continued, "a procession of game shows, violence, audience participation shows, formula comedies about totally unbelievable families, blood and thunder, mayhem, violence, sadism, murder, western badmen, western good men, private eyes, gangsters, more violence, and cartoons. And, endlessly, commercials—many screaming, cajoling and offending. And most of all, boredom. True, you will see a few things you will enjoy. But they will be very, very few."

My 19 hours as a videonaut surveying this realm confirmed many of Mr. Minow's contentions. A more extended journey probably would bear out others, but I am not prepared to go again. Flesh, blood and family ties can stand just so much.

I began my ordeal shortly after 6 a.m. of a reasonably typical TV day, last Wednesday, with a low residue breakfast on the tray beside me. (I had attempted unsuccessfully to persuade my dietitian that I should have a filet mignon wrapped in bacon.) I staggered from my chair a few minutes after 1 a.m. the next day.

In briefing sessions, it had been decided that I should alternate between the two local channels at 2-hour intervals. This course was followed until the evening hours when the pattern of hour-long programs ending on the half hour forced certain revisions. Even so the division between the two stations was kept equal.

My equipment included a stop watch with which I attempted to keep a record of the total G's of commercial stress. This amounted to approximately 3 hours total exposure from about 8 a.m. until signoff. Prior to that time, and in some of the subsequent periods, the commercial allotments are filled with public service announcements. I might say that at no time during the day did I experience anything resembling weightlessness.

I should also point out that my clocking of the commercials was not entirely accurate. Because of prior conditioning, my impulse at the beginning of commercials was to move toward the refrigerator or the powder room rather than to punch the stop watch. However, the 3-hour total was reasonably accurate.

It was, if anything, conservative because I did not include the immense amount of time devoted to listing and displaying the prizes on the many game shows and audience participation programs. These really are commercials, too.

I encountered a relatively small amount of violence on this particular day, but of course, I missed some of the mayhem because of the arbitrary division of time between the two channels.

It was 10:45 a.m. before I saw my first fight in a 1940 movie, "The Lady in Question," and this was a relatively tame affair. Otherwise, I counted six gunshot killings, an ingenious murder attempt by helicopter on "Danger Man," and a suicide by electrocution on the Steel Hour drama, plus assorted brawls on both the action and comedy shows, including an old Abbott and Costello movie.

It should be noted, in this connection, that among the shows I missed while viewing the other channel were "Malibu Hun," "Hawaiian Eye," "Naked City," an afternoon movie which was a murder story, and the "Three Stooges," perhaps the most senselessly violent show in TV.

Also, judging from some of the previews of next week's exciting episodes, there will be plenty of corpses and beatings to come.

The TV day, I discovered, begins on a high plane with the colorcast "Continental Classroom," although how the TV students are able to absorb information on chemistry and the mathematics of probability between 6 and 7 in the morning is a mystery to me. Then comes Dave Garroway's potpourri of news, weather, conversation, informational and entertainment features on "Today."

After that I entered the kindergarten period, having fun with music with "Captain Kangaroo" and taking six giant steps into Mother Gooseland with Miss Connie on "Romper Room," followed by some inane Heckle and Jeckle cartoons interspersed, peculiarly, with messages from the Toledo Board of Education, all on channel 11.

Back on Channel 13, I came across the old celluloid hours, a 1940 movie, "Lady in Question," with Rita Hayworth and a boyish Glenn Ford, trailed by the umpteenth repeats of the Gale Storm and Bob Cummings situation comedies.

Then after the noon hour news period, I reached for my hanky to undergo the first 30 minutes of the day's soap operas, "Search for Tomorrow" and "Guiding Light." These daytime dramas are resumed later in the afternoon with "Brighter Day," "Secret Storm" and "Edge of Night."

By the end of this teary skein I was still trying to cope with the troubles of the characters in the first one. Janet, it seems, has just learned that she is about to bear a child by Dan, whom she had married after a false report that her first husband Bud had died. Bud has now reappeared and Janet is going back to him, much to the distress of her parents.

The drawn out local quiz show, "Calling With Cash," occupied a spot in the wasteland at 2. Then back on 13, "Day in Court," simulates justice in action, followed by perhaps the dreariest stretch of the day, the giveaways. These include "Seven Keys," the tear-choked "Queen for a Day," and "Who Do You Trust?" a sort of true confessional with comedy commentary by Johnny Carson.

After the 5 o'clock movie, I caught up with the simple heroics of the Lone Ranger, the news, "Death Valley Days," that western soap opera, "Wagon Train," and "Danger Man." A fairly high entertainment quotient was sustained in the Perry Como and steel hour shows. The long day ended with the news programs, a portion of a 1943 movie, "Above Suspicion," and an hour with Jack Paar in which the host stressed that the best way to avoid a hernia is keep your mouth open. Here's a man who takes his own advice.

The reaction of massive boredom which Mr. Minow predicted was certainly borne out. Likewise the stipulation that books, newspapers, and magazines be avoided became difficult to endure. I found my eyes straying longingly to the bookcase at increasingly frequent intervals. And early in the evening my resolution waned; I volunterred to take out the garbage. That was my exercise and fresh air for the day.

What effect such an experience might have on a television executive, I can only surmise. I suspect his reactions would be similar to mine. But I would guess that he might quickly find solace in his profit and loss statements and his rating charts.

Seven Years of Infamy

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24, 1961

Mr. TALMADGE. Mr. President, on May 17, 1954, the Supreme Court of the

United States usurped the power of Congress and the right of the American people to amend the Constitution of the United States by judicial decree to provide that State and local governments no longer could administer their school systems as they saw fit. Seven years later, on May 17, 1961, the Chattanooga, Tenn., News-Free Press devoted its lead editorial to a detailed recital of the lamentable losses which the American people and constitutional Government have sustained as the result of that unconstitutional decision. It is a masterful summation of the gravest domestic crisis to confront our Nation this century and I ask unanimous consent that the full text of that editorial, entitled, "Seven Years of Infamy," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SEVEN YEARS OF INFAMY

Seven years ago today—on May 17, 1954—the dark red draperies of the U.S. Supreme Court Chamber in Washington parted to admit to their seats nine appointed, never-elected Justices whose purpose it was to begin a revolution overturning the constitutional concept of American freedom and Government.

Throughout the world today, there are revolutions and counterrevolutions, marked by military force, battles, and bloodshed. In the revolution initiated 7 years ago today by the Warren court, there was no gunfire but the Constitution of the United States of America was sorely wounded.

Without constitutional justification, without amendment or law having been enacted, the Warren court established dictatorship through usurpation and issued its decree in total contradiction of constitutional and legal practice. Mocking the Declaration of Independence, which says: "Governments are instituted among men, deriving their just powers from the consent of the governed," the Warren court, without consent of the governed, seized power.

In doing so, it exceeded the constitutional bounds of the judiciary, assumed the legislative powers reserved to Congress, and imposed its will by prompting illegal executive action.

This was only the beginning, these violations of articles I, II, and III of the Constitution. The Warren court infringed upon the rights of the States as preserved in the 9th and 10th amendments of the Constitution, for the court acted without delegated authority to do as it did; the 10th amendment declares: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

The Warren Court amended the Constitution by dictatorial decree in violation of the legal amending process described in article V, which requires two-thirds of both Houses of Congress or two-thirds of the State legislatures to propose amendments and three-fourths of the States to ratify them before they shall become a part of the Constitution and law.

In committing this unconstitutional abuse, the Warren Court sought to hide behind the 14th amendment, which itself was never legally promulgated or ratified. The 14h amendment was a punitive measure offered in the reconstruction period following the War Between the States. The Southern States already had ratified the 13th amendment abolishing slavery; their ratifications were considered by all to be valid, else the antislavery amendment would not have had sufficient approval for adoption. But when the Southern States rejected ratification of the 14th amendment, they were subjected to military occupation, the legal legislatures were dispersed and illegal, troop-backed rubber stamp legislatures were forced to ratify the proposed 14th amendment—illegally. In Tennessee, where there was no military occupation, the ratification was illegal because of lack of a quorum in the legislature. Furthermore, two Northern States rescinded their ratifications, but were counted just the same. Even if the 14th amendment were legal, it does not provide grounds for the May 17, 1954, ruling. Those who supported the 14th amendment maintained segregated schools in Northern States, and established them in the District of Columbia, and for more than half a century the courts upheld the separate but equal doctrine.

The Warren Court turned away from the Constitution and chose as its authority the nonlegal theories of sociologists, including one Gunnar Myrdal, a Swedish Socialist, who has expressed contempt for the Constitution of the United States.

The Warren Court opinion has been unconstitutionally proclaimed the "law of the land," in violation of article IV, section 2, of the Constitution, which says the law of the land is not a court decree, but "this Constitution, and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States."

This then was to be worse. President Eisenhower sent an army of occupation down on Little Rock to enforce the unconstitutional Warren court action by his own violation of the Constitution's article IV, section 4, which prohibits his improper use of military force.

Then came violation of the Constitution by Congress in the Civil Rights Acts of 1957 and 1960. They attacked the protection against double jeopardy, denied trial by jury, allowed trial outside the State of alleged violation, interfered in elections, seized power delegated to the States, permitted prosecution on testimony taken without allowing the accused to face their accusers, established means for potential election rigging, promoted lawsuits—these in contradiction of the Constitution's 5th amendment, 6th amendment, 9th amendment, 10th amendment, 11th amendment, and articles I, II, and III.

The Warren court's violation of the Constitution, Presidential violation and congressional violation have brought about some forced integration in Southern States—3,500 Negroes attend white schools in Texas, 342 in Tennessee, 208 in Virginia, 16,329 in Kentucky, 113 in Arkansas, 82 in North Carolina, 27 in Florida, and 4 in Louisiana.

But the price has been a shredding and defilement of the Constitution of the United States, the imposition of illegal might over constitutional right, the establishment of disregard for constitutional processes and the erection of a precedent that threatens all constitutional protections of liberty.

If the Constitution can be violated for one purpose, it may be for any purpose. But no end justifies an unconstitutional means.

Thus today, we note 7 years of unconstitutional infamy.

Hypocrisy on the Schools

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 24, 1961

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Hypocrisy on the Schools," published in the Wall Street Journal of May 19.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HYPOCRISY ON THE SCHOOLS

We hear a great deal these days about the Nation's unmet needs that only massive Federal spending can remedy. And we hear especially of the alleged needs of education; a $2.5 billion Federal aid program is now gliding through Congress on promises of what Washington will do for the schools and the people. But unmentioned is what the people have been doing for themselves and their schools.

Ten years ago, the American people were spending about $6 billion a year on education which was a lot of money but not enough in the view of many. They were paying teachers an average salary of $3,126; again, some thought the figure was too low to attract talented personnel. The Commissioner of Education argued that school construction was proceeding at a rate that would fall 370,000 classrooms short of meeting the need in 1954. Another gloomy guess, by the chairman of the Senate Education Committee, put the Nation's classroom shortage at an alarming 600,000 by 1958.

But what did the people actually do about their school problems in the absence of Federal aid?

Well, while school enrollment was increasing 44 percent from 1951 to 1961, school expenditures increased 153 percent—to an estimated $16.4 billion in 1961. The National Education Association (NEA), a main force behind Federal aid for teachers' salaries, found that without a cent of Federal money salaries had jumped 74 percent over the decade, to an average of $5,389. In the meantime, the Nation's average per capita income was rising 30 percent.

What about the 600,000-classroom shortage forecast for 1958? By 1959, according to the generous estimate of the U.S. Office of Education, the shortage amounted to about 132,000 classrooms. To clean up that alleged backlog and meet future needs, the Federal agency called for 61,000 classrooms a year to be built during the sixties. But when the call went out from Washington classrooms were already being built at a rate of 68,000 a year—which would produce a classroom surplus rather than a shortage.

Moreover, figures on enrollment indicate that the worst of the schools' population explosion is over. Enrollment leapt by 44 percent during the decade of the fifties; in the coming 10 years, enrollment is expected to increase by about 20 percent. Yet while the additional influx of children will be half that of 1951–61, the level of community effort continues to rise. During 1960–61, reports the NEA, school construction hit a record high of more than $3 billion in capital outlay.

Were the States and localities wrung dry by these herculean labors, as proponents of Federal aid insist? Hardly. Only 237 of the Nation's 40,000 school districts—or one-half of 1 percent of the total—were found to be "borrowed up" in a 1959 survey by the Department of Health, Education, and Welfare.

A broad margin remains for State and local school financing. Some States are entirely free of debt; the total indebtedness of State and local Governments is about $62 billion. In striking contrast, the Federal Government which would support them has present and accruing liabilities of some $750 billion.

We don't suggest that every community has all the classroom space it might wish or require. Or that teachers' salaries are as high as everyone would like. But scattered local school needs do not amount to an un-

met need of the entire Nation, save in the imaginations of Federal aid enthusiasts.

Let them make a straightforward argument for Federal control of education, if they will. But let us have an end to hypocrisy about a nonexistent need.

Infiltration of Youth Organizations a Major Objective of the Communist Party

EXTENSION OF REMARKS
OF
HON. RICHARD L. ROUDEBUSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. ROUDEBUSH. Mr. Speaker, in testimony just released by the House Appropriations Committee, FBI Director J. Edgar Hoover has warned that infiltration of youth organizations is one of the major objectives of the Communist Party today.

Parents, educators, clergymen—all who work with youth—and the youth themselves, should take careful note of this warning. Hoover's statement is not the only evidence that Communists are now making a concerted drive to win youth to their cause or dupe them into aiding it.

When representatives of 81 Communist Parties met in Moscow last November, work among youth was stressed as a most important phase of Communist activity. Khrushchev himself reminded Communists in all parts of the world of this in a major speech delivered on January 6. He said in this speech:

> Young people can be a powerful revolutionary force. No political party can so attract the youth as the Communists—the most revolutionary of all parties, and the youth delight in revolutionary action.

At its last convention in December 1959 the U.S. Communist Party adopted a resolution on youth activity which declared that "the youth membership of our party is growing faster than any other section, multiplying in some areas as much as tenfold in the past 2 years."

The same resolution stated:

> Truly, youth represents the future of the party * * * to work among youth is to work for the future.

Party members were told in the resolution that they were to give first attention to infiltrating existing youth organizations. They were informed that the party must begin laying the groundwork for the formation in the near future of a national Marxist youth organization. As you perhaps know, a preparatory conference for establishing such a group was held in Chicago at the end of last December.

This is a challenge to our youth and to all American adults as well. The true nature and history of communism—and of our own country—must be shown to our youth. Then they will not fall for the sugar-coated poison of Moscow.

Mr. Hoover testified that he saw a very healthy sign in the fact that some young people are beginning to realize that communism is not all it has been portrayed to be. We must make this more than a sign. We must make it a fact known to all young Americans.

This is the challenge the American people face today.

Retraining of Workers Displaced by Automation

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24, 1961

Mr. HARTKE. Mr. President, I have organized a number of Indiana college and university professors into the Indiana Academic Advisory Council. This group has volunteered to serve as an advisory group, doing research and proposing ideas that can be useful to the Nation.

This council has been active on an individual basis for some time, but the first group meeting was held last Saturday, in Indianapolis, Ind. An article in the Indianapolis Times of Sunday, May 21, 1961, by Walter Spencer, summarizes the meeting, its purposes and some of the recommendations made by the group.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDUCATORS SOUND OFF FOR HARTKE
(By Walter Spencer)

A panel of Hoosier college professors yesterday recommended that Congress enact a civilian GI bill to retrain workers edged out of jobs by automation.

The proposal was included in a group of recommendations on national economy, education, and foreign affairs made by 28 Hoosier college faculty members meeting in a brain trust session called by Senator R. VANCE HARTKE, (Democrat, Evansville), at the ISTA building.

Other proposals included:

Federal aid to education for areas which can't pay for adequate school facilities and Federal "leadership and stimulation" for States which can pay their own school bills but don't.

Provide aid to raise teachers' salaries before spending Government aid on classroom construction.

Expand National Defense Education Act program of student loans beyond present limits of science and foreign language studies.

Set up an advisory committee "similar to the Federal Reserve Board" to study and guide policy on national education problems.

Promote adult education programs necessary to educate older citizens "because of the increasing intellectual upgrading of our society."

Continue to fight Red China's admission to the United Nations, "but plan some sort of two-China program in advance, in case admission becomes inevitable."

Rely more on the Security Council for U.S. dealings in the U.N., rather than on the General Assembly.

Prod Great Britain into taking "more interest" in European economy.

The educators also said:

United States must remain an open market for world trade to maintain its position as a world leader.

Indiana's tax structure must be reformed so that adequate State aid to education can be provided, or "Federal aid will become a necessity."

Tax exemption to parents of college students is not particularly good because it "doesn't provide help for needy parents, since they aren't paying much taxes anyway."

Educators should spend much more time in research to find the real value of educational television before using it widely in schools.

Disarmament is an ultimate essential, but will not be feasible until other world powers agree to an open inspection system.

The United States must be willing to recognize the neutrality of many foreign nations, and cannot support foreign regimes simply because they are pro-American.

The educators split on whether to provide mass aid programs for unemployment victims, but agreed present unemployment statistics are extraordinarily inadequate.

"Unemployment is an inevitable consequence of progress in our scientific revolution and will have a growing impact on political, sociological, and economic problems. Steps should be taken now to retrain workers who are in jobs becoming outmoded," Warren Shearer, head of the economics and social studies department at Wabash College, said.

Shearer noted that jobs are falling off in industries which make products. "Workers will have to be trained for service jobs. Interest should be stimulated particularly in public service work—teachers, doctors, police, and firemen," Shearer said.

The college instructors met in a 6-hour session.

They were invited by HARTKE, after his staff wrote to presidents of all State colleges asking for the names of top intellectuals in the schools to participate in a seminar on national problems.

HARTKE said he had worked on the program for more than 9 months.

"This is definitely not meant to be a political action group, but an outlet so that our State's intellectuals can make their opinions heard," HARTKE said.

Another session will be scheduled in September or October, with discussion of specific Government legislation, HARTKE said. He said "more than 50 papers" on national problems have been sent to him by the college professors since last fall.

Address by Carl Fenichel, Ed. D., at Annual Luncheon of the League School

EXTENSION OF REMARKS
OF
HON. HUGH L. CAREY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. CAREY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

ADDRESS BY CARL FENICHEL, ED. D., DIRECTOR OF THE LEAGUE SCHOOL FOR SERIOUSLY DISTURBED CHILDREN, AT THE ANNUAL LUNCHEON OF THE LEAGUE SCHOOL, SATURDAY, APRIL 29, 1961, GRAND BALLROOM, HOTEL PIERRE

A few weeks ago, on the morning of April 12, a man was rocketed into outer space,

orbiting our earth in less than an hour and a half. On that same morning, a few hours later, another journey took place, one that made no headlines and had meaning for no one except a boy named Jeff, his family, and a few of us at the League School.

At 9:20 a.m. on the day the road to the planets was opened, our mentally ill teenage boy ventured out alone for the first time in his life into a world as strange and frightening to him as the dark infinity of outer space. Jeff was taking his first walk, alone and unescorted, from the League School to the Children's Museum three blocks away, where his teacher waited to give him a hero's welcome at 9:27 a.m. It is the less than spectacular, earthbound journey of Jeff that has meaning for us here today as we join in tribute to a school and an idea that took shape and substance 8 years ago.

The League School was born in a decade that saw the "have-not" people of half the world awakening and demanding that they be allowed to enter the 20th century. During these 8 years we at the League School have been concerned with another world of "have-nots," the mentally ill children who live in the shadows on the edge of life, and who, by being excluded from the community and the schools, were being denied their chance to live in the 20th century.

On the cover of our Luncheon Journal is a line of poetry which truly characterizes the mentally ill child:

"A stranger and afraid
In a world I never made"

Mankind has always distrusted and excluded the stranger within our gates—particularly the deviant, the atypical, the abnormal, whose strange behavior sets him apart—the human being who disturbs us because he is disturbed.

Down through the ages, the victims of mental illness have been exiled, lashed, shackled, and storaged away, far from our consciousness and our conscience. Always they have been despised and disposed of; always they met torture rather than treatment.

While the past still holds its tyranny over us, we are beginning to shake off some of the fear, superstition, shame, and cruelty that still cling to mental illness. New concepts and new drugs are helping to remove the straitjackets that had replaced the chains, and are opening the locked wards of mental hospitals that once were asylums and dungeons.

On our dais are some of the leaders who are helping to change the climate of mental illness in our State and city; outstanding psychiatrists like Dr. Paul Hoch and Dr. Lauretta Bender, who are converting State hospitals from cold storage bins to warm treatment centers; Mr. Hyman Forstenzer, who played a key role in drawing up and in carrying out the pioneering New York State Community Mental Health Services Act of 1954 under which local communities are beginning to assume their rightful and long overdue responsibility for the mentally ill; and Dr. Marvin Perkins, under whose leadership the New York City Community Mental Health Board is improving and expanding community resources and services for the mentally sick.

It was Victor Hugo who said, "There is a power mightier than the armies of men; it is an idea whose time had come." The opening of the League School in 1953 marked the beginning of a new idea whose time had come. Up to that time, the State hospitals were accepted by parents as the last and only resort for most mentally sick children. The reason was obvious; there was no other place to go. All of us recognize that education is probably the most significant life experience of the child and that in today's complex world it is a must for survival.

And yet every community has been compounding and perpetuating the disabilities of mentally ill children by barring them from public schools as uneducable and from clinics as untreatable.

The League School began with the idea that a State hospital is not the only place that could help a mentally sick child. It was a belief that swept away legend and tradition by starting a new kind of treatment facility, one that didn't involve the critical surgery of separating child and family. The League School marked the first attempt to keep deeply disturbed children in the community by substituting the day school and the home for the State hospital.

Each year there comes this moment of appraisal when we go back to the beginning and recount our trials and our triumphs. Like any pioneering project suffering from lack of community support and recognition, we have had to meet the familiar specter of debts, loans, and mortgages in a stubborn struggle to keep our doors open and our idea alive. Actual survival was often at stake. And yet a small band of parents and a tiny force of others, filled with a tremendous sense of purpose and of being part of something new, helped carry us from the small brownstone house where we started with 2 children, a staff of 3, and a budget of $19,000 to our present 3-story building filled beyond capacity with 48 children, a staff of 30, and a budget of more than $150,000.

No one measures the true scale or dimensions of the League School by the area of its building, the size of its budget or the number of children on its register. It is by our example and not by our size that we have become known and judged. With each passing year the school's historical role becomes more evident. Today our day school idea has won professional and community acceptance as a new and vitally important facility in a wide network of services for mentally ill children. We are proud to announce that the value of the day treatment school as an important rehabilitation facility was given official recognition 3 months ago when the regulations on community mental health services were amended, making day treatment services like the League School eligible for State aid, along with hospitals and clinics.

The opening of day schools and day hospitals for the mentally ill is bringing home a few simple truths. We are learning that quarantining the mentally sick from society, while often necessary, is not the best way to resocialize and restore them to society. We are finding out that much of the disability of mental illness is not part of the illness but is the result of the isolated way of life imposed by society on the mentally sick.

Even more significant than our pioneering day school role has been our faith and our belief in the worth of every mentally ill child, no matter how sick. The sad and shocking fact is that most professionals in the mental health field, convinced of the hopelessness and incurability of serious mental illness, have become prisoners of their own pessimism and have shied away from working with those who need it most. About 1 month ago, on March 24, the Joint Commission on Mental Illness, appointed by Congress in 1955, released its long awaited report. Among many other things that the report pointed up was the fact that most psychiatrists and clinics devote most, if not all, of their time to the minor and more easily treatable forms of mental illness and ignore those suffering from serious mental sickness and psychoses. In striking contrast, the League School has won wide and warm respect and admiration for its unique policy of accepting seriously disturbed children who have been turned down by every school, agency, and institution except the State hospitals.

There are many who questioned the wisdom of our policy. We were advised by some professionals and administrators that ours was too costly a program for children with so grim a prognosis. It was suggested that we could win more public support and acceptance by concentrating on the less disturbed where the chances for improvement were surer and faster. All this is undeniably true if our program is to be judged by the standards of the marketplace: low-prices, small overhead and fast turnover.

We prefer to invest each child at our school with significance and dignity—no matter how poor the prognosis and how high the price. We see our children not as a collection of strange specimens, statistics or symptoms found in a medical journal or filed in a steel cabinet—but as members of the human race suffering from an illness that stunts, twists, and cripples the mind of every child who suffers from it—an illness diagnosed by most psychiatrists as childhood schizophrenia.

Anyone observing our children will recognize that while they all suffer supposedly from the same illness, each is a unique individual with every possible variation and extreme in behavior, intelligence, and level of functioning.

At our school are the mute, the silent, and the speechless who have never given voice to any of the joys, curiosity, longings, or needs of childhood except for an occasional cry or signal of distress. Others talk glibly, fluently, and endlessly. Some just mutter to themselves. Others who once had speech, now just echo empty, monotonous phrases or babble like babies.

Among our children are the nimble-fingered and the fumblers, the sure-footed and the stumblers, the slow and listless and the quick and intense. There are the timid and gentle ones who stare into empty space oblivious to everyone and everything, the agitated ones who spin or whirl aimlessly, and the frantic ones who flare up in tantrums of explosive agony.

There are the withdrawn and the isolated who hide or recoil from all human contact, and those who try desperately to cling to any and all for total support. There are the poorly endowed who function like helpless, retarded infants, and others with surprising skills and talents scattered and mixed with glaring deficits and weaknesses—children who reveal a strange imbalance of intact intelligence and maturity in some areas and defective functioning and regression in others.

At our school is a dedicated staff of people who live and work with the painful isolation, the anxiety, and the terrible confusion of these children. Dedication, however, is a poor substitute for knowledge. The fact is that we are working with an illness that can't be heard through a stethoscope or seen through a test tube, an illness involving the most inaccessible and elusive thing in all the world—the human mind.

Unfortunately, so much of what passes as scientific knowledge in our field is folklore, fiction, and fantasy, disguised and accepted as formula and fact. The sad truth is that we know very little about childhood schizophrenia and even less about why and how it happens. We still don't know what part of it is structural, constitutional, psychological, or organic in origin, or how much of it is an accident of chromosomes, glands, metabolism, chemistry, prenatal injury, or a hundred and one interacting forces about which we know so woefully little.

What we need now are massive doses of new facts, new insights, new approaches and techniques in the fields of psychiatry, genetics, neurology, biochemistry, psychology, and education that will bring new answers and solutions to the mysteries of mental illness.

Among the research projects launched at the school during World Mental Health Year 1960 was one which is approximately

international in scope. It involves the first study of the chomosomes of schizophrenic children. Each month, skin biopsies taken from selected children at the school by Dr. Nichtern, the school's psychiatric director, are flown to Sweden for intensive study at the Institute for Medical Genetics at Uppsala, Sweden, under the direction of Dr. Böök.

Dr. Böök, director of the institute, and one of the world's great geneticists, has been among the scores of outstanding visitors who come to the school each year from every part of the United States, Canada, South America, and Europe. Like so many of our visitors, he sees the league school as a potential gold mine for research.

We at the school try to convert into practice the best that can be generated by research and experience. However, even the best theory or technique must be held tentatively and tested constantly, for we must never allow ourselves the domination of dogma or certainty. We realize only too well that whenever any idea or technique stops growing, it starts dying.

Unfortunately, there is still a very influential number of experts in our field who have won their reputation on the theory that if you aren't sure why something happens to a child, blame it on his mama and papa. This theory notwithstanding, the fact remains that mental illness can strike any family. It has hit good, warm, loving parents and has exempted cold, hostile, rejecting ones. It has no respect for wealth, geography, race, or class. It is as impartial as mumps or measles and as unpredictable as April weather.

We at the league school realize that there are no quick remedies, no slick solutions and, as yet, no cure for childhood schizophrenia. But we do know that we can reach and teach many of these children, reduce much of their disability and help them live more effective and productive lives. Unfortunately, we know also that even with the most sympathetic understanding and sensitive handling our therapeutic skills and tools are neither adequate nor precise enough to help every child.

Too often we meet with failure and with the frustration and uncertainty that come from not knowing why we failed. This year, despite our all-out effort, there were seven children at the school who failed to make any progress.

Our days are never marked with the excitement of miracle cures or spectacular growth, but with a single mission and a fervent hope that we can some day reach and touch the lives of each of our children. At the school is a staff of people who never stop trying to make a child's hands, fingers, eyes, and ears do things they never did before; a staff that is forever working to nurture and build some interest, strength or skill—no matter how small—that can bring a little more meaning to a most meaningless existence.

We live for those small breakthroughs when a child, locked in his own lonely world, begins to find new awareness and sudden wonder in the world around him: the sight of falling snow, the sound of wind, the feel of rain, the face of another child; or when a child slowly emerges from the shadows and begins to make contact and manipulate a fragment of the outside world—toying with blocks, stringing beads, dabbling in finger paints, washing a doll or rolling a ball.

Each year we gain heart and hope watching these small triumphs grow bigger: the once frightened and withdrawn children who now find safety in people they once feared; the frantic and agitated ones who are beginning to find the peace and comfort of controlling their own bodies; the once completely dependent and helpless ones, now proud of their new-found capacity to feed, toilet, dress, and manage themselves.

Each year there is the deep satisfaction that comes from the lessening of anxiety and the growing appetite for life of children who once sought refuge from life and who now find pleasure in the give and take of playing with others, skating, swimming, joining the school's stamp club, putting on an Easter play, exploring the neighborhood and the city, children who are taking their first strides toward coping with our world and finding it good.

And then there is that deep personal and professional gratification that comes from watching the mind of a child begin to come alive and grow as the wonder of symbols and words and the magic of books and academic learning begin to open up.

At last year's luncheon I told of the 16 children at the school who were reading. This year we have 24 children, once labeled "uneducable," who are reading and doing some form of academic work.

Since last year's luncheon, four more of our children have made sufficient progress to graduate from our school; two of them are now in Brooklyn public schools; one in a Nassau County public school and one in a good private school in Queens. These are some of the more heartening achievements that give us the reward of fulfillment and help us live through the heartbreak and the humility of failure.

And now I want to express our gratitude to all who helped make this possible—to the National Institute of Mental Health, the New York State Department of Mental Hygiene, the New York City Community Mental Health Board, to our staff and parents, to the National Organization for Mentally Ill Children and the many other wonderful organizations and individuals, some of whom are listed on our honor roll, all of whom are listed in our heart.

With your continued support we can go on with the unfinished business that is still before us. The grim arithmetic of 17 million Americans, including the countless number of children and adolescents, who suffer from some form of mental illness, is too staggering a statistic to be swept out of our mind and hidden under the rug.

We must give mental illness the same power and urgency we give our space program if we honestly believe that the mind of a child is as precious as the mechanism of a missile.

Outside, sitting and waiting for us, are the mentally ill children who have been cast out of life. What we do to help them find their way back will be the test and measure of our conscience and our humanity.

Sale of Surplus Cotton Owned by the Commodity Credit Corporation

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1961

Mr. WHITENER. Mr. Speaker, Hon. JOHN W. MCCORMACK, our distinguished majority leader, has introduced a bill, H.R. 6783, to provide for the sale of surplus cotton owned by the Commodity Credit Corporation at such prices as the Secretary of Agriculture may determine in order to allow the U.S. cotton textile industry to regain the level of exports of cotton products during the period 1947–52.

This bill, if enacted, will do much to alleviate the distressing situation existing in the textile industry by reason of the so-called two-price cotton system which prevails today. The principle of the bill is in line with the 7-point program announced recently by the President for the relief of the textile industry.

The bill deserves the support of every Member of the House who is interested in protecting the jobs of the people who are employed in this country in the great textile industry. Mr. MCCORMACK has had correspondence recently with the Secretary of Agriculture and the Secretary of Commerce with respect to his measure. With the thought that my colleagues in the House might like to read the correspondence he has had with these officials I request that a copy of a letter from Mr. MCCORMACK to the Secretary of Commerce, dated May 15, 1961, and the reply thereto from the Secretary dated May 19, 1961, be inserted in the Appendix of the RECORD, together with a copy of Mr. MCCORMACK's letter of May 23, 1961, to the Secretary of Agriculture:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
OFFICE OF THE MAJORITY LEADER,
Washington, D.C., May 15, 1961.

Hon. LUTHER H. HODGES,
Secretary of Commerce,
Department of Commerce,
Washington, D.C.

DEAR SECRETARY HODGES: I noted in the newspaper recently that President Kennedy is taking steps to try and meet the problems of the textile industry of our country, and that in connection with the same he has appointed a Cabinet Committee, of which you are the chairman. From the newspaper item that I read, this committee has suggested to the President a program of assistance to this industry and is giving further consideration to this important matter.

Several years ago I introduced a bill which I thought was a fair one, but with reference to which no action was taken. I have again introduced the bill, H.R. 6783, a copy of which I herewith enclose, which touches one phase only of the problem in the field of textiles, but which I consider to be an important one. I think the passage of this bill would be of material help to the textile industry. I have always felt that it was a fair one.

I am respectfully forwarding the within copy of the bill that I have introduced for the information of yourself and your associates on the committee. I have written to Chairman COOLEY of the House committee, urging early and favorable action. I think that he and the members of the committee are waiting to find out what legislation will be recommenedd by the committee of which you are chairman. I think the within bill should receive favorable consideration by you and the other members of your committee

With kind regards, I am.
Sincerely yours,
JOHN W. MCCORMACK.

THE SECRETARY OF COMMERCE,
Washington, D.C.

Hon. JOHN W. MCCORMACK,
House of Representatives,
Washington, D.C.

DEAR MR. MCCORMACK: Thank you so much for your good letter of May 15, 1961, about your bill to provide for the sale of surplus cotton owned by the Commodity Credit Corporation at such prices as the Secretary of Agriculture may determine to allow the U.S. cotton textile industry to regain the level of exports of cotton products during the period 1947–52.

This is a most interesting bill, indeed, and is along similar lines to the thinking which

the President's Textile Committee has had.

As you know, this committee made a verbal report to the President and based on it, the President announced a seven-point program. One of these points was for the Secretary of Agriculture to advise him with respect to the elimination of the so-called two-price cotton system. The textile industry should not be discriminated against by paying higher prices for cotton than that at which foreign importers of cotton are permitted to buy.

We are now waiting a report on this matter from the Secretary of Agriculture, which I hope will be forthcoming shortly. As soon as it is, I will be happy to advise you.

Obviously, legislation will be necessary to change this two-price system.

Thank you so much for your fine cooperation in this matter which is so important to one of our vital national industries.

With kind regards,

Sincerely yours,

LUTHER H. HODGES.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
OFFICE OF THE MAJORITY LEADER,
Washington, D.C., May 23, 1961.

Hon. ORVILLE L. FREEMAN,
Secretary of Agriculture,
U.S. Department of Agriculture,
Washington, D.C.

DEAR SECRETARY FREEMAN: Under date of May 15 I wrote to Secretary Hodges in relation to H.R. 6783, which I have introduced, copy of which I herewith enclose. My letter to Secretary Hodges (in connection with this bill) will also constitute a part of this letter to you in conveying to you my thoughts in connection with such proposed legislation. You will note that this bill is nothing new in my mind; I introduced a similar bill several years ago.

Under date of May 19 I received a letter from Secretary Hodges in which he says, in part, "This is a most interesting bill, indeed, and is along similar lines to the thinking which the President's Textile Committee has had."

Secretary Hodges also said, in connection with the President's announced 7-point program, "One of these points was for the Secretary of Agriculture to advise him with respect to the elimination of the so-called two-price cotton system. The textile industry should not be discriminated against by paying higher prices for cotton than that at which foreign importers of cotton are permitted to buy."

Secretary Hodges further said in his communication of May 19, "We are now awaiting a report on this matter from the Secretary of Agriculture, which I hope will be forthcoming shortly. As soon as it is, I will be happy to advise you. Obviously, legislation will be necessary to change this two-price system."

I sincerely hope that action on this matter, particularly in connection with H.R. 6783, will be rapid and that you will quickly make a report to the committee on my bill.

With kind regards, I am

Sincerely yours,

JOHN W. MCCORMACK.

The Fear of Woozles

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24, 1961

Mr. JACKSON. Mr. President, I ask unanimous consent that an address entitled "The Fear of Woozles" delivered by Prof. Robert W. Tufts of Oberlin College, be printed in the Appendix of the RECORD. The address was delivered this spring to the students and faculty of Oberlin College. It is an appealing, perceptive, and humorous discussion of some of the problems of scholarly research. Professor Tufts, formerly a member of the policy planning staff of the State Department, and an outstanding authority on economics, is serving with distinction as the chief consultant to our Subcommittee on National Policy Machinery.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FEAR OF WOOZLES

One bright winter's day when the snow lay fresh on the ground, Winnie the Pooh discovered some tracks. He was walking round and round an old beech tree at the time. After Piglet joined Pooh's peregrinations, the number and variety of tracks alarmingly increased. As Christopher Robin pointed out, but not until Pooh and especially Piglet had had a good scare, the tracks were their own.

Analyzing this episode, we note that Pooh made a genuine discovery: There really were tracks. Next, that Pooh misinterpreted his data: The tracks were not the tracks of a Woozle. Thirdly, that to the best of the ability of a Bear of Very Little Brain, Pooh published his results: The whole woods soon was alarmed about the Woozle. We note, lastly, that a scholarly person was needed to set things straight: Christopher Robin quieted the company by correctly reading the evidence.

The spoor of the Woozle is heavy in the grooves of Academe. Our precincts resound with reports of useless discoveries. Scholarly detectives by the dozen would be needed to separate the useful from the useless clues to the whereabouts of understanding.

This state of affairs is not new. In an amusing but serious article a former editor of science recalls the sober announcement in 1935 of the formation of the American Institute for Useless Research. The institute, serving the needs of physics, was to publish a journal called Refuse of Modern Physics. The German edition was to be known as Makeshift fur Physik, the French, deliciously, as Comptes Fondues.

For some time I have been thinking along similar but more ambitious lines. An interdisciplinary journal of useless findings, or Woozles, would meet an important need. I propose to call it the Compendium of Woozles, or more familiarly, in our modern manner, C-O-W. It will be sponsored by a Council of Useless Discoveries, or C-U-D.

C-O-W's function will be to bring all research of little or no interest between two covers, thus helping us to ignore it. An editorial innovation, long overdue in this age when everything must be quantified, will be the indication of an article's exact weight in the table of contents. What Kinsey has done for sex, we will do for scholarship. Instead of referring loosely to an article of some weight, C-O-W will enable us to speak precisely of Dr. C's 2-ounce rejoinder to Dr. B's 1-ounce comment on Dr. A's 3-ounce article on "The Construction of a Construction Index for Waterloo, Iowa: Some Methodological Notes."

Unfortunately, I am only half joking. The flood of trivial publications threatens to undermine the foundations of serious research. Lincoln once remarked of a man that whenever he opened his mouth, he subtracted from the sum total of human knowledge. The excesses of scholarly publication today threaten to accomplish the same result. The specialist has been ridiculed as someone who knows more and more about less and less. I would raise the question whether he may not merely know less and less. Judging from the apparent role of the CIA in the Cuban fiasco, it might be necessary to introduced the minus sign to measure the contribution of intelligence experts. Might this be because of overspecialization?

The scholar who tries to keep up with current work in his discipline faces an impossible task. A recent issue of the American Economic Review, the leading American quarterly in its field, listed 218 new books on economics. My long division indicates that it had been receiving 2½ books on an average day. One of these books, by the way, was a 474-page bibliography of works on economics published in the year 1958. The same issue of the AER contained advertisements of 40 economic journals. A quick check indicates that there are at least as many more which were not advertised. A new issue of some economic periodical could arrive every day in the year (Sundays mercifully excepted so that we may read the 492 pages of the New York Times.

No one in his right mind, of course, would try to read everything published on economics or any other subject. Instead, like the Romans, scholars have tried to divide and rule. The effort is self-defeating. The more we specialize, the easier it becomes to expose one's self in print, with little danger of being cited for indecent exposure. Almost anything can be accomplished, if one tries, and hardly anyone will notice that one had little or nothing to say. Few people are more surprised at an affirmative answer than the author who inquires, with faint self-deprecation, whether you have seen his piece in "The Economics of the Compost Pile" in the Middle Atlantic Review of Bioeconomics. And when he adds, a little archly, "I said all I have to say on the subject in that piece," he really does not expect you to read the reprint he will send you in the next mail. On the contrary, he is usually counting on you not to.

One suspects, indeed, that the purpose of the press is more to impress one's colleagues than to express one's findings. The law of publish-or-perish has led to a kind of academic Darwinism, or survival of the wordiest. When one is asked these days what one is working on, it is taken for granted by both questioner and questioned that the words "working on" refer to writing. It would be almost unthinkable to reply that one is reading.

There is, I should quickly add, at least one inescapable reason for the rising tide of publication. About one-third of all the people who have ever lived are alive today and about 90 percent of all the scientists who have ever lived and worked are alive and working today. Probably much the same is true of the social sciences and the humanities. The quantity of research turned out presumably bears some relation to the number of researchers at work.

If so, there is all the more compelling need to set and maintain high standards in writing and reading. Otherwise Gresham's law may be found to apply to scholarship, with bad research driving out good in the marketplace of ideas.

I am concerned about this and you should be, too. We face the danger of an increase in information and a simultaneous decrease in understanding. If you are one of the lucky and lonely ones, a person with an original mind and creative power, a time will come, perhaps very soon, when you should write, not only to share your insights with others but also to gain new insights through the disciplined and imaginative ordering of your old ones. If your standards are as high as they should be, most of your work should be entrusted to a trunk in the attic, not to a printing press.

Over the past 2 years I have been working as a part-time consultant to a Senate subcommittee. We have been studying the

policymaking process in the executive branch of our Government and trying to make recommendations for its improvement. (There is still room for improvement.) I am pleased with the quality of the subcommittee's work. I am equally pleased with its brevity, and believe that the two are related. In 2 years, two professionals and a part-time consultant (and here I slightly exaggerate) have produced 40 printed pages, or a page every 18 days. Our approach was to read everything that had been written on the subject and to interview everyone who had knowledge of the process as a result of personal participation in it at a high level. After long reflection and discussion, we reached tentative conclusions and checked them with persons who had impressed us by their understanding and perceptiveness. To the extent that we have made a contribution, it is because we took our time, placing emphasis on understanding, not on rushing into print.

Most of us should, I think, read more, and read more carefully, and write less, also more carefully. As a wise politician once said to me of an overly articulate colleague, "You don't learn anything with your mouth open," or I would add, with your pencil put too quickly to paper.

My hope for you who are about to graduate is that you have learned the joy and the craft of reading. To read well is hard but rewarding work. Mixed with walking, new ideas may rattle around in your head and shake down into some pattern of understanding.

Above all, do not restrict your diet to your specialty, whatever it is. The seeker after understanding is, first of all, a powerful, lively, sensitive, joyous, voracious, and catholic reader. The ideas that may light your way are to be found in the least expected places. You are looking—if you are looking for understanding—for a whole larger than, and different from, any of its parts. And you will fully understand any one part only as you approach an understanding of the whole.

As some of you know, I am deeply interested in international affairs. In few, if any other, fields of scholarly research and publication is the ratio of sense to nonesense so discouragingly low. Over and over again we rediscover, in the harsh light of experience, a principle that has been buried, out of sight and out of mind, under layers of wishful thinking.

In the past 15 years the documents on disarmament published by the United Nations make a stack at least 5 feet high. In addition, there is a mountain of private and official papers, documents, reports, and books. Surely no one has read them all. The careful prospector, searching in the slag heaps of useless research by writers ignorant of history and politics, may find a few nuggets here and there. Now the nuclear physicists, full of guilt and good will, too confident that a man who can build a fusion bomb can discover how to fuse mankind into a harmonious and peaceful whole, and too contempuous of social science, are filling our bookshelves with works they should have left unwritten until they had done some reading.

Perhaps our greatest difficulties in using our limited power to mold the world environment in ways favorable to the survival and flourishing of free institutions is our ignorance, as a people, of history. This ignorance surely explains, in part, our susceptibility to the earnest pedlars of quick and easy solutions. It may be, as someone has said, that those who do not know history are condemned to repeat it.

On the wall of my office I have a Daumier cartoon which shows an American haranguing the Paris Peace Conference of 1849. He is pointing to the green felt hat he is wearing and saying that the only means of pacifying the human race is to require everyone to wear a hat like his and to remove it only on going to bed. No one, Daumier adds, dares to oppose this view. The American, by the way, may have been from Oberlin. A friend told me later that three Oberlinians journeyed to Paris for this conference in 1849.

Somehow I doubt that the authors of the Federalist Papers would have made the same mistake. They had read too much and reflected too long upon it. They had the great advantage, of course, that there was not nearly so much to read as is thrust before us. In our anxiety to be informed, we clutter our minds with bright, shiny, novel—and useless—discoveries, more often than not frightening ourselves in the process. All too often we ask, "Have you heard the latest?" and all too seldom, "Have you read the best?"

Why fear the Woozle? Is there anything really to fear in the useless discovery? The reason for my fear is simple: I am afraid of suffocation under a blanket of mediocrity. Galloping mediocrity, not creeping socialism, is our real malaise. It is not, worse luck, a painful disease. In fact, it numbs and deadens the minds. It is the stock-in-trade of the commercial world. One expects Madison Avenue to be a producer and consumer of Woozles. But the minds that discover that aspirin dissolves as it enters the stomach or that royal jelly is good for the skin will neither make the world safe for democracy nor even free it of headaches and blemishes.

One has higher hopes for scholarship. But Madison Avenue has its spiritual colleagues on the campus. The debasement of standards in research and criticism is alarming and one is related to the other. Perhaps a liberal arts college like Oberlin may make its most important contribution by providing a home for men whose scholarly role is to revive and restore a critical spirit that dares to call a Woozle a Woozle—not a basis for a research grant from the Ford Foundation.

When he learned the truth, Pooh said, "I have been foolish and deluded and I am a bear of no brain at all."

"You're the best bear in all the world," said Christopher Robin soothingly.

"Am I?" said Pooh hopefully. And then he brightened up suddenly. "Anyhow," he said, "it is nearly luncheon time."

And so it is.

The Public Opposes Federal Subsidies for Teachers' Salaries

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. FRELINGHUYSEN. Mr. Speaker, the House Education and Labor Committee today approved a bill which authorizes the Federal Government to spend roughly $2½ billion over the next 3 years to help in the construction of public school classrooms, and to improve the pay of the Nation's teachers.

In my opinion, Mr. Speaker, this bill is defective in many respects. Especially objectionable is the bill's failure to discriminate between two quite different problems, toward which the Federal Government may well be said to have quite different responsibilities. It is one thing for Washington to help construct a building, and quite another for us to determine what is an adequate salary for a teacher in our public school system.

I am glad to say, Mr. Speaker, that the public appears to discriminate between these two types of programs.

In a questionnaire I recently sent to my constituents, I asked for their opinions on various subjects. On the question, "Do you favor Federal aid for school construction?" 55 percent answered "yes," while 40 percent were opposed and 5 percent had "no opinion." On the question, "Do you favor Federal aid for teachers' salaries?" only 29 percent answered "yes," 64 percent were opposed, and 7 percent had "no opinion."

Almost 8,000 people returned the questionnaire. This is a 40 percent return, the highest I have ever received in a poll of my constitutents. This interest is heartening. So too is the unwillingness of the public to support ill-advised programs such as Federal subsidies for our Nation's teachers.

The final results of my questionnaire are as follows:

[In percent]

	Yes	No	No opinion
Do you favor—			
1. Federal aid for school construction?	55	40	5
2. Federal aid for teachers' salaries?	29	64	7
3. Federal scholarships for higher education?	59	32	9
4. Replacing the electoral college with direct vote?	79	14	7
5. Medical care for the aged tied to social security?	53	39	8
6. Increasing minimum wage to $1.25 an hour?	49	41	10
7. Broadening scope of minimum wage coverage?	52	27	21
8. Federal aid for commuter railroads?	39	45	16
9. Construction of a jet airport in Morris County?	19	65	16
10. Establishment of a Peace Corps?	52	28	20

Career Keys

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24, 1961

Mr. JAVITS. Mr. President, the serious thought that this year's crop of high school graduates is giving to their future careers is exemplified by the essays of the eight young ladies who have been desigated the regional key award winners of the Girls Clubs of America. Seven of these young ladies received $350 scholarships to enable them to attend the schools of their choice. From New York there is 17-year-old Connie Anne Pucci of 2402 Avenue A, Schenectady. The eighth talented 17-year-old Mary Kimmerlin of Bridgeport, Conn.,

was the winner of the $1,500 scholarship.

The subject of the contest was, "What a Career Will Mean to Me," and these scholarships were given in conjunction with the Reader's Digest Foundation. The young winners are to be congratulated for their achievement, and I am happy to name the other winners of the regional scholarships.

The other winners are: Madeleine Schwarcz, 17, 196 Ora Lee West, Valdosta, Ga.; Susan Jane Bright, 17, Rural Route 5, Franklin, Ind.; Lois Anne Rowe, 17, 3305 Washington Avenue, Newport News, Va.; Dawn Quier, 17, 10 South Halstead Street, Allentown, Pa.; Rita Marie Mageary, 17, 38 Story Avenue, Lynn, Mass.; and Marjorie Brecht, 17, 20 Partridge Road, Pittsfield, Mass.

I ask unanimous consent that the eight essays relating to the subject "What a Career Will Mean to Me," written by the aforementioned young ladies, be printed in the Appendix of the RECORD.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

WHAT A CAREER WILL MEAN TO ME

(By Connie Anne Pucci)

In this world of today there are many people. Among these people there are individuals, each having set a goal for himself. This goal is what that person wants to do with his life. This goal is a career.

A career to me will mean a way of life. It will be what I want to attain out of life. My interests, skills, abilities, and personality are centered around business; therefore this is the career I have chosen.

The importance of a career will be very essential to me. It will mean that I will have the confidence of an employer, responsibilities to assume, decisions to make, and the initiative to go ahead when necessary. I will be working with people who have the background, education, and interests similar to my own. I will also be meeting new people, working and planning with them to make my employer's business an asset to him.

The impressions that will make upon these people will be important. I will be the first person to give a picture of the firm and of my employer. In my position I will be a representative of one firm to another.

My career will also be significant to me. It will give me the pleasure of knowing that I have completed a job that is done well. It will also tell me that I have achieved part of the goal that I have set for myself. It will prove that I have a position of trust upon my shoulders, that an employer can depend upon me for what he wants done. Also, that he can trust me with responsibilities, decisions, and initiative that he needs in an employee.

These are the reasons why I feel a career will be important to me as a goal that I plan to fulfill.

WHAT A CAREER WILL MEAN TO ME

(By Madeleine Schwarcz)

A career, to me, is a dream. Everyone dreams of a career in his lifetime. The majority of these dreams never come true. This is due to the fact that the persons lose interest, get married, or for some other reason. Every person thinks his situation is different and that he will reach his goal. I know that I must reach mine.

I have been given so much in my life that I have to try and repay—in the very best way that I know how—the people who have given me so much. I am not referring to material things.

I have a debt to pay to God, to my mother, my family, and to society. The most important thing in my life is to do good and to make my mother proud of me. It has been said that love is the greatest reward of all. I give my mother all the love I possibly can and yet I want to give her so much more. She has reared me alone and has sacrificed greatly for me to have just about everything. I would like to be able to give her some of the things she has given to me.

My chosen career is that of an airline stewardess, because I like to work with people and be of service to them. I plan to do secretarial work until I reach the age of eligibility, which is 21, to become a stewardess. I would like very much to attend night school as it will be necessary for me to work during the day. Courses in foreign languages would be particularly advantageous.

This is what a career would mean to me.

WHAT A CAREER WILL MEAN TO ME

(By Susan Jane Bright)

Ever since that day in the third grade when I first decided that I wanted to become a schoolteacher, I have worked hard on each rung of the ladder of life which is leading to my achievement of this goal. The climb has not always been easy, especially in these last 2 years; and I know it will be much more difficult upon entering college. However, along the way I have tried to do my best in all my schoolwork and extracurricular activities.

With each important decision in my life, I asked myself, "Will this better prepare me for future years?" "Will it be a benefit to someone else as well as myself?" If I could not truthfully answer "Yes" to these two questions, I knew that it was not a worthwhile thing.

I want to be able to repay all of the people who have helped me all through my life, by, in turn, contributing something to the world and helping others. I feel that it is my duty, in payment for the privilege of living, to do something worthwhile in life—to contribute something to mankind.

In 1961—a year of great advancement—we are entering a period that will take more bravery, wisdom, and strength than any other period in history. I want to feel that I am contributing to my Nation's welfare by reaching my goal in life, teaching, and helping to prepare the Nation's youth for other greater times that are to come. Through this achievement, I will feel that I have compensated for a small portion of what I owe to my country and to my God.

WHAT A CAREER WILL MEAN TO ME

(By Dawn Quier)

There comes a time in each of our lives when we must make a very serious decision. That is whether or not we will pursue a career. This decision, I feel, is one of great importance, and it should be made with a good deal of thought. I have made this important decision and have chosen a career in teaching.

It will mean a great deal to me if all my dreams of the future are fulfilled. College, of course, is just the stepping stone to a career, but offers limitless opportunity for educational advancement. After college new experiences begin. Yes, it will then be the start of a career that had been anticipated all through college. The opportunity to help others will be ever present. To me a career will mean satisfaction derived from helping others. It will build my poise and character each day as I go through the ups and downs of life. A career will offer a new outlook on life, to live for others and not just for myself. If and when I have a family of my own, it will supply a background by which we can live in togetherness and love.

Finally, I am hopeful that a career in teaching will strengthen my perseverance and integrity in all I undertake throughout my life.

WHAT A CAREER WILL MEAN TO ME

(By Lois Anne Rowe)

Stepping inside the dimly-lit theater I stared in awe at the many rows of seats around the huge room. Looking up, I saw a stage already set with background scenery. I paused for a moment after climbing onto the stage and sat down in one of the small chairs, thinking to myself what a magic world is the theater.

To me a career means a future—something to look forward to. The theater is ageless as an art, yet untouchable by the experience gained. Most people believe true acting is an art, but how can a series of emotions such as being sad, happy, or joyful come just from reading of words. Everywhere you go, you give an impression of yourself—you the individual. A career is important in a field which you hope to ascertain, but without knowledge and understanding of your field you will do nothing. The impression actors give an audience depends entirely on their interpretation of action and words. True acting comes from the heart; it is giving a part of yourself to others through your understanding of an audience as individuals. Everyone is born with some acting ability, but few ever develop it to its fullest extent.

Being born in America has granted me the opportunity to develop my knowledge and choice of vocation, while it has given me the courage of my convictions. This is why I have chosen such a vocation as the theater arts. With faith I grow, with hope I will try, through charity I shall succeed.

WHAT A CAREER WILL MEAN TO ME

(By Marjorie Brecht)

A career to me is more than a way to support myself. It is a special calling to some profession for a lifework which would give the feeling of accomplishment far beyond the necessity of earning a livelihood. Such endeavor would result in greater happiness and well-being for others as well as for myself.

For my career, I have decided to enter youth work. This desire did not occur all of a sudden, but rather, it started when I first joined the girls club 3½ years ago. During this time, I have assisted in a variety of activities at my local girls club. My interest in children grew until one day, I realized that I would like to take up youth work as a career. In my chosen career, I hope I will be of service to the people in my community. Giving children the right kind of guidance at an early age will make them better citizens so that they, in turn, can serve their community.

Thus, a career will mean a great deal to me. It will give me the personal satisfaction which I desire as well as give me the ability to help other people find personal satisfaction in their daily living. By helping others to find happiness, I believe that I could make a small contribution toward a better way of life. Therefore, after I complete college, I hope to begin my work with youth in the girls club organization.

WHAT A CAREER WILL MEAN TO ME

(By Rita Marie Mageary)

"Lives of great men all remind us
We can make our lives sublime
And departing leave behind us
Footprints on the sands of time."

This excerpt from "A Psalm of Life" by Henry Wadsworth Longfellow incited within me a desire to further my education so that I may make a deserving and worthy contribution to mankind. At the Girls Club, when I saw the joy sparkling in the eyes of a girl, fighting an endless battle against cere-

bral palsy, as she proudly displayed the first hat that she had knitted under my direction, I too experienced a sense of elation and accomplishment. I felt this way because I realized that she and many other Girls Club members not only benefit from the material knowledge that they gain through such training, but that they also are building and improving their minds. It is this realization that prompted the choice of elementary teaching for my career.

Through teaching, the key to open the minds of many youngsters will be mine. With this I shall be able to influence their ideals, their reasoning, their learning power, and above all, their future. For, you see, I will be laying the foundation with which they will further their education and their lives. If I fulfill my duty to the best of my ability and lay a sturdy foundation, I will be rewarded with the knowledge that my students wil grow to be citizens which the United States can be proud of. Thus, in part, my goal will be obtained, because I will have aided not only many people, but also, indirectly, my country and God.

The long road leading to the fulfillment of my destiny has not yet ended. Another milestone will be added when, in September of 1961, I enter college. After 4 years of preparation there, I shall be ready to begin my career. But the long road and its challenge will not end there; it will end only when I witness the growth of children's minds under my guidance—for only then, with the achievement of knowing that I share a part of this important growth, shall I leave my footprints on the sands of time.

Foreign Affairs: Bad Judgment and Bad Manners

EXTENSION OF REMARKS
OF
HON. CLARK MacGREGOR
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. MacGREGOR. Mr. Speaker, the drifting of U.S. foreign policy since January is becoming of increasing concern to serious and informed persons. In this connection my own views coincide with those of the distinguished gentleman of the New York Times, C. L. Sulzberger, as appearing in his column of this date. I would like to call his column to the attention of my colleagues:

FOREIGN AFFAIRS: BAD JUDGMENT AND BAD MANNERS

(By C. L. Sulzberger)

PARIS, May 23.—It is as harmful to diplomacy as to digestion when one bites off more than one can chew and it begins to look as if President Kennedy's European journey will suffer from precisely this defect.

The primary purpose of the journey was to try and improve Franco-American relationships and thereby to end certain glaring differences in NATO. By choosing Paris for his first official trip to Europe, it was clear the President meant to do signal honor to General de Gaulle. Thus the best possible atmosphere for fundamental accord might be encouraged.

Now, however, by adding Vienna and London to his schedule, a carefully developed psychological ambiance has been destroyed. In the eyes of the world the Vienna dialogue transcends in importance that in Paris and, if anything, the brief London epilogue adds a note that will seem slightly sour to De Gaulle. The chances of any real achievement here have seriously diminished.

One important Frenchman remarks: "It appears the President's tour was arranged by American Express, not the State Department."

This change was neither wise nor necessary. Had Mr. Kennedy stuck to his original plan, had he flown to Paris for 3 days and then flown home, there was reason to hope his visit might prove fruitful. And, after all, such a schedule would in no sense have prevented a later conference with Khrushchev.

The presidential jet takes less than 7 hours to cross the Atlantic. It could have returned to Washington as initially contemplated; and it could have gone again to Austria a fortnight later with little inconvenience save, perhaps, some sacrifice in sleep. But, apparently, some of our foreign policy advisers were too zealous. They thought it both logical and tidy to wrap up everything in one big bundle and they ignored Talleyrand's sage advice—"Above all not too much zeal."

There was no point tying together two wholly separate packages—intra-alliance difficulties, on the one hand, and East-West crises on the other. Whether Moscow's calculations were shrewd or accidental, the net result is that Khrushchev, by euchering Kennedy into what will necessarily be a Vienna stalemate, euchered him out of a possible Paris success.

When the White House began delicately to explore the idea of a Kennedy-Khrushchev colloquy no one was in any hurry. This project had nothing whatsoever to do with the later plan for a trip to France; nor should it have today. Furthermore, one can scarcely say our position vis-a-vis the Russians improved between February and May when the Kremlin suddenly accepted what had only been a tentative suggestion. It is said the President wants to take the measure, personally, of the Soviet Premier. This may be a sound intention but it is scarcely urgent.

It is also said the President wishes to make plain to Khrushchev that the United States remains strong and firmly resolved to protect its far-flung commitments. Surely such attitudes might easily have been conveyed, at least initially, by conventional diplomacy, reinforced by public statements. There was no compulsive need for an early June summit. Yet we are almost made to appear as if, indeed, we are being compelled by events to alter schedules. This is grist for Russia's propaganda mill.

One must regret that our diplomatic experts failed to inspect all the angles in advance. By focusing on the anti-NATO problem, they seemingly forgot the NATO problem. A priori, it looks as if they had misappraised the situation and compounded with bad judgment what De Gaulle will consider bad manners.

Facts, in the dialectical sense, have not been altered. But one nondialectical fact is the personality of De Gaulle, a proud and sensitive man. And this is an outstanding fact in France today because De Gaulle, politically speaking, is contemporary France and will remain so for some time to come.

Therefore, if it was once worth facing this reality and doing things in a fashion best calculated to create a receptive mood in the General, it was still worth doing so. One may assume that De Gaulle, who is meticulously courteous and careful to disguise his feelings, will give no hint of disgruntlement. And one may also hope Kennedy's charm and persuasive powers will facilitate the entente we so much want. But those who know De Gaulle make no secret of their disappointment and uneasiness. Any aura of optimism has vanished.

Recognition of Apprenticeship Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24, 1961

Mr. WILEY. Mr. President, in a fast-changing, forward-moving age, there is a real need for useful, constructive, creative programs to train and equip our people to meet the challenges of the times.

Today, I would like to pay tribute to efforts being made to enable our people to better meet the challenge; that is, the importance of vocational training and the apprenticeship programs to train competent craftsmen for industrial progress.

Recently, I received two resolutions on these important topics, adopted by the Wisconsin State AFL–CIO conference on apprenticeship. To give my colleagues the benefit of the resolutions, I ask unanimous consent to have these printed in the Appendix of the RECORD.

There being no objections, the resolutions were ordered to be printed in the RECORD, as follows:

Whereas the program of vocational education in Wisconsin has assisted in developing the skills of the working people of our State; and

Whereas there is a continuing need for skilled workers who are trained through a sound method of apprenticeship; and

Whereas the program of vocational education in Wisconsin has progressed through the use of Federal aids allotted to the State under the provisions of the Smith-Hughes and George-Barden Acts; and

Whereas the further development and expansion of these training programs is essential to our national strength and economy: Therefore be it

Resolved, That the Wisconsin State AFL–CIO Conference on Apprenticeship assembled in Wausau, Wis., Tuesday and Wednesday, January 31 and February 1, 1961, record its recommendation to President John F. Kennedy and the Congress of the United States to support increased Federal aids for vocational education; and be it further

Resolved, That a copy of this resolution be presented to the executive committee of the AFL–CIO in Wisconsin for their consideration and that a copy be sent to the Honorable John F. Kennedy, President of the United States, the Executive Committee of the AFL–CIO in Washington, D.C., to all Wisconsin congressional representatives and to the Honorable Gaylord A. Nelson, Governor of Wisconsin.

Adopted by Wisconsin State AFL–CIO Conference on Apprencticeship, January 31 and February 1, 1961, Wausau, Wis.

RESOLUTION No. 2

Whereas labor and management have given of their time and effort in advancing the cause of the apprenticeship system for the purpose of training competent craftsmen for the industrial welfare of our Nation; and

Whereas the future status of skilled manpower in the United States is dependent upon apprenticeship training; and

Whereas there is a need to acquaint the American public with the efforts made to establish the philosophy of bona fide apprenticeship training in order to provide the public with the highest possible grade of products and services: Now, therefore, be it

Resolved, That the Wisconsin State AFL–CIO Apprenticeship Conference meeting in Wausau, Wis., January 31 and February 1, 1961, go on record in favor of the issuance of a special postage stamp in recognition of the efforts of both labor and management so that it might serve as a reminder to the public of the value of the apprenticeship system to our national economy; and be it further

Resolved, That copies of this resolution be sent to the Postmaster General and the Senators and Congressmen from Wisconsin.

Adopted by Wisconsin State AFL–CIO Conference on Apprenticeship, January 31, 1961, and February 1, 1961, Wausau, Wis.

Problems of Parochial Schools

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. PUCINSKI. Mr. Speaker, on May 17, I included in the RECORD the first two articles of a series which has been printed in the Chicago Sun-Times regarding the entire question of Roman Catholic elementary and secondary schools in this country, and in particular, the plight of these schools in Chicago. The first two articles in this series appear on page A3488 of the CONGRESSIONAL RECORD of May 17.

I should like to include today the remainder of this series, which I am sure will go a long way in helping Members of Congress understand not only the contribution Catholic parochial schools are making toward this Nation's educational effort, but also the problems these schools experience in trying to help educate the children of our country.

There has been a great deal of discussion about some form of Federal assistance to these private schools, should Congress decide to enact Federal aid to public school education.

One paragraph stands out most succinctly in this series which I trust Members of Congress will consider as they discuss this entire subject. This paragraph clearly describes the contribution the Catholic parochial schools are making in one community of our country, namely, Chicago. It points out:

For Chicago alone, if all the pupils in Catholic grade schools were transferred to public schools, it would cost Chicago taxpayers in excess of $62,500,000 a year for operating expenses alone—and the cost of new classrooms for the transferred elementary school pupils would add a minimum of $125 million to the taxpayers' bill.

I think this gives us some idea of how vast is the contribution of these schools. It has been estimated that throughout the country the operating cost of Catholic schools totals in excess of $2 billion annually. To those who have so violently opposed any constitutional assistance to these private schools, I think it is proper to ask if they feel the local communities of America could absorb this cost in the public schools if the private schools were to close their doors in the near future.

Mr. Speaker, the last four articles from the Chicago Sun-Times series follow:

[From the Chicago Sun-Times, May 16, 1961]

McManus Tells How Catholic Schools Fare Here

(By Dolores McCahill)

Insofar as the Roman Catholic Archdiocese of Chicago is concerned, the battle to include Catholic schools in Federal legislation assisting education is a matter of principle and not of immediate financial crisis.

The Catholic schools in Cook and Lake Counties have problems, yes, said the Very Reverend Monsignor William E. McManus, archdiocesan schools superintendent, but they are not in a crisis and they are not going out of business.

RUMOR LAID TO REST

He would like to lay to rest a rumor that the first, second, and third grades of the archdiocese's parochial schools are in danger of being discontinued. The rumor is traceable, he believes, to speeches made here in the National Catholic Educational Association Convention of 1960, and subsequent addresses by Catholic educators in this association and other organizations.

"I am not ready to throw in the sponge on any division of Catholic education," Monsignor McManus said. "The fact is every appeal for funds we've made has gone over the top. We have the same problems now which we've had since Catholic schools were started—money, buildings, and teachers. These problems are 100 years old and I expect will remain with us for the next 100 years."

Monsignor McManus said it would be an exaggeration to talk of a Catholic school "crisis" here when "our greatest asset was never better—that's the laity's enthusiasm for Catholic education supported by ever increasing contributions."

The archdiocese intends "to continue all eight grades and to build as many high schools as need warrants," he said.

SEVENTY THOUSAND IN FIRST THREE GRADES

The rumor that it would discontinue the three primary grades is completely without foundation, he said, since Catholic parents would not tolerate the emergency situation that would be created if Catholic parishes unloaded 70,000 first, second, and third graders on the public school system in Chicago alone. Their sense of community responsibility would not tolerate such disruption of the city's school system, nor would they want their children to be educated under emergency conditions, Msgr. McManus said.

Although the idea of structural change in the Catholic educational pattern is being much discussed on the theoretical level by Catholic school administrators, he knows of no diocese planning wholesale elimination of grammar or high school years, he said. There are experiments here and there omitting some grades, usually the lower ones, he said.

He sees the effort by Catholic leaders to win inclusion of their schools in any Federal aid program Congress enacts as one to establish as a principle that any school meeting general educational standards set by the Government is entitled to Government aid, whether or not religion is part of the curriculum.

"We think the Federal Government is on the verge of setting a policy regarding the future of education in this country," Monsignor McManus said. "We think that policy will have great influence on the destiny of both public and private schools. We feel very strongly that policy should include some kind of recognition for the role private schools play in American education.

EVERY LITTLE BIT HELPS

"We don't have any illusions that Federal aid, if it were granted, would solve our financial difficulties. But every little bit still helps, and we don't want to be frozen out in perpetuity the way we have been frozen out in so many of the State constitutions.

"The fact we are dealt with unjustly in Illinois is all the more reason for us to object strenuously to similar injustice on the part of the Federal Government."

The school system administered by the Chicago archdiocese is a massive one that takes in all of Cook County and a part of Lake County.

In Chicago, the archdiocese operates 279 elementary and 70 high schools. In Cook County outside the city, it maintains 120 elementary and 15 high schools. In Lake County, it operates 27 elementary and 2 high schools.

FIGURES LISTED

There are 178,422 elementary and 47,541 high school pupils enrolled in the archdiocese schools in Chicago. The schools in Cook County outside the city enroll 82,936 elementary and 11,760 high school pupils. The Lake County schools have 10,871 elementary and 567 high school pupils.

In Chicago, the archdiocese has 4,199 elementary and 2,067 high school teachers. In Cook County outside the city, it has 1,915 elementary and 520 high school teachers. In Lake County, it has 267 elementary and 46 high school teachers.

Grand totals: 426 elementary and 87 high schools; 272,249 elementary and 59,868 high school pupils; 6,381 elementary and 2,633 high school teachers.

By comparison within the city only, the Chicago public school system operates 395 elementary and 52 high schools. It has 377,657 elementary school and 104,221 high school pupils. They are taught by 12,938 elementary and 4,633 high school teachers.

(All figures are as of last March.)

CITES EXPENSES

Monsignor McManus estimated operating expenses for archdiocese grade schools at $52 million a year and for the high schools at about $14 million a year.

For Chicago alone, he has estimated, if all the pupils in Catholic grade schools were transferred to public schools, it would cost Chicago taxpayers in excess of $62,500,000 a year for operating expenses alone—and the cost of new classrooms for the transferred elementary school pupils would add a minimum of $125 million to the taxpayers' bill.

Monsignor McManus also has estimated that the closing of the archdiocese's first-grade classes alone would require the city to employ about 700 added teachers at a cost of about $3,500,000 a year.

The forms of aid which Catholic school administrators could hope to obtain are circumscribed by the first amendment to the Constitution—"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof," by the interpretations which have been placed upon this phrase in the Supreme Court, by public school educators who don't want any diversion of funds from the public school system, and by a long line of spokesmen from Protestant and Jewish organizations.

Catholic leaders have set forth the argument that, since they hold as a religious tenet the belief that religion is or should be a vital part of a child's educational experience (a viewpoint also held by clergymen of other religious groups), their "free exercise" of religion is hindered to the extent that tax increases for public school operation prevent Catholic parents from making voluntary contributions adequate to maintain their church-related schools.

If the Government disbursed aid to religious schools of any denomination meeting Government standards for education, there would be no establishment of any one church since all would be equally eligible for aid on terms set by the Government, the Catholics.

FREEDOM TO DIFFER

"One freedom of religion which Catholics exercise," Monsignor McManus stated, "is their freedom to differ with the dominant secular philosophy of public schools. I can see where a Protestant doesn't want to pay taxes for the advance of Catholicism. But he should see that Catholics feel their freedom of religion to send their children to a parochial school is being restricted by the price.

"When taxes get to the point the Government practically confiscates money the family would budget for a Catholic school, the freedom to pick your school is limited. He is still free to send his child to a nonpublic school but this is like telling an unemployed person he is free to work—if he can find a job."

Monsignor McManus thinks an income tax deductibility for tuition "would help particularly parents of high school youngsters" but is actually a side issue, since he believes fees paid church-related schools should be tax deductible "not because the schools are religious, but because they are nonprofit."

"The fact still remains, particularly on the high school level," he said, "that hundreds of parents do not send their children to Catholic high schools because they cannot afford them."

NIGHT SCHOOL CLASSES

High schools of the two-county archdiocese currently have 59,868 students. Another 19,560 Catholic teenagers attend parish "schools of religion" one night a week.

Should Catholic leaders fail to establish their contention, what next?

"We may not move as fast without Federal aid, but we will keep moving," the archdiocesan superintendent said. "There is a problem, but it's not a crisis.

WILL KEEP MOVING

"The Catholic school system as a system is doing all right, but there are a lot of parents who just can't send their kids to the schools because of the fees we have to charge. With Federal aid in a substantial amount, we could reduce our charges and make it possible for more parents to send their children to Catholic schools. It's the parents who have the problem.

"We are trying in the Chicago archdiocese to add 5,000 to 7,000 classroom seats a year. I can't predict what the situation would be if there were a depression, or if the tax bite gets so big people have no money to contribute to anything. But we have no plans, immediate or remote, for any wholesale change in the pattern of our schools.

"Whichever way the Government goes, we still will have most of our problems of money, buildings, and teachers. But the Federal Government, serving all the people and dedicated to the welfare of all children, is forging a national policy and we think it should take into account the existence and needs of nonpublic education."

So financial pressures on the taxpayer and the voluntary contributor are sharpened by the centuries-old antagonisms between religious groups to give Congress a problem it can hardly resolve without a residue of ill will.

[From the Chicago Sun-Times, May 17, 1961]

CATHOLIC SCHOOL ENROLLMENT HERE ABOVE AVERAGE

(By Dolores McCahill)

Roman Catholic children in the archdiocese of Chicago have a better-than-average opportunity to attend Catholic schools.

Across the country, 55 percent of Catholic children of grammar school age, just slightly more than half, are attending church-related elementary schools. At the high school level, Catholic high schools are able to accommodate less than half the church's teenagers—45 percent.

People of other faiths who have heard of the Catholic canon law obliging parents to send their youngsters to a Catholic school whenever possible are often surprised to learn the church's goal is only half-realized here in the United States, where the Catholic school system is further developed than anywhere else in the world.

By national average, there are about as many Catholic children attending public schools as the church's own.

ARCHDIOCESAN FIGURES

Here in Cook and Lake counties, the Chicago archdiocese's territory, 82 percent of the Catholic children of elementary school age are attending Catholic grammar schools, and 18 percent are enrolled in public schools.

Of last June's 27,660 parochial elementary school graduates, 19,685 were able to continue their education at Catholic high schools. The other 7,975 presumably entered the public school system of Chicago and suburbs of Cook and Lake counties last September as high school freshmen.

Only about 400 of these actually applied for admission at Catholic high schools and were turned down for lack of room. The other 7,500 didn't apply. Reasons are unrecorded but logical deductions would be lack of money for tuition, inability to commute conveniently to a Catholic high school, especially in suburban areas, and possibly for some a desire to remove themselves from the discipline of Catholic schools.

The Right Reverend Monsignor William E. McManus, archdiocesan schools superintendent, estimated a breakdown between city and suburban enrollment figures. "Seventy-five to eighty percent of our eighth-grade graduates in the city go on to Catholic high schools," he said, "and only 45 to 50 percent in suburban areas. Three thousand more applied for high school last September than the previous year, and we took care of all except 400.

TRANSPORTATION EXPENSE

"In suburbs, the distance of their homes from the nearest Catholic high school and the great expense of transportation, which sometimes is higher than the actual tuition, keeps many from attending.

Service by commercial carriers is so limited in some suburban areas that if a student needs transportation it virtually has to be by chartered buses. Our students are eligible to ride public school buses but the routes eldsom coincide with the students' needs."

Tuition fees of Catholic grade schools are minimal, since much of the cost is met from parishioners' church donations at Sunday masses. The maximum in this archdiocese is $5 a month—"just 25 cents a day" as Monsignor McManus notes—or $100 annually per family regardless of the number of children in school.

WIDE TUITION RANGE

Most high schools are operated by religious orders and have no parish treasury to tap, no Easter offering to help balance the books, and consequently charge a yearly tuition per student which ranges from $150 to $300.

There are a smaller number of high schools connected to parishes and subsidized through the Sunday collections. In these, tuition can be as low as $50 per year.

In the great swirl of debate over Federal aid to education, and the claim which Catholic schools advance for recognition, Monsignor McManus asserts that it is the Catholic people, parents and children, who face financial difficulties rather than the Catholic educational system as an institution.

"Our typical high school junior or senior from a low-income family pays all or most of his tuition through earnings from part-time employment or summer work," he said. "Freshmen and sophomores are more of a burden on their parents since jobs are not open to them.

SEASONAL JOBS

"We are worried about the tightening employment situation. But these youngsters know they have to find work to get back to their school so they hustle for seasonal jobs, Christmas and summer. We think it's a great idea. One reason why Catholic youngsters appreciate the advantage of a Catholic education is that they are paying for it."

The general population shift to suburbia following World War II has given the archdiocese acute problems at the high school level. High schools are more expensive to equip and to staff, and commuting difficulties discourage potential students.

In 1952 the Chicago archdiocese departed from the traditional growth pattern of letting a religious order locate and finance new high schools as best it could. Instead a parish "tax" was levied for high school expansion.

Quotas were based on numerous factors, with less expected from a parish whose people already had contributed to the establishment of a parish or nearby religious order high schools than of parishioners in the new residential areas where the future Catholic high schools would be built.

FORTY MILLION DOLLARS COST

From 1952 to 1958, Catholic laity through their parishes contributed $14 million toward the construction of high school facilities accommodating 17,000 students at a total cost of $40 million, Monsignor McManus related. The balance was either paid by religious orders or became outstanding indebtedness. A second 5-year high school development program is now underway.

While the Chicago archdiocesan school system is able to enroll a considerable percentage of the school-age children, it does so at the expense of preferred educational policy on class size. The nationwide average class size in parochial schools is reported to be 35 pupils, and for the public schools 26 pupils.

Here "the policy is to try to keep class size below 50 students," said Monsignor McManus. "The average would be in the vicinity of 45."

The policy was instituted by him in the aftermath of the disastrous fire at Our Lady of the Angels School, when educators shuddered professionally at surveys disclosing class sizes of 60 and higher in some Catholic schools.

CLASS SIZES CUT

Catholic school expansion took a time out period here following that tragedy, with priority going to the installation of sprinkler equipment and the reduction in class size at existing schools.

Some additions, instead of enrolling all new pupils, were utilized partly by students transferred from the extra-large classes, so total enrollments did not rise as much as might otherwise have been the case.

Along about this point in time, Chicago's new police superintendent, O. W. Wilson, let it be known that he took a dim view of bingo games, church-related or otherwise.

Albert Cardinal Meyer, archbishop of Chicago, then issued a statement noting that while the morality of gambling is viewed differently by various religious faiths, and Catholic moral theologians regard games of chance as unharmful within certain limits, parishes of the archdiocese should obey existing civil law on the subject. Parishes which had been using bingo income to help support their school programs had to look for increased contributions.

TEACHER SHORTAGE

Expansion still has not returned to its former rate, but the problem now is the difficulty of obtaining teachers. The number of teaching religious—priests, brothers, and sisters—is no match for the constantly increasing student enrollment. Lay teachers

have ceased to be an oddity in the Catholic school, but Monsignor McManus asks:

"How can we compete for good teachers? We pay $3,500 to start in elementary schools. The Chicago public schools pay $5,100 for beginning teachers."

In Catholic high schools for boys the starting salary is $4,000, and in high schools for girls, $3,500, he added.

His school system needs 400 new lay teachers a year, he said, either to staff newly built classrooms or replace those who quit. Of the 19,026 lay teachers in parish grammar schools, all but 25 or 30 are women so marriage and pregnancy is a rather frequent reason for their resignation from faculties, he said. His school system will be 125 classrooms bigger next September, but he expects only 15 or 20 additional nuns from teaching religious orders.

MORE THAN MONEY

The other 100 or more new classrooms will be looking for Catholic lay educators whose religious faith means more to them than personal financial return. The superintendent manages to find them.

"We confess we can't give them the same salaries as public schools," Monsignor McManus said. "But many are products of Catholic education. They are acquainted with its objectives and would like to be engaged in it.

"Generally, a lay teacher can select her own school convenient to home, cutting down the expense and time of travel. The high quality of instruction and discipline attracts them, since it makes the Catholic school a pleasant and encouraging place to work.

"It is harder to get teachers for grade than high schools because salaries are a little higher in high school and college graduates who can't get public high school assignments without first teaching elementary classes will take a position with our high schools.

"The overwhelming majority of our lay teachers are in our schools because they believe deeply in the values of Catholic education. But we don't have as many as we could use."

[From the Chicago Sun-Times, May 18, 1961]

HOW CATHOLIC SCHOOLS MEASURE UP TO ACCEPTED STANDARDS

Just how good are parochial schools?

They have been criticized inside the Roman Catholic church as well as outside.

Non-Catholics tend to see the Catholic parochial school as a place of rigid discipline, whose teachers do not necessarily have proper educational training, and which is strong on religion and weak in science and mathematics, and which has oversized classes to burden an already harassed teacher.

Within the Catholic church, some of the criticisms have been equally vehement. The problem of excellence versus mediocrity in the Catholic school was discussed with some acrimony at the National Catholic Educational Association conventon last month.

At least one Catholic school superintendent and one prominent layman publicly stated that parochial schools are not producing their share of American leaders and are not doing their job as well as they might.

DRAGGING THEIR FEET

The Reverend Thomas J. Costello, superintendent of schools in Syracuse, N.Y., declared that "we are creeping when we should be striding forward.

"Education," he continued, "has been seduced from the production of leaders to leadership in production. And Catholic education is not immune from this failing." In leadership training, he added, Catholic schools have been "dragging their feet."

And John Cogley, of the Fund for the Republic and the Catholic layman's magazine Commonweal, echoed his words.

"The sorry fact," he said, "is that up till now, Catholic education has not been producing its shares of national leaders."

But, Cogley added, "our failures have been understandable and wholly forgivable. The task the founders of the parochial school system took on was so gigantic, their resources so slim, the venture so daring that, as Dr. Johnson said about the dog walking on his hind legs, the surprise wasn't that it was done badly but that it was done at all."

A DIFFERENT VIEW

One of the most highly regarded Catholic educators, the Reverend Neil G. McCluskey, a Jesuit who is dean of Gonzaga University's School of Education, in Spokane, Wash., sees the problem of excellence in parochial schools another way.

"Academically," says Father McCluskey, "Catholic schools stand up as well as others. I have found some parochial schools that I wouldn't recommend to anybody—and I have seen some public schools that I wouldn't either. We judge a school as a school—it has to be a good school before it is a good Catholic school or a good Lutheran school or a good public school."

Said the Right Reverend Monsignor William E. McManus, archdiocesan schools superintendent in Chicago:

"Like public schools, Catholic schools have their limitations and faults. But much of the criticism of Catholic education—particularly that of Catholics—is exaggerated. It stems from impatience in not meeting the high ideals of Catholic education rather than from valid evidence of serious failures and faults.

THREE TESTS A YEAR

"In the archdiocese of Chicago, we test our elementary school pupils three times a year. The test results conclusively prove that the students are doing better-than-average work as measured by national standards and norms. We rest our case on test results and not on superficial observations of self-appointed critics."

While standards to judge the excellence of private or public schools are exceedingly elusive, the layman is likely to turn to the nearest scholarship competition as a basis for judgment.

Although the National Merit Scholarship Corp. warns that the number of merit scholarships awarded to the students of a school should not be the criterion of the school's performance, many parents (and some educators) do just that.

WIN THEIR SHARE

Among this year's 950 Merit winners, 76 Catholics received college scholarships. This, according to the National Catholic Educational Association, is almost the exact proportion of seniors in Catholic high schools to the total number of American high school seniors, about 8 or 9 percent.

In honorary merit winners, where no stipend is given, Catholic seniors took 12 percent of the citations, or 17 out of 140.

Similarly, among the 15,542 regents' college scholarships awarded in New York State this year, seniors in Catholic high schools took about 15 percent, or 2,347.

But one shortcoming in parochial schools which Catholic educators are perfectly willing to admit is overlarge classes. Once again, this has been aggravated by the violently rapid multiplication of students—118 percent since 1945.

ABOVE THE AVERAGE

The average class size in parochial schools today is 35—against 30 in 1945—according to the National Catholic Educational Association. However, some classes run well over 50. In public schools, says the U.S. Office of Education, the average class size this year is 26 and in no State does the average run over 30.

In the New York archdiocese, the parochial class size is an average 42 in elementary school (8 grades) and 37 in high school (4 grades). In the public schools of New York City, the average class sizes are 30 in elementary schools (6 grades), 32 in junior high schools (3 grades), and 32 in academic and 29 in vocational high school (3 grades).

Monsignor McManus takes issue with those who emphasize class size problems.

"Class size is a factor in good education," he said. "But it is greatly exaggerated. The important thing is to have good teachers, many of whom can handle a class of 45 or 50 whereas a mediocre teacher would get nowhere with a class of 20.

SCIENCE AND MATHEMATICS

"The sisters in Catholic schools, who by reason of their religious life can work around the clock at their teaching duties, can manage large classes very successfully."

In regard to the currently sensitive fields of science and mathematics, the Right Reverend Clarence E. Elwell, superintendent of schools in the diocese of Cleveland, has said that parochial schools "are doing less than an adequate job in mathematics" and that science is weak in the elementary schools.

Commenting on the Catholic schools in Chicago, Monsignor McManus said:

"At the present time in the elementary schools, reading, mathematics, and science are our strong points.

"Our next objective is to bring up English, handwriting and social studies to the same high level.

NEW BOOKS USED

"We have just introduced a completely revised science curriculum in the elementary schools that uses the very latest textbooks and teaching aids. We think that television affords great promise for even better instruction in science.

"On the high school level, the students of local Catholic high schools recently took several top honors in a statewide science competition."

The Right Reverend John Paul Haverty, New York archdiocesan superintendent of schools, stoutly defends the overall caliber of his schools.

"We have our own schools of excellence, comparable to the Bronx High School of Science," he said recently.

In 42 of our parish schools our pupils are taking foreign languages in the elementary grades, mostly French but some Spanish. This, as you know, is one of the most modern experiments in foreign-language instructions."

HONOR COURSES OFFERED

Msgr. Haverty continued: "Four of our high schools are teaching Russian—to small classes of only 15 pupils each. A large percentage of our high schools have honor courses or permit their students to take advanced courses, whereby college credit can be obtained in high school after examinations given by the College Entrance Examination Board."

Elsewhere in the country, up-to-date Catholic schools are participating in other educational experiments.

All 228 elementary schools in Newark, N.J., archdiocese began to use educational television last fall, adding 15 minutes to the school day to make this possible. The Newark parochial elementary schools are participating in the New York State Regents' educational television project, which is telecast over WPIX, channel 11.

BRIGHT PUPILS ADVANCE

The ungraded primary system is now in operation in Catholic school systems in Pitts-

burgh and in St. Louis (since 1953). Next fall, Kansas City, Mo., will also try the system, in which pupils advance by levels of skill and not by age or grade.

The system, which is also being tried in such public schools as those of Appleton, Wis., is designed to let the bright pupil advance more rapidly, while the slow learner can take more time.

To refute the charge that parochial schools indulge in excessive religious instruction, the National Catholic Welfare Conference says that "the average parochial elementary school class spends 30 minutes a day formally studying religion. Two-and-a-half hours out of 25 class hours each week is hardly too much."

HEAD POPE'S PLEA

In the matter of teacher training, a nationwide movement is underway to upgrade the training of teaching nuns so that all will have bachelors' degrees before even beginning to teach in elementary schools.

Known as the Sister Formation Conference, the movement was started 6 years ago in answer to a plea from the late Pope Pius XII for more excellence in Catholic education.

Sister Formation aims to have every one of the future teaching sisters in this country receive 5 years of religious training, 4 years of college, and extensive practice teaching—all within a 5-year period—before she goes behind a teacher's desk, cooperative efforts toward this end are currently underway among the 377 women's teaching orders.

And Monsignor Haverty points out that in the New York archdiocese right now no nun or brother or layman may teach in a high school without a master's degree in hand or in sight.

Catholic parochial schools have always prided themselves on "teaching for the hereafter rather than the here." They have also taken pride in being open to all races and to creeds other than Catholicism, if there is room for them.

Man is created in God's image and will share the divine life hereafter, Catholics believe. Hence equality of all men and the disciplined preparation for a life after death are hallmarks of Catholic education.

A TWOFOLD PURPOSE

"We must remember," says the Right Reverend Carl J. Ryan, archdiocesan superintendent of schools in Cincinnati, "that Catholic schools serve a twofold purpose." Writing in the Ave Maria magazine last month, he continued: "They provide an education under religious auspices for those who attend them. These schools have given, and will continue to give, to the church, a body of practical and reasonably informed members who will be the backbone of the church in the United States.

"The Catholic school also stands for a principle. The principle is that religion has a place in education, and this in the face of a progressive secularization of public education.

"So long as the Catholic school exists it will be a reminder to our fellow citizens that there is an approach to the problem of education other than the purely secular system in which most of our citizens are now being educated."

[From the Chicago Sun-Times, May 19, 1961]

SURVEY OF CATHOLIC SCHOOLS CONSIDERED AS AN AID IN CORRECTING WEAKNESSES

(By Terry Ferrer)

NEW YORK.—The present and future of Roman Catholic parochial schools in the United States may soon be getting the same kind of sweeping evaluation as Dr. James Bryant Conant, president emeritus of Harvard University, made of public schools.

The Carnegie Corp. of New York, which supported Conant's reports, is considering the sponsorship of a comprehensive parochial study.

Dr. John W. Gardner, Carnegie president, said this week that he had received the suggestion for Catholic study from David E. Willis, director of teacher education at Marquette University, a Jesuit institution in Milwaukee. He said the foundation is giving serious consideration to the proposal of having an educator of high caliber undertake such a study. The educator probably would not be a Catholic, it was understood.

CONANT NOT AVAILABLE

Conant would not be available, as he is starting a study on teacher education for Carnegie this fall.

In Washington, a spokesman for the National Catholic Education Association, said the association would cooperate in such a quality report. "We need to know much more about parochial education than we do now," he added.

Indeed, the lack of centralized knowledge, planning, and national statistics and the loose financial structure of parochial education are conceded as weaknesses by prominent Catholic educators. They have long been begging for internal reform and the breaking of old patterns.

GRADE SCHOOL CUTBACK?

Caught between the growing pressure for seats in Catholic schools and inadequate funds, some Catholic bishops have suggested cutting off elementary years, beginning with the first grade of Catholic education. Some first grades already have been dropped in Saginaw, Mich., Spokane, Wash., and in Greenhills, a suburb of Cincinnati, for example.

The dropping of elementary grades was first proposed in 1959 by Bishop Lawrence J. Shehan of Bridgeport, Conn.

Bishop Shehan suggested that Catholics concentrate their educational efforts on grades 7 through 12, when adolescents most need a religious atmosphere. It might then be possible, the bishop said to offer "to every child Catholic education at a certain level."

Without such a cutback, "the size of our educational system will have to be not merely doubled, but tripled within our next generation," Bishop Shehan said. He cited the growing number of infant baptisms—1,349,240 last year.

NO COMPLETE AGREEMENT

The bishop's views are seconded by Father Neil G. Mccluskey, prominent Jesuit educational theorist. The Rt. Rev. Msgr. Frederick G. Hochwalt, director of the education department of the National Catholic Welfare Conference, prefers a cut from 12 grades to 10.

But neither clergy nor hierarchy are in complete agreement with Bishop Shehan.

Albert Cardinal Meyer, archbishop of Chicago, thinks "the problems certainly are not so new or so grave that at the present time we should seriously consider discontinuing all the lower grades of all Catholic elementary schools.

Msgr. Clarence E. Elwell, Catholic superintendent of schools in Cleveland, also opposes dropping elementary grades. He favors the traditional Catholic concept that it is better to have a nucleus of Catholics who have had a full 12 years of Catholic education rather than to give all young Catholics some Catholic education.

SOME SEE RETREAT

The Right Reverend John Paul Haverty, New York archdiocesan superintendent of schools, agrees with Monsignor Elwell that cutting down on Catholic school years would be a retreat. But the Right Reverend Monsignor Neil C. D'Amour of the National Catholic Educational Association points out that the orders of teaching nuns would rather concentrate on the high schools, because it is these years, not the elementary grades, that produce religious vocations—and future nuns.

In addition to advocating a possible cutback in the school system, there are Catholic critics who say that the present financing of parochical education is so archiac that there is no Catholic school system.

"The parochial school, as an independent, parish-controlled and parish-financed operation, is an anachronism," the Jesuit Father McCluskey said last year. "We speak loosely of a Catholic school system, but only a few dioceses approach education systematically."

M'CLUSKEY SUGGESTION

Father McCluskey advocates a strong, centralized diocesan school system, rather than individual parishes. In such matters as school construction, uniform teacher salary scales and curriculum planning, such centralization would be economical and creative of excellence, he believes.

Father McCluskey also proposed that schools be financed by a diocesan school tax, and that all tuition be abolished. "Henceforth," he said, "let the education of the youngster in the rich suburban parish and the declining downtown parish be paid out of the same central fund."

Calling the present system of financing Catholic education "archaic, obsolete and inefficient," Father McCluskey declared that "in this matter we are a good 100 years behind the public schools, whose architects long ago argued successfully that the burden of support for the commonly used public schools was a total community responsibility."

NO SOLUTION TO NUMBERS

Such centralized planning and taxation might well save Catholic education considerable money. But it will do little to alleviate the pressure of numbers, a problem that parochial and public schools share alike in this high-birth-rate period.

If the figure of 1,349,240 Catholic babies baptized last year remains constant—or increases, as it probably will along with the total number of Catholics—it may even be impossible for the Catholic Church to educate half of them in parochial schools, as it does today.

And curtailing the grades of Catholic education would add fresh burdens to the elementary public school system, already facing a boom period.

Each of the 42,104,900 Catholics in the United States is already paying an estimated $35 a year in maintenance for parochial education, whether or not he uses Catholic schools. He also is being asked to finance new buildings at the rate of $175 million or more a year. On top of this, he is dutybound to support the public schools as well. The thought that some Federal money might ease his school obligations is appealing.

Do Catholics believe that they will receive some Federal aid to education? Many would agree with Father McCluskey, who said in his book, "Catholic Viewpoint on Education" (1959):

"An awareness is growing that the sheer dimensions of the Catholic school system make its needs and interests more than the concern of the Catholic community. In its own time American society will translate its appreciation of the religious school into a corresponding pattern of appropriate support.

"To predict this is not to imply any simple or overnight solution to the dual problem of religion in public education and public support for the religious school. As the Reverend John Courtney Murray (Jesuit philospher) has suggested, 'The solution, like the creation of the problem itself, will be the work of generations'."

Bean Study

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. KNOX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and an article from the Grand Rapids Press Bureau. Perahps the Michigan congress who are requesting an appropriation of $100,000 could save the government this money if they would follow the recipe of my constituent, Mrs. Clyde Wilbur of Alden, Mich.

The letter and article follow:

ALDEN, MICH.

Congressman VICTOR KNOX,
Washington, D.C.

DEAR MR. KNOX: I was surprised when I read the enclosed clipping with a request to spend that much money for something that was not needed. Well, all that is necessary is to teach people how to cook beans so they will be in no distress in eating them.

Just put them on to cook and after they come to a boil add ginger and do not drain them. You will not taste the ginger but what a difference after eating them. For my size family I cook a pint of the dry beans, and add a good teaspoon of ginger so the amount of ginger will depend on the amount of beans you cook. Be sure and use enough.

Have those in Congress that want to spend money to try them cooked that way and save the $100,000. I think our country could sure use it for better use.

Sincerely,

Mrs. CLYDE WILBUR.

BEAN STUDY IS URGED—STATE CONGRESSMEN CALL FOR RESEARCH

WASHINGTON.—The industry politely calls it "flatulence," but three Michigan Congressmen minced no words in asking Congress for $100,000 for continued research to take the gas out of beans.

The request was made in a hearing of a House Appropriations Subcommittee by Representatives ELFORD A. CEDERBERG, of Bay City; JAMES G. O'HARA, of Utica, and JAMES HARVEY, of Saginaw.

CEDERBERG and O'HARA stressed the need to make beans more digestible so they can be included in the diets of older persons.

Said CEDERBERG, who is an Appropriations Committee member, "It is a rule of thumb in the industry that consumption of beans declines after persons reach the age of 40 because of the gassiness of beans which makes digestion difficult. If, through research, we can remove this limitation on consumption we will be giving not only the bean industry but the entire economy a boost."

O'HARA said eliminating the gassiness from from beans would be "reflected in greater prosperity for agriculture" in Michigan and all other bean-producing States. He emphasized that Michigan is the bean capital of the country and noted that his congressional district is the largest bean-producing district in the Nation.

HARVEY told the subcommittee that licking the bean flatulence problem would "open vast new markets and would be a real service to all our citizens."

Added weight was given the Michigan plea when industry witnesses were introduced by Representative GERALD R. FORD, Jr., of Grand Rapids, prominent Appropriations Committee member.

Testimony supporting the bean research request was given by F. J. Eisengruber of Bay Port and Regis Daily of Greeley, Colo., chairman of the National Dry Bean Council.

Was Lincoln Wrong?

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24, 1961

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "The Bush Amendment: Was Lincoln Wrong?" which was published in the Hartford Courant of Tuesday, May 23, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Hartford Courant, May 23, 1961]

THE BUSH AMENDMENT: WAS LINCOLN WRONG?

There are those who impatiently witness the race riots in Alabama, and the breakdown of public safety, and who wonder whether Lincoln was wrong in not letting the Deep South go its own way. It has not only been a constant economic burden to the rest of the country, but its social and cultural lag, particularly in this era of expanding international liberties, has made us vulnerable to blame for our segregation policies. But these people are wrong. The South may be our burden. But if it had been permitted to go its way one can only wonder what kind of a virulent situation we would have now.

There is, however, some justification for impatience, and this impatience is reflected in the proposed amendment by Senator PRESCOTT BUSH to the school-aid bill. Senator BUSH may not expect to get his amendment adopted, and it does seem unlikely. But by attempting to attach a nonsegregation rider to the school-aid bill he is at least pointing up the South's tragic inconsistency in expecting the rest of the country to subsidize its outmoded and evil practices in education.

This arrogance is shown, not only by the preferment in the school-aid bill that would permit grants based on the total number of school-age children, rather than those actually in public school, but from the duality of attitude. On the one hand, in a situation that exists now in Montgomery and Birmingham, the Federal Government is treated as an interloper. On the other hand the Federal Government is supposed to pour its funds into the segregated school system of the South.

As the representative of a State that has not only been in the forefront in furthering the cause of justice for the Negro, has always paid in more than it receives from the Federal Government, Senator BUSH is a fitting person to offer such an amendment to the pending legislation. Even though there seems little likelihood of the amendment's adoption, morally and ethically it is a sound proposition. The law of the land has been flouted and continues to be flouted by a hard core of resistance in a handful of States. While one might tolerate this as a temporary condition that must evaporate some day, it is quite another thing to reward these intransigent States by subsidizing their segregated schools, or even by basing grants on a per capita for children who are not even permitted to attend school.

Federal marshals are not welcome in the South, but Federal money is greeted with open hands.

Aspirin Limited

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. YOUNGER. Mr. Speaker, it occurred to me that the attached sermon by Rev. W. Paul Ludwig, pastor of the Chevy Chase Presbyterian Church, should receive wide circulation because of its treatment of our present day situation:

ASPIRIN LIMITED

I Corinthians 10: 13: God is faithful who will not suffer you to be tempted above that ye are able; but will with the temptation make also the way of escape, that ye may be able to endure it.

Aspirin has become one of the primary symbols of our modern culture. We have carried it like a sacred charm wherever we go. "It is silly to suffer," we have said. But when the shelf looks like a regimental parade of empty pill bottles and we have continued to feel that misery in our bones, then we have resigned from the cult of the painkillers and have joined the devotees of make-believe. "It's all in our mind," we have said. Even if it snuffs out our life, it's all a mistake. Our affliction has no real substance.

One can enjoy subterfuge only so long, then it fades into the ethereal mists from whence it came. The great game of pretend loses its fascination. Everybody plays according to his own rules and there is no discernible pattern to it. You can't block off a twitching nerve center with a cold, stoical stare. You can't just say "it isn't so."

So we check off both sedation and make-believe—because now there is something new. Everybody is talking about it. Everybody is writing about it. Everybody is preaching about it. It is a thin soup of psychology with a light dash of Christian spice. It has a shiny, big vocabulary, full of fixation, repression, frustration, self-rejection, and insecurity. It all happened years ago at Aunt Mary's. You were only 6 years old, but you slyly dropped a button in the chocolate cake mix. And you have not been the same since. Neither has Aunt Mary.

But there's a great bag of pains that didn't start in Aunt Mary's kitchen. And there's a pileup of fear that's right up on the top of my mind, fear that was born only yesterday, or that sprang full-blown out of this morning's headlines. The pressure is on every minute. This is not a matter of unveiling the past. It is a question of where I stand now—and what I have to stand on.

But there is yet another way of trying to deal with our troubles. There is the philosophy represented by a familiar motto: "To the stars through difficulties." Maybe I shouldn't run from pain at all—maybe I should run after it—maybe I should try to get hurt, so I'll know the good feeling of a healed wound. There can be no argument about it: many of the bright constellations of human achievement have been hung in the heavens on hooks forged out of adversity. We do not need to marshal evidence to that effect. It would be altogether too

trite to describe the tempering process of life's storms, when our sinews grow tough under the threat of annihilation.

It is not possible for any man to trace the footsteps of a Cross-bound God without facing sharply humanity's supreme argument for the crown of thorns. Most crowns are painful. Most victory marches vibrate with the deep rumblings of defeat. Progress is costly. If we ever needed to be persuaded, Golgotha is the world's most convincing witness to the power of sacrifice. To this fact we can never be smugly indifferent. The church is the custodian of the Cross and must never let the world take its eyes from Calvary.

But we need to show a little caution right here, lest when we glory in the Cross of Christ we take only sentimental notice of its pain. When the hymn-writer sings: "I take oh cross thy shadow for my abiding place" * * * "content to let the world go by, to know no gain nor loss; my sinful self my only shame, my glory all, the Cross," we must not forget that we have omitted the best line of all: "I ask no other sunshine than the sunshine of His face." The Cross was not all shadowy and blurred, not by any means. Where Christ is, there is always a blazing light. He is the constant symbol of hope. The most tragic feature of our world is not its tragedy but its preoccupation with tragedy. Empty optimism is stupid but Christless pessimism is sinful.

Suffering is not the only prospect for man in our time. It is not the only way of achievement. The things that drive a spike of terror through our hearts are not the things that are happening but the things we fear might happen. The strangling octopus of communism, for example, is paralyzing enough. Need we make it even more devastating by treating it as if it were the only effective dynamism existing in the world today? What about the revolution that took place on Golgotha? What about the social revolution fostered by the democratic process? What about the powerful industrial revolution buttressed by the daring of a capitalistic system? Are these streams dried up? It would be refreshing if we could see the whole picture.

There is more than the prospect of total destruction for our world. Our progress in health, housing, diet, education, communication, working conditions, and social awareness, our will for peace and our religious passion—these are not marginal nor unimportant. On the basis of the record, the future was not yesterday. This "age of anxiety" deserves a better label. "The age of awareness" would fit the facts: When we have become keenly sensitive to the colossal power which resides jointly in the hands of God and man, rather than being totally preoccupied with the power that resides in the Kremlin. C. B. Stewart's story of the old mountaineer is disarming. When he was asked if he had been in the tornado which had siphoned its way through the hills, he replied: "When the roof fell in, she fell just right. And when the walls caved, they only nudged me. The hot stove set the house on fire but I got out in time. No, sir, I guess you couldn't rightly say I was in that tornado, but I was getting awful close to it."

Somewhere I was reading the review of a book. I don't know what book. I don't recall who said it. But this is the sentence that I remember about the book's author: "He has said something enduring with the truth of pain."

What is the truth of pain? If it is not an empty aspirin bottle; if it is not a game of make-believe; if it is not a frantic rummaging in the topsy-turvy cupboard of remote yesterdays; if it is not a welcome ladder to the stars; if it is not just dumb resignation to inevitable doom—then what is there about it that you could call truth; and what is there about it that you would want to have endure?

In a photographic exhibit of the World Council of Churches, there was a gallery of suffering which I have never been able to erase from memory. I was helplessly magnetized by the deep-lined face of an old peasant woman, so wrinkled and worn it seemed her skin had been crumpled up like a piece of tissue paper and then unfolded. Beside her pleading face was the photo of a boy behind the bars of a cell, with scars on his young-old face and red eyes which had been so drained of tears that he could weep no more. Next to him was an Indian village that had been laid waste by flood.

The last scene in the group was too eloquent ever to forget: It was the deep, long shadow of a great cathedral—just the shadow, showing the gray shape of the tall tower and clerestory wall framed on the ground. And in the cool refuge of that shade were the huddled figures of the crippled beggars—beaten caricatures of men, finding hope not inside the church but in its uninspiring shadow. Is this a parable of the church: that men find their salvation not inside but outside her walls?

"I take, O Cross, thy shadow for my abiding place." Is that all? Just a shadow. Is that all the hope painstricken, tempted men can find in a religious faith? Men who lived close to Christ never thought that. Paul refused to play with shadows when there was a real cross to live by. "God is faithful" he cried to the Corinthians, "God is faithful who will not suffer you to be tempted beyo d what is common to all men; but will with the temptation make also the way of escape, that ye may be able to endure."

God is faithful. Paul was tearing pages right out of his autobiography. He had found out a few things about God. Fierce, wild persistent temptation was forever tagging at his heels. But God was forever leading him by the hand. Always there was the pressure of a godless society that swirled about him; always there was the vision of a Man on His Cross bidding him to stand fast. Always there was his heredity—his thorn in the flesh—his pain and his weakness and his discouragement, but always there was a strong divine friend standing by. Always there was a trap to ensnare him, but always there was the way of escape.

The truth was that pain and temptation were as real a part of life as a man's hands and feet—nothing at all make believe. No promise anywhere that this life would be painless; no promise that temptation would be removed. But this—this thing you could count on: God is faithful. If you never let go of Him, He'll never let go of you. For He will not suffer us to be tempted beyond our capacity; but will with the testing, which is surely now upon us, make also the way of escape, that we may be able to endure.

Gagarin and God

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24, 1961

Mr. MUNDT. Mr. President, the Hairenik Weekly published by the Hairenik Association in Boston, Mass., editorialized in its May 18 issue about the recent space flights by Russia and our country.

The editorial effectively points up one of the great differences between our free society and that of the Soviet Union and I believe it is worthy of the attention of my colleagues.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GAGARIN AND GOD

With the passage of nearly 45 years of communism much was said and far more was forgotten about the existence of the Supreme Being in Soviet circles. The mounting wave of atheism had lost much of its initial intensity and many optimists began to entertain the hopeful notion that the Soviet people are gradually returning to God.

Apparently all such notion of a religious relaxation in the Soviet Union must undergo a shocking revision. Since the orbital flight of the astronaut Yuri Gagarin atheism seems to have received a shot in the arm and the fanatics of the Soviet Union are having a field day in their zeal to demonstrate to the world that God had nothing to do with Gagarin's daring feat.

They asked Gagarin if he carried with him in his flight some sort of talisman, or if he was not tempted to think of a supreme being of the universe as he hurtled through that vast domain all by himself. They asked him if his convictions about religion did not change in that awesome moment, and the Soviet hero replied: "I do not believe in God, I do not believe in talismans, superstitions, and such things."

The Soviet hero did not believe in God and he penetrated the cosmic space. But so did the American hero, Shepard, who believed in God. So did Shepard's parents and the whole American people who prayed for his safe return.

The Soviet atheists took Gagarin's feat as proof that God does not exist. The believing world took Shepard's feat as proof that God does exist, neither of which is conclusive. But we still believe faith in God will carry much farther in the long run.

All the same, we are once more reminded that atheism in the Soviet Union is not dead. It is very much alive.

Editorials Favor Chairman Minow of Federal Communications Commission

EXTENSION OF REMARKS
OF
HON. MAURINE B. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24, 1961

Mrs. NEUBERGER. Mr. President, Chairman Minow's speech to the convention of National Association of Radio and Television Broadcasters has prompted enthusiastic editorial response from all corners of the country. Two particularly highly respected newspapers have commended Chairman Minow. One is the Christian Science Monitor, the other the Washington Evening Star in a column by Miss Doris Fleeson.

I ask unanimous consent that these articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

A CALL FOR IMPROVED TELEVISION—MINOW CALLED NEW FRONTIER'S BOLD SCOUT FOR EFFORT TO END INDUSTRY STAGNATION

A bold scout for the New Froniter has broken with a thunderclap through the barriers of do-nothingness which time and official timidity have erected around the independent agencies of the Government.

No Gunsmoke hero ever stunned his quarry more completely than Newton N. Minow, new chairman of the Federal Communications Commission, did the TV industry at its convention here.

Mr. Minow fired squarely into the teeth of 2,000 broadcasters that their TV program output was a "vast wasteland." Before they could even swallow hard, he followed with a warning that the FCC would no longer automatically renew station licenses.

Then he issued an invitation to the station operators to watch their stations' programs for one whole day from sign-on to signoff. What they would see, he assured them, was violence and mediocrity, and—worst of all from their point of view—they would end up being bored.

Today official Washington, not to mention the TV industry, is only slightly less interested in Mr. Minow than in the astronauts, with honors for nerve being distributed almost evenly. Yet what Mr. Minow has done is only to assert that the public interest which justifies the granting of licenses for the enormously valuable airwaves cannot be served without taking into account what the public gets, which is the programs.

It was the industry's second blow this week. Its own Broadcasters Association president, former Gov. Leroy Collins, of Florida, told it that it was not master in its own house but was permitting the rating services to dictate its product.

TV viewers will remember Mr. Collins as the handsome, soft-spoken chairman of the Democratic National Convention last summer.. His manner of speaking is gentler than the Midwest twang of Mr. Minow and his phrases were less barbed, but he also challenged them by saying: "I want your active support, not just your acquiescence. If you want someone to paddle your boat into stagnant pockets of still water then you do not want me."

Altogether, it has not been a good week for the broadcasters. They have really only one place left to go now besides up and that is the White House woodshed, into which the newspaper publishers and editors preceded them. The President, however, supports Mr. Minow strongly.

Darkening suspicions about the forces which drove Mr. Minow and Mr. Collins into action can be set at rest. "Villains" are the young Minow and Collins children who love to watch TV. Their fathers have been watching it harder than ever under the impact of new responsibilities.

The Minow-Collins statements also are the only truly logical followthrough on the TV scandals exposed by the Harris subcommittee of the House. On Mr. Minow for the Federal Government and Mr. Collins in his industry monitor job lie responsibility for a change for the better. If there is no Federal responsibility for insuring that, then its right to grant licenses and look into the programming is a sham.

Today the possibly dreamy idealists who really want the regulatory agencies to perform the functions assigned to them are toasting Chairman Minow and wondering what life would be like if his fellow chairmen followed his example and reread the law creating them.

IMPROVING TV'S WASTELAND

Viewers who have read or heard the new Federal Communications Commission Chairman's speech exhorting broadcasters to improve TV may be inclined to think that everything is going to be all right now. After all, the FCC does have the power to grant and withhold licenses to operate stations, and Chairman Newton N. Minow says he intends to see that broadcasters serve the public's needs as well as its whims.

But, although it is reassuring to hear a Federal regulatory agency spokesman set a high goal for the industry, it should not be forgotten:

That Mr. Minow, while chairman, is just one of five FCC members, and that the majority still charts the agency's policy. Not all of the other members join in Mr. Minow's feelings either that TV is quite the "vast wasteland" he describes or that the FCC is legally authorized to try to upgrade TV fare.

The broadcasters themselves are not generally convinced that the public desires a different kind of programing than is now offered.

That many people both in and out of broadcasting genuinely feel that the FCC has no real legal right to influence TV programing by direct means. Mr. Minow declares himself "unalterably opposed to governmental censorship." Yet a large segment of industry leaders firmly believes that the kind of regulation Mr. Minow's speech envisages would amount to just that.

Thus any viewers who feel they can sit back and let Mr. Minow carry the fight are underestimating the intensity of broadcaster (and perhaps congressional) feeling in this matter. Mr. Minow has gone way out on a limb, and viewers who agree with his position ought to give tangible support. Otherwise the opponents of a stronger FCC role in programing will have fresh grounds for repudiating Mr. Minow's bold stand.

World Food Budget Favors West

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 24, 1961

Mr. WILEY. Mr. President, the life-and-death struggle against communism, the universal need for lifting standards of living for humanity, these, and other factors, require a reevaluation of our resources to meet such challenges.

The struggles of the future have been variously termed:

A battle against totalitarianism;

A battle for men's minds and a need for reaching the millions of underprivileged, underfed people "through their stomachs."

A fight against disease, hunger, illiteracy;

An effort to close the "great spread" between the "have's" and "have-not's," in living standards.

In dealing with these aspects of the challenge, unfortunately, we have not yet found adequate ways to utilize one of our most valuable resources: food.

Today, we have billions of dollars in food surpluses.

Meanwhile, hungry hands stretch out across the sea from people who suffer from malnutrition—yes, in some cases, even starvation.

In a modern world, this is a lamentable situation.

True, we have expanded our food for peace program. Undoubtedly, this is serving a great need of humanity.

Admittedly, there are serious economic problems involved in attempting to distribute our surplus foodstuffs, either through sales or through giveaways.

In the interest of more quickly attaining our natural objectives of peace, of thwarting the outspreading efforts of communism, of attempting to help people to live better, however, we cannot long accommodate this strange paradox.

For humanitarian reasons, then, we as a nation can and should attempt to further improve ways in which our great agricultural food plant can serve the needs of humanity.

Strategically, also, in the East-West struggle, food can be a vital weapon. Until now, regrettably, this great source has served too much as a handicap, rather than as an asset.

The task now is to develop more effective ways and means in which we can utilize this invaluable source of food for serving our national interests and the needs of humanity.

Recently, the Milwaukee Journal published an informative article entitled "World Food Budget Favors West," by Loren H. Osman, presenting an informative picture of the problem of balance of food resources.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORLD FOOD BUDGET FAVORS WEST—SURPLUS CROPS OF UNITED STATES, OTHER FREE WORLD COUNTRIES CAN FEED THE HUNGRY IN ASIA, AFRICA, LATIN AMERICA; COMMUNIST BLOC HARD PUT TO FILL ITS OWN NEEDS

(By Loren H. Osman)

American farmers have another big crop on the way. Even with the Kennedy administration's new feed grains program, which is taking millions of acres out of production, this seeming paradox still exists:

Surpluses are worrying American taxpayers and politicians.

Millions of the world's population are inadequately fed.

Where does the world stand in the outlook for food? Is production keeping pace with population? Or is the old Malthusian law, which says that people eventually will breed themselves into starvation, gaining on us?

FREE WORLD EDGE OVER COMMUNISTS

The U.S. Agriculture Department has been studying the world food situation from several angles. The Foreign Agriculture Service (FAS) is interested not only in the potential markets for American products but in the application of its food for peace program, which now sends U.S. food to shortage areas abroad at the rate of $2 billion worth annually. The program could be stepped up still further, its Director, George McGovern said last week.

The United States and its allies have an immense advantage over the Communist bloc in their food position, whatever may be their

relative standing at the moment in outer space.

Russia's recent agricultural failures have brought a current wave of purges of officials throughout the Soviet Union. Red China's 1961 crop expectations have been severely curtailed by spring drought, floods and hail storms, according to the official New China news agency, and famine threatens again. The 1960 crop had suffered the worst damage in 100 years from drought, floods and typhoons, forcing China, ironically, to buy food on the free world market and to place huge wheat orders with Canada and Australia. Russia apparently has not supplied China with any significant help in meeting the food shortage.

"SOFT" MONEY SALES

In the U.S. view, the twin deficits of food and dollars must be considered together. A nation is not considered deficient in food if it has money to buy from surplus nations.

Conversely, a hungry nation must be helped if it does not have dollars to buy. This is the area in which Public Law 480 operates, allowing sales of surplus food to be made on deposits of "soft" local currencies for the United States. Three-fourths of the food-for-peace shipments are paid for this way, the rest by grants and voluntary agencies.

There have been few accurate measurements of the world's hunger problems. Data has been unavailable or unreliable in many cases.

However, the Agriculture Department recently produced what it called the first world food budget, a compilation by specialists in international food and agriculture of food needs in terms of proteins and calories.

HOW BIG DEFICITS IN WORLD FOOD?

In deficit countries, the survey showed, there were these estimated shortages: 1,800,000 metric tons of animal protein, in terms of nonfat dried milk; 400,000 metric tons of pulse (legume) protein, in terms of wheat; and 8,600,000 metric tons of calorie deficit, in terms of wheat.

Put another way, this would be equal to 35 percent of the U.S. milk production, 40 percent of the U.S. bean and pea production, and 120 percent of its annual wheat production.

Although progress is being made, there is no assurance that the total food gap can be closed soon, the study indicated.

The world splits up this way. In the United States, Canada, Australia, New Zealand, the Soviet Union, and eastern and western Europe, national diets exceed minimum standards.

Total calories, proteins or both are very low for the populations of western Asia, Africa, the Far East, mainland China, and large parts of Latin America. All are less developed areas of the world.

Food requirements per capita vary in different regions, depending on climate, body size, and proportion of adults to children.

PATTERNS OF DIET

Persons in Latin American countries, for instance, had requirements of 2,500 calories each, while western Europeans needed 2,635, Africans, 2,375, and the United States, 2,640. Even greater are the variations in the kind of diet: In North America, consumption of animal proteins and fat are very high, cereal proteins relatively low; the pattern is reversed in the Far East, Asia and Africa. Europe's pattern is about halfway between, but with western Europe consuming somewhat more animal protein than eastern Europe, and somewhat less cereal.

World food production is expected to to reach a new high in the 1960–61 marketing year. Per capita consumption will be about the same as last year and below the 1958–59 level, but population increases are expected to raise the total demand for food.

"World agricultural trade probably will increase again in 1960–61," said the FAS. "Even so, exporting countries' stocks of such important commodities as wheat, feed grains, and coffee are expected to be larger at the end of the season than the beginning."

There will be many people who need this surplus food, but will not have the money to buy it, nor will their governments.

The world output of food was forecast at 121 percent of the 1952–54 average, 2 percent over last year and 42 percent more than the 1935–39 average. The world population is now growing at an alltime high rate of 1.7 percent a year, according to the Population Reference Bureau, and is expected to pass 3 billion this year. Thus the world food output has been keeping pace with population growth overall, but distribution is uneven.

OUTLOOK FOR FOOD GIVEN BY AREAS

Per capita production—the amount of food for each person—is gaining only in the United States, Canada, western Europe, western Asia, Africa and Australia-New Zealand. It is expected to show little change in China, but decreases are in prospect for the Soviet Union, the Far East, Latin America and eastern Europe.

Here is the outlook, by areas:

United States

There was a record 1960 crop, and another big one expected this year. Although production and consumption projections depend on farm programs, economic conditions, technology, and weather, the 10 percent population increase expected by 1965 will boost consumption domestically 10 to 15 percent. Biggest gains will be in meats, poultry, fruits, and vegetables. Exports will be 20 percent higher by 1965.

Canada

There was a 5-percent increase in production in 1960, and about 2-percent increase in population. Per capita consumption, in calories, expected to change little in the next decade. Per capita spending for food will increase, with more livestock products, fruits, and vegetables used.

Latin America

Population rising 3 percent a year, with agricultural output not keeping up. This will get worse in the next few years, despite incentives and intensive programs. Imports must increase, especially in wheat and flour. Coffee, cacao, sugar, bananas, cotton, feed grains, and tobacco will continue to be exported.

Western Europe

This highly industrialized area takes more than 40 percent of U.S. farm exports. Its farming is technologically advanced and output will increase faster than the population. However, demands also will expand with growth in economy. As diets are upgraded, wheat imports may drop, but feed grains, fats and oils, and meats should increase.

Eastern Europe

Socialization of agriculture to continue. Emphasis on increased livestock production, with a trend toward higher consumption of better foods.

Soviet Union

Drops in production of bread grains and cotton, but increases in feeds. Mechanization will help overcome losses from weather, such as experienced in the "New Lands" projects in 1960. More fertilization and irrigation to be used. Production probably will increase substantially in next 5 years.

Mainland China

Limited information but indications of shortages again in 1961. Major emphasis on industrial development. Livestock lags, with feed supplies and disease major problems.

Far East

Production gains expected in next decade. India started a new 5-year plan in April, with major emphasis on agriculture and goals up one-third.

West Asia

Production up 4 percent and per capita production up 1 percent over previous year. Short-term prospects not good. Over long term, deficits expected in wheat, sugar and, as incomes increase, vegetable oils. Exports will continue for cotton, fruits, nuts and tobacco.

Africa

Increased agricultural production expected in north. High Aswan dam will improve Egypt's situation but population will increase by several millions before that is completed. Large potential for agricultural development south of the Sahara. Demand for wheat and flour will increase faster than supply, and there will be increasing shortages of meat and dairy products, unless the tsetse fly is controlled.

SUMMING UP SURPLUS, DEFICIT

Summing up, in addition to the United States, the major surplus-producing areas of the world are Canada, Argentina, Australia, New Zealand, Burma, and Thailand.

Together these countries have a population of 270 million and an annual surplus of 35 million tons of food. The food and dollar deficit areas include some countries of Africa, Asia, the eastern Mediterranean, and parts of South America. They have 755 million persons and a food deficit of 60 million to 70 million tons.

In other countries, there is a variety of situations.

Cuba has a surplus of sugar but needs wheat and rice. The United Kingdom and Western Germany are deficit food producers but are economically well developed and able to buy and pay for imports. Some African and Latin American countries have a balance.

The Communist bloc produces most of its own supplies or goes without—with such exceptions as China's recent wheat purchases from Western nations.

What does this add up to, in terms of U.S. export possibilities? America had a good season last year, with $4.5 billion worth of exports. The year ending June 30 is expected to total $4.8 billion in shipments abroad.

Exports of wheat are expected to be above last year's 512 million bushels, second highest on record. Rice may run slightly below, but increased sales elsewhere will partly offset the loss of market in Cuba. Exports of animal products will be 10 percent higher, with biggest increases in dried skim milk, hides, skins, and poultry meat. Cotton may be down slightly.

HOPEFUL FACTS

In a review of the food for peace effort, the State and Agriculture Departments point to these hopeful facts:

There have been no major famines in the world in the last 20 years.

Nutritional levels in underdeveloped countries have crept up.

Agriculture has, on the average, kept abreast or ahead of population increase in underdeveloped areas.

A Bill To Establish the Elmer T. Ellsworth National Monument

EXTENSION OF REMARKS

OF

HON. CARLETON J. KING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1961

Mr. KING of New York. Mr. Speaker, I have today introduced a bill to provide

for the establishment of the Elmer T. Ellsworth National Monument at Mechanicville, N.Y.

A monument such as this seems especially appropriate to this brilliant young American who was the first Union officer killed in the Civil War. His sudden death in Alexandria, Va., on May 24, 1861, just one century ago, is now regarded as a martyrdom and his name has been meritorious enrolled upon the list of our country's greatest patriots.

Elmer T. Ellsworth was born on April 11, 1837, in the village of Malta, N.Y. He attended the public schools at Mechanicville and after leaving school at an early age, he went to New York City to find employment. From New York, he traveled to Chicago where he became a lawyer's clerk, studied law, and later became a partner in a patent-soliciting business.

While practicing law in Chicago, Ellsworth was asked to become captain of the National Guard Cadets, a military company of volunteers who were in danger of disbanding due to lack of leadership. Ellsworth's life ambition was to become a military leader and he organized the cadets under a new title, "The U.S. Zouave Cadets," which he patterned after a Berber military corps organized by the French in Algeria in 1831. His aim was to induce a military spirit among Americans to increase the efficiency of the Nation's militia. The exhibitions given by the Zouave Cadets attracted considerable attention in Chicago and they became well-known throughout the country while making exhibition tours in many large cities.

When Ellsworth returned to Chicago in 1860, from an exhibition tour of eastern cities, he entered the law office of Abraham Lincoln as a clerk and devoted himself principally to the presidential campaign of that year. He later accompanied the President-elect to Washington and at this time proposed to President Lincoln the formation of a militia bureau, with himself as its chief. From this proposal, developed today's National Guard Bureau in the Departments of the Army and the Air Force.

The Civil War broke out while Ellsworth was awaiting the outcome of his proposal for a militia bureau. He went to New York and immediately recruited a volunteer regiment of Zouaves from the New York City Fire Department. When Lincoln issued his appeal for 75,000 troops, Ellsworth and his volunteer "Fire" Zouaves were ready to be sworn in. They arrived in Washington on April 29 and were quartered in the House of Representatives. In a ceremony at the east front of the Capitol on May 7, 1861, the regiment was sworn into Federal service and became officially known as the 11th New York Volunteer Infantry.

On May 23, when Virginia cast its fateful vote to secede from the Union, it meant that Union troops were immediately to occupy Alexandria. Ellsworth and his "Fire" Zouaves embarked down the Potomac on May 24 for his rendezvous with death. As his regiment landed in Alexandria, they saw a large Confederate flag flying from a pole on top of a hotel named the Marshal House. Determined to remove the flag, Ellsworth went to the roof of the hotel and as he descended the stairs with the flag in his arms, he was shot and killed by the hotel proprietor.

His death, being the first of note to occur in the war, produced a profound sensation throughout the country. His body lay in state in the White House, was taken to New York City by special train, and from there escorted to Albany and Mechanicville, where he is now buried.

Mr. Speaker, the legislation which I have introduced today is not only for the preservation of Elmer T. Ellsworth's home in Mechanicville, N.Y., but to also memorialize the birthplace of our Nation's first Civil War casualty.

More on Comdr. Alan B. Shepard and Friends

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. CONTE. Mr. Speaker, not only was Comdr. Alan B. Shepard from New Hampshire, but it seems that New England has produced many more of the men directly concerned with the success of our first manned space shot. Since the vast majority of those who played a part in the event will never receive more than a great personal satisfaction and lasting memories, I want to recognize those from western Massachusetts who were involved. Therefore, Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the Pittsfield, Mass., Berkshire Eagle, of recent date.

Also, I draw your attention to an editorial from the Washington Evening Star of May 17, 1961, on a related subject—hazardous duty compensation for our astronauts. It concisely supports my bill, H.R. 7049, to rectify the present ironic provisions of the Career Compensation Act of 1949.

The articles follow:

FIVE AREA MEN HAD ACTIVE ROLE IN AIDING ASTRONAUT

Five Northern Berkshire men had active parts in the successful conclusion of Astronaut Alan B. Shepard's rocket ride to the edge of space.

Two were aboard the aircraft carrier U.S.S. *Lake Champlain* to the deck of which helicopters lowered Commander Shepard after he had emerged from his space capsule, and then the capsule itself after it had been fished from the sea.

Three others aboard the destroyers in the Navy recovery force which was deployed down the flight path from Cape Canaveral, Fla., prepared to recover the spacecraft and its occupant wherever they landed.

Aboard the U.S.S. *Lake Champlain*, the flagship of the force, when Commander Shepard was lowered to its deck, were Lt. (jg.) Francis J. Noel III, son of Mr. and Mrs. Noel of 62 East Avenue, this city, and Airman Roger R. Malloy, U.S. Navy, son of Mr. and Mrs. Robert W. Malloy of 125 Cole Avenue, Williamstown.

Lieutenant Noel is a nuclear weapons officer aboard the carrier. Airman Malloy is attached to one of the naval aviation flight squadrons aboard the vessel.

Navy Lt. (jg.) John W. Hinkell, son of Mr. and Mrs. Alfred A. Hinkell of 932 Church Street, was aboard the destroyer U.S.S. *The Sullivans* of which he is chief engineer; Walter Ostrobinski, of 88 Summer Street, electrician fireman and son of Mr. and Mrs. Walter Ostrobinski of 88Summer Street, Adams, was aboard the destroyer U.S.S. *Wadleigh*, and Ralph C. Jones, chief electrician's mate and son of Mrs. Anna M. Jones of 12 Manning Street, Williamstown, was in the destroyer U.S.S. *Rooks*.

MOST HAZARDOUS OF ALL

Obviously an oversight has been responsible for the strange anomaly which has threatened our astronauts with a loss of income because their jobs are not legally defined as hazardous duty. With gratifying alacrity, however—as soon as this ridiculous situation was explained to them by Reporter William Hines of the Star—key Members of Congress have promised to rectify the matter.

As things now stand, the seven astronauts qualify for from $200 to $245 a month each in extra pay if they can manage to sandwich in a collective total of 28 hours' flying time. Thus, according to the Navy, Commander Shepard earned the munificent sum of $14.38 in cold cash by his historic 15-minute flight the other day in the Mercury capsule. At this rate, it would take a lot of missile shots to accumulate $200 a month, and the pressure of their duties as pioneering spacemen has severely limited the time available to the astronauts for regular jet flying.

Whether these men should fly planes at all during this period is up to their superiors. But of course they should not be required to do so simply to maintain the moderate take-home pay they have received in the past. All that is needed is a simple bill to designate astronaut service as the 14th hazardous duty category in the Career Compensation Act of 1949. And no one, most assuredly, will appear at any hearing to challenge this classification.

Illinois Group Opposes Curbs on Scientists' Use of Animals

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. MACK. Mr. Speaker, the Illinois State Academy of Science has adopted a resolution in opposition to various legislative proposals to place Federal restrictions on the use of animals in scientific research.

Under leave to extend my remarks I wish to include the resolution adopted at a meeting of the academy in Charleston, Ill., on April 28, 1961:

ILLINOIS STATE ACADEMY OF SCIENCE
Urbana, Ill., May 11, 1961.

Hon. PETER F. MACK,
House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE MACK: The attached resolution was approved unanimously by the members of the Illinois State Academy of Science in their meeting at Charleston, Ill., on April 28, 1961. It is my pleasure to send you this copy of it.

Sincerely yours,

G. R. YOHE, *Secretary.*

5. Federal Regulation of Research

Whereas Representative MARTHA GRIFFITHS, of Detroit, Mich., has reintroduced a bill in the 87th Congress proposing that the Federal Government police the use of animals in scientific research (H.R. 1937); and

Whereas Representative MORGAN M. MOULDER, of Missouri, has introduced a different bill that would also police research (H.R. 3556); and

Whereas Senator JOHN SHERMAN COOPER, of Kentucky, has been preparing a revised version of the bill he introduced in the 86th Congress; and

Whereas these bills permit an unwarranted encroachment upon the research worker's freedom in conducting his research; and since implementation of these bills would require expensive, massive, and totally unproductive regulatory machinery; and as these bills would delay the testing of new concepts and ideas, and would hinder and restrict medical and biological research; and because the administrative requirements of the bills would significantly reduce the investigator's productive research time when his efforts are vital to our national and international interest; and

Whereas numerous problems of interpretation would be created by the vagueness in terminology of many of the provisions; and since the bills contain no constructive provisions to deal with the current needs in the field of laboratory animal care, i.e., to encourage serious research in significant animal care problems; to provide greater support of professional and technical training; to encourage even wider dissemination of factual information in the field; and to support the improvement of existing laboratory animal facilities and the construction of new facilities; and as the bills would retard the objective of rational humane care for laboratory animals: Be it

Resolved, That the Illinois State Academy of Science, in annual convention assembled, expresses for the reasons set forth above its opposition to H.R. 1937, and H.R. 3556, to Senator Cooper's bill, and to any similar legislation that may be proposed; and be it further

Resolved, That we urge the Senators and Representatives from Illinois to oppose these proposed bills in every possible way, for the best interests of science in its constant attempts to better the welfare of mankind, and to support nonregulatory Federal legislation which would encourage greater support by private and Federal agencies of research and training programs in laboratory animal care; of programs for the dissemination of factual information in the field; and of programs for the improvement of existing laboratory animal facilities and the construction of new facilities; and be it again further

Resolved, That our secretary be directed to send a copy of this resolution to each of the Senators and Representatives from Illinois.

(Approval was moved by Dr. Kanatzar, seconded by Dr. Kaplan, and carried.)

Mrs. Shepard's Contribution

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1961

Mr. WESTLAND. Mr. Speaker, many words have been written and spoken proclaiming the historic feat of Cmdr. Alan B. Shepard, Jr., the first American to reach outer space, but little recognition has been given Mrs. Shepard for her contribution.

I believe that a resolution unanimously adopted by the United Voluntary Services during its recent annual convention in Washington, D.C., is fitting recognition of the faith and courage Mrs. Shepard demonstrated during her long preparatory stage and the flight itself.

The United Voluntary Services is an organization of volunteers who are dedicated to service to the hospitalized veterans, military personnel, and youth. In adopting its resolution it recognized that "They also serve who only stand and wait." Mrs. Shepard certainly proves the point.

The resolution follows:

RESOLUTION

To Mrs. ALAN B. SHEPARD, JR.:

The United Voluntary Services, in national convention in Washington, D.C., wish to recognize and acclaim the deep courage it required to see a loved one take a momentous patriotic step that will go down in the history of all peace loving nations.

Louise Shepard's unheralded contribution to her husband's feat, and her personal faith and courage, will serve as an inspiration to all women.

HELEN F. LENGFELD,
National President,
United Voluntary Services.

It Is Not a Space Race

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1961

Mr. DERWINSKI. Mr. Speaker, as Americans we are all proud of the explorations of our space program and the successful feat of U.S. Astronaut Commander Shepard. One of the outstanding community newspapers in my district, the La Grange Citizen, in the issue of May 11, directed its readers' attention to one of the important aspects of our space program, namely the so-called space race with the Soviet Union.

I believe this editorial is extremely sound in its analysis of that situation, and I insert it into the RECORD with the hope that it will receive careful attention and thought for the House Members:

THE PUBLISHER SAYS—IT IS NOT A SPACE RACE

The pleasure and exultation of the U.S. man-in-space feat has been marred by the inclusion in every story of a statement such as "this puts the United States back in the space race," or "Commander Shepard's performance is less than that of the Russian who orbited the earth", or "it was puny compared to Yuri Gagarin's."

Why this apologetic reiteration? Why this minimizing of an accomplishment which deserves all out commendation without depreciation.

The U.S. man-in-space success should be given its proper emphasis. And that emphasis is that the people of the United States of America were not as eager to be first in space as they were to be sure that the first man they sent aloft would come back safe.

To us, life still is a prized possession. We are not willing as a Nation to deliberately sacrifice a man for the nebulous prize of public acclaim.

The Voice of America in its broadcasts, the U.S. press and the press friendly to this country should be encouraged to point out that the difference between the Russian and the U.S. outer space programs is the difference between the basic humanitarian concepts of the two philosophies of government.

The individual is our main concern. Recognition of the red emblem is the only goal for the Russians and their satellites. Stalin, Khrushchev, Castro and their ilk have no regard for individuals or human lives, as is manifested by the hundreds and thousands of murders they deliberately order to get rid of those who stand in their way.

The world may never find out how many men Russia unsuccessfully shot into space, and up to now the world has no documented evidence that it has orbited one and returned him to the earth. In contrast, the United States let its duds perform without human sacrifice. And, the success was given worldwide exposure with irrefutable evidence of its accomplishment.

Why not capitalize on these differences and create in the people everywhere a recognition that the difference between democracy as we practice it and communism is the difference between respect for individuals and disdain for them.

Trade, Not Aid?

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following article, written by the well-known press writer, Victor Riesel, appeared in a recent issue of the Binghamton Press.

I think it is high time the Members of this House took notice of the fact that we are still trading quite actively with the enemy, in this case Fidel Castro.

Although we are very largely responsible for Castro's rise, it would seem that by now he should be known for what he is: a Communist enemy on our very doorstep. Or is this another case of "Trade, not aid"? Methinks it is a good deal of both.

(By Victor Riesel)

The last time I spoke to Castro he was wild-eyed and muttering. But apparently he has not lost touch with the practical. His devotion to communism has not developed in him a distaste for our capitalist dollars—and it should be known Cuba still is selling more than $40 million worth of produce a year in the United States. This business, though not quite as usual, is going on right now, invasion or no invasion, insults or no insults.

His economic chief, "Che" Guevera, needs these dollars to keep the island's gasping economy from choking to death. The Soviets are sending him military hardware, not hard rubles. The Cuban State Trust collects these dollars from some "Americans" through letters of credit placed to Cuba's accounts in Canadian banks.

With these $40 million, Castro actually still is purchasing some vital machinery in the United States and vital livestock in Canada to bolster his regime—not to feed his people. Despite everything that Castro has

come to mean, some U.S. machinery is permitted him by the State Department on the theory that a total embargo would cause hardships to some international brokers.

The American suppliers of machinery would lose money if they could not complete orders Castro and Guevera placed here over the last year or so—that's the theory. What about the "hardships" of the Cubans who hit the beaches for freedom? They lost more than money.

Furthermore, some of the $40 million the Communist Cuban Government earns from its sales in America is paid to Canadian ranchers. They have been rolling their livestock south along the eastern seaboard to West Palm Beach.

There, twice a week—Tuesdays and Thursdays—the cattle have been shipped on the West India Fruit and Steamship Co. ocean ferries.

The overnight ferries were shut down for a few days during the life of the liberty beachheads. But now they've resumed supplying Castro and returning with his money-making produce. Other Cuban cargo is flown in by his communized companies to Miami.

Even at this minute Castro's plantations are selling some $2 million worth of tobacco a month in the United States. This is a Government—well documented—figure. The Cubans are even selling us a synthetic filament made by the Rayonera factory in the Matanzas district. Thus, the State Department permits this neo-Communist competition with our own hard-hit textile industry, which President Kennedy is attempting to aid. Those people at the State Department should check with the White House.

The State Department should check with somebody. As recently as March 10 Castro was permitted to buy live cattle, live hogs, baby chicks, and even hatching eggs from us. These purchases were not made for the benefit of the people of Cuba.

The livestock was being used for breeding purposes, so Castro could equip future collective farms. If we had not been sending him these animal cargoes, the Russians would have had to supply Cuba. This would have drained the scarce Soviet stocks. It would have put a heavy load on the already overburdened Red bloc merchant fleet.

But early in March someone told the boys at the State Department the facts of barnyard life. Only then did the trade end. But if we had not permitted the Cubans to make money in the United States they never would have had enough to pay for the cargoes for their Caribbean communes.

What makes this business as usual between Cuba and some private U.S. brokers even more galling is the fact that our military finds itself in an awkward position in Cuba. There are some dollars the Pentagon must pay Castro. We rent the Guantanamo Bay base for $150,000 a week. Also we pay some 3,500 Cuban workers on the base some $15 million a year in wages. This we have to do in dollars.

But why should private U.S. citizens add to Castro's Communist exchequer? The anti-Communist Cubans who fought Soviet tanks on the beaches can tell you that liberty is dearer than money.

The Blackmailer

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1961

Mr. DERWINSKI. Mr. Speaker, the brazen blackmail by Cuban Dictator Castro in offering to release 1,200 captives in return for bulldozers has to be clearly understood for all the implications that could stem from this situation.

It is logical to assume that if the first blackmail attempt is successful, others will continue, and in each we will receive less and be giving more. I would feel that the Members of the House in supporting the Selden resolution last week most certainly in principle would oppose this Castro offer.

I have been disturbed by the misguided Americans, many of them bearing names of great fame or notoriety, depending on public opinion, who are committed to raising the funds necessary to arrange this trade.

Mr. Speaker, the time has come not to bargain with Castro, but to press forward aggressively with firmness on all fronts to free the Cuban people from their horrible fate. We must reappraise all the aspects of the problem posed by this blackmail attempt, and I feel that the editorial in the Chicago Tribune yesterday, May 23, entitled "The Blackmailer," concisely and vigorously presents the whole picture in a most understandable light.

The editorial follows:

THE BLACKMAILER

The awful Castro, with a sense of imagination never displayed in Washington, unloaded a delegation of 10 prisoners from the recent abortive invasion in Miami Saturday. He sent them here by air to appeal for support of his offer to release 1,200 invasion captives in return for 500 bulldozers needed to clear land for agriculture.

The Kennedy administration, already sufficiently embarrassed by the American directed fiasco at the Bay of Pigs, was obliged to hold still and permit the return of the Cubans it had sent on an errant mission. A committee of do-gooders, including Mrs. Roosevelt, Milton Eisenhower, and Walter Reuther, promptly sprang into being to encourage the Castro blackmail.

Well, we suppose that, inasmuch as the Kennedy administration got the invaders into their pickle, it owes them some exertions to spare their lives. But we don't think the cost of the bulldozers, if the trade is consummated, should be borne by the public through subscription or the taxpayers through appropriation. Properly, it might be met out of the Kennedy family fortune.

Capitalism Continues To Bail Out Socialist Failures

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1961

Mr. CEDERBERG. Mr. Speaker, we are being told that poverty and communism go hand in hand and that we must continue to shovel our foreign aid funds to impoverished countries to prevent their overthrow by Communist infiltrators.

In the countries that have gone behind the Iron Curtain the rate of communism has been higher in industrial areas. Communists in the field of arts, science and elsewhere are anything but impoverished.

Oddly enough the Communist movement in this country has been financed by those who have obtained their gains through our free enterprise system.

Mr. Henry Hazlitt ably sheds light on this Communist-and-poverty thesis in the current issue of Newsweek. His column follows:

HOW TO CURE POVERTY

(By Henry Hazlitt)

The real issue in the Western Hemisphere, according to Secretary of State Dean Rusk, is the battle against poverty. Foreign aid, he keeps repeating, must be concerned with "social" as well as "economic" objectives; it must not perpetuate the gap between the rich and the poor.

Is the battle against poverty the real issue? Is it the problem with which Americans think their Secretary of State should be primarily charged? Or isn't that problem really the battle against Communist subversion and aggression?

The problem of poverty has existed from time immemorial. It is as old as man. Since the birth of capitalism—the Industrial Revolution—tremendous strides have been made toward its solution. But the problem of Communist subversion and aggression is peculiarly the problem of our time, of our decade, of 1961. It is this that Americans are worried about. They are a generous people and would like to see other people better off. They have in fact done more in this direction than any other people in history. But the poverty in India, or the gap between the rich and the poor in Brazil, is not what keeps them awake nights.

Secretary Rusk seems to think that poverty is the primary cause of communism, and that an increase in incomes would be the primary cure. Experience and statistics do not bear him out. In Italy and in a score of other countries, communism is nearly always found to be higher in the richer industrial districts than in the poorer agricultural sections. Communism has been growing while world income has been growing. The Broadway and Hollywood Communists also spoil the Secretary's thesis.

NOT BY GIVEAWAY

One of the things we have been told for years by the advocates of foreign aid is that the world cannot exist half rich and half poor. It has in fact so existed for centuries. Of course poor nations do not buy much from us nor sell much to us. But neither do they threaten us militarily. It is nations well off enough to embark on huge armament programs, like Nazi Germany, prewar Japan, and Communist Russia, that can do that. The latter can also subsidize aggression against us in the poorer countries.

Of course it is always desirable to reduce poverty, where and to the extent that we can. But what is the method or system most likely to do that? It is precisely here that Secretary Rusk and the advocates of bigger and longer term foreign aid are most wrong in their implications. For they assume that the way to cure foreign poverty is by government-to-government giveaway programs, by state projects, state spending, state planning. In a word, by socialism.

BRAZIL AND INDIA

This is made clear not only in their generalities but in their specific programs. A $2 billion "international financial rescue package" is being prepared for Brazil, with smaller packages to bolster the economies of Venezuela and Bolivia. But the difficulties of these countries are of their own making. They are the result of their inflationism, socialism, Brasilias and other grandiose state-planned projects. Now that they have run out of their own money, the United States is offering Latin American governments a $600 million "social development fund" for more of the same. Our planners are also planning to lend India $1 billion in the next

2 years to meet the foreign-exchange requirements of India's third 5-year plan, and to help India build a nuclear powerplant and a Government steel mill. India having borrowed and spent itself to the brink of bankruptcy, it is considered our duty to forget all about our own balance-of-payments problem and rush to the rescue of Indian socialism.

If the Kennedy administration is right in thinking that foreign poverty is the real problem, it has chosen precisely the wrong way to solve it. The problem of poverty cannot be solved by communism, socialism, or state planning, but by capitalism—by the system of freedom of private property, private enterprise, and free markets. But few of our officials, despite occasional lip service, seem to have any real faith in the system that has made it possible for us to keep bailing out the socialist failures.

Farley Says Latin America Fears Its Own Castros

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the May 1 issue of the Rockland County Journal-News:

FARLEY SAYS LATIN AMERICA FEARS ITS OWN CASTROS

NEW YORK.—James A. Farley, recognized authority on gaging public opinion, said leaders of Latin America are strongly anti-Castro and the United States would be wise in stepping up its good neighbor policy.

Farley recently toured South America and conferred with Presidents, Foreign Ministers, and other government officials. Some were close friends from the days Farley was in the Franklin D. Roosevelt Cabinet.

"I found the leaders down there very friendly toward President Kennedy," he said in an interview with United Press International. "Their attitude toward the administration in Washington is better today than it has been for many years.

"The leaders of Latin America are strongly anti-Castro. They know there is a potential Castro in every country so they are determined to contain the present Cuban leader."

The former Postmaster General and political adviser to F.D.R. said there "is no doubt in my mind there will be no further goofing in handling Fidel Castro," but he added:

"You can't invade Cuba with the size of the force they tried to do it with."

He said all Latin-American countries need and want financial help from the United States. He said, "You can't write a strict formula or set a hard and fast rule" for providing assistance.

"What they really need is help in developing their economy," he continued. "They need more water power, better roads and transportation facilities. Their lands need irrigation. And, they desire improved educational facilities and technical help."

Farley said officials of the Latin Governments are "extremely anti-communistic," but added he saw evidence of Communist activities "in areas where the economy is low."

"I discovered the leaders very pleased with the election of President Kennedy," he continued. "They feel that in Kennedy they have a friend who will help."

Farley suggested more frequent visits to South American countries by top U.S. officials. He noted that Roosevelt and former Secretary of State Cordell Hull personally took a hand in furthering the "good neighbor" approach.

"A visit by President Kennedy would do much," Farley said.

Farley talked with officials in Brazil, Argentina, Chile, Peru and Uruguay. He also visited Panama.

Stop Appeasing the Communists

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. DEROUNIAN. Mr. Speaker, this sobering editorial by David Lawrence, in the May 29 issue of the U.S. News & World Report, is must reading for all America. Is it not about time we stopped appeasing the Communists, not only abroad but also here in the United States?

KOWTOWING TO KHRUSHCHEV

(By David Lawrence)

President Kennedy has disheartened millions of Americans by his willingness to sit down with Nikita Khrushchev—the man who insulted the preceding President of the United States.

Mr. Kennedy said during the last campaign that he was willing to express regrets to the Soviet Government because of the U–2 incident. This was widely interpreted at the time to mean that he was ready to apologize even though this might make it appear he was repudiating an act of military necessity—protection of the American people against surprise attack.

Mr. Kennedy also said—as he was trying to get the votes of his countrymen—that he didn't think summit conferences should be held with the Soviet Premier unless there had first been preparations at the diplomatic level indicating some area of agreement.

There has been no such agreement. Instead, the situation between the East and West has since worsened.

What possible good then can come from kowtowing to Khrushchev? The same old argument is made that it will clear the air and that we shall know where we stand.

On May 30, 1955, on this page this writer said:

"Those in Government, here and abroad who know the inside story of all the futile efforts thus far to obtain from Moscow, through the customary diplomatic channels, some evidence of a sincere desire to negotiate peace must have a troubled conscience as they accept the enemy's propaganda trick—a spectacular meeting with Bulganin (at the summit)—and arouse false hopes everywhere about the prospects for peace. * * *

"A third world war must be avoided if it is humanly possible to do so, because the destruction of cities by atomic weapons is too horrible to contemplate. But it is precisely because a policy of weakness and craven surrender of basic principles invites attack that those who are crying for peace at any price can turn out to be the very ones who bring on a terrible war. * * *

"Whence comes this strange delusion that by a four-power conference good faith can be established where there has been none before? And when will we learn to take our stand on principle and adhere steadfastly to it no matter what the sacrifice? For there is only one way to deter any enemy government from aggression, and that is to persuade the people behind it that their rulers are endangering their lives—and, if this fails, then to make sure our force is adequate to defend ourselves against any attack that may come. * * *

"Governments that wish to preserve freedom must steer by the compass of basic principle. They cannot surrender to the whims of experiency now without risking the surrender of their liberties later on."

Commenting on the summit conference idea 6 years ago, on May 5, 1955, the writer said on this page:

"The people of Soviet Russia and of China want freedom just as we do. We must not tighten the hold of their oppressors on them. We must open the way for their liberation by refusing to deal with gangster governments. For those governments constantly threaten the peace of the world, and there can be no safety for anybody as long as they remain in power.

"There is but one way to force the disintegration of the Communist empire. It is by forgetting four-power conferences and imposing a complete quarantine on the Communist regimes. This means extermination of their agents and conspirators from all free countries.

"These enemies must be driven from within our gates. It makes no sense to endeavor to negotiate with the master minds of world conspiracy."

In the past several months, the Soviet Government has vigorously waged a cold war everywhere.

Khrushchev has refused to cooperate with the United Nations in the Congo.

Khrushchev has tried to wreck the United Nations by seeking to dissolve the office of Secretary General.

Khrushchev has virtually taken over the Castro Government in Cuba, just 90 miles from our shores.

Why then does the President of the United States feel that he must go to Europe to see Khrushchev and thereby give the world the impression that he is kowtowing to him?

Why should our Government place credence in the word of a Communist ruler who has broken faith on every occasion—a tyrant who ordered the brutal murder of the people of Hungary and who today is conniving in Laos and in South Vietnam to undermine the forces of the free world?

It is pertinent to recall the words of George Santayana, the famous philosopher, who wrote:

"Those who refuse to learn from history are condemned to repeat it."

Once it was the arrogant Kaiser Wilhelm. Appeasement failed, and then came World War I.

Next it was the insane Hitler. Appeasement failed, and then came World War II.

Will the intransigent Nikita Khrushchev now misconstrue our continued submissiveness and thereby bring on world war III?

Depressed Areas Law Loosens Purse Strings

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. WESTLAND. Mr. Speaker, recently the Congress passed and the President signed a depressed areas bill. I should like to remind my colleagues that

parts of my district are termed so-called depressed areas, at least when the loggers, fishermen and harvesters are not working because of the seasonal aspect of their vocations.

On May 18, 1961, the Everett (Wash.) Daily Herald editorialized on this depressed areas legislation in a thought-provoking manner. It points out there is the possibility that money dished out to "depressed areas" will sweeten some voters in certain areas in time for the next congressional elections.

Also, Mr. Speaker, the editorial speaks of how the Congress again has relinquished more of its power over the public purse through the back-door spending provisions of this legislation. I agree with the Daily Herald, and under leave to extend my remarks I include the editorial in the RECORD as follows:

DEPRESSED AREAS MEASURE SPENDS PUBLIC'S MONEY

President Kennedy's measure to dish out $451 million in the next 4 years to depressed areas should rightfully be tabbed as a political victory for the administration. It got the Democratic gravy train on the road and it will sweeten some voters in certain places in time for the next congressional elections.

It could assist President Kennedy in areas that count at the voting polls 4 years from now.

Try as we did we could find nothing that would assure us that these handouts will accomplish much, if anything, in placing chronically depressed areas back on the right side of the economic highway or even make a little dent in unemployment.

Therefore we believe we have a valid doubt as to the worthwhileness of the measure.

The taxpayers merely lost another round to the spenders. In this instance the Congress let them down.

Three hundred million dollars of the $451 million will be spent with congressional review, without congressional authorization of specific outlays. The spenders will merely receive the money upon demand from the Treasury. The Treasury then will proceed to borrow sufficient cash to cover. Thus we have additions to debt and deficit.

Thus we have chronicled a bad feature of the act.

Congress again relinquished its power of the purse as it has done in so many other instances. We remember the day when this power was zealously guarded. It enabled the Congress to place a brake on spending and to counter inflationary tendencies originating within the Federal structure.

But as we said, the measure is purely political. The objective being to gain votes through liberal use of your money. Neither the Government nor the people of this country should permit the spending of millions whether with or without some check on the purse strings.

What Is U.S. Will Power?

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. MORSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following penetrating editorial from an outstanding newspaper, the Woburn Times, published in the Fifth District of Massachusetts, which I have the honor to represent:

[From the Woburn (Mass.) Daily Times, May 19, 1961]

WHAT IS U.S. WILL POWER?

What can be certain that the United States has the military power to stand up to any threat Premier Nikita Khrushchev poses.

But the big question in our minds, and in Khrushchev's mind is: "Have the people in the United States the will power to use their military power?"

A defeatist slogan is sweeping England. "Better Red than dead," it goes. "Communism is bad, but it is not as much evil as death."

Rather than have a showdown fight of nuclear proportions with the Soviet bloc, it is a far better thing, so these pacifistic-neutralists say, to allow the Communists to roam at will over the world and test the inevitability of their philosophy * * * which is: Come what may, communism will conquer all some day.

Putting our current use of will power to the test, we have these indications:

If Castro is not dealt with, and soon, communism will make rapid strides in this hemisphere. Latin America is offering little help in curbing Castro. A large batch of U.S. professors tells us that we should stay out of Cuba. Most Americans would use force to defend the Guantanamo Bay Naval Base, but less than 50 percent want any part of an invasion of Cuba.

Laos is lost to us. We would like to see the rest of Southeast Asia saved from communism. We will make the sacrifices to send economic and military help, but we want none of our soldiers over there.

Then comes the test of our willpower on Berlin, Nikita Khrushchev says that "all time limits have expired" for a settlement of the Berlin and German questions.

Secretary of State Rusk says we will not retreat from our position that West Berlin remain free, a part of West Germany. On the surface, the words mean that we will fight the East Germans and the Soviet Union, too, if they try to take over West Berlin. But we told the world there would be no retreat in Laos, and now we are in Geneva trying to make a deal on that lost-to-the-West nation.

If the pattern of U.S. action in regard to Cuba obtains for Berlin, then we will start too late to defend Berlin and new compromises will have to be accepted.

Are we going to force Russia to accept a plebiscite or the unification or division of Germany?

Are we going to defend West Berlin as we have promised?

Or are we going to pass off our losses in the recurrent crises, with the cheap, myopic cowardice expressed in the daily more popular symbol of human decadence: "Better Red than dead?"

Montgomery and the World

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. DERWINSKI. Mr. Speaker, I insert into the RECORD an editorial in this morning's Wall Street Journal which, in a clear, concise manner, brings to our attention one thought that should be kept in mind as we pass judgment upon the recent unfortunate disorders in Montgomery, Ala.:

MONTGOMERY AND THE WORLD

There is, surely, plenty of blame to go around for the Montgomery racial disorders. But we should like to enter a dissent to the increasingly prevalent notion that the United States as a whole deserves all this criticism, at home and abroad, for mismanaging its racial problems.

In this particular case the trouble was deliberately provoked. The so-called freedom riders went looking for trouble, in one of the most likely parts of the South, and they found it. The local and State authorities failed, in the beginning at least, in their duties to prevent violence and maintain law and order.

That was said to require Federal intervention, and perhaps it did. But the present administration sometimes seems almost as zealous in this matter as some of the agitators. It seems to believe that by fast, firm action it can clear up this whole question of segregation in the near future.

If that is indeed the view at the Justice Department, we fear it is an illusion. The Supreme Court school decision of 1954, whatever one may think of it otherwise, undertook to upset a social pattern of long duration. The consequences have been coming ever since, and the only sure thing is that the troubles will keep coming.

But all that does not, in our opinion, properly make the United States an object of scorn in its own eyes and the world's. We are dealing here with a collision of cultures, with elemental emotions, instincts, and attitudes which cannot be waved away with court orders or U.S. marshals or promptly solved in any simple fashion. And we would just like to know what society, ever, faced with such a problem, has dealt with it any better or nearly as well.

Let's consider a few cases in the world today—not to justify the United States by pointing a finger at others, but simply to keep this complex matter in some kind of perspective.

There are, for instance, the emerging nations of Africa, so perturbed about America's race problems. Yet they themselves exhibit racism in reverse. Native politicians in Kenya, heading toward independence, want to drive out or submerge the whites and Asians who built the place for them. That is perhaps their business, but it hardly suggests they have found the secret of a harmonious multiracial society.

Throughout the vast backward areas of the nonwhite world, in fact, prejudice, discrimination, segregation are the custom. It's hard to think of a more thoroughly segregated setup than India's caste system.

Then there is the sanctimonious Soviet Union; to be sure, it does not have a Negro problem, but it holds many Asiatics, among others, in thrall and follows a quasi-official policy of anti-Semitism.

Even the civilized nations across the Atlantic are not successful at coping with the race problem when the problem arises—as it has in Britain. For most of them, of course, the problem has not arisen in any important degree, and therefore it is all the easier to deliver lectures on inequality in the United States.

The truth is that progress toward equality under the law—before as well as after 1954—is one of the more remarkable achievements of America, in view of its singularly difficult situation in this respect. Today compromises on the schools are taking shape in many areas of the South. Long and involved litigation, which itself dissipates passions, frequently results in a measure of desegregation not satisfactory to either side, but not intolerable either. Where there is any community will to ac-

cept change, the Federal courts have generally been understanding.

None of this excuses the mess in Montgomery; it does not mean all Americans are going to love each other any time soon. But the broad record of progress ought to be remembered once in a while in the midst of all the talk of the damage we are causing ourselves and our image abroad.

Ill-Conceived Flight of Fancy

EXTENSION OF REMARKS
OF
HON. PAUL FINDLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. FINDLEY. Mr. Speaker, the Globe-Democrat of St. Louis, printed with great clarity Tuesday, May 16, the difficulties involved in the President's forthcoming meeting with Mr. Khrushchev. This analysis deserves the attention of all Americans, particularly those highly placed in the administration:

ILL-CONCEIVED FLIGHT OF FANCY

In ordinary circumstances, it is always a good thing if two people who have widely divergent points of view sit down to discuss and, if possible, reconcile their differences.

If we were dealing with a normal person, or with a country which subscribes to the same idea of truth, honesty, and decency to which the United States has been devoted throughout its history, it would make good sense for President Kennedy and Chairman Khrushchev to have a meeting. There are few things in life which two reasonable people cannot achieve if they share a common goal.

Unfortunately, the United States and Russia, when talking of peace, simply are not using the same language. The Russians' idea of peace is entirely different than the dream which all good Americans have for this utmost aspiration of any civilized people. Peace to Russia is absolute slavery, and complete capitulation on their own terms.

Under these circumstances, Mr. Kennedy's overtures to Mr. Khrushchev bode nothing but ill for the world situation, considering the present state of global affairs.

American statesmen from President Wilson on have, without exception, suffered diplomatic disaster when they attempted to engage in personal diplomacy.

This was true in 1919, when America had won the war for the allies.

It was far more true at Tehran, Yalta, and Potsdam in the closing days of the victory which American strength had achieved in World War II.

Yet, in all these instances, America was negotiating from a position of strength.

President Eisenhower's personal diplomacy with Khrushchev—culminating in the humiliation in Paris just a year ago this week—should have taught American leaders, once and for all, the consummate folly of high-level discussions with the Russians but, even last May, the United States was negotiating from strength.

Today, quite to the contrary, following our disaster in Cuba and the unfolding tragedy in Laos—plus the superior achivements of Russia in space, and the deteriorating situation in other areas—the United States is not negotiating from strength, but from the greatest position of weakness in this Nation's recent history.

Under these circumstances, it is absolutely inconceivable that any good can come out of such a meeting. Conversely, enormous harm to an already devastatingly bad international picture could come of it, if Khrushchev inflicts on Kennedy the same abuse he poured on Dwight Eisenhower's head a year ago.

It must be borne in mind, too, that President Eisenhower was a man with tremendous international prestige because of his reputation as the architect of victory in Europe in World War II—whereas Mr. Kennedy's international prestige, at the moment, is considerably less than zero.

If Khrushchev had any idea that he might want to transmit to the United States, which could pave the way for a just and lasting peace, he has a full diplomatic representation through his ambassadors and ministers in Washington.

He has another diplomatic staff at the United Nations, and he has representatives presently throwing roadblocks in the path of progress in both the nuclear talks in Geneva and the discussions on Laos in the same city.

An added cause of concern to the American people is the impulsive way in which Mr. Kennedy has conducted foreign affairs in his unhappy 4 months in office, marked as they have been by a complete lack of planning, preparation and follow-through.

If Mr. Kennedy is going off on another ill-conceived flight of fancy similar to the abortive invasion of Cuba, the results for this Nation could be even more calamitous than that miserable nightmare.

All in all, there is nothing to be gained by a personal meeting which could not be achieved through normal diplomatic channels. On the other hand, there are exceedingly grave risks to our already badly damaged stature in today's world picture.

Mr. Kennedy's brash impulsiveness, which may charm television audiences, presents an extreme liability in the precarious balance of today. Look out for the trap, Mr. President.

Good Old Days in Brooklyn

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. ANFUSO. Mr. Speaker, many of us talk about the weather, but nobody does anything about it. In the same manner, many of us talk about the "good old days," but nobody ever does anything to bring them back—that is nobody, except good old Brooklyn, N.Y.

Here we are discussing today such matters as aircraft missiles and appropriations for the National Aeronautics and Space Administration to launch more and newer satellites into space, men in space, trips to the moon, which only a few short years ago seemed fantastic and almost impossible.

But in Brooklyn today they are turning the clock back to the good old days, the days of bustles and bows, the Keystone cops, and the horse-drawn trolley car. That "garden spot of the world" known as Greenpoint, located in my congressional district in Brooklyn, is today beginning its annual celebration of the good old days in an effort to recapture some of the spirit and the gayety of those carefree days of our grandfathers and grandmothers.

On Greenpoint's streets, beginning at 7 o'clock this evening, the folks will be wearing the fashions of yesteryear. The stores will be decorated to look like the oldtime stores. A cavalcade will make its way through the streets. A barbershop quartet will sing such delightful favorites from grandpa's hit parade as "Sweet Adeline," "Genevieve," and "I'll Take You Home Again, Kathleen." Of course, Miss America of 1895 will be there. There will be free rides on the pony-drawn Toonerville Trolley. There will also be clowns galore, horseless carriages, and prizes for novel ideas to bring back the old days.

Mr. Speaker, I am torn betwixt and between. I know I should be in Brooklyn today with my constituents, reliving the good old days and partaking of all the fun and excitement. But duty calls in Washington and I must help "mind the store" here in these crucial days. So while my heart is in Brooklyn, my place is here. We may not be able to bring back the good old days for good, but if we succeed in achieving true peace for the world, perhaps future generations will someday think of our days, too, as the good old days.

To Gale H. Wilcox, for Heroism Far Above the Call of Duty

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. CONTE. Mr. Speaker, "A greater gift hath no man than to lay down his life for a friend." Gale H. Wilcox, district park ranger in the Grand Teton National Park who had served his Nation for nearly 25 years, was given the Department of the Interior's Valor Award, posthumously, for sacrificing his life to save another's. At the 25th Honor Award Convocation, his widow received the Department's recognition, reserved for employees who demonstrate unusual courage involving a high degree of personal risk in the face of danger, whether or not it be in the line of duty. Also, recently, the Carnegie Hero Fund Commission presented him, posthumously, its bronze medal for heroism.

Under any circumstances and at any time a human being makes this sacrifice, it is worthy of continuing commendation and public notice. Therefore, Mr. Speaker, under leave to extend my remarks in the RECORD, I include the citation of the Department of the Interior:

CITATION FOR VALOR AWARD, GALE H. WILCOX, FOR COURAGEOUS ACTION IN THE FACE OF DEATH

THE SECRETARY OF THE INTERIOR,
Washington.

While on ski patrol with two other park rangers in Grand Teton National Park on

March 9, 1960, District Park Ranger Wilcox lost his life after breaking through the ice on Jackson Lake during an attempt to rescue one of his companions. Mr. Wilcox and Assistant Chief Ranger Stanley H. Spurgeon had skied, one at a time, across the ice-covered channel when Ranger John Fonda, who followed them, broke through the ice. Although he could not swim, Mr. Wilcox joined his companion in an attempt to get Mr. Fonda to safety. Rescue efforts failed when the ice ledge broke, plunging all of them into the icy water. Mr. Wilcox, valiantly and heroically, tried to save Mr. Fonda until he became exhausted and had to be dragged from the water by Mr. Spurgeon. The exertion and exposure proved to be more than Mr. Wilcox could physically withstand, and he advanced into a state of shock from which he did not recover. For heroism and courage far beyond the call of duty in an effort to save the life of a fellow worker, resulting in the loss of his own life, Mr. Wilcox is granted, posthumously, the Valor Award of the Department of the Interior.

STEWART L. UDALL,
Secretary of the Interior.

Will the Statue of Liberty Carry a Hammer and Sickle?

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. VAN PELT. Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD and to include an address by Miss Karen McDonald, entitled "Will the Statue of Liberty Carry a Hammer and Sickle?"

WILL THE STATUE OF LIBERTY CARRY A HAMMER AND SICKLE?

(Speech given for the Wisconsin High School Forensics Contest, by Karen McDonald, St. Mary's Academy, Milwaukee, Wis.)

When our forefathers touched the prow of the *Mayflower* to the newly discovered land of America, liberty was released from bondage and stepped forth to become the foundation stone of our freedoms. Down through the centuries she has survived through war and peace, depression and recession, years of want and years of plenty. Until the present time, her secure position in our country has never been seriously threatened.

This is the climax, the turning point has arrived. Freedom, my freedom and your freedom, is being undermined by that subversive power, communism. Gathering strength and prestige by leaps and bounds in one country after another, communism has grown from one man's abstract idea into a worldwide party of hate.

"Behind the Iron Curtain" seems to express the average citizen's concept of or his concern in communism, but the Soviets have boasted that they have active Communist parties in 87 countries of the world, and America has not been proven to be invulnerable to the attacks of these groups.

But we say, let it go, America is strong, it cannot fall into communism. We know it, but do the Communists know it. Of course they don't.

The activities of this subversive group in the United States give conclusive evidence to that fact. For example, did you know that the Communist magazine, U.S.S.R., is being sold right now at your neighborhood book shop, at the newsstand on the corner? In fact, up until a short time ago, and I'm ashamed to admit it, this propaganda-filled magazine was actually published in my hometown, Milwaukee. Also today, there is much said against the House Un-American Activities Committee; and who inspires this dissension, learn the truth about the state of affairs in his country? No. But much communistic-inspired criticism is directed against Representative WALTER and his committee.

Yet, not all are blind to the false propaganda against Congressman WALTER and the HUAC. A recent article in the Brooklyn Tablet reported on the activities of a college group which is supporting this committee in its courageous fight against communism. They base their opposition on the fact that under our Constitution, the public has a right to be informed about any persons or organizations that might attempt to overthrow our way of life. And communism has not only overthrown the way of life in Russia, China, and the countries behind the Iron Curtain, but has infiltrated to every corner of the globe and is now attempting to overthrow America and its democracy.

In America today, the question is not, When will the Communists attack? They have attacked and will keep on attacking until our Government, the leader of the free world, topples. The riots in San Francisco last May, the prejudice of the people in South America against the United States, these and many other incidents uphold the fact that America is being infiltrated and democracy is being undermined by the Communists.

The symbol of our democracy, the Statue of Liberty, has stood in New York Harbor since 1886, carrying in her hand the symbols of peace and guidance, the book of knowledge and the torch of human understanding. Are we going to allow these symbols—symbols our forefathers fought to obtain—to be replaced by the treacherous hammer and sickle of the Communists? It is up to the average citizen, the John Does and Mary Smiths of America, to keep the spirit of liberty alive in their hearts, to keep America for the Americans and not for the Communists.

Effective Legislative Leadership

EXTENSION OF REMARKS
OF
HON. MAURINE B. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24, 1961

Mrs. NEUBERGER. Mr. President, proponents of Federal aid to education owe much to the excellent leadership and untiring efforts of Oregon's senior Senator. It is a privilege to commend his work on behalf of education.

I ask unanimous consent that the editorial from the Washington Post of May 24, 1961, be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ON THE MERITS

It now looks as though the Senate will have a chance, before the week is out, to vote on the merits of Federal aid to education. Efforts to clutter the education bill with extraneous issues have been resolutely opposed by administration leaders and voted down by sizable majorities. Senators will decide, therefore, whether they want the Federal Government to assist the country's public school system—without being obliged at the same time to decide whether they want to assist religious schools—or whether they want to adopt a new civil rights measures.

We congratulate the managers of the education bill—Senators MORSE and MANSFIELD in particular—on their demonstration of effective legislative leadership. In the wake of the weekend savagery in Alabama it was not easy to reject Senator BUSH'S antisegregation rider prohibiting allocation of aid funds to segregated schools. Senator MORSE was abundantly right, however, in asserting that "it would kill the chances of the bill being passed." Some other steadfast supporters of civil rights such as Senators CLARK, JAVITS, and HUMPHREY deserve warm commendation for supporting him—preferring a solid stride toward better schools to an empty gesture toward racial equality.

We do not doubt that some of the Republicans who voted for the Bush amendment regarded it as a moral challenge which they regarded the rider as a convenient device for killing Federal aid to education while winning kudos from their Negro constituents.

The issue now is a straightforward one: whether to allocate to the State $2,550 million in Federal funds to help meet the costs of constructing new public schools, improving the pay of public schoolteachers, and meeting other school costs as the States themselves may determine. This newspaper, which has urged Federal aid to education in every Congress for the past 15 years, believes the measure to be soundly conceived and imperative in the national interest. The public school system is the fountainhead of the national future. It needs regeneration.

Freedom of the Press

EXTENSION OF REMARKS
OF
HON. PAUL FINDLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. FINDLEY. Mr. Speaker, nothing is more essential to freedom than a free press. It is one of the first things seized by a panicky or totalitarian ruler, and its control is a clue to the kind of government that will follow.

A free nation must ever be alert for those who would muzzle the press no matter what the pretext, and, in that connection, I insert in the RECORD an editorial which appeared May 17, 1961, in the Christian Century:

FREEDOM OF THE PRESS

No word spoken by President Kennedy since his administration began struck so discordant a note as his appeal to the press to limit its use of its constitutional freedom in the interest of national security. His appeal demonstrated too little faith on his own part in the strength of truth and too great confidence in the capacity of the foes of democracy to win by use of the big lie. Coming as it did immediately after the Cuban fiasco, his appeal carried an overtone of panic which was not justified by the event, serious as it was. And the appeal cannot be justified on the basis of the principles on which a free and open society must stand. Such a maneuver seems curiously inconsistent with other actions of the President, such as his recent commendable move ending post office censorship of mail coming from Communist countries.

Turning back to Justice Holmes, Mr. Kennedy cited the doctrine of "clear and present danger" as justifying limitations on freedom of speech. "The danger has never been more clear and its presence has never been more imminent," said the President. Noting that the courts have held in times of clear and present danger that "even the privileged rights of the 1st amendment must yield to the public's need for national security," he called on the press to limit itself to publication of "facts the public deserves to know."

Several things need to be said about the President's exhortation. First, the paternalism of the phase "facts the public deserves to know" is shocking. Does not the public deserve to know everything that bears on its freedom and responsibility, on its civic duties, on its obligations to country and world? Of course it does. Second, conditions of actual war as implied in court decisions do not exist, and will not exist unless Congress declares war. The Holmes dogma that no man has a right to create a panic by crying "fire" in a crowded theater is not relevant to the situations to which the President referred. He complained that the press had revealed "details of this Nation's covert preparations to counter the enemy's covert preparations." It was in fact the duty of the press to reveal what was essentially an illegal enterprise, an enterprise violating American laws and treaties.

If President Kennedy is not ready to ask Congress to declare that a state of clear and present danger prevails—and we do not argue that circumstances warrant his being thus ready—he should not complain when the press gives the American people the information it must have to form right judgments on events and actions, including judgments on the decisions and deeds of President Kennedy and the CIA. (What a serious mistake it would be for the President to appoint his brother, now the Attorney General, to succeed Allen Dulles as CIA head. Yet this is being discussed in the highest administration circles, according to reports which may be trial balloons.) The real ground for criticism of the press is that to too great an extent it did precisely what the President complains it did not do—it concealed from the American people the full scope of what was going on until it was too late for the public to bring its judgment to bear.

But assume for the moment that the press were prepared to attempt the self-censorship the President asks. Who would be able to determine the rules of self-censorship? The President's admonition for editors to ask "Is it in the national interest?" as well as "Is it news?" does not solve the problem. And if a way could be found to lay down the official line, how could the board of censors enforce voluntary compliance with its will? By definition the project is impossible.

After making his proposal, which is so impracticable that it may have been nothing more than an appeal for sympathy, the President seemed to glimpse the position he should have understood from the beginning. He said: "Perhaps there is no answer to the dilemma faced by a free and open society in a cold and secret war." The only thing wrong with that sentence is the inclusion of the word "perhaps." Of course there is no answer to the dilemma. The President and the Nation's press are compelled to seize one horn or the other. We had better lay hold with both hands of those principles which are consistent with "a free and open society." They require us to tell the truth, to espouse and act for freedom, to leave no doubt that the morality which is identified with responsibility to God is of a different order from the morality whose highest authority is that of the absolutist state. We ought to follow this line even if we were sure it would lead to our destruction; the fact that our best hope for survival lies in honor and integrity certainly does not weaken our obligation so to act.

President Kennedy should realize that nothing can tarnish the image cast by his administration as quickly as attempts to secure control of the press, even if it is controlled by self-censorship. An American friend who hoped much from the Kennedy administration writes from Europe: "The New Frontier is rapidly becoming a New Curtain. After a short period of hope in the new administration, there is now a sick feeling of horror spreading over here. This begins to sound like a new McCarthy era but now on a worldwide front." He raises the question as to whether the New Curtain is to be drawn around the Western Hemisphere, abandoning Asia to the Communists, and urges: "The real policy of the new administration should be put on the table. If we are being led into an anti-Communist crusade in the name of a New Frontier, let's make Kennedy show what he really is and strip away the facade that he has created with names like Stevenson and Bowles. It is time to press for a clear statement of policy."

Our friend is right. The old policy of containment of communism has failed. Communism is not being contained. Scores of the bases which we have built around the perimeter of the Communist world are liabilities or even traps. It is high time that a new, legal, viable and truthful policy be proclaimed. The press will do its duty in relation to the national interest by truthful reporting and independently expressing its opinion, acting of its own free will and without censorship.

Address by Hon. Vance Hartke, of Indiana, Before Indiana Academic Advisory Council

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, May 24, 1961

Mr. DODD. Mr. President, last Saturday the distinguished junior Senator from Indiana [Mr. HARTKE] met in Indianapolis with the Indiana Academic Advisory Council for the first time. This group, organized by the Senator from Indiana, is composed of college professors from 25 colleges and universities in Indiana. Their purpose is to advise and counsel the Senator and to do research for him.

I ask unanimous consent that Senator HARTKE'S opening remarks to the first meeting of the Indiana Academic Council be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OPENING STATEMENT BY SENATOR VANCE HARTKE TO IAAC MEETING, INDIANAPOLIS, MAY 20, 1961

I want to welcome you here to the first meeting of the Indiana Academic Advisory Council. Thank you all for coming. This is, of course, a pioneer meeting of a pioneer group. I believe the meeting will be successful. I am certain that the council will make significant contributions as a group.

You may ask: Why such a meeting? Why such an organization of educators and scholars? The answer is a simple one. We need it.

America today faces a great challenge. In recent months we have come to the realization of the gravity of the times and the challenge. To survive as a free society, is is imperative that we make use of all the resources of our Nation. Since it is a challenge of culture, of thought and social philosophy, intellectual resources have become armaments.

We have seen that the battles of the cold war are being won and lost with ideas. The battlefields of the struggle are the minds of men the world over.

The challenges to our Nation are very real. We must, on one hand, develop our domestic society to provide jobs, goods, health, and happiness for an ever-increasing population. We must develop an educational system which can provide sufficiently for the coming generations of Americans in an evermore complex society. And we must do this in a world divided by philosophies of government where millions of people are having a 20th century world thrust into their semi-civilized lives.

To succeed in meeting these challenges, America needs the best minds, the best ideas, and the best analyses of the problems we face. That is the purpose of this council. I represent more than 4 million Hoosiers in the U.S. Senate. There with 99 others, we daily decide issues which determine the course of the free world.

It would be presumptuous indeed to represent without seeking the best source of counsel available. Your studies, your interests, your ideas can be contributions to the Nation's future if they are properly directed and acknowledged. That is the purpose of this council, to give you an outlet for meaningful ideas and considerate reflection.

The course of the legislative process dictates a regimentation of thought and efforts. It allows little time for free thinking and reflection. We become involved with techniques and details and have little time for consideration of theory and broad goals.

In the academic life, you have more time to develop ideas and theories and to make careful analysis of alternative courses. It is in this manner that I believe that you can make great contributions to the future of the American free society.

I am at once asking your help and offering you an opportunity to become active and influential in the conduct of our Government.

We have in Indiana, many fine and respected institutions of higher learning. In this council we have represented more than 20 of these institutions. I am hopeful that soon the number of individuals and institutions will swell. The problems America faces are vast and there is a place for everyone who wants to contribute toward their solution. I am confident that the Indiana Academic Advisory Council can someday become recognized and respected as one of the important, vital sources of significant thought in America. I am confident that, in time, ideas which are spawned in meetings like this one will become the basis for legislation to be considered in the Congress.

As a group, the resources are many and varied. Working together, where possible, can result in individual and common benefits.

As you have been advised, we will divide into three discussion groups to consider individual areas of the one problem: The future of the American free society. We have prepared a general outline in each of the three areas setting forth some questions which seem from the vantage place of the Congress to be most important for your con-

sideration. We do not want to bind you to the consideration of only these points or all of these points.

I would like to introduce the three discussion leaders:

Prof. Raymond P. Kent, professor of finance and business economics at the University of Notre Dame will lead the discussion on the domestic economy.

Dr. Robert P. Bell, head of the department of business education of Ball State Teachers College will head the discussion group on our education system.

And Dr. Joseph E. Hoskins, professor of political science at Earlham College will lead the consideration of our conduct of world affairs.

I want to emphasize my hopes that your discussions will proceed as free as possible. Do not temper your considerations, comments or conclusions because of my personal political philosophy, party or legislative program. I want your ideas and reasoning.

I ask only that your considerations involve one aspect. How will the topic of discussion relate to the future of the free society? When we meet to consider the reports of the various discussion groups, I hope we will be able to come up with some explanations of why conclusions, or programs, or ideas will contribute to the future of the free society.

One of the great problems in selling our system is rationally justifying it to other societies. The why of the question has become more and more important. And, I am afraid, many times we are forced to use empty cliches when logical answers are needed. So, be thinking, if you will, of how to justify our society, our philosophy of government and our social system in terms of scholarly, irrefutable, logical explanations.

We want to follow the timing of the agenda as closely as possible. I intend only to be an observer in your discussions. If there are procedural questions, I will try to be helpful, but please do not ask me to become involved in your discourse.

Beware the Summit

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. ALGER. Mr. Speaker, in spite of his campaign promises and pronouncements in the first days of his administration, it is now apparent the President has planned for some time to meet Khrushchev for a face-to-face discussion. I, personally, am opposed to such a meeting because I believe the President was right when he said that such a meeting would be fruitless until the Soviets showed some sign of wanting to bring about a meeting of the minds. But, if the President is determined now to change his course, he must assume the responsibility. I believe, however, that we should do all in our power to caution him against any rash commitments and it may be well to study the thoughts in the editorial which I here include with my remarks:

CONFERENCE WITH THE ENEMY

What was the first summit meeting? Jehovah and Moses on the mountain? We don't know, but plainly the idea of a meeting of two powerful figures—heroic antagonists, if you like—is as old as man. And just as plainly, what matters is not the meeting but the attitude of mind the disputants bring to the meeting.

Napoleon and Alexander, as General Eisenhower used to describe them, meeting on a raft in a river to settle the fate of the world; in a sense we are back to that stage. President Eisenhower refused to view summits that way; President Kennedy says he has no intentions of trying to settle anything when he talks with Khrushchev 2 weeks hence. We hope he sticks to that resolve.

Yet the fact remains that there are only two powers in today's world, and they are more powerful than anything the world's history has heretofore revealed. And no matter how much the sentimentalists may weep, what rules the world today is power.

That makes the confrontation all the more dangerous. Many things are wrong with summitry in any case. Heads of state, almost by definition, should not negotiate; that is what Ambassadors are for, to keep the leaders from getting personally engaged. Mr. Kennedy may insist all he wants that he will not negotiate, but the temptation is strong—all the stronger because the world is in such sorry shape.

Moreover, it is impossible to have a quiet conference. The Vienna meeting is to be informal and private. But already the world spotlight is on it, and so it must be. Our age is beyond tranquillity; a Jefferson and Hamilton could not conceivably meet privately in a tavern today, to shape history's most magnificient political achievement. The inescapable publicity nowadays builds the hopes higher regardless how much the officials try to dampen them in advance. So we have people already saying that of course Kennedy and Khrushchev must meet and lift the pall of death that hangs over us; how can there be any hope unless the leaders converse?

Alas, the trouble is not lack of discourse, lack of understanding. We understand, or should, the Soviets very well. The Soviets have not hidden their aim to destroy us. Khrushchev, too, sees clearly that we represent freedom, the arch enemy of his design for universal slavery.

Still, this clarity, this extreme polarization, is in its own way a good thing. What went so disastrously wrong with some summits was a foolish belief that the Bolsheviki, of all people, were really like us in their aspirations. George Kennan, in the book reviewed on this page today, describes our inexcusable body of ignorance about the nature of the Russian Communist movement before, during and immediately after World War II. Roosevelt thought he could charm the unspeakable criminal Stalin into international cooperation.

Was it only ignorance though? Cast your mind back to the thirties, if you are as old as we, and you will recall the smooth-talking American Communists at the fore of every movement, whether literary, educational or governmental. We had a climate of opinion all right, and it was pretty Red. It led us to join forces with the Red fiend; it led us to hand over central and eastern Europe and much of Asia to the grisly aegis of communism.

Well, we have learned, it is to be hoped. Eisenhower, in all his meetings with the barbarians, never gave anything away. He would not have in any case, being the man he is. But also he could not even if he would. For the climate of American opinion, thank God, was totally against it, just as earlier it favored accommodating the monsters of the East.

American opinion is still opposed to appeasement, and that is the chief reason why we cannot worry unduly about the Vienna get-together. We don't think it will solve anything, and that is indeed the best thing to say of it, for the bitter truth is that Americans cannot really solve anything with their self-appointed murderers. We don't think the summit is a particularly smart idea, certainly not the kind of foreign-policy approach Mr. Kennedy caused us to expect.

But it does represent a basic, elemental urge. If you were Mr. Kennedy, probably one of your first thoughts would be to meet the enemy face to face and form your own impressions. That's all right as far as it goes, and if Mr. Kennedy rightly senses the American temper, it will go no further.

What Is God Doing?

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. HARRISON of Virginia. Mr. Speaker, the Communists deprecate and deride moral values, but we profess respect for them, and for the guidance of the Almighty.

In this connection, my attention has been directed to a significant sermon preached recently by the Reverend James E. Drinkard at the Woodstock (Va.) Presbyterian Church. Under leave to extend my remarks in the Appendix, I include it, as follows:

WHAT IS GOD DOING?

Text: Heb. 2: 4: *But the just shall live by His faithfulness.*

If any of the ancient prophet's words sound up to date and relevant, certainly they are the words of the prophet, Habakkuk. We know very little about the man who spoke these words. We only know that he was the first one to speak for his people to God in the way in which he presented their grievances instead of speaking as the prophets traditionally had spoken for God to the people. Of course, Moses had done this many years before. But in the so-called period of the prophets, Habakkuk was the first to ask questions of God. "How long shall I cry for help and Thou will not hear?" he asks.

Is this not what is in the minds of a great number of us? We pray for help only apparently to see God doing nothing. We ask, "What is God doing?" Look at the state of the world. Is God going to let us destroy ourselves? What is God doing about all this? We read about Laos, a half dozen places in Africa, Cuba. Everywhere is unrest. We cannot know for sure where justice always lies but as we look on, innocent people are being killed. Isn't God concerned with what is going on in the world and, if so, what is He going to do about it?

Listen to Habakkuk, "Why doest thou make me see wrongs and look upon trouble?" If this is not the question for 1961, I do not know what is. Listen again. "The wicked surround the righteous, so justice goes forth perverted." Who today can tell what is justice and who is righteous? And, even if we could judge wisely, we would still be perplexed and ask, "What is God going to do about this mess the world is in?"

I suspect that most of us feel guilty when we question God for we have learned that God is allwise and good and that whatever is done is eventually going to work out for good. Yet, let me say, one need not be ashamed to confess before God that he does not understand God's ways in this world. Habakkuk was not a man of no faith but a man of great faith.

Only the person with great respect for God and for his power over the world can question like Habakkuk. The more devoted to God that one becomes, the more troubled he sometimes is by life's experiences. Habakkuk's questions are not due to any cooling off of his religious temper but they come from the consuming zeal of prophecy as it encounters experience. One who believes so definitely in God's cause that he gives his life to it and then sees the cause apparently failing, can only question.

The questions asked do not indicate the loss of faith in God but merely the lack of understanding of God's purpose as he sees it at work in the world. He cannot understand God's nature as he knows it and asks, "Thou who art of purer eyes than to behold evil and canst not look on wrong, why doest Thou look on faithless men, and art silent when the wicked swallows up the man more righteous than he?"

I assume this is the problem which faces most of us today. How much longer is God going to let godless men and nations overrun God-fearing nations? And I am afraid that we are going to come up with some of the answers that Israel employed for herself 2,500 years ago. God gave Habakkuk the answer to his question but the nation did not listen to it. Israel tries to fight evil with evil. She allied herself with heathen nations to fight off heathen nations. She put her trust in alliances instead of God.

We today find ourselves almost panic stricken for we seem to be alone in the world trying to oppose communism and support freedom in a democratic society. Certainly the United States is in a world position different from any it has occupied during any of our lifetimes. We seek answers to our political problems. But I tell you the answer is a religious one and it always will be. By this, I do not mean a superficial throwing up of our hands and saying, "Leave it to God." I mean there is an answer, a God-given one; the same one which Habakkuk heard but which no one heeded before. It is this: "But the righteous shall live by his faithfulness."

This is the only answer for the world today. Evil cannot be defeated by employing the methods of the evil we seek to defeat. This is an answer we are hearing today. It may be an expedient answer but it is an insidious one, for if one sells his soul to the Devil in order to defeat the Devil, he is lost. This was the temptation which Jesus met and triumphed over.

A person who has a just or righteous cause cannot maintain his cause by questionable methods and at the same time keep his cause from becoming tainted. There is but one answer for all of us and for our Nation if we expect to survive as a Nation and that is the God-given answer. "The just (or righteous) shall live by his faith (or faithfulness)".

Let us see what this means in today's situation. First, let me state the deep meaning of this verse in the best interpretive English I can find. It says, "the one who has a cause which is right in God's eyes shall be preserved or sustained by his steadfastness to that cause which is God's cause."

If there is any future for this Nation or any nation, it is dependent upon the people of that nation dedicating themselves to God's cause so much that the national objectives and the objectives of God are the same. Israel had thought she was God's chosen people but she did not so conduct herself and her prophets boldly proclaimed that God would let the wicked swallow up the man more righteous than he was because the righteous man knew how to be better but was not. He had been the recipient of God's grace but he had become selfish. In Israel at Habakkuk's time there was cheating, stealing and gross immorality within the country and godless enemies without. Does this not sound like the 20th century?

This past week Henry Ford II addressed a group of Jaycees in Minneapolis and lamented the fact that there is so much immorality in business. In recent years, we have heard of immorality within the ranks of some labor unions. There is always a charge of such breach of ethics in Government service. But this is not to single out these. This is our Nation. Millions of people cheat their Government on income taxes. This is our Nation to the core. Cheating is our national pastime. And God says if you have a just cause, this is, if your purpose is God's purpose, then you shall live by that purpose and survive.

If we, as a people, are to have a future, we must dedicate ourselves to finding God's purpose for this Nation and not just what we want it to be, "the land of the free and the home of the brave." Freedom and bravery for selfish motives are not worthy pursuits. Freedom and bravery to serve God's causes are the only worthy motives for the future of this Nation, if it is to have a future.

Where then, does the responsibility lie for our future? With the President to enforce morality? With Congress to enact more laws? With the courts and Department of Justice to uphold the laws? No. The responsibility for a renewed purpose for our Nation lies with us who are aware of what God's word is saying. Any moral revival which shall sweep the country must start at the bottom and well up to the top and not start at the top and hope that it will trickle down to the bottom. It is with you and me that moral revival must begin. The man, who has accepted for himself God's standards and God's purpose in life, cannot compromise himself in a world which employs other standards. We must make sure that what we proclaim to the world is true. Equality of opportunity must be a fact which exists in practice and not just a theory. Concern for the needy must be evidenced by tangible help—not just a token of charity. A standard of honesty must be practiced in every dealing in life so much so that we must examine all that we do. When our concern for God's help and protection is equaled by our own concern for the needs of others within and without our own country and when we become true servants of God—then we will have a cause by which we can live and survive.

Yes, one who has a just cause must live by it. This is what faithfulness means in our text today. It means practising what we preach. The United States has been preaching Christian democracy for years but the world is now saying, "What you do is making so much noise, we cannot hear what you are saying." Our problem is not that we should find fault with one another. Fixing blame on political parties or politicians will not solve our dilemma. What we need to do is examine ourselves to see if we are truly concerned with what God wants done in the world. Are our own attitudes towards others Christian? Have we made personal enemies? If so, how can we expect our Nation to rise above what we are? It cannot. This Nation of ours is what we make it. Every nation is what its people are. For God is concerned with the quality of life of people more than he is with proclaimed national policy. And God is still in control of this world. We ask, "What is God doing?" The answer is simple, God is preserving the just or righteous people who are truly living according to God's fustice. Our question no longer need be, "What is God doing?" but "What on earth are we doing?" What are we doing here on earth to be steadfast and faithful to what has been revealed to us of God's purpose? God has every right to expect Christians—those who have experienced his grace, to behave better than and different from all the evil people in the world. Evil cannot be overcome by evil. Evil can only be overcome by good and if there is nothing good in God's people, then we are to be pitied most of all.

Address by Secretary of the Interior Stewart L. Udall

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. EVINS. Mr. Speaker, Tennessee and the district I have the honor to represent in the Congress were privileged and honored to have Secretary of the Interior Stewart L. Udall as our visitor recently when he addressed the joint meeting of the Elk River Development Association and the Tennessee River Tributaries Association in Fayetteville.

Secretary Udall delivered a most forceful and significant address, and I ask unanimous consent that Secretary Udall's speech be reproduced in the Appendix of the RECORD.

Secretary Udall's address follows:

ADDRESS BY HON. STEWART L. UDALL, SECRETARY OF THE INTERIOR, AT THE TENNESSEE RIVER TRIBUTARIES ASSOCIATION AND ELK RIVER DEVELOPMENT ASSOCIATION, FAYETTEVILLE, TENN., MAY 12, 1961

You do me a unique honor in asking me to talk with you about development of water resources. You were in the frontlines of the long battle for water development in this region when I was a schoolboy in a little Arizona ranch town. You were among the first "New Frontiersmen" because you were pioneers in a coordinated, comprehensive river development plan. To all of you residents of the Tennessee Valley, the subject of water and its planned control and use is far from novel.

I understand your valleywide association is only slightly more than a year old. You can accomplish much through joint and coordinated action, and you hold it within your power to be of considerable assistance to the directors of the Tennessee Valley Authority. You are holding fast to the original brilliant concept of TVA. You well realize that we can no longer afford to be piecemeal in our development of water resources. We must devise plans which will transcend the interests of individual localities or agencies, and which will conform to a broad plan of integrated development of all the resources of a great watershed. This is no time for standpatters, it is no time for the overly cautious approach to resource development—it is a time for broad-gaged planning and bold action. President Kennedy has told us, "Failures to act now may be opportunities lost forever."

Years ago you and other farsighted men set the pattern. You saw the opportunities available in harnessing the mighty Tennessee and making it work for mankind. In so doing, you made the three letters TVA synonymous with the idea of overall basin development.

It wasn't a simple matter. I'm sure many of you vividly remember the slow and often disappointing struggle which you underwent before TVA became a reality. Perhaps by now, though, that stirring story is "old hat" to some of your neighbors in this valley. I know that you here tonight, rep-

resenting various area development associations, have not forgotten and will not forget.

The world outside this beautiful valley of yours continues to hold up TVA as a shining example of the best that man can accomplish in utilizing nature. Just 6 days ago, the Christian Science Monitor carried a long story about the Cauca Valley Corporation, a new river development effort in the South American nation of Colombia. It quoted the English-speaking general manager of the CVC as saying, "We think we are admirably suited for a TVA-type development." It isn't the admittedly great water development works of Russia that these South Americans look to as a guide—it is your own, our own, TVA. And so it goes, everywhere in the free world. Do not, yourselves, become immune to the great accomplishments around you.

Not all of the development of the Tennessee River region is to be spoken of in the past tense. Part of the job still remains to be done. I'm sure you recall the words of the late George Norris who said in his autobiography that—"This program of controlling the surplus floodwaters of the great Mississippi Valley by storage in natural reservoirs situated on the main stream and along the tributaries is an immense one. It may never be fulfilled. That depends entirely upon the vision of the American people. It will require a vast amount of money to complete it; it will take years of planning and of labor to meet fully all of its factors; and yet it offers the only promise discovered by men for the effective control of floods and efficient conservation of natural resources."

Yes, you have begun to make real use of your river system—but you've only begun, as George Norris foresaw. Now you face the challenge of continuing with his great vision—yes, and that of many others as well. You who continue to hold to the vision, you who still have the evangelist's fervor and the salesman's persistence, must work together with the officials of the TVA to complete this project that is of great importance to all America. One of the dreams that you in the Southeast have long held is that of joining the Tennessee and the Tombigbee to cut off 600 miles of the long water journey from your ports to the gulf. The TVA itself was once such a "pipedream"—who knows, perhaps your later effort will be crowned with success. Certainly, this administration favors a stepped up program of long-range planning now in the resources field.

You leaders realize, too, that river development doesn't necessarily mean great power dams or navigation channels on every watercourse. You realize that some areas of this vast river basin are best suited for recreation development, others are promising for intensive agricultural undertakings, such as your growing poultry industry, or timber production, and some spots are best retained for the benefit of wildlife. There's room on the big Tennessee and its tributaries for all kinds of development. Not every mile of the system can be developed as a new Pittsburgh—just as not every mile can be drained farmland, a river park or a wildlife refuge. But every mile can be developed in some manner, with due consideration for economics and always with a progressive and far-sighted standard of feasibility that holds great faith in the future.

Listen again to George Norris' words: "Every drop of water that falls from the heavens to the earth beneath should perform its proper share of preserving the blessing God intends to bestow upon His people." Every drop of water in this watershed can be made to work, over and over again, and it must be done. The important thing, it seems to me, is to develop this homeland of yours that the natural resources so abundant here are utilized and conserved in the highest and best manner appropriate to the overall concept of basin development.

All of us in the Kennedy administration were enthused and challenged by the precedent-setting special message of the President concerning natural resources. Here was given all of us a blueprint for the construction of an integrated program for the wise conservation and use of our natural resources. If that stirring message could be summarized in only two words, I believe those words would be, "Think big."

We must all think big and act in accord with that thought. Here we can see that even George Norris, who thought some of the biggest thoughts ever to burst forth in the U.S. Senate, didn't think big enough. George Norris almost overlooked one of the primary items in the Tennessee River development—the recreation potential of water. Recreation is a latecomer on the list of benefits of comprehensive river development, and certainly we cannot blame the founding fathers of TVA for initially paying it little heed. But now, in a Nation of rising wages and increasing leisure time, recreational use of the TVA facilities is growing at an astonishing rate. Americans have discovered that yours is one of the most diverse and enjoyable outdoor recreation areas in our Nation. I'm told that an average of $8½ million worth of new recreation facilities is added each year at the reservoirs of the TVA. In addition to a total governmental recreation investment here of $120 million, there has been nearly an equal amount in private recreation investments such as cottages and resorts. You have close to 50,000 boats on your river system. Think what all this already means to the economy of your valley. Think what more it will mean in the years immediately ahead.

Everywhere in the United States recreation is becoming big business. We're going to have to think and act mighty big if we meet the pent-up recreation demand.

We in the Department of the Interior have taken this recreation boom, and the President's message, to heart. We are embarking on some big planning for recreation development throughout the United States. We feel that this is the moment of decision. What we do, or don't do, in the next 10 years will set the character of this Nation for generations to come. America's open space is disappearing rapidly at a time when all signs point to mounting demands for parks, parkways, recreation areas and wildlife refuges. We need open space in which to find outdoor enjoyment and refreshment of mind, body and spirit.

To meet this need we are laying plans for a program without parallel in our history. Because much of this recreational development is of national impact, we want the Federal Government to take the lead in a program we're calling Parks for America. And we want to encourage local areas and States to do more through a cooperative effort. Only a few areas and a few States, notably New York and California, are keeping up or vigorously attempting to keep up with the mounting demand.

This generation, as we see it, has a "last chance" opportunity to save perhaps 15 or 20 million acres for national parks, another 2½ million acres for national recreation areas, more than a million acres for national parkways and scenic roads such as your Natchez Trace, 4½ million acres for wildlife refuge areas. The program will be costly, but every year we delay the costs will rise. Fortunately, much land we propose to retain as open space already is in public ownership. But, for 4.6 million acres of privately held land that we foresee as national park lands, the estimated cost has doubled in the past 10 years and is expected to nearly double again in the next 10. Make no mistake about it, if we do not act now the opportunity will vanish. What we save in the next 10 years may well be all we will ever have the chance to save.

These aren't the only ways in which we are undertaking to implement the natural resources program outlined by President Kennedy. We hold uppermost his warning that "Our Nation has been blessed with a bountiful supply of water; but it is not a blessing we can regard with complacency." In all those areas wherein we have primary responsibility for multiple-purpose water development we are hard at work drawing up plans for a resumption of the effort that shriveled into near nothingness during the past 8 years. In this we have as a shining example the transformation wrought in hydroelectric power production and consumption by your TVA. That transformation brought you from an area of relatively little electric use to one in which electric power consumption is nearly twice the per capita average for the rest of the Nation.

Too, we accept the goal of developing comprehensive river basin plans during the decade of the sixties, so that all parts of our country can follow the steps to progress that you have made.

And we share with others in the Government a concern that a major breakthrough be made, and made soon, on the growing problem of cleaning up our streams. Conserved water will be of little use if it is polluted water. No longer can we rely on the adage that "dilution is the solution to pollution." Something more, something positive, must be done. We face the imminent peril of having our major rivers become thousand-mile sewers.

No longer is water pollution a problem of a few metropolitan areas; it is a problem nationwide in scope. To meet it we must spend twice as much on municipal waste treatment plants as we now do. The administration's program for a grant-in-aid system to help communities meet this problem is the start. With its adoption perhaps I won't have to inhale the stench of the Potomac when I drive home on a hot day. Perhaps we will close out the business I read about recently in a magazine—the business some private enterpriser started on the Missouri River. He skims and sells the grease from the surface of the broad Missouri.

Already the Secretary of Agriculture and I are working together in another area to which the President directed his attention. Together we are formulating a comprehensive Federal recreational lands program and working to eliminate conflicts in fish and wildlife programs so that an increased and improved wildlife conservation effort may be made. If this takes some knocking together of a few bureaucratic heads, then Secretary Freeman and I are ready to do it.

I hope it goes without saying that in all these various fields of natural resource planning and development the Federal Government does not desire to move ahead alone. Nor does it expect to. We are heeding President Kennedy's view that only through the fullest participation and cooperation of State and local government and private industry can this task be done wisely and effectively. It's up to you folks just as much as it is to us. Resource development is a must—a natural, if you'll permit the pun. With our soaring population we are facing what I call the quite crisis. For all its quietness, this crisis in the field of resource development is just as real as the one we face in world affairs. America has the ability to meet this crisis—we aren't a poor Nation. Just a small part of the money we now spend on pointed-toed shoes and overpublicized gimmicks can have a beneficial effect for many generations if we direct the money into public investment. As progressive conservationists concerned with the efficient development of our Nation our job is cut out for us.

I'm sure I could do not better than to end with the closing words of the President's natural resources message: "The task is large but it will be done."

Comdr. John J. Shea, a Hero Remembered

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. CONTE. Mr. Speaker, one of our distinguished American heroes was honored on May 14, 1961, when Boston College dedicated its new 10-acre athletic area as Comdr. John J. Shea Field. It was on another afternoon, back in 1942, when the Navy airman and Boston College graduate gave his life for his country. The Nation remembers him for his now famous letter, to his son, written just before his death. This letter, to his 5-year-old son, John, appeared in the November 16, 1942, issue of Life magazine.

Mr. Speaker, under leave to extend my remarks in the RECORD, I deem it a privilege to include this letter:

COMMANDER SHEA WRITES TO HIS SON

(Comdr. John Joseph Shea of the U.S. naval air force was last aboard the aircraft carrier *Wasp* on Sept. 15 in South Pacific waters. His last letter to his 5-year-old son, John, in North Cambridge, Mass., follows:)

DEAR JACKIE: This is the first letter I have written directly to my little son. I am thrilled to know you can read it all by yourself. If you miss some of the words it will be because I do not write very plainly. Mother will help you in that case, I am sure.

I was certainly glad to hear your voice over the long-distance telephone. It sounded as though I were right in the living room with you. You sounded as though you missed your daddy very much. I miss you, too, more than anyone will ever know. It is too bad this war could not have been delayed a few more years so that I could grow up again with you and do all the things I planned to do when you were old enough to go to school.

I thought how nice it would be to come home early in the afternoon and play ball with you and go mountain climbing and see the trees, brooks, and learn all about woodcraft, hunting, fishing, swimming and other things like that. I suppose we must be brave and put these things off now for a while.

When you are a little bigger you will know why your daddy is not home so much any more. You know we have a big country and we have ideals as to how people should live and enjoy the riches of it and how each is born with equal rights to life, freedom and the pursuit of happiness. Unfortunately there are some countries in the world where they do not have these ideals, where a boy cannot grow up to be what he wants to be with no limit on his opportunities to be a great man such as a great priest, statesman, doctor, soldier, businessman, etc.

Because there are people in countries who want to change our Nation, its ideals, its form of government and way of life we must leave our homes and families to fight. Fighting for the defense of our country, ideals, homes and honor is an honor and a duty which your daddy has to do before he can come home and settle down with you and mother. When it is done he is coming home to be with you always and forever. So wait just a little while longer. I am afraid it will be more than the 2 weeks you told me on the phone.

In the meantime take good care of mother, be a good boy and grow up to be a good young man. Study hard when you go to school. Be a leader in everything good in life. Be a good Catholic and you can't help being a good American. Play fair always. Strive to win but if you must lose, lose like a gentleman and a good sportsman.

Don't ever be a quitter, either in sports or in your business or profession when you grow up. Get all the education you can. Stay close to mother and follow her advice. Obey her in everything, no matter how you may at times disagree. She knows what is best and will never let you down or lead you away from the right and honorable things of life.

If I don't get back you will have to be mother's protector because you will be the only one she has. You must grow up to take my place as well as your own in her life and heart.

Love your grandmother and granddad as long as they live. They, too, will never let you down. Love your aunts and see them as often as you can. Last of all don't ever forget your daddy. Pray for him to come back and if it is God's will that he does not, be the kind of a boy and man your daddy wants you to be.

Kiss mother for me every night. Goodby for now.

With all my love and devotion for mother and you.

Your Daddy.

Billions for Defense but Not One Bulldozer for Tribute

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. WILSON of California. Mr. Speaker, my office is besieged with letters, wires, and telephone calls, protesting Castro's proposed trade of bulldozers for prisoners. Because these messages are eloquent in themselves, I ask unanimous consent to include a few of them as a part of my remarks.

The first is from an Army captain who served with distinction in World War II and Korea. His message is as follows:

It has been some time now since I have written to you and actually I don't have any excuse—just have been extremely busy and not much letterwriting time.

How long do we U.S. citizens have to put up with this continuing effort to pull down our country's prestige? I laughed when I heard that Castro had offered to trade 1,000 prisoners from the invasion attempt for 500 bulldozers to be supplied by the U.S. Government. Who in their right mind would ever believe that our country would swallow such a thing? It's humiliating—a disgrace to our country.

Then there is Laos—we talk and talk but never back up our words in a manner that counts. How much faith does Thailand or Vietnam really have in the United States now?

We must stop being kicked around. Bob, what is happening when the greatest nation in the world lets a bandit and power-mad man like Castro dictate terms such as he has on many occasions in recent months?

I could go on and on I'm sure, but what's the use? I feel that someone or group in high places in our Government is letting us down. Please don't join them.

Obviously, Bob—I can't write to you officially but I wanted to let you know how a lot of us feel.

Another letter says it this way:

Again I feel compelled to write to you about a matter of national importance. I am very much opposed to sending bulldozers or anything else to Castro. I think it is outright blackmail and an insult to the administration. We have an embargo against this sort of thing and I personally think the embargo was much too late. I am appealing to you to use your vote and influence to prevent any war machinery being sent to Cuba. I sympathize with the prisoners but we have no assurance that they would be released or that this would be the end of the blackmail.

Three wires from constituents carry in fewer words the same feeling of indignation:

Billions for defense but not one bulldozer for tribute.

I strongly urge that you protest sending any machinery or heavy equipment including bulldozers to Castro. Do what is necessary to initiate an investigation of the matter. Please inform Senators ENGLE and KUCHEL of this request.

Millions for defense but not one cent for tribute. No tractors to dictators. We will fight for liberty and freedom, but ransom—never.

Senator Keating Delivers Strong Speech on Combating Communism

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. WALLHAUSER. Mr. Speaker, the distinguished junior Senator from New York [Mr. KEATING] recently delivered an address at the 200th anniversary dinner of St. John's Lodge No. 1 of the Free and Accepted Masons in Newark, N.J. As a member of this historic lodge, I was particularly pleased with Senator KEATING's strong remarks about the need for continued vigilance against the international Communist conspiracy.

The Senator from New York also advanced a novel and ingenious plan for the issuance of Government space bonds—somewhat like savings and war bonds—to help finance the terribly expensive space program our Nation must undertake in the days ahead.

Because there is much good food for thought in this address, it deserves wide circulation, and I, therefore, ask unanimous consent that it be printed in the Appendix of the RECORD.

SENATOR KEATING DELIVERS STRONG SPEECH ON COMBATING COMMUNISM

Mr. Chairman, brothers of St. John's Lodge No. 1, it is a profound source of pleasure to me to be in your good and fraternal company tonight.

• • • • •

We live today in an age of peril. The values we hold dear, the concepts we hold dear, the very freedom we hold dear—all are being challenged on a massive scale, on a global scale. Peril is not a new and strange condition in the life of the Masonic Order. Throughout our long and honorable history we have stood many a time on the ramparts of freedom—and many a time our brothers have been in the forefront of the drive to roll back the surging lines of tyranny. The battlefields of America's past have seen this spirit of patriotism translated by our brothers into deeds of high courage, and, so often, into the ultimate sacrifice that is the last full measure of devotion. The valor of our brothers, in all the services, in all the wars, should remain for each of us a heritage of pride and glory forever to be guarded in our hearts.

Yes, danger has been a familiar face in our history—but always a foredoomed face—because the valor of American hearts, the power of American arms crushed danger to earth.

Tonight, as I speak to you, danger stalks the world once more. It is not dressed in uniform. It is not the same face of danger we have met so many times before—at Valley Forge—across the no man's land of France—on the beaches of Italy—in the Coral Sea and on the Pacific islands—in the forest of Bastogne—or on Pork Chop Hill in Korea.

The enemy who now confronts us fights with a new kind of arsenal—a new kind of tactics—a new kind of grand strategy, but if the conventional trappings of war are absent, the real consequences of war are present.

Throughout military history the end objective of the use of arms has always been to seize territory. Today, territory is a secondary consideration. The prime objective is to seize minds and hearts—to occupy, if you will, mental and spiritual objectives. Once this is done—once the infiltration has succeeded—territory does not have to be captured in the military sense. It falls like a tree whose force and substance have been sapped away by armies of termites.

This is the kind of warfare that communism is waging today. It is not a shadow war. It is as real as the loss of freedom is real. You do not learn its outcome in the shouts of victorious armies. You learn of it in the silence of imprisoned men, of captive nations, as the symbolic Iron Curtain falls to signal the end of freedom's drama—falls silently, fatefully, across the world.

And now it has fallen closer to us—a scant 90 miles from our shores—for the darkness of tyranny has closed over little Cuba. If we think of freedom as a homeland—the mother country of our free society—that homeland, that mother country is shrinking before our eyes. A slow shrinkage, but a continuing and fateful shrinkage, as communism trickles its Red stain across new frontiers, spreading to new areas, poisoning, paralyzing, and destroying freedom as it goes.

The greatest irony of modern history is that communism uses the very hope of liberty—the very slogans and language of liberty.

The vicious technique is to take honest words and make liars out of them. What for example, is truth in Russia? It is anything that conforms to the preestablished party line. When truth can't fit this line, it automatically becomes a lie—a capitalist lie, of course. And what is peace in the Communist translation? Peace is a condition of no opposition to communism. When the Soviets have overrun and manacled a nation then the climate of peace has been established.

The dove of peace is a Russian symbol—but you know and I know that if a real dove of peace flew over the Kremlin he'd probably be shot down for violating the airspace over Russia.

Thus, too, the nations of the West are branded colonialist powers—branded that by a power that snatches nations as a wolf snatches sheep. And in China, the government is called the people's government—which is tantamount to saying that a zoo belongs to the animals that live there.

I find it especially appropriate in these perilous days when the fate of our Nation, the fate of freedom itself are at stake in the world that I should speak before this gathering of my Masonic brethren. For our entire history, our essence, our purposes exemplify not only the spirit of free men in a free society, but the vigilance to preserve that freedom and the strength to defend it when it is threatened or attacked.

It can well be said that the Masonic Order runs like a red vein of courage through the marble of our Nation's history—from the remote founding of our beloved country to the actuality of this hour, this minute, in the life story of America.

Today, perhaps, above all previous times of danger, Masonry finds itself summoned to cope with a challenge to all the values—spiritual, moral, social—that it has traditionally held sacred, that it has instinctively defended.

What is imperatively called for in our time is a vivid awareness of the fact of danger, of its presence, of its growing challenge—and it is here that our great brotherhood can, through its individual members, in all areas of our free world, alert their friends, their fellow citizens, their communities, to the tremendous implications of the history that is being written before our eyes.

Geography used to be a study for children. Today it should be a study for each of us. On the world map the areas of a dehumanized, despiritualized society are growing ominously, spilling over frontiers, engulfing new populations.

It is an insidious advance—slow, silent, but measurable by the miles it encroaches, by the lives it controls, by the lights it extinguishes in the hearts and minds of men.

The hour is late, too late for apathy, yet apathy is all around us. For too many Americans confuse material well-being with national security. They seem to assume that, like labor-saving devices, freedom-preserving devices are items available at a price.

Associated with this apathy is a kind of spiritual depression, induced by Communist successes. We can better realize the extent of this spiritual depression when we consider the tremendous sense of elation that the man-in-space success evoked throughout our land.

America's first man-in-space shot was a resounding success. It was a shot heard around the world.

But we must not delude ourselves. The Soviet Union is still ahead of us in outer space and by a substantial margin. Later this very month the Russian rocket fired from an orbiting satellite may come within hailing distance of Venus. The United States still has a long way to go in outer space. And the price is going to be high.

It will cost in the neighborhood of $40 billion to send an astronaut to the Moon. That means about $225 for every man, woman and child in the United States.

There can be no doubt that this money is essential to get American space programs off the ground. President Kennedy declared in his press conference last week that he was going to ask the Congress to appropriate even more.

Here is a proposal for raising the financial thrust that America needs in space and rocketry. It's through a new bond issue. Good ideas you know, even now, can come from Yale as well as Harvard, and this idea was brought to my attention by a Yale student, from Douglaston, N.Y., who has thoughtfully outlined some of the reasons supporting his proposal.

I have studied his suggestion, canvassed it among my colleagues, and I think it has real merit.

I propose that in addition to seeking a regular appropriation, the administration take advantage of national interest and enthusiasm in this field, and that the administration call upon Americans to make some of these sacrifices that we have heard about. I propose that the administration offer long term, nominal interest bonds—not war bonds, not liberty bonds, not savings bonds but space bonds.

These bonds could be offered on the same terms as series E savings bonds. Their appeal would be tremendous.

Instead of taking tax money from those who could afford it least, the space bonds would enable those who have funds available to invest where it is most needed—in our country's future. Instead of swelling speculation on the stock market, these funds would go directly into the Nation's economy, creating new space achievements and incidentally new jobs. The technical aspects of such a bond offering will require careful study and planning, of course. I have already written to Secretary of the Treasury Dillon asking whether he believes the program would be feasible and how it could be worked out.

Among those who, I am sure would volunteer to purchase the first offering are the workers at various rocket and missile centers who have been picking up bigger pay checks than the Secretary of Defense for overtime work. If space funds come directly from patriotic buyers of space bonds, rather than through the cumbersome Federal appropriations process, it might well be there would be more effort and less featherbedding at these installations.

In short, I do not believe that American people are unwilling to make the sacrifices needed to put this country ahead in space. They just have not been asked to do so.

"Buy a space bond" should be America's motto for the sixties. This is more than just a fund raising program. It is an appeal to the country to put America ahead in space. No longer is the sky the limit. We must set our sights right now—for the moon.

Masonry is in the full spirit of its historic role in our history when it raises its voice to remind our people that freedom is not an heirloom but a vulnerable possession—a jewel that can be lost as well as found, and that will inevitably be lost if there is no one to stand guard over it.

Masonry can be—should be—one of the Paul Reveres of our day—a day that agonizingly calls for minutemen of freedom. We cannot ride through the country, pointing to a real enemy behind us. We cannot ask citizens to listen for the trumpets and the shellfire. That is what makes the challenge to us the greater.

The task force of Masonry must alert our Nation to the silent, but no less deadly weapons by which the enemies of freedom push forward across the world. It must dramatize the nature of the conflict. It must illuminate and educate. It must fight apathy for the enemy it is. It must rouse from the slumber of indifference that great body of citizens who do not believe in danger until they hear a siren, or until they are shot at.

* * * * *

I am sure that each of you has been impressed, as I have by one fact that is basic to the whole pattern of Communist conquest. It is what I might call the "global confidence game" whereby the Reds set themselves up as the friends, the benefactors, yes, the liberators of the peoples upon whom they prey.

Cuba is a recent and striking example of this fixed game where the dealer ends up with all the cards.

Now this is a situation that calls for more than the wringing of hands, and the question: "Why don't these people see that they are not getting freedom, but only tyranny dressed up to look like freedom?"

Let us rather ask ourselves—as the leading free Nation of the world—if it isn't about time that we took the words and phrases we use so glibly—freedom—the dignity of man, spiritual values, human rights—and made them more living, more meaningful, more propagated, more real to the millions of people who are called upon to make a choice between the false face of liberty and the true face of liberty. We Americans have a tremendous export business in things—but only a trickle of export in values. We are better known in many countries for our machines than for what we stand for, what we believe in, what makes us proud to be Americans.

In a word, we are better known for what America makes than for what makes America. This is wrong. It is bad. It is dangerous. We're in a life-and-death game where to come in second is not to come in at all. We must realize this fact. We must recast our thinking about the awesome responsibilities of leadership in a world that is being shaped and dominated by our enemies.

This, indeed, is a time for greatness. In the past no body of Americans has responded to the call more quickly, more wholeheartedly, more valorously, than the Masonic Order, one of the great cornerstones of the building of our Nation, one of the great pillars of its moral strength.

I am confident—supremely confident—that we shall accept the challenge that history throws down to us in these days of destiny—that we will help to rouse and revitalize the spirit of this Nation—that we will make freedom a cause, not merely a slogan, that we will turn the searchlight of vigilance on the face of danger so that its menace may be clear to all. And finally, I am confident that we shall look upon our beloved country not as a legacy left to us in perpetuity by heroes, but as our solemn trust for which generations to come will hold us accountable.

Uncle Sam: Price Fixer

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. BOYKIN. Mr. Speaker, in the U.S. News & World Report, issue of May 15, 1961, appeared a very interesting editorial by Mr. David Lawrence entitled "Uncle Sam: Price Fixer."

Under leave to extend my remarks, I include Mr. Lawrence's excellent editorial in the RECORD:

UNCLE SAM: PRICE FIXER

(By David Lawrence)

The biggest price fixer of them all is Uncle Sam. He is not amendable to any antitrust laws. He scorns the word "monopoly." But he goes on rigging or fixing prices and smothering competition.

Who is meant by Uncle Sam? The politicians, of course, who constitute a majority in Congress. Yet they lose no opportunity to point the finger of blame at any persons in industry that they can single out as scapegoats.

How does Uncle Sam function as a price fixer? Well, first of all, he does it secretly and without benefit of prying press or investigators from the Department of Justice.

Let us take a flagrant example. The steel industry was engaged in a major strike in the autumn of 1959. Later the leaders of the steel union met with representatives of management to determine the biggest item of cost in the making of steel—labor's wages. The entire industry was told that it had to make its wage costs uniform. Each company was thereby advised what its main item of cost of production would be.

The White House had requested that the two groups meet. They did so secretly. Public opinion and Congress had been pressing to get a settlement. What was thereupon discussed? Labor costs—the biggest item in the manufacture of steel. And didn't the two groups also discuss what prices might have to be raised? Of course they did.

The statements issued to the press after the settlement promised that there would be no price increase in steel, at least until December 1960.

The Government at Washington knew all about these confidential discussions—in fact, encouraged the making of an agreement that prices would not be raised.

Where is the authority under the antitrust laws for nationwide bargaining on wage costs as between a big labor union and the representatives of all the big steel companies?

When the Government acted as mediator, what part did it play in fixing the labor costs that, in effect, fixed the current prices in steel? Why doesn't some congressional committee inquire into this phase of price-rigging?

Why, it may also be asked, are there uniform prices today in many commodities? Why do gasoline dealers, for instance, charge the same for fuel at every filling station in certain regions of the country?

Why do so many other manufactured articles sell at a uniform price? Is it any less a case of price fixing if the largest company in an industry announces a price and the others follow? In reality, it is much easier for competitors to let the big fellow fix the price. For if there's plenty of demand for a product from the public, why shouldn't smaller competitors get the same price as the large company charges?

We come now to the biggest price-rigging game of all. It is sanctioned today by the President of the United States in a message to Congress and by his Secretary of Agriculture. Very soon it may be authorized by the politicians in Congress. They seek the political support of the farmers. So a law is being proposed which will permit all the farmers who raise a given commodity to vote among themselves on what the price of that commodity shall be, and the Government is expected to approve the whole arrangement.

Theoretically, all the consumers of farm products are represented by the Congress and the Secretary of Agriculture. But, actually, the consumers will have to accept the price rigging foisted upon them under the new scheme. For it means price fixing not only by Uncle Sam through Congress, but by the farmers themselves who, through voting in a referendum, will presumably follow a few chosen leaders of farm organizations. They would have even more power than trade unions.

Large companies often are the victims of congressional interference through laws that permit labor groups—and now perhaps farm groups—to play a decisive part in fixing prices.

Large companies have lawyers who try to tell them what is or isn't a violation of antitrust laws. But can executives in business be blamed for getting a bit confused when they see the Government sitting in at secret conferences with nationwide unions and steel companies and virtually fixing prices? Who represents the public interest when the Government, as it is now proposed, would encourage the farmers to arrange among themselves to fix the prices of the food the Nation's families must have at the dinner table?

Why shouldn't there be a law requiring competition in wage scales, instead of allowing labor unions, by nationwide bargaining, uniformly to fix labor costs? This could stimulate profit-sharing for the workers.

If members of Congress find this is politically inexpedient for them, why not recognize frankly that we have a cartel system in big industry and will continue to have until Uncle Same comes out for free and fair competition and forbids any collusion by employes of one company with the employes of a competitor.

People-to-People Fellowship

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. DADDARIO. Mr. Speaker, the people-to-people program of the United States has no more enthusiastic center than my home town and the capital of Connecticut. This year, in another demonstration of community support for the exchange of peoples between countries, they have banded behind the selection of Dr. and Mrs. Robert E. Dunn of West Hartford, who will shortly depart for a stay in Birmingham, England.

The Dunns will leave Bradley Field by jet clipper on June 6 for London. In Birmingham, they will be the guests of the Birmingham Mail, and I have been assured by Kenneth B. Atkinson, our consul in Birmingham, that a full program has been arranged by the Birmingham sponsors for their visit.

In Hartford, the Dunns will be honored at a farewell luncheon on June 2. Meanwhile the community is planning for a visit in September from winners of the Birmingham contest. More than 150 clubs, organizations and schools in the Greater Hartford area sent in suggestions and entries in selection of the Greater Hartford couple and showed great enthusiasm in the program.

Helping the program in Hartford throughout its search for representatives has been the Hartford Courant, the nation's oldest newspaper of continuous circulation. The Courant will be host to the Birmingham couple in the fall, and its own cooperation with the Birmingham Mail is an excellent example of people-to-people relations in itself.

The two people who will be going to Birmingham as representatives of this country are outstanding. Dr. Dunn has been there before—he holds a special certificate from the Institute of Birmingham which he won while he was on a Rotary Foundation travel and study fellowship.

He is now vice principal of William Hall High School in West Hartford and has held that responsible assignment for

4 years. He met his wife while they were undergraduates at Bates College in Maine. He earned his master's and doctors' degrees at the University of Connecticut and was married 3 years ago. Mrs. Dunn, who teaches third grade at Braeburn School, West Hartford, holds a master's degree at the University of Hartford.

Their application for the people-to-people fellowship was sponsored by fellow teachers at Hall High and Braeburn as well as the Hall Parent-Teacher Association and the West Hartford and East Hartford Rotary Clubs.

I am sure they will make outstanding representatives of the American way of life in their visit to Birmingham and England. Looking over their schedule, I note that they have a rigorous time planned and I hope it will be a wonderful one for them and their country.

In exchange, a Birmingham wholesale merchant and his wife will be coming to Hartford for 2 weeks in September. He wanted to be a schoolteacher but the death of his father at an early age led to his becoming an insurance clerk. He served with the RAF in World War II and has had a most varied career.

I should like to call the attention of my colleagues to this remarkable and energetic example of a venture in international understanding, congratulate those who worked long and hard to make it a success and wish the best of luck to the ambassadors of good will who have been chosen.

Kansas Labor

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the May 19, 1961, edition of the Lawrence (Kans.) Daily Journal-World, which points out an extremely important factor—the high productivity of Kansas labor—in consideration by industries of new plant locations. The editorial and its content are worth repeating here, where Representatives from all over the Nation will note and remember this important point.

THE BIGGEST FACTOR

A Kansas lawyer not long ago discussed talking with an official of a company the attorney represents and chiding the official of the national organization for paying such extra-high wages for unskilled labor in the Kansas plant.

The official admitted that the hourly rate was far higher than it should be, but he added:

"Even though we're putting out a lot more money than we should have to for this kind of work, we get far more good work per dollar in our Kansas plant than we get at any of our other 13 plants in other States. This speaks volumes about the merits of the type of labor you can hire in Kansas, and I think that if more industries realized this, more of them would locate here."

The attorney then told about talking to other manufacturers and getting the same type of story, favoring Kansas labor over that in other States.

This should remind us that when we try to "sell" businesses and industries on locating establishments in Kansas we never want to undersell the type of people we have as one of the big reasons firms should come here.

True, water supplies, sewage and power facilities, transportation links, recreational facilities—all these have a role to play in attracting new business and industry to a city or State.

But it is people who still make these businesses and industries run, and the newcomers can't bring all of their own employees here. They generally must do the great bulk of their hiring in the region where they locate. The fact Kansas has the reputation for supplying good employees should do a great deal to boost our growth.

The Need for Middle Income Housing in My District

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of a statement which I have submitted to the New York City Planning Commission dealing with a subject of vital interest to the people of my district, particularly those living in the Williamsburg section. There is a crying need for middle income housing in Williamsburg, and my plea is directed to the Commission to provide such housing before the area is depleted of many of its fine families.

My statement reads as follows:

ADDRESS BEFORE THE CITY PLANNING COMMISSION BY HON. VICTOR L. ANFUSO, OF NEW YORK, WEDNESDAY, MAY 24, 1961

Mr. Chairman, gentlemen of the commission, the city of New York is composed of many neighborhoods and communities, rich in history and tradition in their own right. The area which we now call Williamsburg was itself a city in 1852. As the Congressman of the area involved in these proceedings permit me to say a few words in its behalf. The community of Williamsburg was established in 1792 by a merchant named Richard M. Woodhill who planned it as a residential development. Mr. Woodhill named the community after Col. Jonathan Williams, a distinguished citizen of the United States. Colonel Williams had a distinguished career as an engineer and the surveyor who laid out the roads for this community; as secretary to Benjamin Franklin; as commander at West Point and superintendent of the U.S. Military Academy; and concluded his career as a Member of the 14th Congress of the United States who died in office in 1815. Colonel Williams set up the forts and defenses for New York and in this period surveyed the area now known as Williamsburg.

The community of Williamsburg had difficulty in becoming established but in the 1800's the advent of the Wallabout and Newton Turnpike made commuting to Williamsburg easier and the community entered upon a period of rapid growth. By 1827 the community had prospered to the point where it was incorporated as a village by act of the legislature. On January 1, 1852, Williamsburg, now a thriving community, received a city charter. The new city prospered and lasted for a period of 2 years when it became a ward of the city of Brooklyn.

Over the years, the Williamsburg section has not suffered industrially. The proximity of Williamsburg to bridges, freight terminals, and marine facilities along the East River led early to the establishment of factories, lofts, and warehouses which have been maintained. Among the better known plants in the area are the F & M Schaefer Brewing Co., Joseph Schlitz Brewing Co., Liebmann Breweries Inc., Charles Pfizer Drug Co., Socony Mobil Oil Co. refinery and several other large plants.

The most serious problem which has faced this community has been a depletion of responsible citizenry. Williamsburg increased in population at the turn of the century when Jewish immigrants settled there to be near their brethren on Manhattan's lower East Side. They moved into the area in great numbers after the opening of the Williamsburg Bridge in 1903 and were followed by other immigrant families of Italian extraction. After the holocaust of World War II, 15,000 orthodox Jewish refugees from Nazi persecution settled in Williamsburg. The advent of the Brooklyn-Queens Expressway cut a winding path through most of Williamsburg uprooting thousands of these people.

In the past 15 years there has been a decided population shift. What was once a community with a substantial middle-class citizenry has begun to change in both the ethnic and socio-economic character of the population.

An increase in industrialization has been partially responsible for this population trend but the real answer lies in the fact that the majority of housing facilities in this community are 60 years of age or over and the housing developments constructed in the past 15 years have been geared to those in the lowest socio-economic class. Thus, thousands have been displaced and more than 20,000 persons in the lowest economic classification have moved into the community, all of whom have made good citizens, by the way.

The result of this trend may best be pointed up by the comment of Leila Morgan, executive secretary of the districts health committee, who as early as November of 1954 was quoted in the press as saying: "Our leadership in the health committee keeps moving away. All our chairmen move to Queens, Westchester, and the suburbs."

Here lies the answer to many of the serious social problems that affect the Borough of Brooklyn. Let us never forget that it was a responsible middle class that expanded undeveloped land into a thriving community and thence into a flourishing city. It is this kind of citizenry we must rely on to lead in community activities. Time and again sociological studies have been made and whether it be juvenile delinquency or better housekeeping facilities in the city, all studies will agree that it is community leadership which provides the only answer to this problem. Those in the lowest economic strata of our society are burdened with the chores of earning their bread. These are the families where both parents work. These are the families where children are unsupervised, where there is no time for participation in the religious, cultural, and civic activities of the community.

The exodus of the old citizens of Williamsburg into the suburbs and even neighboring States must be stopped. These peo-

ple whose roots lie in Williamsburg; who have over the years been the leaders in community activities should not be displaced. And, these are the very vital reasons why I appear here today to implore this Commission to act promptly in establishing middle income housing for the leaders of Williamsburg who may be scattered to the suburbs and other States.

Gentlemen, I know this community and have been proud to represent it in the Halls of Congress for almost 9 years. The people of Williamsburg are honest, industrious, hard-working citizens who have a proud tradition fostered over many years which they wish to sustain. I ask you to permit them to remain. I implore you to take action so that the great cultural and religious traditions that have evolved from our Jewish community over the past 2 decades and have achieved worldwide recognition, may be continued. I beseech you on behalf of the other old and established elements in our community who wish to remain and continue their religious, charitable and community service. Do not let these people go. Stop this mass exodus.

I look forward to a revival of civic activities in Williamsburg. I look forward to an integrated community where those in the lowest socio-economic level may live in peace and harmony with the older elements in the community who are granted access to this middle income housing. Then, Williamsburg will have the leadership necessary to guide the less fortunate and actively participate on the local level in programs of rehabilitation and assistance that will permit the community to act as it has in the past in meeting and solving its own problems.

In conclusion, permit me to thank Chairman Felt and all of the members of this commission for their study and considerate judgment of this very important situation. Your prompt action in facilitating the erection of such housing will mean that this proud section of Brooklyn will once again flourish and assume even greater responsibilities for which we can all be proud. I congratulate you in advance for establishing a better Williamsburg which means a better Brooklyn and a better city of New York.

The Cuban Situation

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. KOWALSKI. Mr. Speaker, since my recent statement in the CONGRESSIONAL RECORD setting forth my views on the Cuban situation, I have received a multitude of letters supporting my position. But of all the communications received, none was more succinct than the following which I would like to include for the RECORD at this point:

YALE LAW SCHOOL,
New Haven, Conn.

Representative FRANK KOWALSKI,
House Office Building,
Washington, D.C.:

It is reasonable for this country to boycott Cuba; it is reasonable to want no Communists there; but it is irrational to impose the first and then demand the second.

FRANK KEATING.

American Seapower: A Great Speech by Hon. Herbert C. Bonner, on Maritime Day 1961

EXTENSION OF REMARKS
OF
HON. THOMAS N. DOWNING
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. DOWNING. Mr. Speaker, on Monday evening, May 22, I had the privilege of hearing a great address by the chairman of the Committee on Merchant Marine and Fisheries, Hon, HERBERT C. BONNER, delivered at Fort Eustis, Va., at a joint meeting of the National Defense Transportation Association and the Propeller Club, Port of Newport News, in observance of National Maritime Day.

The theme of Congressman BONNER'S speech, American seapower, brought the subject of our total maritime posture more clearly into proper focus and perspective than any statement I have ever heard or read.

Mr. Speaker, I commend to the attention of every Member of Congress the thoughtful and penetrating remarks of the distinguished chairman of the Committee on Merchant Marine and Fisheries in his splendid and timely address on our dependence as a maritime nation upon seapower in its commercial and naval entirety. We must not forget,in our preoccupation with outer space, that the destiny of the world we live in can be determined on the seas which comprise some three-quarters of the earth's surface.

Under leave to extend my remarks in the RECORD, I include the following text of Chairman BONNER'S great speech:

It is an honor and a great pleasure to be here at Fort Eustis to observe National Maritime Day at the joint meeting of the Propeller Club, Port of Newport News, and the National Defense Transportation Association.

I think it is particularly auspicious that this meeting should be held here at Fort Eustis, the splendid transportation training command center of the Army. The atmosphere of the occasion is further enhanced by the 344 merchant vessels of the National Defense Reserve Fleet lying at anchor only a few yards away in the James River. And down the stream, only a few miles away, stand the facilities of the great Newport News Shipbuilding & Drydock Co., bulwark of this Nation's waterborne military and commercial might for 75 years.

Most of you have heard Maritime Day speeches before.

Frequently they consist of fine phrases of praise—pleasant to the ears of members of the merchant shipping fraternity. Much is said about the "fourth arm of defense" in a context which makes it sound terribly important and able to function alone in the welfare of our country.

Here at Fort Eustis, enjoying the hospitality of the Army, and in the presence of the National Defense Transportation Association, composed as it is of representatives of all forms of transportation, I am going to speak on seapower, a subject which involves all who are here tonight—in time of peace and in time of war.

I would like to discuss American seapower in its total sense, and its importance to our future. For, more than ever today, we are a maritime Nation dependent upon our seapower in its commercial and naval entirety.

"Seapower," as I am speaking of it, is not merely Polaris submarines or 33-knot liners.

As Adm. Arleigh Burke, our great Chief of Naval Operations, stated only a month ago: "* * * seapower relies on far more than ships and weapons systems. Our capability to exert effective naval power when and where we need it rests on our natural assets of geography and material resources. It depends too on our shipbuilding capacity and it rests very heavily on the technical and design skills of our naval engineers. Seapower includes all those things which enable a nation to use the sea advantageously during peace or war."

And he might well have added: "The concerted, continued, and dedicated cooperation of the men who man the ships and handle them at portside."

We tend to take our maritime position for granted, but we do so at our peril. We must rid ourselves of the myopia of recent years which placed the expediencies of bookkeeping above national maritime strength and which made the accountant the prime arbiter of the policies governing the sinews of our seapower.

We must insure that in the immediate years ahead we not only overcome the effects on our maritime posture of past neglect and shortsightedness, but that we push forward our maritime frontiers. We must proceed without delay in modernizing and strengthening our U.S. merchant marine. We must move ahead, to gain maximum effectiveness and efficiency from the new technologies.

We must aggressively compete for trade—the trade which provides the basic link of common interest between us and our allies, and the undecided nations of the world. The volume of this trade will expand in the years ahead and means must be found to insure that our merchant marine carries a sharply increased portion of it.

It is not only our commercial interest and balance of payments that are affected.

In our struggle with the Communist world, trade is a key factor—a potent weapon for the side which will effectively use it. We want the future to see our products, moving in American merchant ships under the shield of the Navy of the United States. Our trade, made possible by our seapower, can and must be the means of lifting up the undeveloped nations.

The Russians, though late to arrive on the maritime scene, have long been experts in political penetration. They fully understand the importance in the world struggle of trade and mercantile seapower.

Soviet expansion, in both naval and merchant fleets shows their determination to replace us as the foremost in overall seapower. The primary position given to submarines in the growing Soviet Navy openly shows an intention to strive mightily to cut our sea links of trade and supply in time of war. Growing emphasis on merchant shipping shows the value the Soviets place on world trade for attaining their objectives short of open war.

Russia now has a merchant marine of about 850 ships—over 4½ million deadweight tons. Her satellites provide an additional 200 ships, totaling 1¼ million tons. This fleet is steadily expanding, through building in Soviet bloc shipyards and purchases from the free world.

An Associated Press dispatch of May 10 quoted the Chairman of the Russian Shipbuilding Ministry as saying that the demand of the Soviet merchant marine is increasing so rapidly that Soviet shipyards no longer can fully cope with it and that by 1965 the

volume of Soviet seaborne freightage will almost triple compared with 1958.

He added that in view of this, various ships are under construction for the Soviet Union in Poland, Finland, Denmark, East Germany, West Germany, Holland, Japan, and other countries.

I might note that the Soviet Union has pioneered the development of nuclear icebreakers—a field which we have neglected, strangely enough, considering that we face Siberia across the Arctic Basin. Their large and powerful atomic icebreaker *Lenin* has been in operation for more than 2 years now while our small fleet of war-built icebreaking vessels are obsolescent and wearing out.

Russia knows how to use newly acquired maritime power. The Red flag is showing all over the world—of course, with a heavy emphasis on the ports of the small nations they wish to penetrate.

Soviet ships and trade are vital and integral parts of the Communist economic offensive.

In countries where reserves of hard currencies are limited, Communist willingness to supply and deliver Iron Curtain products and pick up the exchange material, all for barter, has been very successful. Russian petroleum, Polish fishing boats, and East German machine tools move over the world, implementing about 100 barter treaties signed with non-Communist countries. We have only to look, from Florida, 90 miles south, to Cuba, to see a textbook example of Communist penetration leaning heavily on the effective use of mercantile seapower.

Thus, the Soviet merchant fleet acts as a political weapon of national trade. Russia's merchant marine is free of such hinderances as the necessity to make a financial profit. Political profits are the objective. The future could well see them concentrating shipping on a few trade routes to haul free world cargoes at some financial loss to them perhaps—but an irretrievable political loss to us.

These grim facts provide ample reason why we must revitalize our position of primacy at sea and restore it in such clear degree that no doubt will exist anywhere that the United States and the free world control the sealanes under all conditions.

There must be no doubt that we can carry the trade, and our goods and our ideas to all the nations.

There must be no doubt that, if need be, we can strike at will in a controlled and limited manner from the seas, with shattering promptitude. There must be no doubt that we can apply the most precisely tailored degree of force—naval force capable of appearing without warning, and remaining indefinitely to strike or threaten. There must, further, be the certainty in the minds of our friends and those who are not our friends, that our Polaris ballistic missile submarines, are there at sea, invisible and unfindable.

In these future years, I believe that we must have a much closer degree of coordination of maritime and naval policies.

This is of the greatest importance.

Never before has there been such a degree of interdependence between our naval power and the strength of our merchant marine.

It is a task of naval power to protect and control the sealanes in the face of potentially the most massive submarine threat of our experience. It is the job of the merchant marine to bring in the vast quantities of raw materials—imports such as metals, ores, and petroleum—which are now vital to our national strength and warmaking ability.

But, consider the degree of our present vulnerability: Over 1½ million barrels of petroleum per day are imported by ship—less than 5 percent of it in ships flying the U.S. flag. About 99,000 tons of iron ore are daily imported in ships, nearly all under foreign flags. There are, of course, other critical items: The raw materials for the space age must be imported into the United States by ship. In a very real sense, our lack of capacity to carry our own vital imports may be our exposed jugular.

Our capacity to project our limited war force needs a well-balanced naval-military force working closely with a modern, effective merchant marine, active and in being.

Do not be misled to believe that sealift, meaning the movement of troops and military material by sea, is obsolete.

There is, of course, no substitute for adequate airlift. Its ability to rapidly move a few thousand troops and their light equipment is invaluable.

But when divisions and armies are to be moved, sealift can accomplish the job more rapidly and of course much more efficiently, both in terms of military effectiveness—as troops arrive concurrently with their heavy equipment—and in terms of resources expended. This can be done with ships of 15 to 20 knots, such as our reserve fleet transports and our older cargo ships.

A more spectacular statement of sealift capability is the fact that one ship like the 33-knot *United States*, or her authorized but as yet unbuilt superliner sistership, can carry a full division of troops and much of their equipment from New York to Europe in less than 5 days and to the Middle East in 6½ days. In doing this, she would carry her own fuel for the round trip, plus a large margin.

Only ships—and I mean large numbers of them—can supply the equipment, food, ammunition, and fuel for a limited war of even moderate size. A considerable part of the tanker requirement would be devoted to the supply of fuel for the aircraft of the very vital airlift. And mistake it not, airlift cannot function without these tankers—or without the pre-positioned staging bases which must be supplied by merchant shipping.

The American merchant ships to do the job—the passenger ships, the cargo ships and tankers—must be modern, fast, and of the highest quality. More than that, they must be in being and actively employed. This means that if they are to be ready to serve in an emergency, they must be built, manned, and gainfully employed before the emergency.

We do not have ships of the needed quality now except in limited numbers.

Only 13 percent of our active merchant tonnage is 6 years old or less, but 75 percent is over 14 years old.

To make up for past neglect, the replacement rate on our berth line cargo and passenger ships must be increased from the current 14 per year up to the 25 or more envisaged in the 1936 act. Modern thinking on limited war heavily underlines the importance of ships in being.

Here we may close the circle of this interdependence of seapower.

If these ships of our merchant fleet are built, manned, and employed, they will be spearheading our trade, performing the vital mission of expanding our seapower through economic means, as well as being ready for emergency use.

The years ahead are filled with challenge for this Nation, and the way aheda is far from clear. This is particularly so in the future of our maritime position—our total seapower. Yet, the opportunities ahead are vast—and it is of extreme importance that we make the most of them.

We must revitalize our seapower in its entirety, and bring about the closet coordination of its elements.

We, as a maritime nation, must determine realistically, what appropriate portion of the national budget should be allocated to the strengthening of our merchant marine. We must create the domestic climate of intraindustry cooperation in which the merchant marine can thrive.

We must expand our trade for its political as well as its economic value to us—and we must greatly increase the proportion of it that our own ships carry.

We must make our maritime power the instrument with which we can help the undeveloped and undecided nations to achieve their aspirations.

We must insure the continuation of the flow of imported materials vital to us by decreasing our dependence upon foreign-flag shipping in this regard.

We must insure our ability to carry such quarrels as may be forced upon us to the shores of our adversaries by maintaining well-balanced naval and military forces supported by an adequate, modern, and commercially viable merchant marine.

It is from the sea that we will realize our ultimate victory.

Thank you.

Mrs. Copenhaver: Good Neighbor, Typifies Kansas Spirit

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following item.

Mr. and Mrs. Donald McCoy, who are personal friends of mine, came to Kansas from New York several years ago and are now members of our community. Mrs. McCoy, in a letter to the editor of the Lawrence Daily Journal-World of May 18, 1961, tells of an experience the family had when they first got to town. Because the experience of the McCoys is, I think, typical, I am very pleased to bring it to the attention of my colleagues.

MRS. COPENHAVER

EDITOR, JOURNAL-WORLD:

Last evening's Journal-World included a notice of the 95th birthday of Mrs. Ellen Copenhaver, 1025 R.I. Street, to be celebrated this Friday. I would like to honor this wonderful woman by telling you how much she has epitomized for me all the warmth and goodness of the Kansas character.

Four years ago my family and I came to Lawrence from New York State and had the good fortune to rent a house next door to Mrs. Copenhaver. From the beginning she proved the good neighbor. To our toddlers who made their way to her back door, she was always an endless source of gaiety, friendly words, and daily bouquets of flowers from her well-tended garden. The first path our older son beat after escaping through the porch folding gate was in the same direction. When our Kansan was born that first summer of our stay in Lawrence, Mrs. Copenhaver, then 91, was his first sitter while I made necessary errands to the store.

That first winter our family came down with the flu and to my utter surprise the family supper arrived hot and without delay through the thoughtfulness and generosity of our next door friend. I enjoyed endless conversations on her front porch and they all painted for me a vivid and lasting picture of Kansas history as it was made by the same rugged enduring personalities who peopled Kansas in the century just past. She told me how she consoled her mother when it was time for the widow and her children to leave Virginia to entrain for Kansas where a relative farmer would offer them

a home. "Oh, mama, don't cry, this is the most wonderful thing that ever happened." When they arrived there were none of the windbreaks so common now and the wind blew the pins right out of my hair. To this day a grasshopper must be killed on sight, perhaps her only admission that life could be hard in Kansas, too.

In a year when we are celebrating Kansas' Centennial I want to say that I am thankful that I and my family had the good fortune of knowing Mrs. Copenhaver, a woman who will always be our most memorable Kansas pioneer.

VIVIAN R. MCCOY.

Monroe County Negro Cited in Liberia for Aid to Country's Agricultural Service

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. BOYKIN. Mr. Speaker, too often te achievements of our colored people in the South are lost in the confusion and in the biased reports of the northern press, periodicals and other communication media. Under leave to extend my remarks in the RECORD, I include an article from the Monroe Journal, Monroeville, Ala., under date of May 11, 1961, concerning a native son of Monroe County, Sandy J. McCorvey. You will note that McCorvey was an agricultural extension advisor for the U.S. International Cooperation Administration in Liberia, and that he has been commended in a public ceremony in Monrovia for his assistance in developing a Liberian agricultural extension service. I want to join with the citizens of Monroe County in congratulating Sandy McCorvey on the excellent contribution he has made in promoting good will for the United States in Liberia.

The article follows:

MONROE COUNTY NEGRO CITED IN LIBERIA FOR AID TO COUNTRY'S AGRICULTURAL SERVICE

MONROVIA, LIBERIA.—Sandy J. McCorvey of Peterman, Ala., recently was commended in a public ceremony here for his assistance in developing a Liberian agricultural extension service. He is the son of Julia McCorvey of Peterman.

The Peterman native, who was an agricultural extension advisor for the U.S. International Cooperation Administration in Liberia, has returned to the United States for home leave and reassignment.

On his arrival in Liberia in 1951, he immediately organized a program to train Liberian agricultural extension leaders. Each tribe or community selected one man who was given a 3- to 12-month training course at the Boneke agricultural station. Graduates returned to their own communities and taught improved agricultural techniques to the farmers.

Thirty men were graduated from 12-month training course and 70 others received shorter periods of training during McCorvey's first 6 years in Liberia.

To help finance the training program, the Boneke station sold the vegetables it produced to farmers in the area. However, after 3 years, the farmers learned to increase and improve their own vegetable crops and no longer needed to buy vegetables raised at Boneke.

McCorvey and his Liberian assistant performed experiments to determine at what time various vegetables should be planted to produce the best crops and compiled data which McCorvey used to write a vegetable planting guide. This guide will be published and distributed to Liberian farmers. McCorvey also is the author of "Better Rubber Farming Means More Money For You." This pamphlet is an outgrowth of his famous "Let's Talk About" series, including studies on rubber, cocoa, oil palms and other agricultural subjects.

A poultry improvement program, school garden clubs, 4–H Clubs and chapters of Future Farmers of Liberia also were organized under McCorvey's guidance.

Mrs. McCorvey contributed much of her time in Liberia to community development work. She helped to establish a public library—the first in Maryland County.

McCorvey was graduated from Tuskegee Institute, receiving a B.S. degree in Agriculture in 1937. He received an M.A. degree from the Michigan State University of Agriculture and Applied Science in 1949. He also did graduate study at Indiana University.

After completing a 6-month refresher course at the Agricultural and Technical College of North Carolina, McCorvey and his wife will leave the United States for another ICA assignment.

Albert W. Byrnes, Democratic Leader in Brooklyn, Honored by Club

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. MULTER. Mr. Speaker, Albert W. Byrnes has been active in Brooklyn politics and has contributed his efforts toward the betterment of his community for many, many years. On April 22, 1961, the Clarendon Regular Democratic Club honored him at its anniversary celebration at the Biltmore, Church and Flatbush Avenues, in Brooklyn:

Albert W. Byrnes, prominent Brooklyn businessman and leader of the First Assembly District Regular Democratic Organization, is certainly no newcomer to politics.

To support this claim, Mr. Byrnes can point with pride to his family's career in politics spanning 100 years.

His uncle, the late Frank V. Kelly, Jr., was the Kings County Democratic leader, and before him, his grandfather, the late Frank V. Kelly, Sr., helped guide the political destiny of the city of Brooklyn as head of the volunteer firemen's association.

"Al," as his friends call him, has continued in the footsteps of these two prominent Brooklynites. After attending Public School 16 and Eastern District High School in Brooklyn, he served in the Navy in World War I. After his discharge, he cashed in a $40 liberty bond to purchase his first truck and start what developed into one of the State's outstanding trucking firms.

He has always maintained a deep interest in Brooklyn politics and civic affairs. He has served as a presidential elector in 1948, 1952, and 1956, and as delegate to the Democratic National Conventions in 1956 and 1960.

The silver-haired, sparkling eyed leader has found time to serve as a member of the lay board of Greenpoint Hospital, a member of the board of visitors of Brooklyn State Hospital, second vice president of the Emerald Association, and first vice president of the St. Patrick Society of Brooklyn.

He has been working diligently to spark a back to Brooklyn move, as a member of the Brooklyn Chamber of Commerce; honorary member and past president of the Traffic Club of Brooklyn, and the Metropolitan Traffic Association of New York. He is also trustee of the Dime Savings Bank of Williamsburgh.

"Despite the loss of the Dodgers and several key businesses, Brooklyn has a bright future. Aggressive commercial leadership, coupled with a constant effort to attract young families, new businesses and constant housing improvements, will enable Brooklyn to maintain its leadership in the greater New York area," Mr. Byrnes said.

And, he talks from experience, 100 years of it.

Placing the Blame for the Montgomery Incident

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. ALGER. Mr. Speaker, the following editorial from the Wall Street Journal points out some pertinent facts concerning the recent racial incident in Alabama. This article deserves the careful attention of all of us in determining if the South and the Nation should bear the brunt of the propaganda now being circulated:

MONTGOMERY AND THE WORLD

There is, surely, plenty of blame to go around for the Montgomery racial disorders. But we should like to enter a dissent to the increasingly prevalent notion that the United States as a whole deserves all this criticism, at home and abroad, for mismanaging its racial problems.

In this particular case the trouble was deliberately provoked. The so-called freedom riders went looking for trouble, in one of the most likely parts of the South, and they found it. The local and State authorities failed, in the beginning at least, in their duties to prevent violence and maintain law and order.

That was said to require Federal intervention, and perhaps it did. But the present administration sometimes seems almost as zealous in this matter as some of the agitators. It seems to believe that by fast, firm action it can clear up this whole question of segregation in the near future.

If that is indeed the view at the Justice Department, we fear it is an illusion. The Supreme Court school decision of 1954, whatever one may think of it otherwise, undertook to upset a social pattern of long duration. The consequences have been coming ever since, and the only sure thing is that the troubles will keep coming.

But all that does not, in our opinion, properly make the United States an object of scorn in its own eyes and the world's. We are dealing here with a collision of cultures, with elemental emotions, instincts and attitudes which cannot be waved away with court orders or U.S. marshals or promptly solved in any simple fashion. And we would just like to know what society, ever, faced with such a problem, has dealt with it any better or nearly as well.

Let's consider a few cases in the world today—not to justify the United States by pointing a finger at others, but simply to keep this complex matter in some kind of perspective.

There are, for instance, the emerging nations of Africa, so perturbed about America's race problems. Yet they themselves exhibit racism in reverse. Native politicians in Kenya, heading toward independence, want to drive out or submerge the whites and Asians who built the place for them. That is perhaps their business, but it hardly suggests they have found the secret of a harmonious multiracial society.

Throughout the vast backward areas of the nonwhite world, in fact, prejudice, discrimination, segregation are the custom. It's hard to think of a more thoroughly segregated setup than India's caste system.

Then there is the sanctimonious Soviet Union; to be sure, it does not have a Negro problem, but it holds many Asiatics, among others, in thrall and follows a quasi-official policy of anti-Semitism.

Even the civilized nations across the Atlantic are not successful at coping with the race problem when the problem arises—as it has in Britain. For most of them, of course, the problem has not arisen in any important degree, and therefore it is all the easier to deliver lectures on inequality in the United States.

The truth is that progress toward equality under the law—before as well as after 1954—is one of the more remarkable achievements of America, in view of its singularly difficult situation in this respect. Today compromises on the schools are taking shape in many areas of the South. Long and involved litigation, which itself dissipates passions, frequently results in a measure of desegregation not satisfactory to either side, but not intolerable either. Where there is any community will to accept change, the Federal courts have generally been understanding.

None of this excuses the mess in Montgomery; it does not mean all Americans are going to love each other any time soon. But the broad record of progress ought to be remembered once in a while in the midst of all the talk of the damage we are causing ourselves and our image abroad.

American Legion Goes to Denver

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. ROGERS of Colorado. Mr. Speaker, the American Legion has made a wise choice in selecting the city of Denver to hold its national convention, September 9 to 14. The city of Denver welcomes all Legionnaires and their friends to attend this convention, as we know it will be an outstanding event. My friend Bill Brenneman has written a splendid article entitled "Go West to Denver, Colo." that is in the June issue of the Legion magazine and I ask unanimous consent to have this article inserted in the Appendix of the RECORD, which is as follows:

Denver is the highest (1 mile), most isolated (500 miles from the next major outpost), and friendliest of this country's big cities.

She also is, perhaps, the most genuinely western of cities. She practices her brand of "welcome stranger" hospitality with such intensity that the casual vacationer who drops in for a few days leaves as Denver's best salesman; the man who stays a week feels he has a vested interest in the new pachyderm house at City Park Zoo, and he who remains a month becomes a native son.

All of which is by way of introduction to the expansive, open-arms welcome extended to newcomers by this fresh new city at the base of the Rockies which will be host to the 43d annual convention of the American Legion September 9 to 14.

Because her past is so recent and her present so new, and because of her isolated positions at the point where the Great Plains meet the Rocky Mountains, Denver is a city of marked contrasts.

Distinguished observers have called her "the most cosmopolitan of cities." Equally astute critics save dubbed her "cow town."

She may be either or both. Cosmopolitan, certainly, for the newcomers who have been arriving at the rate of nearly 2,000 a month since World War II have come from everywhere. "Cow town," of course, for she is the center of western America's billion-dollar livestock industry, and the most lavish of white-tie affairs at the gracious Brown Palace Hotel is bound to attract a sprinkling of 10-gallon hats and high-heeled boots.

(Former Gov. Dan Thornton once bedded down a $50,000 Hereford bull in the lobby of this dignified hotel.)

On a mountaintop 20 miles from downtown Denver is the carfully tended grave of "Buffalo Bill" Cody, the great buffalo hunter whose name is synonymous with the days of the Wild West—only yesterday in Denver's 100-year history. (Kiddies toss pennies over a spiked fence onto the grave, for luck.)

A couple of hogbacks away is the $60 million industrial complex which is building that most sophisticated weapon of the rocket age, the Titan ICBM.

Nowhere is the contrast between past and present demonstrated more strikingly than at the corner of Colfax Avenue and Broadway, where any tour of the Mile High City must begin. To illustrate what is meant:

On one hand is Colorado's State Capitol Building, topped by a dome coated with $23,000 worth of gold leaf—a lasting tribute to early mining glories. On the other is the gleaming white tower of the 28-story First National Bank Building (Denver's tallest) representing a wedding of old-line Denver banking money and the flamboyant millions of the Murchisons of Texas.

From the same corner (just a block from Leyden-Chiles-Wickersham Legion Post 1, host to the conventions) can be seen the graceful classic columns of Denver's city and county building, which an earlier generation of city fathers stopped at four stories so Denver's beloved view of the front range of the Rockies never would be blocked. A glance to the side discloses the new, 22-story, 884-room Denver Hilton Hotel, majestic symbol of Denver's postwar emergence as a principal convention center and commercial city.

In downtown Denver, within walking distance of all downtown hotels, is the Denver City Auditorium which will be the scene of general sessions of the American Legion and the American Legion Auxiliary. The auditorium has a seating capacity of 8,000 in the area, where general sessions are scheduled for September 12 and 13, and 2,333 in the theater, where the Auxiliary will be in session September 9, 10, and 11. The auditorium also will house displays throughout the convention.

If President Kennedy accepts an invitation to speak, the general session on the day of his appearance may be moved to the municipal Denver Coliseum, located about 3 miles from the hotel district at East 46th Avenue and 44th Street. The Coliseum can handle a crowd of about 11,000 with parking for 2,500 automobiles.

Senior drum and bugle corps groups are scheduled to appear September 10 at the University of Denver Stadium, seating 30,000, 6 miles from the downtown business district. The stadium may also be used for junior bugle corps, tentatively scheduled for September 9.

Under discussion is the possibility of a public spectacle at the Theater of the Red Rocks, handling up to 12,000 persons, 15 miles from downtown Denver. Other groups are exploring the possibility of producing a special rodeo for the Legion at the Coliseum September 12 and 13.

Despite its diversified economy, Denver still stops to wonder sometimes just why it is. Neither of the streams which flow through it (the South Platte River and Cherry Creek) carries enough water to float anything drawing more draft than Huck Finns raft. The first railroads bypassed it rather than tackle the mighty bastions of the highest part of the Continental Divide, and early-day explorers were prone to describe the vast plains at its back door as the "Great American Desert," incapable of ever growing anything more nutritious than buffalo grass.

Nevertheless, in 1850 a trapper found a show of color in a nearby creek and, in 1858, a Georgian named William Russell camped at the confluence of Cherry Creek and the Platte to look for gold. The next year, John Gregory stumbled across a gold lode at Central City, and the big gold rush to the Rockies was on.

In short order, silver was found at Georgetown; Horace Greeley had sent Nathan Meeker west to found the Union Colony (first irrigated farming development in Colorado) at Greeley; the predecessor of the University of Denver had been established, and Denver had been named capital of Colorado Territory. Colorado achieved statehood in 1876, and silver had touched off the Leadville bonanza days. In the late seventies, the Ute Indians gave up the ghost following their last abortive uprising at Meeker, and all of western Colorado, with its precious metals, timber and lands was opened to the white man's development.

The railroads finally came, and with them came new dwellers, new businesses, and new industries. Texas cattlemen, driving their longhorns to winter pasture, provided the nucleus of the livestock industry. Small tradesmen, who were to become giant wholesalers, headquartered in Denver to serve a growing empire. Infant banks became giant financial institutions, providing capital for the development of the entire Rocky Mountain area.

The railroads also brought something else: The tourist.

The earliest settlers long since had discovered the health-giving qualities of the high, dry, rarefied air of Colorado, and of its long seasons of brilliant sunshine, qualities which attracted hordes of those afflicted with "lung fever" to seek cure in the mountains.

A German nobleman named Count Pourtales built a casino at the foot of Cheyenne Mountain, and his friends from the East and from Europe flooded into Colorado Springs ("Little London") as the vanguard of the swarms who were to come later to enjoy the luxuries of one of the world's greatest resorts, the Broadmoor Hotel.

William N. Byers, founder of the Rocky Mountain News, came upon steaming vapor springs in Middle Park, 100 miles northwest of Denver and Hot Sulphur Springs was born. An English syndicate built the Hotel Colorado near the vapor caves at Glenwood Springs, 170 miles west of Denver.

Teddy Roosevelt went bear hunting in the Flat Tops country near Glenwood Springs

and big-game hunting became an industry. The Stanley Brothers drove one of their steamers up the banks of the South Saint Vrain River and the Stanley Hotel was conceived and around it the resort village of Estes Park was built.

Roosevelt set aside the vast mountainous domain that is Rocky Mountain National Park, and other public use areas followed quickly: Mesa Verde National Park near Cortez, Great Sand Dunes National Monument near Alamosa, Colorado National Monument near Grand Junction, Dinosaur National Monument near Craig, Hovenweep National Monument west of Cortez, and 11 national forests, covering more than 15 million acres of majestic, untouched, untamed mountain wilderness, forever closed to commercial exploitation.

Otto Mears hacked a precarious trail straight through the forbidding fastnesses of the San Juan Mountains in southwest Colorado, and his million-dollar highway between Silverton and Ouray remains today as one of the most spectacular automobile highways in the world.

The Rio Grande Railroad pushed its tracks through the San Luis Valley and into the formidable San Juans to Durango—then swung north and thousands of awestruck visitors today ride the 49-mile Animas River route to Silverton which is the only remaining regularly scheduled narrow-gage passenger train trip in the Nation.

The roads and railroads tapped new riches and new resources—lead, zinc, molybdenum, oil, coal, timber, lush grazing lands, rich croplands—and all of Colorado thrived.

Denver and Colorado reached a staid maturity by the time of World War I, and the quarter century between then and the start of World War II passed in relative quiet.

The Moffat Tunnel was built under the Continental Divide, and Denver at last had a truly transcontinental railroad route. A Denver mayor named Robert W. Speer built a magnificent civic center and a system of city parks as notable for its practical usability as for esthetic beauty: no Denver park ever has been marred by a "Keep off the grass" sign.

A fledging State highway department used the proceeds of the first gasoline tax to open highways for year-round use across the lofty mountain passes—and the great barrier of the Continental Divide shrank even more.

Colorado Springs built a cog railroad and an auto highway to the top of 14,110-foot Pikes Peak. The National Park Service completed Trail Ridge Road through Rocky Mountain National Park to provide adventurous motorists with the highest continuous auto highway on the continent—12 miles above timberline at more than 11,000 feet.

But it remained for the changes wrought by World War II to bring Colorado into its full-fledged maturity. Thousands of servicemen were stationed at Fort Carson (infantry), Camp Hale (ski troops), Fitzsimons Army Hospital (sick and wounded), and at Lowry Air Base and Buckley Naval Air Station. They liked Colorado—and returned to live.

Colorado industry found new markets for its products. The Colorado-Big Thompson project, diverting millions of gallons of precious water from the western slope to the eastern, was completed at a cost of $160 million—and in its first year of use saved $22 million worth of crops from drouth.

In the ravine-pocked mesas of southwestern Colorado, the powderish yellow rocks that had gone unnoticed for years touched of a new boom in mining that resulted in years of excitement and growth in the great uranium rush of the 1950's.

The Air Force Academy was established, and the marvelous new service institution took shape against the foothills of the Rampart Range near Colorado Springs. (Visitors are welcome at the academy, now Colorado's most popular tourist attraction.)

New capital—from New York real estate men, from Texas oil millionaires, from small-town bankers in Kansas—poured in. Colorado blossomed and grew.

With growth came growing pains and problems. Since World War II, for example, the people of Denver have had to put up more than $80 million in school bonds to provide for an explosion of the small fry population.

(Perhaps it is this interest in good public education which has provided much of the impetus for Denver's headlong pursuit of culture. More than 20,000 adults attend her Emily Griffith Opportunity School. The private University of Denver, known for its schools of business and the theater, has big campuses both in the downtown and the south residential areas. The University of Colorado operates a big extension center in downtown Denver, and its medical school is campused in Denver. Denver public schools sponsor the one educational television station in the Rockies—and Denver also supports 4 commercial TV stations and 18 radio stations.)

As in all metropolitan areas, Denver, the mother city, has been faced with a choking growth of satellite communities. Nearly half her metropolitan area population lives in suburbia. The problem of financing capital improvements to serve both her own people and her neigbhors is her most pressing concern.

Her traffic problems have been met in two ways. A pioneering traffic engineer named Henry A. Barnes introduced her to one-way streets and the Barnes Dance, which permits pedestrians to move across intersections at any angle when they get the walk light. Recently, Denver completed her first big expressway, the $30 million Valley Highway, on which motorists can drive the length of the city at speeds up to 55 miles an hour without stops or cross traffic. (Expressway traffic has not yet equaled the confusion records established by some other notable expressways. To date, the Valley Highway's biggest pileup has involved only 12 autos.)

As this issue of the American Legion Magazine goes to press, Denver is concerned about the fact that several of her finest are in jail or facing felony charges—at least two rings of uniformed burglars have been found to be operating from within the police department.

Because of these and other problems, Denver has been accused by her sisters to east and west of being self-conscious. And why not? her citizens rationalize.

Ask any resident of Denver on any street why he lives there. The answer, invariably, is: "Because I like it."

Then, unless you're fast on your feet, he'll have you roped and hogtied and will be leading you home to a cookout steak dinner on his backyard patio.

HOW TO GET TO DENVER

American Legion members planning to attend their national convention in Denver September 9 to 14 will find that Denver's central location and wealth of transportation facilities make it easy, economical, and swift to reach from any major part of the country.

Five large trunk airlines and two local service lines serve Denver. The trunks include United, Braniff, Continental, TWA, and Western. Local service lines are Frontier, serving all the mountain regions between Canada and Mexico, and Central, serving large areas of Kansas and Oklahoma.

Denver also is served by seven major railroads—the Burlington; Colorado and Southern; Denver and Rio Grande Western; Missouri Pacific; Rock Island; Union Pacific; and the Milwaukee Road.

Both major transcontinental bus systems—Trailways and Greyhound—link Denver with cities and towns throughout the Nation. All principal car-rental systems have branches in Denver and, in addition, the Colorado Transportation Co. provides sightseeing bus tours throughout Colorado.

Chief among U.S. highways entering Denver are U.S. 40, 6, and 36 from the east; 287, northwest and southeast; 85 and 87, north and south, and 285, southwest. In addition, U.S. Highways, 138, 50, 24, and 160, entering from the east, and U.S. Highways 82, 550, and 660, entering from the southwest, connect with routes leading directly to Denver.

For air travelers, pure-jet service (United DC–8 and 720 and Continental 707) has brought Denver within 2 hours of Chicago, San Francisco and Los Angeles, and 3¾ hours from New York. Jet and/or turboprop service also links Denver with other principal cities in the Southwest, west coast, and Midwest, with good connections to all other points.

Following are some typical fares and approximate travel times between Denver and other principal cities (all fares are round-trip and include tax):

New York: Pure-jet service, $238.36; flying time, 3¾ hours. Other air service: first class, $224.22, coach, $166.15; flying time, 6 to 7 hours. By rail, pullman, $237.56, by coach, $119.90; traveltime, 33¼ hours. By bus, $54.07, traveltime, 50 hours. By auto, traveltime, 42 hours.

Chicago: Pure-jet, $149.60; flying time, 2 hours. Other air service: first class, $140.80, coach $114.07; flying time, 4 hours. By rail, pullman, $93.58, coach, $53.95; traveltime, 16½ hours. By bus, $46.37; traveltime, 28 hours. By auto, traveltime, 23 hours.

Los Angeles: Pure-jet, $155.70; flying time, 2 hours. Other air service: first class, $146.96, coach, $107.69; flying time, 4 hours. By rail, pullman, $152.31, coach, $84.43; traveltime, 29½ hours. By bus, $34.32; traveltime, 32 hours. By auto, traveltime, 23 hours.

Dallas: By air, first class $114.95, coach, $90.42; flying time, 1¾ hours. By rail, pullman, $63.80, coach, $47.91; traveltime, 18 hours. By bus, $23.93; traveltime, 20 hours. By auto, traveltime, 16¼ hours.

(Fares and times may vary from line to line and are subject to change. If members of your family will go with you, check on the airlines' family plan for lower fares.)

Agricultural Legerdemain

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. WHARTON. Mr. Speaker, while House Committee on Agriculture has under consideration the broad general agricultural program of the New Frontier, it would be well to consider its reception by rank and file members of that very substantial industry. This, especially in view of the fact that the new plan has been presented to us as advanced thinking and a do it yourself program. Upon sober reflection however, and in the light of our past experience, many seem to feel that this is simply old merchandise under a new label.

Frankly, I find no support for the propose farm bill neither among farmers,

consumers, or the taxpaying public and I would like to quote some representative observations from six farmers of my district:

The Kennedy administration is pledged to raising the farm income across the Nation. Everyone knows that the increase of revenue is not important unless the costs can be held.

As a farmer of Dutchess County, I am strongly opposed to the Kennedy farm bill because of the inherent creeping regimentation of the Nation's agriculture through the provisions of this bill.

This bill would give the Secretary of Agriculture dictatorial power over all agriculture. It could conceivably mean the end of the free enterprise system in agriculture that has helped build and make prosperous our Nation during the past 180-odd years. The agriculture industry is not proud of the burden it has placed on the rest of the Nation. Let's lighten the load rather than increase it.

As a fruit grower here in the Hudson Valley, I'm very much against this bill. I respectfully ask you to do everything in your power to defeat this legislation.

Also we oppose the omnibus farm bill as it will give the Secretary of Agriculture absolute control of farms and farmers of this country. We do not want power invested in any division of government, as his actions would not even be under congressional control.

The Cochrane-Feeman bill is a step toward more Government control, when what we want is less Government control. We are doing what we can at our county level and also at State level on most of these problems, and they can be done much more efficiently there.

It seems to me that we would do well to scrap this whole proposal without delay and the efforts of our agricultural experts should be bent toward a solution of the individual problem of the various commodities; more difficult, no doubt, but possibly of some benefit to all segments of our economy.

Induction of Rabbi Ira Sud, Temple Ezra, Chicago, Ill.

EXTENSION OF REMARKS
OF
HON. EDWARD R. FINNEGAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. FINNEGAN. Mr. Speaker, on March 12, 1961, Temple Ezra was the site of the induction of their new rabbi, Ira Sud. It was with great pride that I accepted an invitation to be present at this solemn occasion, and I found myself in the company of the religious and civic leaders of the community in the 12th District, Chicago, in which Temple Ezra exercises its spiritual strength. Dr. Manfred L. Hoffmann, leading member of the community and board chairman, conducted the ceremonies, and after the appropriate invocation by Rabbi Herman E. Schaalman of Emmanuel Congregation, Chicago, introduced those speakers who had come to attest to the qualities of the new rabbi. Rabbi Schaalman's invocation was inspiring when he said:

Thou art our God and the God of our fathers, who discloseth Thyself to the world in the beauties of nature and in the strivings of the human heart, who driveth down to us through the angles of ancient revelations and to the dedicated endeavor of His servants, the rabbis and teachers of all generations. We approach Thy throne today in behalf of Thy servant, Ira Sud, who is about to undertake the onerous duties of being rabbi of this congregation. Lift Thou, O God, his every step; when his strength falters, support him; when his advice is sought, give insight into his heart and love of fellow man into his every action. That Thy word be in the word of Torah, may flow from him in undiminished vigor, spreading his healing balm among all who come here to seek Thee.

To his effort and by Thy grace, establish him in this pulpit, from which he shall speak Thy words, the word of courage, the word of reproof, and of guidance. Upon his lips shall flow Thy praise, and so shall the innermost recesses of the heart of this congregation, that they and he, together, shall sing Thy praise, now and for all the days of all his years. Establish Thou, God, the work of his hands, yea, the work of his hands establish Thou it. Amen.

The new rabbi has been well described in the February 9, 1961, issue of the Delaware County Daily Times of Delaware County, Pa., which under the heading of "Rabbi Sud Fills Promise," said:

When Rabbi Ira Sud, spiritual leader of Ohev Sholom Synagogue Center in Chester, leaves this month for his new post in Chicago, Ill., his loss will be as significant for the community as it will be for the Jewish congregation.

This pleasant, friendly clergyman has managed to personify unqualified brotherhood, despite scars of an early life which marred his educational prospects in Prague.

As he ministered to the local Jewish congregation in Chester for a decade, he created a wider fellowship, representing the Jewish rabbi at his most influential level.

When he came to Ohev Sholom, August 1, 1950, he told a Times' reporter that he was "deeply interested in giving service to the community as a spiritual leader, and above all, I want to make a contribution to the democratic way of life."

Examining his record over the past 11 years, it may be said without qualification that few local citizens have ever achieved a stated purpose so completely.

Dr. Manfred L. Hoffmann, president of Temple Ezra, went on to add:

In Rabbi Sud we find a teacher, a friend, a spiritual guide, a cobuilder, a codeveloper, a man to whom we can talk at any time, a man to whom we can come with our problems as a human being and as Jews, a man who will understand us, whom we shall love dearly, with whom we can live in friendship as evidenced by his consideration, his loyalty, and his pleasure in the achievements of others.

The Jewish Theological Seminary of America, the Rabbinical Assembly of America, the rabbi's colleagues and numerous private individuals attest to our fortune in having chosen Rabbi Sud as our new spiritual leader. As he assumes office today, it is my personal belief that his firmness, his farsightedness, his patience, and his experience will enhance Temple Ezra's already strong position in the community life of Chicago. His success will be our success. May he succeed.

Among others whose remarks deserving of extension on this occasion are those of Dr. Rudolph Lackenbacher, who noted:

We pray that you will be a great leader of our congregation and that the three letters of your surname stand for strength, unity, and devotion: "S" for a spiritual, moral, and physical strength; "U" for your intention to unite all members into a bigger and respected congregation; and "D" for your devotion and deep religious feeling to your duties as rabbi and educator.

Simply and in a manner indicative of his nature, the good Rabbi Sud responded:

Temple Ezra to us must become a home away from home, where the great are small, and the small are great. Home is where the heart is, and your heart and my heart will be with Temple Ezra. I will adhere to the principle of positive historic Judaism, as I was sworn to at the Jewish Theological Seminary in Breslau, on January 30, 1937. This position, within the framework of our American civilization, I will maintain.

Summer Jobs for Students

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. MULTER. Mr. Speaker, the following article by Secretary of Labor Goldberg—which appeared in the Sunday newspaper supplement This Week on May 14, 1961—should help many of our colleagues to answer the inquires they receive from students wanting information about summer job opportunities. The Secretary's suggestions are excellent guidelines:

HIGH SCHOOL AND COLLEGE KIDS: HOW TO MAKE YOUR SUMMER JOB REALLY PAY

(By Arthur J. Goldberg)

WASHINGTON, D.C.—This summer nearly 3 million young people will look for jobs to earn money till school and college reopen in the fall. For those youngsters—and their parents—I have a word of advice:

Summer work can be a rewarding and profitable experience—but don't let a summer job lead you away from school. The path away from school, even if it begins with an attractive summer job, can lead to an occupational dead end.

We have discovered that the dropout from school finds fewer good jobs, lasts a shorter time in them, earns far less over his lifetime, and has a much higher rate of unemployment than the graduate.

Those who work this summer will discover why. The good jobs are held for the educated and trained worker. A degree and a diploma are necessary passports to the better employment opportunities of today, and certainly of tomorrow.

A STEP UP THE LADDER

It is important to keep in mind the true values of summer work, keep it in the proper perspective. That way it can be fun—and a step up the job ladder.

A June to September job that is also a training ground for a career already selected is, of course, a real plus. But that is not the only criterion that should be applied.

The important objective in summer work is to acquire the disciplines that apply to all employment—responsibility for conscientious effort, taking direction from a job superior, promptness, proper handling of money, and learning to work with others.

It is always a good idea to start looking for a summer job early. Try to get one lined up long before school closes. Begin by look-

ing in fields that will provide experience for a career, if you have decided on one.

A young girl who wants to teach, for example, might inquire into summer camps and summer schools, or into tutoring. A boy with medical school in view might seek summer work at a local hospital or clinic. A model or designer-to-be might make the rounds of dress shops and department stores for salesgirl openings.

If you are interested in engineering, many companies recruit college students for summer training. Other good bets for future engineers now in college or high school are summer jobs as garage mechanics, or factory work.

JOBS FOR 15-YEAR-OLDS

Whatever your chief job interest, your first visit should be to the local employment office. There are some 1,800 of these offices throughout the country, offering free placement service and good advice.

Summer job lists maintained by the employment service include, for the 14- and 15-year-old girl, clerical, sales and stock work in retail stores, various types of domestic service like baby sitting, and nursing aid work. A 15-year-old boy might find summer work in delivering, sales, packing or stock handling, caddying, or car washing, or in farm work.

The older girls and boys have a wider variety of choices—office work, resort employment, assisting skilled craftsmen, and factory jobs.

One field that should be thoroughly investigated by young people is service with the government—Federal, State, or local. Here's a unique opportunity for service to all of society.

All of the jobs listed with the employment service are legally permisible for young people under the Fair Labor Standards Act—an important point to consider. In most communities, work permits are required before a young person can be put on the payroll.

Once you land your summer job, don't consider it merely a source of income and welcome spending money. No job should exist only for the paycheck. Whether you are clearing a forest trail, stacking dishes, waiting on customers, marking stock in a market, waiting on tables, pumping gas or typing business letters, the values of work extend far beyond the hourly rate and wage scale.

The day of the unskilled worker is over. The new jobs of the new economy will require far wider educational and training backgrounds than in the past—and they will also demand an interest, a willingness to understand and absorb that can be learned now. If you can discover that the reward of work is far more than monetary, your summer will be well spent.

A SENSIBLE WORD OF ADVICE

A young lawyer once wrote to a wise professor of law, asking him how he could best prepare for a successful law career. The professor replied: "Forget about it, and instead make yourself as wise and learned as you can in many fields—in music and literature and science. When you have done that, then you will be a good lawyer as well."

I have always thought that excellent advice. The man who understands his time and the great events in many fields is usually the man who is excellent in his own. So even though a summer job may not be an immediate steppingstone to your eventual career in life, it is a window onto a part of life that can be stimulating and valuable.

My best wishes to all of you as the summer begins—and good luck in your work.

Protection of Marine Mammals on the High Seas

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very informative statement presented by my good friend and colleague, Hon. JOHN P. SAYLOR, of Pennsylvania, in behalf of his bill, H.R. 777, to provide for the protection of marine mammals on the high seas, and for other purposes.

STATEMENT OF HON. JOHN P. SAYLOR, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF PENNSYLVANIA

Mr. SAYLOR. I am John P. Saylor, Representative from the 22d District of Pennsylvania, and the author of a bill which Chairman BOYKIN has been kind enough to schedule for hearing this morning, H.R. 777, a bill to provide for the protection of marine mammals on the high seas, and for other purposes.

I want to say to the members of this committee that I appreciate your having scheduled this bill and having scheduled it at a time when it was possible for me to be here as a witness.

Many years ago, when I began to read of the accounts of what was happening to our polar bear and to our walrus and the sea otter under the guise of sportsmanship, I became gravely concerned because all of the information that was made available to me indicated that it was not sportsmanship but in a sense ruthless slaughter. I was brought up by a father who believed that his sons should be taught to hunt and fish, and also brought up with the idea that, if you hunted and fished, it was to your advantage to match your skills against nature and, being given the undue advantage of having a gun or the latest in fishing equipment, you should more than be able to match your skills against nature.

Finding out that many people were going hunting polar bears by ruthlessly killing them from the air with rifles and never attempting to go back and pick up the carcass except to write and say that they had flown 130 miles out over the ice barrier north of Alaska, that they had succeeded in killing two or three polar bear or at least left trails of blood and finding that on many occasions people went out in the same plane or in another plane and reported back that they had killed several walrus and made no attempt whatsoever to recover them, this under the guise of sportsmanship, bothered me and many years before Alaska became a State I took the matter up with the Department of Fish and Wildlife downtown and had them draft a bill to protect in some way these marine mammals which are rapidly disappearing.

It is for this reason, Mr. Chairman and members of the committee, that I am extremely grateful this morning for this opportunity to testify on behalf of H.R. 777 which I introduced on the third day of January of this year which will provide for the protection of three important and rather unique marine mammals.

As I say, I am pleased to have sponsored this legislation which is vital to the improved management of the polar bears, the walrus, and sea otters. Its enactment is of importance not only to Alaskans, whose interests I have consistently supported, but it is also in my opinion vital to the welfare of the people of the United States in general.

A primary consideration of the drafting of this legislation is the international character of these three marine mammals, especially the polar bears and the walrus. The range of the polar bear, for example, encompass hundreds of thousands of square miles of the north polar basin. The animals contribute to the existence of native villages, and they are taken by either or both natives and sport hunters in Canada, Russia, United States, Norway, Denmark (Greenland), and Sweden.

The Pacific walrus migrates in and out of the territorial waters of the United States and Russia and the high seas. Polar bears wander all over the international ice fields.

The language in H.R. 777 that relates to proposed authority for the Federal Government "on and along the coast of the United States" was inserted with the idea of providing a single jurisdiction of responsibility. The benefits and savings that come from eliminating duplication in manpower and equipment are obvious. It is not my intention to seek to usurp the prerogatives of the new State of Alaska in the management of natural resources that are resident within its boundaries. It is a reasonable expectation that the appropriate Alaskan agency will continue to devote its most intensive effort to the resource problems that are of its greatest magnitude and concern. My intention is to assist them in accomplishing this and not to take away any responsibility that already is theirs.

You men might recall that, when the Alaskan statehood bill was passed, Alaska was the only State that was ever admitted to the Union that was not given complete jurisdiction over its fish and wildlife resources. The bill admitting Alaska to the sisterhood of States specifically provided that the Department of the Interior should continue to have jurisdiction over the fish and wildlife resources of this new State until the Department of the Interior was satisfied that the new State was in a position to handle its own natural resources.

After a series of conferences between the officials of the new State of Alaska and the Department of the Interior, the Department of the Interior passed over to the new State of Alaska jurisdiction over its fish and wildlife resources and that State now enjoys the same privilege that all of the other States of the Union do.

The proper application of the responsibility vested by H.R. 777 would provide maximum opportunity for the exchange of personnel, equipment, knowledge, and experience between the State and the Federal agencies in the improved management of these marine mammals. The predominate distribution and use of these natural resources is international. It is my hope that this legislation will assist the Alaskan program and that it will be bolstered and improved through the provision of a working authority for the study and wise management of these animals in international waters. Only the Federal Government can work out agreements with other nations for the overall benefit of these international resources.

Sport hunters, in their pursuit of polar bear trophies, go considerable distances over international waters. The hunting is done almost exclusively from the air, and the pilot-guides fly their clients as far as 160 miles out over the pack ice in search of this

big white mammal. Most of the walrus are also taken outside of the territorial waters. It is entirely possible for a person to go onto the high seas and take and process walrus, without once touching shore in Alaska.

The life history of the sea otter is fairly well known and the animals have benefited from protection for years which was provided, I am happy to report to this committee, by its predecessor somewhere around the turn of the century. Their number is now believed to be satisfactory, and the resource appears secure after having risen from a point of virtual extinction in the early part of this century. The fur of the sea otter is extremely valuable, and the comparative quality of other furs is rated against that of the sea otter. Perhaps limited harvests of sea otter may again become a possibility, but we must be sure that the resource is not jeopardized.

Little is known about the life history of walrus, and much less of the polar bear. Speculation about the welfare of these two species has been expressed many times. The Copenhagen meeting of the International Union for the Conservation of Nature in 1956 expressed the concern of scientists from all over the world about the status and future welfare of polar bears and walrus.

The Canadians for several years have prohibited the taking of polar bears by white hunters. Canadian natives are believed to kill about 400–500 animals a year, more than half of the total world take. Figures on the world harvest of polar bears are included in the reprint "Status and Management of the Polar Bear and Pacific Walrus," which I would ask to have included as a part of your files. This was a report that was issued by Robert F. Scott, Karl W. Kenyon, John L. Buckley, and Sigurd T. Olson in conjunction with the U.S. Fish and Wildlife Service and the Bureau of Sport Fisheries. This reprint presents much timely information about these animals, their status, and the many management problems that have arisen.

Remote native villages along the Arctic coast of Alaska derive a substantial part of their annual income from providing services and supplies to sport hunters who go there from all parts of the world in quest of the polar bear. It was estimated in 1957 that the nonresident polar bear hunters spent on an average of $2,000 apiece in a trip to kill one of these or acquire one of these trophies. This excludes the transportation and other costs borne by the shooters in traveling to and coming from Alaska. The hunting of bear by the white man is done almost exclusively from the air. The flying presents many hazards to the small aircraft, and when there are mishaps the task of rescuing the stranded hunters falls to the Federal Government, the Coast Guard, and the military from its establishments.

Natives of at least two Alaskan villages, Diomede Island and King Island, get their major subsistence from the walrus. The animals provide needed food both for humans and their dogs. The hides are used in covering boats, and the ivory is worked into implements and artifacts of considerable commercial value. Most of the animals are taken in international waters. Villagers on St. Lawrence Island also depend on the walrus, but not as intensively as the natives in the other islands.

The reprint that I have submitted notes that about half of the walrus killed are not retrieved. The total yearly kill by inhabitants of Alaska and Siberia is placed at about 10,500 animals, or 23 percent of the estimated population. The walrus population is believed to increase at about 11 percent per year under conditions where the animals are not hunted. This means that the annual kill is roughly twice the replacement. How long can this resource exist under such a situation without some protection?

Many conservationists throughout the circumpolar region share my conviction that an esential first step toward providing protection for polar bears and walrus rests on the provision of international protection such as suggested by H.R. 777.

These are changing times, Mr. Chairman and members of the committee, and it is not appropriate, in my thinking, that any past inequities of Federal control of these resources, or the limited purview and financial means of the new State of Alaska, should be cited as a means of discounting the advisability of enacting H.R. 777. These marine mammals are in remote international waters only where the conscience of man stands between their preservation or extinction. Litle is known about their basic biology, their needs, and the total numbers of the animals from which these kills are being made. Steps must be taken so that the subsistence and economy of dependent Alaskans can be protected.

Objections that may be imposed to H.R. 777 by a State whose waters constitute a mere fraction of the immense natural range of these nomadic animals should not be construed as a rejection of the principles that are involved. The wide-ranging movements of these animals and what happens to them while they are beyond the authority of Alaska, can and will have a direct influence on their ultimate use and contribution to persons operating within or beyond the boundary of Alaska. I wish to reiterate that most of the animals taken by residents and nonresidents are in international waters.

If we have erred in the management of these valuable resources in the past, and that is what most persons believe is the case, the blame can be placed on the fact that the United States has put off this vital decision for too long. I propose that we take this necessary step now, for the benefit of both the marine mammal resources and for the interest of all the people of the United States and for the people of the world who are interested in conserving these species.

I might say, Mr. Chairman and members of the committee, that, as controversial as this legislation might become, I am happy to report that since the original bill was drafted a favorable report was received from the Department of the Interior and the other departments of Government; and that not only the past administration but the present administration has reported that they are in favor of the enactment of this legislation.

I want to thank the members of this committee for the opportunity to appear and testify.

Castro Hopes To Get Aid From U.N. Special Fund if Ransom Fails

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. ROGERS of Florida. Mr. Speaker, if Castro's plot to get technical aid through ransom fails, he has another more civilized method in reserve. He hopes to get $1.1 million from the U.N. special fund, a technical aid fund to which the United States has pledged forty percent.

The U.N. special fund is set up according to the basic framework for international loans. Requests are granted by a two-thirds vote of the governing council. The Cuban application lists a need for $763,500 for experts and consultants, $200,000 for equipment, and $50,000 for fellowships.

Mr. Speaker, several times I have protested this matter to the State Department with the hope that the request would be denied. A vote on this measure is due in the United Nations this afternoon. At this time I am sure that the Membership of this body joins me in the hope that the U.S. delegation will prevent this grant of $440,000 U.S. dollars to Communist Cuba.

President Frondizi on the Alliance for Progress

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. CONTE. A maximum of cooperation by all the free nations of this hemisphere is absolutely vital to insure the success of any alliance for progress, economic, social, or both. The great majority of the hemisphere is about to undertake such an alliance which, of necessity, must move forward with unusual speed. We must make use of every resource, every sincere offer of help by other free nations of the world, if we are to succeed.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from President Arturo Frondizi of Argentina to President Kennedy. This statement of support for the concept includes many valuable observations on, and ideas for, the alliance and the means of carrying it to fulfillment. I commend it and include it for your consideration.

The text of the letter follows:

ALLIANCE FOR PROGRESS,
April 7, 1961.

To His Excellency the PRESIDENT OF THE UNITED STATES OF AMERICA, JOHN F. KENNEDY, WASHINGTON, D.C.

DEAR MR. PRESIDENT: I have given most careful attention to the address delivered by Your Excellency on March 13 last before the Latin American Ambassadors in Washington.

I wish to state to Your Excellency that the announcement of the Alliance for Progress enunciated therein opens a new historic perspective of the common task of the American Republics.

Our countries constitute a community united by geographical, historical, and, above all, spirtual ties that are indissoluble.

We are a branch of the Western World. At the time of the great discoveries, the Western World put out branches to all corners of the earth. To all of them it transmitted the vitality of its culture and its spirit of progress. In this way it came into contact with other ancient cultures and with primitive peoples. It penetrated some of them and fused the old and the new values. In others it made its presence actively felt but did not effect a permanent fusion.

America developed as part of the Western World. Our indigenous peoples absorbed its religion and its culture. The European peoples who came to our shores became a part of our land forever.

Our political independence, which we gained almost sumultaneously, was the first expression of the vitality and maturity of the imported culture, which was thus acquiring an autonomous existence.

From that time on, we began the great struggles to develop our national entities, to establish a democratic way of life based on respect for human dignity, and to promote the progress and well being of our peoples.

The evolution of our Republics was marked by the variety and diversity that are characteristic of human destiny itself, although our ideals and our objectives were the same. We have all faced problems and conflicts in our evolution toward democracy and liberty: internecine struggles, local conflicts, tyranny. In Europe, in full maturity, such conflicts reached the catastrophic dimensions that brought the world to the last war.

On that occasion, the United States constituted the moral and material reserve upon which decisive action devolved to save paramount values at the final crossroads. Then, in an unprecedented decision, it put forth a great economic and technical effort in the Marshall plan in order to make possible the rapid reconstruction of a world economically paralyzed by devastation and tottering on the edge of a grave crisis threatening disintegration which would have been fatal to our civilization.

Today Latin America is also passing through a period in which basic values are at a stake.

Many of our peoples have been successful in establishing the democratic institutions essential to the respect for our traditional values, for human dignity, and for an economic regime based on social justice, private enterprise, and respect for private property.

Nevertheless, the Latin American nations are troubled by a serious, disturbing factor which hinders our progress, makes it difficult for the governments to satisfy the ever-stronger aspirations of the peoples and, under such conditions, threatens our social stability in the face of the corrosive activities of disruptive demagoguery and propaganda; this negative factor, as your excellency has clearly perceived, is that of underdevelopment.

The conditions of underdevelopment prevalent in Latin American disturb and impede all national efforts to bring about an improvement in the living conditions of our peoples.

In very few cases is the national product of the countries of Latin America growing at a rate equal or superior to that of the increase in population; export, consisting principally of raw materials, have increased less than the population and therefore provide resources considerably under those required for the acquisition of equipment and manufactured articles indispensable for development.

As depositories of a concept of life based on Christianity and Western tradition, we uphold the supremacy of spiritual values that constitute the dignity of man. In hours critical for the world and for our countries, we did not hesitate to abandon all attachment to material wealth in defense of that which is vital for mankind.

But in the present crisis of Latin America, these values are threatened by the disturbances and frustrations caused our people by their inadequate incomes, which means economic insecurity and, for many communities, malnutrition, disease, and ignorance.

I have had repeated occasion to point out that the vicious circle of poverty and underdevelopment calls for vigorous solutions. In present world conditions, political as well as economic, no underdeveloped country can formulate such solutions within the framework of a democratic regime, without the cooperation of the developed countries.

Moreover, I should like to emphasize to Your Excellency that the problem of underdevelopment is a grave question not only in situations of extreme poverty; it is not only a question of overcoming the problems of hunger, contageous diseases or illiteracy; people in the middle of the 20th century aspire to levels of well-being appropriate to this age and not simply to the material necessities of life. Their aspirations encompass not only the biological needs but also what at this point in civilization and world progress is a full life, in a material and cultural sense and in a physical and spiritual sense. Rural man aspires to become more informed and to be heard, democratically, in the making of national decisions which will affect him; this means educational, transportation, and communications facilities, electrification and rural sanitation, equitable commercial treatment; industrial workers who have acquired the skills to operate the complex machinery in the factories aspire to higher cultural levels, to a higher social position, to a stae of well-being commensurate with the level of productivity made possible by modern technology.

Professional and technical people and intellectuals also aspire to be respected in their professions and to achieve in the communities to which they belong positions of responsibility commensurate with their capabilities.

This implies not only adequate income levels, but also laboratory and educational facilities, and, above all, recognition by society of their aptitudes and capabilities.

The history of this century indicates that tensions of this type, perhaps even more than those created by extreme poverty, offer fertile soil for the germination of nihilist movements that can open the door to the irruption of Communist totalitarianism.

In your message to Congress on the subject of the international cooperation programs of the United States. Your Excellency pointed out with great clarity that these programs are not limited to a passive struggle of mere opposition to communism but have the dynamic aim of demonstrating historically that in the 20th century rapid economic growth can be achieved within the framework of our democratic institutions.

Apart from the Marshall plan for Europe, in the years following the last World War there has been carried on a vast work of international cooperation in the economic and technical fields in which the United States has had the most important role, including that of genuine leadership. However, despite the considerable extent of the effort, from an absolute standpoint and the positive results obtained, if that effort is measured in relation to the magnitude of the needs of the underdeveloped countries, it is insufficient in comparison with the urgency of existing problems and tensions.

In an exceptional act of statesmanship immediately after your assumption of the high national and global responsibility of the Presidency of the United States, Your Excellency revived the best traditions of a great Nation by taking an initiative commensurate with importance and urgency of the problem.

For that reason, I have not been content to limit myself to merely offering my congratulations, however warm they may be.

In this question, our destiny as free nations and our responsibility as leaders are at stake. In the name of that responsibility, I wish to say today to Your Excellency that my Government unreservedly commits itself to the joint cooperative effort of the alliance for progress that you have opened to all the nations of the Americas. This is a decision dictated by the irreversible course I chose for my country when I became head of the Government 3 years ago.

We faced without flinching the difficult task of consolidating our institutions, the free exercise of rights guaranteed by our constitution and social peace and at the same time we initiated an economic policy designed to reorganize and stabilize our finances and to promote on these bases a process of rapid national development.

Under extremely difficult conditions, our faith in the traditional ideals of the West enabled us with the support of the people, to demonstrate clearly that the most fitting and most direct road to economic well-being and the progress can be constructed within the framework of democracy and freedom, affirming the exercise of man's highest spiritual qualities.

The instruments of government intervention that have previously interfered with the economic life of the Nation were removed. We furnished an adequate and definite solution to the manyfold national and international problems with which our country had been burdened for several decades; we call for heavy sacrifice in the nature of austerity on the part of our people to curb the disintegrating process of inflation and to rehabilitate our finances, and we initiated a program of sound development.

Of course, this undertaking would have been impossible of realization if we had not had the valuable cooperation of the nations of Western Europe to which we are bound by traditional ties, and above all, of the United States, your great country, which from the start showed great understanding of the critical importance of the undertaking we were launching.

This cooperation has strengthened the bonds that unite our two countries in a practical and concrete form that is without precedent in our history.

The efforts of my Government have had important and favorable results, but have also encountered strong obstacles that have brought about negative results as well. But we persevere in them because we know that they constitute a long-range effort which must be continued by those who follow us.

For this reason, Mr. President, I state to you today that, as President of the Argentines, I consider myself irrevocably a participant in the alliance for progress, aware of all the other members of the American community, but also certain that only through this effort can we fulfill the historic destiny of America in this century charged with anxiety and promise.

The alliance for progress is a joint undertaking implying responsibilities for all as a condition for the achievement of objectives that will benefit all.

As Your Excellency has pointed out, it is a question of undertaking in this decade a decisive effort to place the American peoples on the road to a rapid economic development that will enable them to raise their standards of living and to overcome the social tensions brought about by these living standards.

This program must be properly organized and oriented, in order that the necessarily limited resources may be utilized in the most efficient manner; in spite of the great amount of cooperation envisaged by Your Excellency and the magnitude of the contribution resulting from the efforts of all our countries themselves, it will always be limited in the relation to the vastness of the objectives to be achieved.

For this reason I believe it necessary to concentrate the initial impetus on the establishment and strategic expansion of the basic industries and services that will, in turn, permit the acceleration of industrialization and the mechanization of agriculture, and thereby rapidly raise the productivity of our economies.

The magnitude of this undertaking also brings up the question that my Government

raised on several occasions over a year ago, and that has also been given attention by Your Excellency: it is that of the participation of countries of Western Europe, bound by close traditional ties to Latin America, in this effort at cooperation for its development.

The development of the program presented by Your Excellency will require close contact and exchange of ideas and initiative among all the participating countries. It will also be necessary to utilize existing institutions to the maximum extent, especially the new Inter-American Development Bank. The studies which have been carried out by the Economic Commission for Latin America and the work done by the OAS, which culminated in a conference held in accordance with the Act of Bogotá, will also be of great utility.

Nevertheless, I should like to point out to Your Excellency, that I believe the magnitude of the task implicit in the Alliance for Progress will require machinery for cooperation, which, while permitting the most effective use of the aforementioned institutions, will have the flexibility and efficiency that will, for example, permit active participation in the program by the countries of western Europe and will assure efficient channeling of the cooperative effort toward the basic sectors mentioned above. This question, raised by my government long before the announcement of the program formulated by Your Excellency, now acquires, in our opinion, a much greater timeliness and importance.

My advisers and I myself are prepared to hold consultations with Your Excellency and all the American governments in order to consider the means necessary for giving the Alliance for Progress dynamic reality.

Mr. President, please receive these lengthy comments that I have taken the liberty of expressing as the most direct homage to the lofty spirit that has inspired your transcendent act of statesmanship.

From them you may have gathered the fact that I already consider the Alliance for Progress as a reality that is on the march, and I am certain that this opinion is held by all the American governments.

In the course of this march, as we advance toward the conquest of our future, the threat of any attempt from abroad to create disturbances will be removed from this hemisphere, and prosperity attained within the framework of respect for liberty and the rule of justice will be definitely affirmed.

Cordial greetings.

ARTURO FRONDIZI.

Floating Medical Center Ends Tour—Ready for Another

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Courier-Times of New Castle, Ind.

FLOATING MEDICAL CENTER ENDS TOUR—READY FOR ANOTHER

After 6 months spent in the tropical ports of the Java sea, the ship, *Hope*, floating medical center, is back in New York.

"There never has been a ship quite like her before," Capt. Jack M. Windas said the other day. "She's essentially a floating medical training institute trying to upgrade medical and nursing practice wherever she goes."

The *Hope*, a World War II Navy hospital ship, was refitted at Seattle early last year. Her service is a good willl project whose costs are paid by public subscription.

Captain Windas supervised the ship's sea trials last summer before steaming off for Indonesia. His stops were at Jakarta for 2 weeks, then at Surabaja, Bali, Sumbawa and Makassar for a month each.

"I would say the mission had its greatest success at the extremely primitive island of Sumbawa, where there is one doctor for 180,000 people and communication and transportation are about nonexistent," he said. "Sumbawa has a very tropical aspect. We anchored offshore because there was no dock for a ship our size.

We set up a clinic on the beach in an old wooden customs shed with no lights and no running water. People came from all over and stood under a piece of canvas waiting to be treated. Launches took the most serious cases out to the ship.

The faces on the *Hope's* volunteer medical staff change several times a year, but there are nearly always a dozen general practitioners, an opthamologist, dermatologist, anesthesiologist, internist, 2 dentists, 20 nurses, and 30 medical technicians aboard, in addition to a crew of 125 men.

Though its mission is to teach, the people tend to regard the ship as a free clinic and, after their initial hesitation they usually sent out word and the sick begin to be brought to the ship from deep inland.

Dr. William D. Walsh, director of the People-to-People Health Foundation, which sponsors the venture, announced that the foundation would like to put another such ship in Africa and another in South America.

Dr. Walsh said at a press conference that the ship had so altered the image of the United States in Indonesia that Soviet medical teams are following us around.

Whenever one of us goes ashore in a jeep on the outer island, he said, kids dart out of the jungle and yell "Hopie, Hopie."

It is expected that the *Hope* will move to Saigon, South Vietnam, June 1 for 3 months.

The Phrase Needs Defining

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. BARRY. Mr. Speaker, the following editorial appeared in New York's Westchester County newspaper, the Patent Trader, of May 11, 1961. It would appear to me to contain a valuable lesson.

THE PHRASE NEEDS DEFINING

When Mayor John Guion of Pleasantville wrote, with the unanimous consent of the village board, to ask the president of the Pleasantville School Board to implore the State education department to postpone a vote on centralization of Armonk, Bear Ridge, and Middle Patent school districts, he specified that such postponement should include time for Pleasantville and Bear Ridge to work out an equitable arrangement for the very logical unification of these two districts.

Quite apart from the question of whether it is desirable for a village administration to participate in its official capacity in the affairs of a self-governing school district (and we are offering no judgment), it would be valuable to explore the meaning of the phrase "equitable arrangement."

Discussion on consolidation of Pleasantville and Bear Ridge in the past has touched on the possibility that Bear Ridge might build its own elementary school and pay at least a few years' share of the cost, in order to make the district a more attractive acquisition for Pleasantville voters.

Does Mayor Guion's equitable arrangement involve separate building by Bear Ridge as a preliminary to union of the two districts?

Requests have been made recently for reassessment of all properties in the town of Mount Pleasant, with a view to correcting what some Pleasantville citizens consider an inequity in assessments of property in their village and in Bear Ridge. Such reassessment, presumably, would be intended to raise Bear Ridge's taxes, not only for schools but for town services.

Is this considered by Mayor Guion to be an indispensable preliminary to an equitable arrangement?

Statements and actions by Bear Ridge residents of late have indicated a fervent desire on the part of the majority to become associated with Pleasantville. Nevertheless, it seems reasonable to suppose that there are conditions under which even the most determined adherents of a Pleasantville merger would consider the price too high. It is not inconceivable that construction of a new school building by about 325 families might be one of these conditions. It is possible that a considerable (and permanent) tax increase might be another.

Bear Ridge has been offered a chance to vote on participation in a three district merger, as a full partner, on an equal (as against equitable) basis, with no strings attached. Before its citizens reject this offer to fling their cap over the Pleasantville windmill, it would be well for them to inquire fully into what may be involved.

Bear Ridge citizens are entitled to, and should demand a definition of the equitable arrangement proposed by Mayor Guion and others. Without this, they are negotiating for a pig in a poke.

Warning Sounded on Increasing Social Security Benefits

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. ALGER. Mr. Speaker, soon we will be called upon in Congress to institute a program for Federal medical aid to the aged under the social security system. While there is yet time to study this proposal in a calm and reasonable manner, I would like to call to your attention the facts brought out in the following article from the Wall Street Journal. In reading these facts, Members should bear in mind that first, we have already increased social security taxes this year; second, a thorough study of the social security system proves that it is actuarially unsound; and third, we have, in this country the finest medical care in the world. We have yet to find a case where any person has been denied medical care because of lack of finances.

ESTIMATES OF KENNEDY MEDICAL CARE PLAN'S COST ARE INCREASED; BENEFITS MAY BE CUT

(By Jonathan Spivak)

WASHINGTON.—President Kennedy's proposal for medical care for the aged under social security, facing sticky going in Congress in almost any form, is threatened now with a higher price tag than its drafters anticipated.

The extra costs showing up under close review may run well into millions of dollars each year. For the first year, the increase might approach 9 percent easily enough to throw the program's delicately balanced financing arrangements out of whack. This leaves the Kennedy regime two principal alternatives, both of which it regards as distasteful: A stiffer social security tax boost than that already proposed or some curtailment of the benefits offered.

Under the President's proposal the tax, shared equally by employee and employer, would be lifted to 6½ from 6 percent. And the tax would be figured on the first $5,000 of each worker's earnings, up from the present $4,800. The tax boost, plus the increase in the earnings base, would bring in added revenue equal to 0.6 percent of payrolls. This tax boost is considered a maximum politically. So the greater likelihood is some scaling-down of proposed benefits to restore the financing balance. And administration spokesmen may propose such a change—a reduction in the amount of nursing home care to be paid for by social security funds, or a requirement that the beneficiary pay part of the cost of such care—when the House Ways and Means Committee holds hearings on medical care next month.

NURSING HOME ESTIMATES

What's happened is this: Uncle Sam's social security planners have decided their original estimates of the cost of nursing home benefits, made public last February, were unrealistically low. Instead of $9 million for the first year of the program, their new analysis lifts the cost to somewhere between a floor of $25 million and a ceiling of about $255 million; the planners indicate $100 million might be a likely sum. The long-range costs of nursing home care, too, might run many times the original figures. Basic reason why: The first forecasts assumed a low rate of nursing home use among the elderly (an average one-tenth of 1 day per person per year) which medical authorities now believe will almost surely be exceeded.

The Kennedy plan as originally drafted permtis a maximum of 180 days a year of nursing home care for any one patient. This care would be offered only to old folks just released from a hospital, and it would be available only in a skilled nursing home—one with round-the-clock nursing service. These safeguards, coupled with periodic review of cases by State health or welfare agencies, it was felt, would cut down the number of people eligible and limit the number of nursing home beds available for use under the program.

But on sober reflection, social security planners recognize it would probably be impossible to limit the nursing home patients to true posthospital cases; it's considered likely that many old folks would, in effect, simply be booked through a hospital on their way to a nursing home.

Furthermore, the planners concede it's unrealistic to assume there would be no increase in the 181,000 skilled nursing home beds recently estimated as eligible to receive patients under the program. Of the 144,000 unskilled beds now existing, some are considered certain to be converted in order to qualify. The total number of nursing home beds, skilled and otherwise, has been increasing by about 10,000 a year.

ADDING UP THE PACKAGE

While Chief Social Security Actuary Robert Myers has not yet figured out the details, he has now decided that the original premium cost calculated to cover nursing home care would not be enough to finance the maximum 180 days of care originally proposed. That sum was 0.01 percent of payrolls subject to social security taxes. This cost, along with 0.56 percent of payrolls for hospital benefits, 0.2 percent for diagnostic outpatient care and 0.1 percent for home health care, added up to the 0.6 percent of payroll package announced in February—a package expected to yield benefits climbing from $1,050 million in the first year to $4,750 million in the year 2050.

While nursing home care may seem a piddling item in the total, the entire program's financing, notes Mr. Myers, was "balanced on dead center." An unexpected increase in any one component, officials say, would require a bigger income or a smaller outgo.

Among the possibilities for adoption when the bill comes before the House Ways and Means Committee would be cutting the nursing home benefit from the proposed maximum of 180 days to no more than 30 days. Social Security planners regard such curtailment as highly effective for keeping the benefit within its intended scope—for medical cases which do not require full hospital care. It would presumably rule out the program's use for the bulk of nursing home cases, which are essentially long-term living arrangements.

The medical care program has had financing problems from the start. When the President's program was unveiled to the press in February, Health, Education, and Welfare Department officials said all the benefits except nursing home care would go into effect July 1, 1962; nursing home benefits wouldn't start until mid-1963. But the very next day, when the bill was sent up to Congress, the effective date for the first benefits was put off to October 1, 1962. Reason for the change: Actuaries pointed out the medical care fund would be broke in its first year of operation if benefits were paid out for more than one quarter of that year.

Congress and the CIA

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. ROGERS of Florida. Mr. Speaker, the need for congressional review of all phases of our national security effort has never been more apparent than today. The Cuban situation, conditions in Laos, Korea, and elsewhere indicate that to survive as a free society we must be alert to all the dangers. These dangers include not only those from without, but also the results of our internal actions or inaction.

The Florida Miami Herald has outlined the need for congressional review of the Central Intelligence Agency in an editorial date, April 28, 1961. I have joined with other Members of the House and Senate to sponsor a Joint Congressional Committee on Foreign Information and Intelligence to meet the needs as suggested in the editorial and in light of all recent events.

Knowing the views of this important newspaper will be of interest to all Members, I include it in the RECORD:

CONGRESS AND THE CIA

As Gen. Maxwell Taylor begins what Washington once called an "agonizing reappraisal" of the Central Intelligence Agency, Congress might well look into its own responsibilities toward this arm of the Nation's defense.

Under the law, CIA Director Allen Dulles must stick out like a thumb (but not, it may be said, like a sore thumb) because of our passion for personalizing government.

However, he is the only visible part of the agency, whose very stenographers can't own up to where they park their carbon paper.

An intelligence agency must be operated in confidence, even in a free society. But how much of that operation requires some accountability to the people through their Congress and not merely to the President?

These things, for instance, are not known about the CIA:

How much money it gets and spends, and for what purposes.

How many people it employs, and where.

How it conceives of its duties, which are exercised under powers that appear absolute.

Six years ago the Hoover Commission on Government Reorganization recommended that Congress set up a joint committee to watch over the CIA. For some years House and Senate have had a similar committee that is privy to the deepest secrets of the Atomic Energy Commission.

But nothing really came of this. The Senate voted down a resolution creating a CIA supervisory committee by 59 to 27 (Senator John F. Kennedy was for it.)

True, there are subcommittees of standing committees which are supposed to know all about the CIA.

But their members don't. Nobody, save undoubtedly the President, knows. And some suspect that the CIA itself hardly knows, as witness the confusions of purpose and direction which marked the Cuban policy and what to do about it. Suddenly, this became the exclusive business of the CIA, and a private business at that.

If it is true that the agency mapped the invasion plan, herded the Cuban resistance leaders around like redheaded stepchildren and conducted military operations in their stead, then we have trusted a Government agency to make all but war without the consent of Congress.

As we said, secret government and a free society are an unholy concoction of these times of expedience. That free society already is spiritually if not legally at war. The wit and genius of free men must find some way to make this dilemma palatable.

Congress cannot do it by abdicating responsibility simply because surveillance by a few men of thousands of men might seem to interfere with what is regarded as the national interest.

Who, in the circumstances, says what is the national interest? And who ratifies that decision?

Only Congress can.

Serving Our Nation's Children

EXTENSION OF REMARKS
OF
HON. HUGH L. CAREY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. CAREY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

SERVING OUR NATION'S CHILDREN

(An address by Wilbur J. Cohen, Assistant Secretary of Health, Education, and Welfare, before the annual luncheon, the League School for Seriously Disturbed Children, New York, April 29, 1961).

I am deeply honored to be your guest here today as you review your achievements of the past year and look forward to the challenge of tomorrow.

The League School for Seriously Disturbed Children can be proud of the work it has done. But it is your concern with tomorrow that is so impressive. You are not content to look back or to stand still. You are always pushing ahead, looking for new ways to bring new hope to children and their families.

That is why you have won such a well deserved reputation as a pioneer in your field. And that is also why your Annual Citation is so highly prized.

Your citation this year does honor both to the donor and the recipient. Dr. Paul Hoch is one of this Nation's foremost experts in the field of mental health. He has served this State and community, the entire country, and many international health groups with great distinction. His accomplishments, his sense of public spirit, and his leadership have already won him many awards. I am sure that your citation will take its place among his treasured possessions.

As many of you know, Dr. Hoch has served the Department of Health, Education, and Welfare in several capacities. The interests of Dr. Hoch, of the League School, and of the Department coincide at many points—most particularly, in our mutual concern for children and the welfare of families.

Today I would like to share with you some of the recent developments in the campaign to improve the health and well-being of children and families. It is a campaign which we intend to wage with renewed vigor and determination.

President Kennedy has announced a series of social programs for the 1960's of wide scope and important consequences. Several of these programs—in education, in health, in improved economic opportunity—would have a tremendous impact on the lives of children and on the welfare of many families. In the comprehensive health program set forth by the President in February, child health was high on the list of national objectives.

NATIONAL INSTITUTE OF CHILD HEALTH AND HUMAN DEVELOPMENT

One of his proposals is for the establishment of a National Institute of Child Health and Human Development on a par with the existing research facilities at the National Institutes of Health. The new institute requires legislative authority which will soon be sought. Meanwhile, the President directed the Surgeon General to create, by administrative action, a Center for Research in Child Health. When the new institute becomes a reality, the center will become a part of it. The center is intended as a national resource for new knowledge on the causes of childhood disabilities, as well as on normal growth and development. We are very optimistic about the opportunities for fruitful work at the center—an optimism that has been shared, we are happy to note, by prominent medical scientists, professional workers such as yourselves, and the public in general.

Considerable research is under way on the special problems of childhood and adolescence. What is lacking, however, is a national focus for such work, a coordinating mechanism. We expect that the new center will fill this gap and at the same time will stimulate a variety of new studies. A broad range of research—biological, behavioral, and clinical—will be encouraged. Much of the research will involve several scientific disciplines, necessary because of the complex nature of human growth and development.

WELFARE SERVICES FOR CHILDREN AND FAMILIES

Welfare services are also due for a new look. We are, therefore, planning a comprehensive review of all of the Department's public assistance and related programs for children and families to see how they can be made more effective.

In the United States, we have gone far toward improving the lives of children. There was a time when nearly every area had its poor farm or orphan's asylum. In those days, the death or disability of the head of the household often meant that the family would have to be broken up and the children sent to relatives, to an orphanage, or put to work as soon as they were old enough to get a job.

Medical advances are now keeping more children healthy, keeping more children from becoming orphans. Foster and adoptive homes have largely emptied the remaining orphanages of full-time, year-in-year-out residents. Among the factors which have brought this about are the social security and child welfare programs.

Benefit under the old age, survivors, and disability insurance program, for example, are now being paid to more than 2 million children. With 9 out of 10 women and children eligible to receive insurance benefits in the event of the death of the breadwinner, practically all those who become orphans in the future will get these insurance benefits. In most cases, the payment of insurance benefits means they can continue to live at home, to go to school, and to continue with at least their basic education. Widowed mothers can devote full time to the care of their children rather than having to take a job outside the home to keep the family together. If a child's surviving parent cannot provide a home, the child's benefits help pay for his care or provide for his future wherever he is—with other relatives, in a foster home, or in an institution.

The best place for a child, of course, is in his own home with his own parents. This is so obvious that it is sometimes necessary to review the circumstances which threaten to interfere with the home environment.

The most persistent threat is economic need of the parents. The first White House Conference on Children and Youth in 1909 set forth the principle that no child should be taken from his home because of poverty alone. This principle is widely accepted today. Yet the tragic instances in which poverty triggers a series of circumstances that break up the family are all familiar to all of us here.

One of the welfare programs that help to keep the family together is the program of aid to dependent childen.

Only children who are living in a broken home or a home seriously threatened by the incapacity of a parent are aided under the dependent children's program. Children in need because a parent is out of work are not eligible for assistance. When the program was established, it was assumed that States would provide home relief or other types of aid for such families. In some parts of the country, this assumption has been justified; aid is indeed available on behalf of children at home with their parents who are the victims of unemployment. In many parts of the country, however, this is not the case.

For this reason, as one of its first actions the administration proposed to the Congress that the aid to dependent children program be broadened, on a temporary basis, to include the children of parents who are unemployed. This action is especially urgent at a time when unemployment is high and provisions to aid the unemployed are often meager in many localities.

I am pleased to be able to report that the recommendations of the administration have been adopted by the Congress.

Included in these amendments are two very significant changes in our welfare legislation:

1. Federal payments to the States for foster care of certain dependent children.

2. Federal financing of training of public welfare personnel.

The new law authorizes Federal participation in a limited program of care of children who are eligible for public aid, when the courts have removed them from homes of their parents or relatives on grounds the homes are unsuitable and the children have been placed in foster family homes. The courts may make such a decision when continuation in the home of parent or relative has been determined to be contrary to the child's welfare.

Several reasons make this change in the law appropriate at the present time. No one takes lightly the severance, even for a brief period, of the ties between a child and parent or someone closely related to him. On the other hand, in some cases the home situations in which children live are clearly contrary to their best interest so that at least temporary placement elsewhere is necessary. Facilities for such placement have been limited and vary widely among localities.

While Federal funds, available through the child welfare grants to States under title V of the Social Security Act, are used for foster care of children to a limited extent, the bulk of the costs of foster care is paid from State or local funds, or from funds of voluntary social agencies. The lack of financial resources for such care in many States has at times hindered the proper development of the most suitable care for children who need care outside their own homes. For these reasons, the new legislation would provide for Federal financial participation under title IV for the support of some of these children in foster-family homes.

The new foster care provision is a limited one and has been designed to safeguard the rights of the child and his parent or relative. The provisions would also stimulate and assist the States in the protection and care of children under proper safeguards. It would further stimulate the use of the services of employees of public welfare agencies who are thoroughly skilled and experienced in placement and supervision of children outside their own homes. If a State takes advantage of this part of the amendment, the State would have to provide for development of an individual plan for each of these newly covered children. The plan would assure that each child receives proper care and, where practicable, that services are provided to help improve the home conditions which necessitated his removal so that he may be returned to his parents or placed in the home of a relative. The plan developed for this child would also include provisions for periodic review of the need for continuing the child in the foster-family home. These foster-family homes must be licensed or approved by the appropriate State agency.

In addition, the State would have to provide that the State or local welfare agency administering the State program use, to the maximum extent practicable, in placing the children in a foster-family home, those employees who participate in administration of the State child welfare services plan with respect to which Federal payments are made under title V of the Social Security Act.

The foster-family care amendment is designed to meet an urgent and very specific

need. It is not intended to provide foster care for the majority of children needing such care. These children continue to be the responsibility of the public and voluntary child welfare agencies. Small numbers of children are involved under this amendment and most such children probably would have been receiving aid in their own homes in the absence of this section.

TRAINING GRANTS FOR PUBLIC WELFARE PERSONNEL

Those persons concerned with improving the welfare of needy persons have long realized that the needy would suffer much less—for shorter periods—with less widespread effects on themselves, their families, and their communities—if more social workers, with complete professional training, were available to help them. An ounce of prevention is worth a pound of cure, we all know. Sufficient trained personnel would facilitate the prevention of many breakdowns before they occur. Their skills would contribute to the preservation of the family unit.

The need for trained personnel was a major concern of the Advisory Council on Public Assistance, meeting throughout 1959. In its report to Congress, it wrote, "The staff of public assistance agencies generally is small in relation to the responsibilities they are requested to carry," and "public assistance agencies are handicapped in competing with other social work agencies by the relatively large and difficult workloads."

Commenting on staff shortages, the council found that many public assistance agencies are so understaffed that they must limit their services largely to eligibility determination. Quoting again from the council report, "Some persons are accepted and remain on public assistance for want of intensive effort directed toward solving their employment, family housing, emotional, or physical health problems."

It takes professional training, skill, experience—and personal character, to help human beings in trouble. But, in a survey of social welfare manpower, made in 1960 by the Bureau of Labor Statistics in cooperation with the Bureau of Public Assistance and the Children's Bureau, the scanty availability of trained social welfare personnel was reaffirmed. Only 13.4 percent of the administrative and supervisory personnel in public assistance agencies have full professional training. The proportion has increased substantially since 1950, but we have a long way to go. Among caseworkers who are primarily in public assistance, only slightly more than 1 percent have full professional education—fewer than in 1950. The number of caseworkers with some graduate social work study has dropped from one-sixth of all caseworkers, in 1950, to one-tenth, in 1960.

But there is one bright spot. The number of caseworkers with a college degree has increased in the past 10 years. And a college degree is essential for graduate social-work study.

Because the recommendations of the Advisory Council on Public Assistance are extremely significant, I would like to read the most pertinent points:

"(a) In order to improve administration, promote social rehabilitation, and help prevent dependency, States should increase the numbers and raise the qualifications of personnel administering the public assistance programs.

"(b) To assist States in increasing the number of their qualified staff, the existing Federal matching provisions for educational leave programs should be amended to provide 100 percent Federal funds for training of public welfare personnel, as is provided in other specialized fields."

Because of the complexity of the economic and social factors involved, the new ADC legislation extending the program to children of the unemployed and permitting the States more flexible use of foster-family home care will require even greater skill on the part of public-welfare workers. We must make renewed efforts to obtain staff in more adequate numbers and with full professional training.

Section 3 would authorize the use of such funds as the Congress may appropriate for the purpose of grants to the States for the training of public-welfare personnel. In 1956, under an amendment which was sponsored by Senator KERR, the Congress gave substantial recognition to the critical shortage of trained personnel engaged in, and preparing to engage in, the administration of the public assistance programs. The amendment, both as Senator KERR introduced it and as the Senate passed it, provided for the Federal Government to pay the full cost of special training grants. The Congress authorized Federal grants of $5 million for the first year, and such sums as the Congress might appropriate for the next 4 years. In conference the proposal was modified to provide that the Federal Government was to pay 80 percent of the State's costs. But Congress has not seen fit to authorize Federal appropriations for grants on this restricted basis. Consequently, little progress has been made in training the personnel we need so badly. And the 1956 authorization is scheduled to terminate on June 30, 1962.

The training amendments to the existing law would be temporary, like most of the other provisions of the new legislation. They would extend the authority through 1963, and would not require the 20 percent State participation called for the 1956 amendment. The amount of the grants would, of course, be limited only by the funds that the Congress chooses to provide. Federal grants for the training of personnel would thus be more nearly comparable to grants that are available to the other professions. An appropriation for training grants would constitute an invaluable step toward the attainment of longer range training objectives in this area.

Such a step is essential if we heed the Bureau of Labor Statistics study of social welfare manpower needs.

It is estimated that, by 1970, we shall need some 32,000 more social workers to serve the normal needs of our expanding population. Between now and then, more than 4,000 social work students should graduate each year—in contrast to last year's total graduating class of fewer than 2,000. There can seem little question about the need for action.

SERVICES TO FAMILIES

The problems of dependency, neglect, and delinquency are not easily solved. Every city in the country faces them. I believe we can all agree, however, that it is important to establish and strengthen protective services for all children exposed to social dangers. These services should deal not only with the problems of the child but with those of other members of the family, which interact with each other to produce intolerable situations.

A disabled, unemployed father is usually unable to meet either the material or emotional needs of his children. As his sense of worth and dignity diminishes, the feeling of hopelessness is transmitted to the children. Anxieties and tension mount. The mother who is ill or otherwise handicapped can also affect the lives of her family adversely.

The recognition is spreading that dependency is a cycle that will not be broken until it is attacked at every point that impedes family solidarity and healthy growth of children, whether it be employment, vocational training, recreation, remedial education, attention to physical or emotional needs, training in family budgeting, or the core problem of mutual respect among various family members.

We cannot afford to delay the attack, because mental and emotional disorders of childhood exact a very heavy price. They may take the form of neurotic behavior, psychosomatic symptoms, or serious psychoses. They may be reflected in retarded mental development, or evidenced in delinquency.

It has been estimated that as many as 10 percent of the children in public schools in the United States may be emotionally disturbed and in need of psychiatric guidance. Over 5 million Americans are mentally retarded. Well over 500,000 children were brought before the courts last year for the kinds of antisocial acts we label as juvenile delinquency, some of them suffering from emotional disorders.

All of us are involved, in one way or another, with the medical and social problems posed by these statistics. The task is formidable but by no means insurmountable.

Disturbed children can be helped. They can be taught, as you here are so well demonstrating. We have by no means travelled the full road, but we have come a long way from the attitude that all children who are different are peculiar and cannot be helped. There is general recognition that they are as much a part of the total school system as any other children in the community. Their needs may differ but their right to an education, to develop to their highest potential, is part of their democratic heritage.

During the past two decades there has been a sharp rise in the number of schools offering special programs and special classes for exceptional children. A quarter of a century ago only about 750 school systems reported enrollments in special education programs. The latest figures—based on an Office of Education survey of 3 years ago—puts the total between 3,000 and 4,000, despite the fact that the number of school districts has declined.

Of the almost 45 million young people in public and private elementary and secondary schools, about 1¼ million were receiving special education because of their handicaps. Many experts believe, however, that these children represent only one-fourth of those who need special education.

Nonetheless, there has been a surge of interest in the educational needs of the blind, the deaf, the mentally retarded, the disturbed, and the exceptional child. Considerable experimentation is going on with new learning techniques and settings.

Local schools are best suited to offer more helpful programs for the handicapped and retarded. To be sure, good schools of this type are expensive, requiring specialized personnel and facilities. But they are less expensive in the long run—and far more rewarding—than placing children in institutions.

We need to develop a broad and bold program to deal with mental retardation, which would involve the cooperation of voluntary and public agencies—local, State, and Federal.

Further progress in all fields of family and child welfare, of course, depends on research. All who work in fields pertaining to the emotional development of children are aware of the vast areas of ignorance. Several agencies of the Department—the Children's Bureau, the Office of Education, the National Institute of Mental Health of the Public Health Service—are stimulating new studies in this field.

We need more research, for example, on why some children cannot communicate, a failure which may be attributable to either brain damage or serious emotional disturbance. A pilot project now underway in Rhode Island, supported by a grant from the Children's Bureau, is attempting to determine just why a group of children cannot communicate. It has previously been impossible to diagnose autistic problems in children—to determine whether they are suffering from brain damage, mental deficiency, childhood psychosis, or metabolic difficulty—and to devise means of treatment.

The children are studied daily in a nursery. A team consisting of a child psychiatrist, a child psychologist, a social worker, and two nursery school teachers are involved in trying to develop diagnostic methods for such children which, hopefully, can then be applied throughout the Nation.

A wide variety of studies—in emotional disorders, in parent-child relationships, in delinquent and defiant behavior—are being supported by the National Institute of Mental Health. Research dealing with children accounts for about one-fourth of the research grant program of NIMH.

Schizophrenia is one of the most severe psychiatric disorders of children, as well as of adults—and the least understood. Research is attempting to get at the causes of this disorder, and to test various forms of therapy. The League School, as you know, is working under an NIMH grant in its pilot day nursery for schizophrenic children. The objective is to develop ways of treating the virtually unreachable disturbed child. Everyone is very hopeful that the findings of this project will help in the formation of similar nurseries and day schools elsewhere throughout the country.

A great deal of attention has also been given to mental retardation. Biological and hereditary factors have been studied in efforts to determine the causes of retardation.

In this connection, perhaps some of you know of the 10-year project in which the National Institute of Neurological Diseases and Blindness is collaborating with 15 other research institutions in a study of 50,000 mothers and their children. Now in its third year, this study—known as the Collaborative Perinatal Project—is following the mothers from early pregnancy through delivery, and their children from the moment of birth until about school age. The purpose is to discover what things go wrong during pregnancy, birth, or early in a child's life which may trigger cerebral palsy, mental retardation, or chronic neurological disorders. Information from this study is expected to disclose causes not yet known or even suspected, and perhaps yield important clues to personality development.

Other research grant projects are investigating the adjustment of the retarded child to a world of his normal neighbors. At the same time, State and local programs for retarded children and their families have increased greatly. In the past 5 years, with the help of Children's Bureau grant funds, special State programs for this group have jumped from 4 to 52. This increase in services has been accompanied by a sharp swing away from the institutionalization of mentally retarded children as the only solution for their care.

One of the aims of these programs is to increase the number of professional workers with special training in mental retardation and thus put more knowledge to work as it is developed. Another objective is to help parents of mentally retarded children with the knotty problems of adjustment so that the parents in turn can be of greater assistance to their children.

Research in this field is also being conducted by the Office of Education, in cooperation with State education agencies and with colleges and universities. This covers the use of human talent, the impact of social and economic factors on education, student behavior and characteristics, and the learning process as it applies to special education.

One study which I believe will be of particular interest to you deals with the integration of the unaccepted child into the ordinary classroom. Comparisons will be made, in 50 special classrooms, of the teachers' ability to deal with situations which occur when severely disturbed children enter a class.

Another study is designed to develop a sound method of testing to give early indication of those children who are emotionally disturbed. One of the most distressing problems about this group, as you well know, is that they are usually in trouble before their condition has ever been recognized. By that time their rehabilitation is a long, difficult, and sometimes impossible process.

Identification of these children has been stepped up in the past year or so by the improved programs of testing and counseling under the National Defense Education Act. Of course, tests and trained counselors help all children discover the things they can do best and plan their schoolwork accordingly; but they are especially valuable to the socially maladjusted. No other group of handicapped people presents so many serious problems to society. If we ignore them, or fail to do enough about them, there is the danger they will spread their unhappiness to wreck other lives.

EDUCATION PROPOSALS

The education of all of our children to the utmost of their potential has acquired a new national significance. Now before the Congress are some of the most important new legislative proposals in education ever to receive the personal support of a President.

In his special message on education, President Kennedy said: "Our requirements for world leadership, our hopes for economic growth, and the demands of citizenship itself in an era such as this all require the maximum development of every young American's capacity. Our twin goals must be a new standard of excellence in education, and the availability of such excellence to all who are willing and able to pursue it."

In addition to recommending Federal funds for classroom construction and teacher salaries, the President proposed that 10 percent of the funds appropriated be set aside for special needs in each State. This unprecedented proposal—that a portion of the funds be used as each State sees fit—would make it possible for many communities to deal more adequately with special problems.

Some of the funds under this program, once it is approved by the Congress, would undoubtedly be used to expand the programs for all children who need special education. One of the chief obstacles to more of these programs at present is the shortage of qualified teachers. This is a matter which will challenge all our ingenuity and resourcefulness. The teachers of handicapped children must have unique and highly developed skills. As a nation, we have not given nearly enough attention to their recruitment, selection, and training.

CONCLUSION

In conclusion, I believe we are on the threshold of a new era of concern for the welfare of people—from the helpless infant with a birth defect to those who are well advanced in years. For handicapped and disturbed children, there will be more research, more community and specialized services, more opportunities for education and a useful future.

You in the League School will contribute much to the exciting developments which are in store, just as you have contributed to advances against difficult problems in the past. I am confident you will do your share, and more, to help every child make the most of his capabilities, and thus build a brighter future. We believe the Federal Government has a vital role to play in this connection and we intend to help make your role more effective.

The Cold Fury of Hate

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mrs. GRANAHAN. Mr. Speaker, events crowd in upon us and some of them make us weep for the depravities of mankind. How many beasts walk the earth in human form?

Earlier this month, we marked the 13th anniversary of the founding of Israel as an independent nation. On May 14, it was exactly 13 years since the day that the people of Israel proclaimed their freedom, and President Harry S. Truman immediately announced that our Government was recognizing the Government of Israel, in culmination of one of the most dramatic incidents of national courage ever demonstrated by any people.

Every American of good will, and every person of good will in the world, applauded the success of the Jewish people of Israel in establishing their own country in fulfillment of Biblical prophecy. While millions of people were aware of the courage and drive and the resourcefulness which went into the Israeli drive for independence, the stark background of events which provided the motivation for the final push was not really known or even guessed at.

We had read and heard much about the bestiality of the Nazi regime. The international trials of war criminals after the end of World War II brought out many of the facts, and sickened decent people everywhere.

DID WE FORGET TOO SOON?

Either we forgot too quickly, or else perhaps many of the horrors of the postwar trials could not be fully reported in those days because of the tremendous press of other earth-shaking news crowding onto the front pages following the end of World War II. In any event, the trial now taking place in Israel of the infamous Nazi who directed the liquidation of the Jewish people of Europe—and of many people of non-Jewish heritage who were also marked for extinction—has finally brought to public attention the extent and the depths of depravity of the hate mongers who followed the Hitler banner.

One cannot read the reports of the Eichmann trial without shock and despair over the aberrations of the human mind which too often show up in violence directed at minority groups.

TERROR IN THE UNITED STATES, TOO

And one cannot read the reports of violence in and around the bus terminals of Alabama these days without being

reminded of Nazi terror and violence and human depravity.

It is perhaps fitting that the self-styled leader of the American Nazi Party has led a tiny band of followers in a symbolic hate ride into Alabama. If nothing else could bring the Hitler past to mind, this episode should do it.

Mr. Speaker, as a partisan of President Kennedy, my comments about the prompt and decisive actions of his administration in moving into the situation in Alabama might appear to be politically motivated. Therefore, in order to demonstrate that there is no partisanship in upholding decency, I submit for inclusion as part of my remarks a hard-hitting but objective editorial on the Alabama riots from one of the most Republican of newspapers in this country, the Philadelphia Inquirer.

The editorial, from the Inquirer of Monday, May 22, is as follows:

DESPICABLE, INTOLERABLE MOB RULE

The Government and people of the United States must never yield to the unreasoning force of a hate-driven, bigoted, riotous mob in Montgomery, Ala., or anywhere else in the country.

Disgraceful, unconscionable acts of racial violence on the streets of Montgomery over the weekend were a manifestation of inhumanity that cannot be tolerated in a nation dedicated to the dignity and liberty of the individual.

The Kennedy administration has properly and lawfully intervened on the side of justice—in fulfillment of constitutional obligations and moral duties.

Almost as outrageous as the attacks by the mob is the failure of public officials in the city of Montgomery and the State of Alabama to exercise fundamental functions of law enforcement.

When the freedom riders arrived in Montgomery, however questionable their methods may be, it was the duty of the police to take appropriate precautions to prevent violence. After violence erupted it was their duty to restore order and aid the injured.

The police made no satisfactory effort in this direction either before or after the mob exploded.

It should be noted that the victims of the mob's wrath included not only freedom riders, who are challenging the practice of racial segregation on buses, but other persons also. Negro pedestrians in the vicinity were attacked without provocation.

Moreover, the injured received no medical attention for hours in some cases while police made absurd excuses.

The dispatch of additional U.S. marshals to Alabama by Attorney General Robert F. Kennedy, with the approval of President Kennedy, is a move to strengthen law-enforcement capabilities of the Federal Government in an area where strengthening obviously is needed.

At issue is not Federal infringement upon local or State police power, as some Alabamans would have us believe, but the duty of the Federal Government to safeguard citizens whose lives and liberties are jeopardized by the inability or unwillingness of local and State police power to function.

The best way for Governor Patterson of Alabama to preserve State rights is to carry out State responsibilities. One important responsibility is the use of police power impartially for the protection and safety of all people regardless of race.

President Kennedy's message calling on State and municipal officials and the general public in Alabama to prevent and avoid "further outbreaks of violence" should be heeded by all concerned.

We hope the Justice Department backs up its latest denunciation of the Ku Klux Klan with vigorous on-the-scene efforts to curb vicious hate-mongers who incite mob action.

State and Federal court injunctions issued in the wake of the riots in Montgomery are the opening guns of what may be a lengthy legal battle in the courts, which is where the battle should be fought. But there should be no delays in the enforcement of law and order and the protection of the rights and safety of all citizens.

The lawless, merciless mob respects no rights—Federal, State, or individual. The violence in Alabama is a shameful episode—acts of desperation by misguided men who talk blandly of "their rights" while inflicting indefensible wrongs upon others.

A 17-Year-Old Youth Proposes a Novel Idea

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1961

Mr. ANFUSO. Mr. Speaker, we often wonder or grow pessimistic about American youth, whether they will be able to take up the problems facing our Nation and whether they will be able to deal with them properly. We are all very proud and very much heartened by the recent achievements of Comdr. Alan B. Shepard, Jr., the first American to make a successful flight into space.

When I think of the Shepards and others like him, I am not one of those who despairs about the future. We have many, many fine young people, serious-minded, capable, energetic, and patriotic, who will be a credit to this Nation in the future.

One such young man has recently come to my attention in my capacity as chairman of the House Science and Astronautics Subcommittee, which is currently holding hearings on my bill to establish a National Science Academy. He is 17-year-old Bruce Tully of Westfield, N.J., who developed a deep interest in science and has come up with the proposal to establish an astronarium and science center for the New York World's Fair. The major purpose of this project would be to arouse the interest of American youth to the marvels of science and engineering. The idea has caught on and appears to be well on the road to become a reality.

Young Bruce Tully will testify before my subcommittee tomorrow morning, Thursday, May 25, regarding the proposed Science Academy. It will certainly be of great interest to hear this young man, who symbolizes the youth of America, its ideas and responsibilities. In the meantime, I wish to insert into the RECORD an article about him which was published in the Ledger-Star of Norfolk, Va., on May 19, 1961, and I commend this article to the attention of all my colleagues:

MILITARY REPORT—YOUNGSTER, 17, SPARKS ACTION FOR SPACE CENTER AT 1964 FAIR

(By James Elliott)

NORFOLK.—If Nikita Khrushchev thinks American youngsters are soft, he has not heard of a star-spangled, 17-year-old boy from Westfield, N.J., who has set about to make the Russian eat his words.

Bruce Tully is a tall, gangling and energetic youth with whom I became acquainted at Cape Canaveral recently when America sent Cmdr. Alan B. Shepard, Jr., into space.

Bruce looked a little young to be among the press corps, but everywhere the press went, Bruce was sure to go. And that was enough to activate the curiosity of any newsman.

When questioned, Bruce explained that he was a guest of the Air Force. He had been invited to witness the launching, he explained, because he has generated the idea for an astronarium and science center for the forthcoming New York World's Fair. Later, I learned that he not only generated the idea, but drew up the architectural plans for the enormous project and then personally went out on his own and sold the idea.

His story is truly a remarkable one. And it goes a long way toward proving that American youth is standing up to the challenge of the times.

Bruce explained that he had become upset—darned mad, in fact—a few years ago when Khrushchev started bragging about the weaknesses of America's youngsters. He was only 15 at the time. But he was determined to do something about it.

One of the major points to upset him was that Khrushchev had said that this Nation's youngsters were not meeting the Russians in engineering.

"So I started questioning some of the kids I knew," he said. "Why don't you want to be an engineer?"

He said he found that one of the reasons they hadn't thought of an engineering profession was that they didn't know anything about it.

"It's sort of like a kid who says he doesn't like milk when he's never even tasted it," he smiled.

Because he was convinced that the lack of engineering interest stemmed from a lack of knowledge, he set about to figure out some way of correcting that dilemma.

His answer: the astronarium.

In his dreams, he foresees the astronarium as a means of cultivating the interest in American youth, of stimulating untapped talents and exposing youngsters to the marvel of engineering and science so they might find a more dedicated devotion in their lives.

The astronarium would have displays, lectures, classes, TV programs, provided by Government and industry, that persons of all ages could visit. But the programs would be geared primarily to creating a response in high school and college youth.

For a year, Bruce worked on his plans. When he set out to sell his idea, he ran into a lot of the apathy he had anticipated. But he stuck with it, and finally—after more than 2 dozen leaders of industry had turned him down—he found a friend in Theodore J. Kauffeld, head of a New York consulting engineering firm. He supported the plan financially.

Now other industrial organizations have joined in. The armed services are behind the project 100 percent. And before long, it would appear, Bruce Tully will see his dream come true.

Somehow, it seemed appropriate that this young, 17-year-old American should be present at the historic launching at Cape Canaveral. For there he had an opportunity to talk to Shepard, who spent 4½ hours of his valuable time to explain America's man-in-space program to this dedicated young-

ster. And their get-together somehow seemed quite appropriate, for in both Shepard and Bruce Tally, America could hardly find better examples for demonstrating that Khrushchev, indeed, will one day be forced to eat crow.

Cost Increases—Foreign Competition Brings Pan Am Furlough

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. ROGERS of Florida. Mr. Speaker, the precarious position of the U.S. airline industry, both domestic and international, was graphically illustrated a few weeks ago when the Air Transport Association announced that all our airlines combined realized a net profit of only $1 million in 1960.

Meanwhile, under the bilateral air agreement policy, the many foreign airlines have begun negotiations with our State Department to obtain further concessions from our Government. In a majority of cases the foreign carriers seeking additional landing rights in the United States have little or nothing to offer in the way of reciprocity.

Mr. Speaker, it is time that our State Department got its back up and begin to protect our own flag carriers.

Pointing up the distress of some of our oldest and more prominent carriers, Mr. Speaker, is a recent announcement from Pan American Airways that its work force is being curtailed at its large Miami base. Not only are sharply increased labor costs responsible for Pan American's current operating deficit, but the fact that more and more foreign airlines flying in and out of Miami, siphoning traffic away from the U.S. flag carriers, making it impossible for Pan American to operate without sustaining a loss.

Mr. Speaker, Pan American's announcement concerning the furloughing of 250 maintenance workers has been brought to my attention and under unanimous consent I include it as a part of the RECORD:

COST INCREASES–FOREIGN COMPETITION BRING PAN AMERICAN FURLOUGHS

Constanly increasing expenses, due in large part to labor costs, and the inroads of uneconomic foreign competition were cited by Pan Aemrican World Airways today as the airline announced it is furloughing some 250 maintenance workers at its Miami base.

Those being furloughed, effective May 19, are being given 2 weeks pay in lieu of notice and will be the most junior of the approximately 2,700 maintenance employees at the base.

Pan American announced Wednesday that it lost $6,352,000 during the first quarter of 1961, more than triple the loss for the same period last year.

Workers being furloughed here will have the opportunity to transfer to other Pan American bases, or will receive severance pay in accordance with their union contracts. This amounts, in general, to a week's pay for each year of service, with a minimum of 2 weeks.

The airline picture in Latin America is one of increasingly runaway competition. For example, 19 foreign flag airlines fly between Miami and Latin America, compared to 3 U.S.-flag airlines.

In all, 30 foreign-flag airlines fly between the United States and Latin America, compared to 7 U.S.-flag airlines flying similar routes.

Salary scales or airlines in other countries generally are about half those of U.S.-flag airlines. In many cases, too, the smaller airlines of other countries fly at deeply undercut rates.

On the other hand, a Pan American mechanic who was paid $81 a week 10 years ago is paid $125 today, plus overtime.

Meanwhile, air fares generally are about the same or lower than they were 10 years ago. A Miami-Buenos Aires round trip in 1950 cost $760, today $548.

Return to Truman Place

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. ALGER. Mr. Speaker, are we going backward in our economic policy? Many of us think so as we view the increased demands from the administration for bigger spending programs as the answer to all the world problems. I am sure the Members will be interested in the point of view expressed in the following editorial:

RETURN TO TRUMAN PLACE

It's plain enough that the administration has embarked on a course of heavy new domestic spending. What may not yet be so apparent is the theoretical base being laid for much greater spending, inflation, and Federal intervention in the economy in the future.

Here is one way the Government economists reason, as drawn from a speech a few days ago by Chairman Walter Heller of the President's Council of Economic Advisers:

From the beginning of 1947 to the end of 1953, the United States enjoyed a large measure of economic growth; the gross national product increased by 4.3 percent a year on the average. But from the end of 1953 into last year, the increase was only 2.8 percent a year. (This makes a rough but convenient political dividing line: 1947–53, Truman years; 1953–60, Eisenhower years.)

Because of the allegedly slow rate of growth in the later period, it is argued that the United States faces a persistent economic slack. It follows that Government spending and other measures must take up that slack in order for the United States to realize its potential growth. This, Mr. Heller assures us, the President has vigorously started to do.

Since there is so much at stake in this theory, it's well to take a closer look at its statistical underpinnings.

The gross national product is supposed to measure the Nation's total output of goods and services, including Government purchases of goods and services. The Government's part of the gross national product did indeed rise sharply in the 1947–53 period; for example, it went from $54.6 billion in 1950 to $102 billion in 1953.

That's not surprising. After all, there was a war on for one thing, a war which sparked a far broader and more costly general rearmament effort. The question is: Does this near-doubling of the Government "contribution" to the gross national product constitute healthy, vigorous economic growth?

One might suppose most people, including Government economists, would consider greatly increased arms spending a necessary evil rather than the hallmark of sound growth. Better measures of a growing economy are to be found in such areas as domestic private investment and personal consumption. What do we find here?

Interestingly enough, the "gross private domestic investment" category of the gross national product went up from $50 billion in 1947 to over $70 billion in 1959. As for personal consumption expenditures, they rose more in the 1953–59 period than in the 1947–53 era.

So the argument for an economic slowdown in the later years falls flat on its face. There is another distinction, however, which does stand up. From 1947 to 1953 we had far more inflation—at least three times as much—than from 1953 to the present. Real growth, then, was that much larger in the more recent years.

Yet it is a return to the same old Truman era inflationary policies of unbridled spending; deep deficits, cheap money that we are being offered now in the name of economic growth. No warnings of inflation issue from these new advisers; why should they warn? They like inflation. Some of them reportedly proposed it to the Germans a decade ago and again even this year. But the Germans so far have too much sense, too many memories, and too much noninflationary prosperity to fall for that fraud.

It's the good old United States almost alone of the advanced nations, that gets saddled with the inflationists. And will get saddled with all the economic ills and Federal controls they will bring if they are not checked.

We think the Nation ought to consider carefully what kind of economic growth it is being promised. Stripped of all the fine theories, it is not economic growth at all, but vast, inflationary Government expansion.

Tribute to Hon. James Farley in the New Jersey Parade

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. ADDONIZIO. Mr. Speaker, it is a pleasure to call the attention of my colleagues to an editorial tribute to the beloved Hon. James Farley that appeared in the Waldwick, N.J., Jersey Parade of February 24. Mr. M. Martin Turpanjian, the editor of the Jersey Parade and of the North Bergen Hudson Gazette, is also president of the New Jersey League of Weekly Newspapers, Inc. The chairman of the board of directors of the league is Mrs. Arthur A. Lyons, editor of Spotlight magazine of Newark; the chairman of the board of trustees is Dr. Clara K. Aszody, of the Hungarian Journal of West Orange.

Mr. Turpanjian's article follows:

[From the Jersey Parade, Feb. 24, 1961]

JAMES A. FARLEY, OF NEW YORK, PROCLAIMED NO. 1 ELDERLY STATESMAN OF THE WORLD—KINGMAKER OF F.D.R. IS "DUTCH UNCLE" OF UNITED STATES—EX-POSTMASTER GENERAL AND FORMER CHAIRMAN OF DEMO NATIONAL COMMITTEE IS TERMED NOBLE PATRIOT

(By M. Martin Turpanjian)

I take great pride to announce that James A. Farley, of New York, has been proclaimed as the No. 1 elderly statesman of the world by the New Jersey League of Weekly Newspapers, Inc., of which I am the president.

The former Postmaster General of the United States and former chairman of the National Democratic Committee, is the kingmaker of F.D.R. as the greatest strategist in the history of America and throughout the world. He is indeed and in fact the genuine "Dutch uncle" to all Americans regardless of party affiliations. He is also a noble patriot in every respect.

Adlai Stevenson would have been today the Secretary of State of the United States had he not attacked President Eisenhower in the U–2 incident, but James A Farley defended Ike and condemned Adlai for his rash statement against the then occupant of the White House.

There is a divinity that must create true leadership, for real leaders are born. They cannot be trained or educated. Such a dynamic leadership possessed by James A. Farley is a divine heritage that must find its origin in the mind and heart of the infinite designer.

One has only to note the record of human history to find that the men or women who scaled the majestic heights of authority were all divinely inspired. Abraham Lincoln, cradled in a rudely built log cabin at his birth, climbed to the highest peak of national American authority and by his fortitude and courageous leadership preserved and stabilized the federal integrity of the young American Republic.

And when we consider the fabulous career of this mighty American political titan in the personage of the resourceful James A. Farley, we must confer on him the well-earned title and accolade of the great American kingmaker, for we can remember vividly the supreme and the superlative quality of his supersalesmanship in promoting the candidacy of Franklin Delano Roosevelt for the presidential nomination and election in landslide proportions in the historic year of 1932. Like the immortal Lincoln, James A. Farley had keen inherent psychic sensitivity for the mass psychology. He knew the strange mechanism of the mortal mind. His very presence generated an atmosphere of friendliness and amity. He refused to support the third term of FDR, in the year of 1940 and resigned from the administration of the man he had labored so effectively to elect in 1932 and 1936. In 1940 he demonstrated in no ambiguous terms that he placed the integrity of principles and character above all the mortal material advantages of the expediency of the official power.

In his monumental sacrificial act James A. Farley scaled the ethical heights of political statesmanship. He became the most beloved and respected national figure not only in America but everywhere in the international world. His frank direct candor, his humane sympathetic approach, his humanitarian principles, his honest conscientious moral integrity, his matchless and uncompromising consistency, and all these commendable and laudable characteristics have endeared him to the American people as an outstanding statesman and noble patriot. The moral lesson that the political career of James A. Farley has taught the American people so dramatically is the stark fact that a man can operate as a practical politician and yet remain incorruptible if he has the willpower and the heroic stamina to be relentlessly loyal to the ideals of honor and moral consistency.

Ransoming Cuban Rebel Patriots

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. CHAMBERLAIN. Mr. Speaker, formation of a private committee to raise $15 million for the purpose of buying tractors or bulldozers to exchange with Castro for the liberation of 1,200 Cuban citizens has raised many serious questions.

Frankly, I am deeply concerned with this situation, in which there are raised serious doubts as to whether the proper officials are acting under the mandate of their offices or whether they have, directly or indirectly, delegated their functions to an unofficial organization. A prompt, positive, and definitive statement on Castro's proposal, by the responsible U.S. officials, would do much to prevent this matter from deteriorating further.

Castro's original suggestion of an "exchange" has now been revised and the Cuban dictator contends the tractors would be an "indemnity" from the United States.

Columnist David Lawrence discusses many facets of this difficult situation, into which our recent national course of conduct has thrust us, and I commend his column to the attention of my colleagues.

RANSOMING CUBAN REBEL PATRIOTS—OFFER OF $1 MILLION FOR CAPTURE OF CASTRO PROPOSED AS ANSWER TO DICTATOR

(By David Lawrence)

"A million dollars for Fidel Castro, dead or alive—but preferably alive."

This is the latest suggestion made by a reader in answer to those who want to raise $15 million to pay off Castro and liberate the 1,200 Cubans taken prisoner in the recent invasion attempt.

The reason for wanting to form a committee to induce the Cuban people to capture Castro and send him to some foreign country is so he may be tried for international crimes just as Adolf Eichmann is being tried in Israel today.

The capture of Eichmann was accomplished privately within a foreign country where he had taken refuge, but in the case of Castro, who is still in his own country, it would be natural for citizens there to seize him and bring him to justice in Cuban courts. For he is guilty of the mass execution of innocent persons on hearsay evidence and without benefit of a fair trial. There must be many persons inside Cuba who would wish to see Castro punished.

The fact that a committee of prominent American citizens is ready to do business with Castro in order to liberate some of the prisoners he holds is provoking differences of opinion in Washington. While it is argued that the committee is solely interested in saving human lives—even raising what is admittedly a ransom—there are many others who think that this would be a disgraceful concession to Castro's inhumanity.

Indeed, the Cuban dictator now says he wants the money as an indemnity from the United States because of the recent "invasion." Whatever interpretation he may put on it there are many Americans who will donate money to save lives. The instinct is commendable, but the maneuver cannot but place Castro in a position of strength. For it will mean that his demand for what he calls indemnity will be proclaimed throughout the world as having been met.

Also, it will give the people of Cuba the impression that the American people are afraid of Castro and are ready to bow to his demands and those of his Communist associates who doubtless thought up the ransom scheme.

Failure of the invasion was a psychological blow to the hopes of those who have sought to liberate Cuba. The United States is blamed for not following through with adequate air support at the critical moment. The effect throughout Latin America has been one of disappointment with the United States. While outwardly the usual fears are expressed that intervention in Cuba would seem to be a precedent for similar intervention when dictators arise in other Latin American situations, many thoughtful persons of prominence in countries south of us are saying privately they wish the United States had followed through on the recent expedition started by the Cuban exiles.

The widespread publicity given the American committee which has just started out to raise $15 million to buy tractors for the exchange of the Cuban prisoners is bound to hurt the cause of liberation inside Cuba. For it pictures the American people as interested in saving 1,200 Cuban prisoners but not so much concerned about the entire Cuban nation which has been taken prisoner by Castro and his Communist partners.

There is little hope, incidentally, that the exchange of tractors for the prisoners will go through. It isn't easy to raise $15 million for any rescue mission outside the United States, and rarely has anything approaching the sum ever been collected, even for a famine or earthquake disaster. Castro, nevertheless, will make considerable propaganda out of the incident, and there is no assurance that he will accede to the terms of the American committee that, as the tractors are delivered, there will be exchanged at the same time certain specified prisoners so as to insure that the agreement will be kept by Castro.

It is unfortunate that Walter Reuther and members of his committee have promised to go to Cuba themselves to negotiate an agreement with Castro. For the Cuban dictator doubtless will use the occasion to tell the Cuban people that prominent Americans are coming to Cuba on bended knee to recognize his right to threaten or actually to execute prisoners of war. Maybe this is a problem, after all, for the United Nations, which manages to send envoys to uncivilized Congo and knows something at least about how to deal with bandits and murders.

Educational Television

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. RIVERS of Alaska. Mr. Speaker, widespread interest in utilizing television transmission facilities in our public schools and colleges and in adult training programs prompts me to urge re-

vision of pertinent legislation now pending before the Congress, such as H.R. 965—Senate counterpart S. 205—and H.R. 132. My purpose in speaking about these bills is to point out their inadequacy for the purpose of accomplishing the desired goal upon which, I am sure, almost all of us agree, and further to suggest changes for effectuating much greater results with the same amount of money than would otherwise be the case.

Although H.R. 132, approved by the administration, postulates grants to the States on a matching basis, while H.R. 965 would authorize straight grants without a matching requirement, the two bills have in common the basic restriction which, I believe, should be modified. I refer to the limitation that the Federal funds could be used by the State, university or other appropriate agency or nonprofit educational organization only for acquisition and installation of transmission apparatus necessary for television broadcasting.

Let us now consider the practical results of this limitation. The legislation itself pinpoints the fact that none of the money can be used for acquisition of sites and buildings for installation of antennas and to house the television transmission apparatus, or for operation and maintenance of such facilities. By inference none of the Federal money would be available for producing either live programs, or films, or for reproducing such films for widespread use. Neither could any of the money be spent to meet such expense as would be incidental to cooperative arrangements with commercial television stations which might be willing to broadcast such educational films on a free time, public service basis.

This last-mentioned restriction is the one which would most seriously circumscribe the educational television program in Alaska, and in other sparsely settled western States with widely scattered population centers. To back up this point, I will use Alaska as an example. Cities in Alaska which have television facilites are Anchorage, Seward, Kodiak, Nome, Fairbanks, Juneau, Ketchikan, and Sitka. Anchorage and Fairbanks each have two TV stations. Ketchikan and Nome are over 1,000 miles apart, and the others, with two exceptions, are several hundred miles away from each other. With the State struggling from a financial standpoint to meet its educational requirements and other responsibilities, it is doubtful that it could afford to establish and operate more than one of the public educational TV broadcasting facilities such as are contemplated in the pending legislation. If such facility were established at the University of Alaska near Fairbanks, for example, its educational broadcasts would reach only the people of Fairbanks, and environs. If the facility were located at the Alaska Methodist University at Anchorage, its programs would reach only the people of the Greater Anchorage area. All of the other towns I have mentioned with television services and the many smaller communities of Alaska would be left without benefit by the program.

Since this legislation has been introduced, I have heard from Dr. William R. Wood, president of the University of Alaska, that the university has applied to the Ford Foundation for assistance to develop a coordinated statewide adult education program and to establish an instructional materials production center to produce films, kinescopes, soundtapes, videotapes, slides, graphic materials and related articles for an extended and intensified adult education program off-campus, and for general improvement of on-campus instruction. If this materializes, the university would be in a position to enlist the cooperation on a primarily public service basis of all the commercial television stations in Alaska. With this start the whole plan could be augmented as to the television phase, if only realistically flexible provisions were included in the pending legislation.

Such provisions, which I urge, would allow a portion of the money to be used for production equipment, for use at the University of Alaska, for example, in the course of producing live educational or informational or cultural programs, to obtain films for distribution to all of the cities which have television stations. With this type of arrangement, and with the University of Alaska, for example, as a focal point, plus cooperation by existing commercial television stations on a nonprofit basis, a highly practical solution to attaining the objectives of the pending legislation would be obtained. In order to further utilize these productions, another item of equipment which converts videotape recordings to 16-millimeter sound on film would mean utilization in every secondary school or closed circuit television station where the 16-millimeter visual aid type of projector is available. Another portion of the money should be usable for the purchase of suitable ETV film or kinescope programs now available from educational centers such as Ann Arbor for use at the university, or elsewhere, and for distribution for telecasting on a cooperative and nonprofit basis by the commercial television stations, with credit given to the university or other agency or institution which acquired the programs. Another minor amount could be allowed for use in reimbursing the commercial television stations for their added expense incidental to telecasting these public service programs.

For the technical advice reflected in my remarks, I give credit to Mr. A. G. Hiebert of Anchorage, Alaska, an outstanding television authority and public-minded citizen. The above suggestions are fully endorsed by the University of Alaska. In my opinion, the adoption of the method I have set forth is necessary to any widespread fulfillment of the fine objectives of the legislation in question.

Air Force Secretary Zuckert's Armed Forces Day Address

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. EVINS. Mr. Speaker, the citizens and officials of Murfreesboro and Smyrna, Tenn., and Rutherford County and the Air Force personnel at Sewart Air Force Base in Rutherford County, in the district which I have the honor to represent, have an unusually fine record of cooperation.

The citizens of the area recognize the importance of this important air base to the community and to the defense of the Nation.

Mr. Speaker, in order to emphasize the spirit and good will that exists in this community and the importance of this base, recently, the commanding general of Sewart and civic and governmental officials of the area invited Secretary of the Air Force Eugene M. Zuckert to visit Sewart Air Force Base as a part of the celebration of Armed Forces Week.

Secretary Zuckert after reviewing the men at the base and inspecting the installation addressed a meeting of more than 400 leaders of the Murfreesboro-Smyrna-Sewart community. The Secretary's remarks were most excellent and informative. He pointed out the "growing importance" of Sewart's role in the national defense and praised the work and cooperation of the people on the base with the neighboring civilian communities.

In this connection, Mr. Speaker, I ask unanimous consent that Secretary Zuckert's excellent address be reprinted in the Appendix of the RECORD.

Secretary Zuckert's address follows:

ADDRESS BY HON. EUGENE M. ZUCKERT, SECRETARY OF THE AIR FORCE

Senator Kefauver, Senator Gore, Representative Evins, Representative Loser, Mayor Todd, Mayor Ridley, General Sutterlin, distinguished guests, this is a very happy occasion for me. The opportunity to visit Sewart Air Force Base in such distinguished company is doubly welcome—first, because I wanted to meet the good neighbors of the base, and, second, because I enjoyed the visit on the way down with Representative LOSER and was pleased to be greeted by Representative EVINS on my arrival.

My association with the members of the outstanding Tennessee delegation in Washington extends over many years. Senator KEFAUVER has almost had my official life in his hands at times by virtue of his service on subcommittees for both Defense and Atomic Energy of the Senate Appropriations Committee.

Senator GORE and I have had much business together growing out of his great service on the Joint Committee on Atomic Energy. JOE EVINS has also been in an important spot because he sits on the subcommittee which handles atomic energy for the House Appropriations Committee.

I want to thank all of you for your hospitality, and the Members of your congressional delegation for the invitation to come. I am sorry to have to leave early in the morning for Texas, but I am grateful for just this short stopover.

Tennessee has traditionally been a long and wide corridor from the East to the Southwest—so long and broad that it might be called the training ground for those who have become famous in other parts, like Sam Houston and Davy Crockett.

It is fitting and proper to join Tennesseans in Armed Forces Day salute to the military services, particularly in middle Tennessee. After all, there are no greater names in our military history than Andrew Jackson and Alvin York.

Tennessee has also played a role in my official life—because of the important part the State plays in national defense and in atomic energy. The Arnold Engineering De-

velopment Center at Tullahoma was established during my tour of duty as an Assistant Secretary of the Air Force a decade ago. The scientists and engineers there have made many key contributions to our aircraft, missile, and space programs over the years. This facility will continue its valuable work as part of the new Air Force Systems Command. When the Secretary of Defense, Mr. McNamara, gave the Air Force responsibility for all military space research and development, we activated the Systems Command to get the highest possible level of efficiency. In this Command, the Arnold Center is a vitally important installation.

From that first Air Force assignment, I went to the Atomic Energy Commission. The concentration of atomic energy work at Oak Ridge gave me another association with Tennessee, not only in the field of defense but also in the development of the peacetime uses of atomic energy.

Besides the vitally important production plants at Oak Ridge, a host of other projects with great defense importance started at Oak Ridge. One is the utilization of nuclear fuels for the propulsion of aerospace craft.

The development of the uses of isotopes in medicine, agriculture, and industry will be a historic entry in Tennessee's log book of contributions to the Nation.

True local support of national defense activities has characterized installations in Tennessee. That is one reason I am happy to have the opportunity for even a short visit to Sewart Air Force Base, a major installation of the Tactical Air Command. General Sutterlin has taken me on a tour of the base and given me an insight into both the on- and off-base operations.

I haven't asked his permission to mention this, but I am sure I am not betraying a confidence when I repeat one thing he was most proud of. He told me that he had served on many bases during his career, from his cadet days right through to the present, in time of war and in time of peace.

"And," he said, "I can tell you that the relations between the people on the base and the neighboring civilian communities is the best I have ever seen, beyond any question."

It is always pleasing to hear a report like this. To me it is the clearest possible indication that you have taken the trouble to get to know each other, and that you have exerted mutual efforts to solve the problems that are bound to crop up from time to time.

It shows me, too, that you people of Murfreesboro and Smyrna understand the mission of the 839th Air Division, and what it means to the security of the Nation.

I can tell you that in the view of the Department of Defense, this mission is one of growing importance. In his state of the Union message to the Congress, President Kennedy announced that he had directed prompt action to increase our military airlift capability.

"Obtaining additional air transport mobility," he said, "and obtaining it now—will better assure the ability of our conventional forces to respond, with discrimination and speed, to any problem at any spot on the surface of the globe at a moment's notice."

We have already gone to work on both immediate and long-range plans to meet this need.

The first move was to add 53 more new and better transports for troop airlift than we had previously programed.

We expect these new aircraft, added to the present inventory, to meet our troop carrier needs adequately up to 1965. To handle the mission beyond that time, we have ordered the development of an entirely new aircraft.

This is the C–141, a jet transport with swept-back wing and turbofan engines. It will not only be an excellent military carrier, but will be available for commercial development as well.

We expect to see the mockup of the airplane in November this year. Flight tests will begin in October 1963, and we will have our first operational unit by June of 1965.

In addition to this job of airlifting ground forces to trouble spots, the Air Force maintains other limited war forces overseas. Units of our tactical airpower are assigned to commands in Europe and in the Pacific, where they are ready for use by the theater commander if they should be needed.

Just as this type of operation is geared to the deterrence of small conflicts, wherever they may occur, there is also a force capable of meeting the maximum conflict of general war. This is the long-range striking power of the Strategic Air Command.

General Sutterlin, as a former bomb wing commander, knows very well just how adequate this force is. Tonight I can give you only a general treatment of this command and its awesome job of deterring general war.

More than 90 percent of the nuclear striking power of the free world is contained within the resources of the Strategic Air Command, or SAC as we know it. The long-range bombers and the intercontinental ballistic missiles of the command form a blend of weapons of enormous range, flexibility, and firepower.

We have these aircraft—and soon will have missiles—dispersed over the Nation in such a way as to diminish enemy chances of knocking them out in the surprise attack. We have the capability of placing some of SAC's bombers on an airborne alert should the need arise. Much of the force is on ground alert, with crews ready to take them off on 15-minutes' notice. A few Atlas missiles are already on the launching pads, and more are coming, all to be ready for launching in a matter of minutes should it ever be necessary.

And all of this force is under positive control. The command has worked out effective systems to guard against triggering a world war ourselves. So this tremendous force is combat ready and poised for action, yet restrained by a leash that can only be loosened by order of the President, as Commander in Chief.

To give us all the warning possible about an impending attack, to insure that we will have that matter of minutes which could make the difference between victory and defeat, we are building an elaborate network of detection and tracking radars.

As we meet here tonight, we are within 30 minutes missile flight time of the launching sites of our potential enemy. Our detection system could pick up the flight of a missile about halfway along its trajectory. We would have, then, just 15 minutes in which to act, between the time the missile was detected and its impact.

So, in the length of time we might spend eating breakfast, we could be under attack.

Because such a thing is possible, our biggest job is to see that it never happens. This is what President Kennedy meant when he said, in his inaugural address:

"We dare not tempt them with weakness. For only when our arms are sufficient beyond doubt can we be certain beyond doubt that they will never be employed."

Keeping our forces in this condition during the years ahead is going to demand of all Americans the same level of dedication that we once felt only in time of actual war. Personal motives and wishes must be secondary to the national welfare. In the years ahead, even more so than today, the growth of our military power for peace will be tied to the progress of science.

We are already moving out into space. We are crossing the vast frontier that has always challenged the imagination of men. But isn't it a sobering thought that we are moving out into the cosmos before we have solved the problem of living in peace on earth.

While we extend our defense into space, then, let us also bend our efforts to the dissemination of our ideals around the globe. Let us serve our fellowman, to the best of our ability, in order that famine and disease, and the pestilence of war itself, will no longer impede our progress toward the goals we have set.

There is a long road to travel before we shall see these goals achieved. We face the most bitter and devious opposition we have ever faced in our national history. We are going to have to reckon with the possibilities of subterfuge and subversion, political blackmail, infiltration, and mounting pressures in many parts of the world in the years ahead.

We shall contend with these problems with all the tools at our disposal. We shall use every means to attain peaceful solutions wherever conflict threatens.

And as we work, there will always be two powerful forces clearly evident. One is our firm national purpose. The other is clearly superior military strength to back up that purpose.

On behalf of the entire Air Force, I can pledge continued dedication to the power we wield for peace.

And on behalf of the Air Force, I want to thank you for your continuing support of our activities as your neighbor. For myself, I want to thank you for this opportunity to spend these few hours with people who are helping maintain our essential air strength.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Provision for Voluntary Retirement at Age 62 Vitally Needed

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. BYRD of West Virginia. Mr. President, this morning I was afforded the privilege of appearing before the Senate Finance Committee, of which our esteemed Senator HARRY F. BYRD, is chairman. I testified on behalf of the age 62 voluntary retirement provision in H.R. 6027. Because this legislation will likely be presented to the Senate for consideration within the very near future, I ask unanimous consent to have my remarks before the Senate Finance Committee printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR ROBERT C. BYRD, OF WEST VIRGINIA, BEFORE THE SENATE FINANCE COMMITTEE IN SUPPORT OF H.R. 6027

Mr. Chairman, I am grateful for this opportunity to appear before your committee in behalf of H.R. 6027. I am specifically interested in the provision, beginning on page 2 of the bill, to allow men to receive reduced benefits at age 62.

When I first came to Congress in 1953, I introduced a bill in February of that year to permit men and women to retire, on a voluntary basis, at age 60. I reintroduced this proposal in subsequent years during my service in the House of Representatives. I came to realize, however, that the time has not yet arrived when we might expect to see voluntary retirement permitted at age 60. Consequently, last year I decided to modify my proposal believing that a half loaf is better than no loaf at all. Accordingly, when H.R. 12580, the omnibus social security bill, reached the Senate last year, I submitted an amendment to allow voluntary retirement for men at age 62 with reduced benefits. I succeeded in getting 18 other Senators to cosponsor my amendment, and I appeared before your distinguished committee in behalf of the amendment. Senator KERR and Senator HARTKE and others on your committee were as interested as I in the amendment, and the Senate Finance Committee adopted it. The Senate later approved the measure, but, regrettably, the amendment was deleted in the joint Senate-House conference action.

I reintroduced my proposal to permit men to retire at age 62 shortly after we convened in January of this year, and I might say, parenthetically, that I was responsible for inclusion in the Douglas committee report to the President of the recommendation that legislation be enacted to permit such retirement at age 62. The President later announced his support, and we now have the opportunity to favorably act upon the proposal and make it become a reality.

An estimated 560,000 people can be expected to get benefits under the amendment during the first 12 months of operation. Taking into account the increase in the minimum benefit also recommended at this time, the additional benefits that would be paid out during the first 12 months to men claiming benefits before age 65 would be $440 million. There would be no level-premium cost for this proposal.

Under this proposal, a man who decides to apply on his 62d birthday can draw social security benefits equal to 80 percent of the amount he would receive were he to wait until he reached his 65th birthday. He would have the option of receiving a proportionate increase—five-ninths of 1 percent—for each month he delays retirement after age 62. For example a man entitled to a benefit of $100 per month at age 65 would receive $80 a month if he chose to retire at age 62, under my amendment. If he decides to wait until he is 63 to apply, the benefit he would receive for life would be increased to $86.67 monthly. If he applied at age 64, his monthly benefit would be $93.34.

It is my understanding, Mr. Chairman, that the provisions which were adopted into law with respect to reduced benefits for women have occasioned no administrative difficulties. In the light of the experience gained from the years in which the lowered eligibility age for women has been in effect, I think one could be confident that the adoption of the proposal would prove to be similarly beneficial and advisable. In other words, the 1956 amendment has worked out all right in the case of women, and it should prove to be the same for men. At the time the 1956 amendment was adopted, there was some skepticism about how well it would work. It was charged that the lower retirement age would encourage employers to lower the compulsory retirement age for women employees. Opponents maintained that it would discourage the continued employment of older women workers whose potential work life would thus be shortened. Experience, however, has failed to bear out these skeptical fears and the average age of retirement for women has not been lowered by the reduced annuity.

I realize that there is some question as to whether it is desirable policy for the Government to encourage early retirement when the science of geriatrics is lengthening the lifespan of men. Yet, it is my understanding that only about half of the women eligible for retirement at age 62 elected to retire when the 1956 amendment was adopted. I think we can properly assume that not so great a percentage of men would elect to retire at 62. Many of the women who took benefits in 1956 had been working during the war years and had not been working immediately before the adoption of Senator KERR's amendment. Most men will continue to work until age 65 or somewhat thereafter as long as they are physically able or as long as there is employment. Moreover, Mr. Chairman, automation is here to stay and it constitutes a growing problem with which our society is going to have to deal more and more in terms of unemployment. A recent study of automation prepared by the National Planning Association points out that, according to Census Bureau estimates, the average annual increase in the labor force is presently 700,000 to 800,000 and that, by the year 1965, it will reach the figure of 1 million or more. It is necessary then that we find new job opportunities for these younger workers who are annually entering the work force.

Additionally, the problem of changing markets poses itself in the question of whether or not the needed job opportunities will appear at the right place and at the right time. The rate of increase in employment in some of the industries now being automatized does not begin to match the increase in productivity made possible by new processes. For instance, in the chemical industry, productivity rose 53 percent between 1947 and 1954, but employment rose only 11 percent. In oil refining, output increased 22 percent since 1947, but total employment fell by 10,000. Automation has made itself felt in the mining areas of my State. Whereas only a few years ago, 135,000 miners were employed in West Virginia, today less than 40,000 are employed. A continuous mining machine operated by 6 workers will load the coal originally requiring the time and labor of 40 men. The problem is not peculiar to West Virginia. The textile and shoe workers in the New England States have experienced the same sudden shift in an employment pattern which had existed for over 100 years. Further changes will create catastrophic dislocation of workers.

Mr. Chairman, there are approximately 1.7 million men who potentially would be eligible to retire at age 62 immediately if this bill is enacted as written. They would not be forced to retire. The choice would be an optional one, and it would be up to the individual. There are many—in fact, a majority, I would assume—of these men who would prefer to continue to work. Yet, on the other hand, there are some who would want to retire and who should retire. There are many individuals who are not physically able to continue working after they reach the age of 62; yet they are not disabled to the extent that they can qualify for disability benefits. This bill would permit these individuals to retire and make room for younger workers.

Mr. Chairman, this provision in the bill is of great importance to that relatively small number of men who, because of ill health, unemployment, underemployment or other personal reasons, find it impossible or ill advised to continue working until they attain the age of 65.

It is of importance to the thousands of unemployed coal miners in my State, many of whom have passed the age of 62, who are unable to find employment and who, in many instances, are physically incapable of working in the mines if jobs could be had. These individuals could elect, if they so chose, to retire, and by the provisions of this bill they and their families could have security, whereas, under present law, they must wait until they are 65 years of age to receive benefits. This bill, then, will mean a check instead of a handout, security instead of insecurity, and hope instead of despair for individuals in these circumstances. I hope that the committee will favorably report this bill and that it will leave intact section 102 which provides for a lowering of the retirement age for men.

Senator Humphrey Is Absolutely Right When He Says It Is Very Difficult for Tourists (Read Constituents) To Find in and Around the Capitol Building Adequate Places Where They Can Eat and Rest. It Will Be Even More Difficult, if Not Impossible, Next March When the Small Businessmen Who Now Provide These Services Are Pushed Off Capitol Hill Under Expansion Plans Adopted Without Hearings by the Democrats in Control of the Congress. Perhaps Senator Humphrey Would Be Willing To Take the Lead in Reexamining These Expansion Plans Now, and Let These Businessmen Testify

---

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. KEARNS. Mr. Speaker, yesterday in the other House, Senator HUMPHREY declared that "it is very difficult for tourists to find in and around the Capitol adequate places where they can eat and rest."

The solution offered by the distinguished Senator from Minnesota was as follows:

On both sides of the Capitol, around the Senate wing and the House wing, are very beautiful terraces which, with but little change in terms of their covering, could be made most useful, with the addition of tables, benches, canopies, umbrellas, and with the provision of some good service, which I believe we might be able to provide by means of a catering service. Thus, in addition to having the pleasure of outdoor recreation and outdoor eating, we could also make available to the citizenry who pay for this Capitol an opportunity to have a very satisfying and beautiful experience.

Senator HUMPHREY began his learned statement by asking:

Can we imagine that a Parisian would permit these beautiful terraces to be unused? In fact, these beautiful terraces around the Capitol could well be used for what some of our colleagues have been talking about; namely, sidewalk cafes.

It is always instructive and helpful to have the advantage of a speech such as this. We can benefit greatly from it. I wonder if the learned Senator has thought of the cost of a meal to the tourists which would be provided by such a catering service as he has in mind?

How much money would the Congress be called upon to appropriate in order to provide such facilities as he has mentioned?

Would the tourists be any more welcome than they are at present in the restaurants and cafeterias which the Congress has in its charge; and has provided at great cost, here on Capitol Hill where conspicuous signs say: "For Members of Congress," "For Senators," "For Members of Congress and Employees," and so on.

What hours would the new facilities be open?

At the present time, the restaurants and cafeterias of the Congress close after lunch, but tourists who are our constituents are busy sightseeing until late in the evening.

May I call to the attention of the distinguished Senator from Minnesota the House debate on May 22, this year, on the bill (H.R. 7208) making appropriations for the legislative branch for the fiscal year ending June 30, 1962.

It immediately becomes clear from even a quick perusal of this debate why it is that tourists, who are our constituents, find it so very difficult to locate in and around the Capitol Building adequate places where they can eat and rest.

Under expansion plans of the Congress businessmen on Capitol Hill have been the forgotten people of the Nation. They have been pushed farther and farther away from the Congress.

The Congressional Hotel was bought by the Congress for an office building and it has been in a sort of limbo for a long time.

Further, it is proposed to start clearing the residences, where tourists are welcome, in the square east of the Old House Office Building in August of this year, and the business establishments, where tourists can eat, will be demolished beginning in March of 1962.

The Congress passed the legislation authorizing these steps, and, with regard to the square east of the Old House Office Building, it is an open scandal that the residents and the businessmen there were never given an opportunity to be heard.

I include at this point an excerpt from the debate of May 22 to which I have referred:

Mr. AVERY. I have not read the committee report, and this matter, perhaps, may have been treated in it. What is the status of what is presently known as the Congressional Hotel as far as this legislative bill is concerned?

Mr. HORAN. Well, that is the property of the Congress, as you know. It has been leased to the Knott Hotel Corp. and the lease expires in about 2 years.

Mr. AVERY. Well, do we have any plans for it? Why are we in the hotel business?

Mr. HORAN. We are not in the hotel business. It was acquired as a part of the general expansion of the Capitol Grounds area, and within the next 2 years the decision will have to come on what disposition to make of it.

Mr. AVERY. Well, if we own the hotel, we are in the hotel business, whether we are actually managing it or not. Has the final price of acquisition been definitely determined upon? As I recall, a deposit was made in the court regarding its acquisition. Has the final figure been made?

Mr. HORAN. Yes; we have the final figure. I do not recall the exact amount.

Mr. STEED. If memory serves me correctly, the cost of that piece of property is $1.6 million. Yes, I find the precise amount was $1,686,000. It is now in the possession of the Congress, and whatever disposition is to be made at the end of the present lease contract will remain to be made by the Congress. It was found that it would be much cheaper to permit someone to occupy the building in the interim than to maintain it on a standby basis. When the property was acquired, that had to be taken into consideration, and since it was such a fine piece of property it was felt that it should be leased until it was determined what would be the most appropriate use of it. It seemed to be too good a piece of property to be torn down. And, by doing that, we saved some $60,000 to $70,000 a year, as I recall, to maintain the building on a standby basis.

Mr. AVERY. I thank the gentleman from Washington for yielding.

Mr. HORAN. Mr. Chairman, I yield 5 minutes to the gentleman from Iowa [Mr. GROSS.]

Mr. GROSS. Mr. Chairman, I take this time to ask the chairman of the subcommittee a few questions. I understand that the gentleman from Oklahoma is not a member of the Building Commission, but I thought perhaps he could clarify or answer a question or two, if he has the information. It is my understanding that it is proposed to start clearing the residences in the square east of the Old House Office Building in August of this year and the business establishments will begin to be demolished in March of next year.

Mr. STEED. That is correct. Those are the dates shown in the printed hearings.

Mr. GROSS. Now, the question is this, if the gentleman can answer: Why clear this taxpaying property? Why clear out these business establishments and these residences until there is some clear use for the property?

Mr. STEED. All I can tell the gentleman is this, that the House passed the bill authorizing its acquisition for addition to the Capitol Grounds, and that under that mandate the only way it can be made part of the Capitol Grounds is to clear it. What is being done was done under a legislative act. The clearing of the property is the completion of what that act of the House and the Congress authorized last year.

Mr. GROSS. Will not the gentleman agree with me that there is no purpose in clearing land or property that is now paying taxes to the District of Columbia until there is some use for that property?

Mr. STEED. Well, I am not in a position to disagree with the gentleman except to say this, and that is, under the law, within the purview of the commission in charge and not this committee, and what you and I think individually would probably have no bearing on it at this stage.

It is perfectly clear that if the small businessmen on Capitol Hill are forced off Capitol Hill they will not be on Capitol Hill to serve the tourists who are our constituents.

The way to make certain that there are adequate places available to serve the tourists who are our constituents, from any one of the 50 States, including Pennsylvania and Minnesota, is not to push the 100 small businessmen off Capitol Hill.

The core of the present difficulty is that absolutely no assurance has been given to Capitol Hill businessmen that if they did provide adequate places to eat and rest, and did make the necessary heavy investments, their property would not be taken over by Congress the day after they were opened for business, and without even having a chance to testify at hearings.

Where will the constituents of Members of Congress go to eat and rest when the small businessmen who have been courageous enough to open and maintain establishments providing these services under these conditions of continued harassment are pushed off Capitol Hill?

As I said in a speech in this House on May 18 this year, these businessmen on Capitol Hill are wonderful hosts and they make our constituents feel welcome when they come to Capitol Hill. Our constituents are not made to feel welcome in the cafeterias and restaurants of the Congress itself.

It is doubtful if the proposal by our esteemed colleague from Minnesota would actually improve the situation. The situation would be radically improved, however, if the Congress were to take the lead in encouraging the small businessmen on Capitol Hill to stay in business and assure them that they were safe from the capricious exercise by the Congress of the vast and impersonal powers of eminent domain.

I challenge Senator HUMPHREY, who has always been deeply concerned with the problems of small businessmen in all the States of our Nation, to hold hearings on this matter and invite the small businessmen of Capitol Hill to testify.

I am sure that Mr. Bassin, Mr. DeGiovanni, Mr. Palm, and their colleagues on Capitol Hill, and the larger businessmen who control the Knott Hotel Corp., are quite capable of providing adequate places where tourists can eat and rest.

All they need is the chance to do so, free from continued harassment by the Democratically controlled Congress.

Perhaps a final word on the subject might be that if the Congress is going into the hotel and restaurant business then a Parisian-style restaurant on the west front of the Capitol Building may be just what the doctor ordered.

In any event it is obvious from the record to date that the Congress can't legislate and successfully host restaurants and hotels for constituents at the same time.

The Congress—and this means the Democrats who are in charge of things at this time—must make up its mind whether to legislate or go into the hotel and restaurant business.

My own feeling is that it ought to legislate and let private businessmen run the hotel and restaurant business.

Racial Agitation Is Not a Moral Movement

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. TALMADGE. Mr. President, with characteristic eloquence and astuteness, Editor James H. Gray, of the Albany, Ga., Herald, has effectively exploded the false argument that the cause of outside racial agitators who are fomenting strife and discord throughout the South is a "moral movement." His penetrating editorial featured on the front page of the Herald's issue of May 23 correctly assesses it as the exact opposite and convincingly points out that the establishment of harmonious race relations is dependent upon mutual confidence and good will rather than application of force. I ask unanimous consent, Mr. President, that the text of this editorial entitled, "South Immoral?—Poppycock," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOUTH IMMORAL?—POPPYCOCK

A great deal of nonsense is being disseminated about the latest racial troubles in our region by assorted sentimentalists, bleeding-hearts and equalitarians, who fancy themselves as the "liberals" of the space age. These self-appointed social critics are sorely distressed. They are seized by the notion that the South in general, and the State of Alabama in particular, is acting both immorally and illegally in its resistance to the scatter-gun efforts to integrate the races.

Their argument runs to the effect that the South is immoral because it is opposing a "moral" movement. The "moralists," in this instance, are the Negro men and white women, traveling together in public carriers in interstate transport, who are sufficiently "courageous" to be willing to test the various segregation laws of the deep Southern States in this dramatic manner. They are "moralists" by definition of their sponsoring agency, the Congress of Racial Equality, because they are supposedly practicing the "brotherhood of man." And because the South does not hold with this kind of social experimentation, and because the South has legislated against such, it is "immoral."

From a legal standpoint, these "liberals" argue with much more logic that a U.S. statute permits this mode of travel, that Federal law takes precedence over State law, and that the Southern States therefore are in an intolerable legal position when they attempt to block the "Freedom Riders."

To our mind, however, both of these arguments miss the point. In the first place, we cannot perceive any "morality" entailed in transportation by bus—or by any other conveyance. The CORE people are on record that they are testing Southern statutes by "non-violent" means. But the fact is indisputable that, in so doing, they are engaging in a direct provocation for the avowed purpose, in the words of Georgia's Governor Vandiver, "of disturbing the people of a section who are otherwise peaceful." Is this a "moral" purpose? Far from it.

In the second place, the question of race relations, the judicial and executive branches of the Federal Government to the contrary notwithstanding, forbids a strict legalistic solution. For example, in the 7 years which have transpired since the U.S. Supreme Court first struck down the 85-year-old "separate but equal" dictum for the Nation's schools, only a handful of Southern schools have integrated their classrooms—and none voluntarily. The so-called "law of the land" is observed in the breach simply because Southern society—and not a few Eastern and Western communities—will not support it with a popular will.

This circumstance, but one of many, argues eloquently the Southern case that racial relations must be established and maintained through mutual confidence and good will, neither of which can be achieved in an atmosphere electric with naked hatreds, suspicions, and, above all, the application of force in the most sensitive area of all human contacts.

This is not to say, of course, that the mobs in Alabama—in Birmingham, Anniston, and Montgomery for the last week—can or should be condoned for their actions. Mob rule is alien to the American tradition. It is invariably destructive, never constructive. Neither is it a safety valve for the discharge of emotional energy, for it leaves in its wake festering sores which heal slowly, if ever, and destroys the middle ground on which the fair-minded can maintain communications with each other to reach accommodations equitable to all parties.

But this is to say that millions of southerners cannot, in truth, be branded as "immoral" for the irresponsible actions of a group of unthinking men reacting predictably to an unending campaign of clever harassment designed to enrich the treasury of the sponsoring racist organization. Try as it may, neither CORE nor the NAACP can resell this Nation the false doctrines first preached by "Uncle Tom's Cabin." Nor, more to the point, can either they or the national administration achieve racial equality at the point of a bayonet or the muzzle of a marshal's pistol.

The South's racial relations, like those everywhere in today's troubled world, will be established ultimately by men—not by laws, not by courts, not by self-serving politicians and, above all, not by dictation from any outside source.

JAMES H. GRAY,
Editor.

News-Times Civic Achievement Award Presented to Attorney T. Clark Hull

EXTENSION OF REMARKS
OF
HON. ABNER W. SIBAL
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. SIBAL. Mr. Speaker, under leave to extend my remarks, I would like to have printed in the RECORD the following article from the Danbury News-Times recounting the award of that newspaper's Civic Achievement Award to Attorney T. Clark Hull of Danbury.

Of all the distinguished recipients of this award, none has deserved it more than T. Clark Hull. I am honored to be able to place the account of his achievements and their recognition by this outstanding newspaper in the CONGRESSIONAL RECORD.

[From the Danbury News-Times, May 16, 1961]

NEWS-TIMES CIVIC ACHIEVEMENT AWARD PRESENTED TO ATTORNEY T. CLARK HULL

DANBURY.—T. Clark Hull, a Danbury attorney who has been prominent in civic affairs for many years, is the latest recipient of the Danbury News-Times Civic Achievement Award.

The silver bowl accompanying the award cites Hull as "a devoted advocate of improved local government" and "a zealous worker for his community."

One of the activities for which Attorney Hull is well known has been much in the news these days—the Representative Town Meeting charter for the town of Danbury.

A senate committee has sidetracked in the State legislature, at least for the present, a bill to validate the RTM charter vote last November.

HEADED CHARTER COMMISSION

Hull was chairman of the nonpartisan commission which drafted the charter submitted to the board of selectmen last June, after nearly 2 years of preparatory work.

The selectmen voted to put the charter on the ballot in the regular election November

n and townspeople approved it, 4876–3241. But the legal call of the meeting did not include the referendum question and the vote cannot go into effect unless and until the State legislature adopts a validating act.

Hull is a Danbury, native, son of the late Treat Clark Hull and of the late Mrs. Elizabeth Schmidt Hull Dalton.

He attended schools here, Yale University and Harvard Law School, with 40 months service in the Army Air Corps during World War II.

He became associated with Louis George, now a judge of the Circuit Court, and with A. Searle Pinney in a law firm which later merged with the law firm of Burton F. Sherwood to become the present firm of Sherwood, Hull and Pinney, with offices at 28 West Street.

He has been active in the Community Chest, serving as 1956 campaign chairman and as a division chairman and worker in other years.

He has also been a director and vice president of Danbury Hospital and has served it on fund committees.

CIVIC INTERESTS

He has been a member of the Danbury Library board of directors since 1957, the same year the Danbury Junior Chamber of Commerce designated him as Danbury's "Young Man of the Year."

Although he has held few political offices, among them tax attorney for the town at one period, he has been active in Republican affairs for many years.

His interest in better government found expression in the charter commission project and, more recently, in organization of the Committee of 1000. He is counsel to that group and a member of the executive committee.

The committee, which fought to retain zoning and planning in the town and then worked for a favorable vote on the RTM charter, is now concentrating its attention on school needs.

On frequent occasions Hull has been called on to serve as moderator of town meetings.

Attorney Hull and his wife, the former Betty Jane Rosoff, are parents of three sons, Clark, 11; Jonathan, 10, and Steven, 6. They live at 187 Kohanza Street.

Proposed University of the Americas

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. SPARKMAN. Mr. President, recently many proposals have been put forth for the purpose of strengthening friendship and understanding among the peoples of the Western Hemisphere.

One of the most effective and practical ideas which I have heard proposed calls for the establishment of a University of the Americas, where students and professors from the Latin American nations and the United States can meet and exchange ideas and views in a cultural atmosphere.

Senator GEORGE SMATHERS, of Florida, is a prime mover in the program. He is Chairman of the Inter-American Council of the People-to-People Program—the organization which is fostering the project—and is a trustee of the University of the Americas. The university has already received a charter from the State of Florida and is expected to open its doors in the near future to receive its first students.

Two outstanding newspapers have recently paid editorial tribute to the concept of the University of the Americas—the Miami (Fla.) Herald of February 23, 1961, and the Kansas City Star of March 8, 1961. I ask unanimous consent at this time that the editorials be entered in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Miami Herald, Feb. 23, 1961]

NOW, A LABORATORY OF FREEDOM

Traditionally in Latin America the rich stream of ideas flows from the universities. They are the centers of intellectual and cultural growth as well as political reform. They are democratic in organization and they combine a practical approach to current events with a cloistered dedication to knowledge.

This high station for such centers of learning gives a deeper meaning to the establishment here of the University of the Americas which was announced this week.

When the institution opens its doors, as it is expected to do in a few months, it will attract scholars from all hemispheric nations. In its opening phase the university will be confined to graduate study of social and political sciences. First students thus will be men and women of academic attainment, with interests in fields that affects national and international policy.

Senator GEORGE SMATHERS, as chairman of the Council of Inter-American Affairs of the People-to-People Program, was a prime mover in establishing the university. It will be privately financed, and while autonomous under a board representing many countries, will have close ties with the University of Miami. Frist classes will be in facilities made available by the University of Miami.

Since only ideas can solve the world's dilemmas this University of the Americas will be a laboratory of freedom. This is an institution highly conceived: "To train people to think, to discover and to speak the truth without restraint by the dictatorial authority of government or by any other agency."

From this concept a great university will surely grow. Miamians and Floridians have a responsibility to help it grow. All interested in inter-American relations have recognized the need for such an institution where the common heritage of the New World may be fostered. We are highly fortunate to have it in Miami and we are in debt to all who made this possible.

[From the Kansas City Star, Mar. 8, 1961]

A HEMISPHERE UNIVERSITY TO BUILD FRIENDSHIP

The proposal by Senator SMATHERS for a new University of the Americas strikes us as a sound idea that could promote hemisphere friendship. The suggestion calls for a bilingual institution for students from the United States and all other countries of North and South America. Regular university courses would be offered, with the emphasis on Hispanic North American cultures, history, geography, and ethnic heritage. The university would bring Latin and North American students together in order to build a better base of understanding.

Unquestionably, there is a great deal of misunderstanding between citizens of the Western Hemisphere. The United States frequently has been accused of a lack of interest in Latin America. People of South America complain that North Americans know nothing of their countries.

SMATHERS' idea has aroused substantial interest. President Kennedy has indicated support. The pledge of financial assistance by the national Veterans of Foreign Wars is a hopeful move. This is the early stage of starting with nothing more than an idea.

Location is important. Florida and Puerto Rico have been suggested. Financing must be worked out. This appears to be a project to justify Federal assistance.

This period of cold war tensions calls for strong moves to stimulate friendship. Foreign students who learn about the United States usually develop an affection and sympathy for our country and its aims. But the U.S. program of scholarships and exchange of students has been limited. The Russians concentrate on attracting foreign students. This year, Friendship University in Moscow is reported to be offering 600 scholarships for Mexicans alone.

A University of the Americas offers good possibilities for scholarships, seminars, conferences, cooperation, and language instruction. It would be focused on a vast region that is growing more rapidly than any other area of the world.

Recruiting for the Peace Corps

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. DEROUNIAN. Mr. Speaker, the following article by Richard Starnes, which appeared in yesterday's Washington Daily News, shows what happens when fuzzy-minded pantywaists bring forth their impractical ideas:

A PAINFUL LESSON?

(By Richard Starnes)

NEW YORK, May 24.—There is some heartening evidence that young Americans have looked behind the recruiting-poster buildup of the Peace Corps and have begun to have sober second thoughts that might do credit to some of their elders.

The Peace Corps illustrates as well as any of a number of other examples how painfully Washington is learning a lesson most junior executives learn before they earn their key to the private gents' room. The lesson is simply that there is a gaping chasm between eloquent, idealistic notions, and the grim, practical and frequently cruel realities of this world.

It was, for instance, almost impossible to believe that one of the early acts of the New Frontiersmen would be to send word to the Kremlin that they would appreciate a 6-month moratorium on crises while the United States shaped policies designed to bring the Communist conspiracy crashing down.

The howls of glee this overpowering naivete must certainly have wrung from Khrushchev and company would have been wondrous to behold. There are, of course, other instances of this curious belief that literacy and good intentions will somehow set things to rights.

The President's ringing declaration on March 23 that Laos was worth a war (these are not his words but they are indeed a fair paraphrase of them) is now revealed as an empty statement by a man who either didn't know what he was talking about, or a man who was foolishly trying to run a bluff on the master bluffer of them all.

Again, the Peace Corps was a concept that would surely appeal to all hopeful, right-

thinking youngsters who were not even vaguely aware of the overpowering magnitude of the problems they were being called upon to solve. In one dispatch on this subject I suggested that the Peace Corps might become as notable a failure as the tragic children's crusades, although hopefully would not end with its personnel sold into slavery in Egypt.

Certain earnest young persons took me to task for this, some even confusing skepticism with cynicism, and others suggesting that I didn't care if the great unwashed masses of the world remained in squalor and ignorance.

In point of fact, of course, anyone who has felt impotent fury at the sight of hungry children being consumed by flies and ringworm is going to hope with every fiber of his being that their lot can be improved. But any realist must conclude that wishing is not going to make it so, that having the appropriate attitude is not going to lift the starving throngs of Egypt or Iran to a better life.

The Peace Corps is based on the assumption that a handful of young Americans can make some difference in the world's terrible, fulminating problems of malignant overpopulation and its handmaidens of hunger and disease.

After the first blush of enthusiasm, however, the young people of this country seem to have penetrated the happy-talk and developed some serious reservations about the program. In any event, the President complained recently that the number of Peace Corps volunteers was disappointing.

Out of 200,000 questionnaires distributed, fewer than 8,000 were completed and returned at last report.

Government by Executive Order

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. BRIDGES. Mr. President, I was very interested in a column written by David Lawrence in which he discussed a Government directive and which he entitled "Government by Executive Order."

It is amazing that the executive branch of Government can effect such powerful control over industry by the simple device of issuing an Executive order over the signature of the President. Under the guise of an antidiscrimination edict insofar as employment is concerned, the individual or company who successfully bids for a contract is under a heavy fist since he must sign a contract and agree to the provisions of the Executive order.

Mr. President, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOVERNMENT BY EXECUTIVE ORDER—DIRECTIVE ON JOBS UNDER U.S. CONTRACTS HIT AS NEW FORM OF DICTATORSHIP

(By David Lawrence)

A new form of dictatorship is arising in America. It is "Government by executive order."

It means that, without the enactment of a single amendment to the Constitution or any new laws by Congress, President Kennedy can put out of business any company that refuses to obey the edicts he has just issued.

Every department of the Government that buys anything from business—whether it be pencils or paper clips or typewriters or window shades or guns or mechanical parts of a defense weapon—must abide by the decree issued by the President.

Every time the Government authorizes a purchase—even a subscription for a daily newspaper—the company must accept as a part of the order an agreement which says:

"The contractor will not discriminate against any employee or applicant for employment because of race, creed, color, or national origin. The contractor will take affirmative action to insure that applicants are employed, and that employees are treated during employment, without regard to their race, creed, color, or national origin.

"Such action shall include, but not be limited to, the following: Employment, upgrading, demotion or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the contracting officer setting forth the provisions of this nondiscrimination clause.

"The contractor will, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive consideration for employment without regard to race, creed, color, or national origin * * *.

"The contractor will comply with all provisions of Executive Order No. 10925 of March 6, 1961, and of the rules, regulations, and relevant orders of the President's Committee on Equal Employment Opportunity created thereby.

"The contractor will furnish all information and reports required by Executive Order No. 10925 of March 6, 1961, and by the rules, regulations, and orders of said committee, or pursuant thereto, and will permit access to his books, records, and accounts by the contracting agency and the committee for purposes of investigation to ascertain compliance with such rules, regulations, and orders.

"In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract or with any of the said rules, regulations, or orders, this contract may be canceled in whole or part and the contractor may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order No. 10925 of March 6, 1961, and such other sanctions may be imposed and remedies invoked as provided in the said Executive order or by rule, regulation, or order of the President's Committee on Equal Employment Opportunity, or as otherwise provided by law."

This extraordinary document has been received by tens of thousands of companies and individuals who do business of any kind with the Federal Government. But the most sensational feature is in the last paragraph, which says:

"The contractor will include the provisions of the foregoing paragraphs (1) through (6) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the President's Committee on Equal Employment Opportunity issued pursuant to Section 303 of Executive Order No. 10925 of March 6, 1961, so that such provisions will be binding upon each subcontractor or vendor.

"The contractor will take such action with respect to any subcontract or purchase order as the contracting agency may direct as a means of enforcing such provisions, including sanctions for noncompliance."

The 14th amendment to the Constitution—from which the alleged authority in the whole nondiscrimination controversy has been derived—says that "the Congress shall have power to enforce, by appropriate legislation, the provisions of this article." But President Kennedy has let it be known that he does not need any more laws on civil rights. He is using instead the device of the Executive order, even though bills to set up a Federal Fair Employment Practices Commission have been defeated several times by Congress. No law has been passed to govern the relations of contractors to the Government or their methods of hiring employees.

It might be assumed that the aggrieved party could go to court and argue that no such authority is granted under any law or any article of the Constitution. But, unfortunately, it is difficult from a legal standpoint to sue the Government without its consent. Supreme Court decisions have upheld that viewpoint.

So, coercion and compulsion now are to be used to obtain compliance with Executive orders and decrees, and the only recourse the injured citizen will have is to the Congress and his fellow citizens, who alone can put an end to dictatorial Government.

The 1964–65 New York World's Fair

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. DELANEY. Mr. Speaker, the New York World's Fair of 1964–65 will be the most impressive international exposition of all time and, as a showcase for new concepts in science, invention, industry, education and the arts, promises to be the most significant. The primary theme of the fair will be "Peace Through Understanding."

Under leave to extend my remarks, I include a talk given before the National Press Club on May 22, 1961 by Robert Moses, president of the New York World's Fair Corp., under whose brilliant direction plans for the fair are already remarkably advanced:

THE PRESS AND THE FAIR

(Remarks of Robert Moses on the World's Fair at the National Press Club, Washington, D.C., Monday, May 22, 1961)

On this spring day, I promise to be brief when, to paraphrase the late Mr. Chaucer in printing terms: "Sumer is icumen in etaoin shrdlu."

It is nice of you to ask me to join your roster of guests and to give me a chance to speak about the coming New York World's Fair, but why you should stay indoors to hear a dubious tenor sing for his lunch, when you could follow any pied typer along the Potomac to greener fields, is beyond me.

I feel a little dizzy here, far from the lower strata of city, suburb, and State which are my habitat, translated in an hour to the higher sublimated echelons of Washington and to global affairs, an obscure bureaucrat and dirt mover, who, in spite of past indiscretions, maintains a prudent regard if not always a slavish admiration for the press. I have always approached the press, the air, and Madison Avenue with decent respect

this side of idolatry, remembering that as fast as images are produced, iconoclasts reduce them to rubble and that one man's Galatea is another's Frankenstein. I have found that the press, operating in the main from safe shelters, is often more thin-skinned than its exposed and unprotected victims.

Having diligently avoided science in college, I now find myself inarticulate and bewildered in an age of mathematical physics and spatial exploration. Infants lisp in numbers, and Planck's Quantum Theory takes the place of nursery rhymes. I confess to being on an intellectual level with the children in one of New York's public schools who were asked in an examination, "Who was the first to conquer space?" Over half the class replied triumphantly: "Castro Convertible." Nevertheless in spite of commercials, funnies, and Westerns, American youth with its native mechanical bent has a grasp of science which my generation, brought up on the elective educational system, succeeded in avoiding.

So much for personal references. Now to the fair. Most of you will recall "The Great Gatsby," the best thing Scott Fitzgerald ever did. The time was the crazy period after World War I and before World War II. The scene was Long Island among the crowded old causeways, turnpikes and speedways of the north shore leading out from town. The central incident occurred at the Corona Dump at Flushing Meadow, which we leveled for the World's Fair of 1939 and 1940. This is how Fitzgerald described it: "About halfway between West Egg and New York the motor road hastily joins the railroad and runs beside it for a quarter of a mile, so as to shrink away from a certain desolate area of land. This is a valley of ashes—a fantastic farm where ashes grow like wheat into ridges and hills and grotesque gardens; where ashes take the forms of houses and chimneys and rising smoke, and finally, with a transcendent effort, of ash-gray men, who move dimly and already crumbling through the powdery air. Occasionally a line of gray cars crawls along an invisible track, gives out a ghastly creak and comes to rest, and immediately the ash-gray men swarm up with leaden spades and stir up an impenetrable cloud, which screens their obscure operations from your sight."

As city park commissioner and landlord of the first fair, I had the tememity to write a piece for the Saturday Evening Post in 1938 entitled "From Dump to Glory," telling about the disappearance of the ash mountain and the emergence of a park. Some of my fellow directors of the fair did not speak to me for months afterward, but they eventually relented and now I find myself back in the meadows as president of another fair.

In those revolutionary decades between 1940 and 1960 astonishing changes in the world occurred, and these constitute the best reason for another fair, the occasion for us to pause for reflection, review, appraisal, and a long look into the future. If this were merely a scheme to attract crowds and promote local business, I would not be here today, and in fact would be no part of the fair. At my time of life, hearing however faintly the rolling of a distant drum, there would be other larger purposes to serve. If you will bear with me I shall try to explain what, in my opinion, makes this World's Fair significant.

The new fair will occupy roughly the same space as the previous one, but the buildings will be taller, the exhibits more numerous, sophisticated and expensive, the emphasis somewhat different, the attendance much larger, and the problems of access, internal transportation and parking therefore more pressing. Modern approaches we shall have, by rubber, rail, air, and water, the most complex of this arterial age, and plenty of ways of parking and getting from place to place without the bone weariness of conventional sightseeing.

The theme of the fair is "Man's Achievements on a Shrinking Globe in an Expanding Universe." Its main objective is peace through understanding. Its purpose is predominately educational which, among other things, entitles us to various forms of tax exemption. There will be a balance at the end to finish the park and for education. After 1965, when the fair is leveled and hardly a rack is left behind, Flushing Meadow will be the city's finest park. As in the case of the new landscaped shores of the St. Lawrence where our dams have created an immense lake, the scars of construction heal fast. Today the St. Lawrence, like the Father of Waters, again flows unvexed to the sea.

The total investment in and close to the fair will be about a billion dollars. The benefits, direct and indirect, to the community will be large. The advantages to the Nation and world, if we are successful in our large aims, will be incalculable. As to our sponsors, President Kennedy has given the fair his blessing. The three living ex-Presidents of the United States are honorary chairmen. Our board looks like a living Hall of Fame of leaders in American life. Our small staff is composed of experienced people aiming from the start at solid public respect rather than easy popularity. We have no hoarse rabble of Coney Island shills and barkers. We have no army of retainers. Practically all of our design construction and operation is farmed out to competent private companies.

There has been much loose talk about the antagonism of the Bureau of International Expositions in Paris to our fair. We do not take this seriously, even if it means a boycott by a few nations as such and the substitution of foreign industrial exhibits by progressive businessmen. The BIE is a curious administrative agency established by the so-called Convention of 1928 Relating to International Exhibitions. This convention applies only to Government and Government-controlled exhibitions, not to those of a free enterprise nature. This convention, therefore, by definition and under its own express wording has no application at all to a major, free enterprise exhibition of the type to be held in New York.

The United States does not belong to the BIE. It could only join by a treaty approved by the Senate, something quite unthinkable. The BIE insists on a single year fair and no ground rental. We require 2 years and rental revenue. Other rules of the BIE are inapplicable in the New York Fair. We did not joint the BIE at the 1939–40 fair. The Seattle fair was licensed as a secondary, 1-year fair and is in no way comparable to ours. We have no quarrel with Seattle and they should have none with us. This country is big enough to stand a significant Pacific fair in 1962 and a larger one on the Atlantic seaboard in 1964 and 1965.

You have no doubt also heard echoes of obscure wranglings about art at the fair. The avant-garde are intolerant, fanatical and armed with sharp stones in their glass houses. We belong to no school at the fair, subscribe to no thesis, worship at no artistic shrine, advocate no architectural millennium. We are sold on Thoreau's observation that if a man does not keep pace with his companions, perhaps it is because he hears a different drummer. The exhibitors, subject to the simplest rules of ground coverage, height and open landscaped spaces, will call the shots, draw their own pictures, pick their own artists and builders and decide on their own exhibits.

They can have literally anything and everything conceived, designed, and built since man gladdened and saddened the heart and obstructed the view with his architecture. They can have replicas of the Seven Wonders of the Ancient World. They can have Renaissance, Louis XIV, Tudor, Jacobian, Jeffersonian, Victorian, General Grant, Bozart, Stanford White. Nervi, Bauhaus, Lloyd Wright, Baroque, Rococo, Ingloo, Ankhor Vat, animated typewriters, frozen music, and the ecstasies of Viennese pastry cooks. If that's not democracy in design, what is?

Our rules will not give any self-constituted clique control and a patent on which they can set their seal. It will make for free enterprise, variety and perhaps some confusion in the minds of those who want everything to conform to a single pattern. Here and there a square, patio, circle, or campus will be formed by a group of the United States, or of new African Republics or of Central American countries with a style and furnishing reflecting ancient pride or awakened ambition. This is for them, not for us, to determine.

The few objects of art which will remain in the park will be passed on by a design board and subject in the end to the taste of the City Art Commission. There will be no Greek revival such as followed the Chicago Exposition of 1893, which put a blight on all originality and native talent in architecture for half a century, and pockmarked the southland with silly wedding cake boxes flanked by Corinthian columns where the candlelight gleamed in the sycamores and the banjos were aringing. In those days we did not yet have the brash self-confidence in the arts which a little later we so abundantly and riotously manifested. Everything distinguished, as Governor Smith used to say, had to be marvelous and from the Old World.

We have been deluged with theme symbols—mostly abstract, aspirational, spiral, uplifting, flashing, or burning with a hard and gemlike flame, whose resemblance to anything living or dead is purely coincidental. I can comprehend the magnificent symbolism of a four-footed musical theme like that of Beethoven's Fifth, reverberating in a deaf man's brain, knocking at every door and echoing round the world, but the symbolism proposed by the avant-garde at Flushing Meadow even if it be ambrosia to the intelligentsia, is surely caviar to the general.

Our United States Steel armillary sphere has been derided and we have been accused of being crude, dull, defeated, uncouth Boeotians, lewd fellows of the baser sort who should be removed and replaced by what Mayor Hylan felicitously referred to as "art artists." One indignant critic telegraphed me with simple scorn: "You disgust me." There is nothing quite like the bitter intolerance of the newly emancipated practitioners of the arts who, having made a clean break with the past, are off on their own, sailing a crazy course on uncharted seas. No one begrudges them their freedom, but why should they insist that all other Argonauts follow in their wake?

Speaking in our Capital City, I must emphasize the extraordinary opportunity of this administration and Congress to offer to a curious an critical world as the central exhibit of the fair, in an ingeniously designed pavilion, an epitome of what this Nation of, by and for the people signifies to democracy everywhere, graphically presenting the source of our inspiration, the secret of our civilization, the American dream. To give form to this concept, our deepest thinkers and our cleverest artificers should be recruited to imagine, design and furnish the U.S. Pavilion. We want no tame, shopworn stereotypes, no dead collections of historical relics, no wooxy nostalgic sentimentalities, no frantic boasts and foolish words. We want what will compel the respect and even the admiration of mankind.

We must rise above patriotic knickknacks, pawnbroker items, waxworks, antimacassars, doilies, bustles, stamp and coin collections and clay replicas which pedestrain minds too often offer in competition with what new nations have to show. Shall we acknowledge that Yankee genius is satisfied to bark at the moon while the Russians actually land there? To be sure, the race is not always to the swift nor the battle to the strong nor yet bread to the wise, but the odds are two to one on speed, brawn, and brains.

Our Federal exhibit should present not the graven image but the true face of this Nation and the immense variety and richness of American life. The central, focal U.S. pavilion is no place for clichés, patronage and the lowest common denominator. In the area of space accomplishments we must trust our National Government as well as our private industries to match the best that the Iron Curtain countries may offer. The graphic presentation of our own advances will require all the genius we can recruit in the visual arts. Surely our scientists who are spending so freely on research and experiment can dramatize for the layman sea water desalted by atomic energy, the reclamation of the immense parched and thirsty wastelands of the earth, plankton as a breakfast food and the travels and exploits of rocketed, weightless men, or perhaps give us a replica of the mysterious, atomic laboratories where they rudely awaken the sleeping energy of billions of years and the isotope is the modest symbol of our hope and deliverance. We don't have too much talent to draw on. Many an executive hunting for ideas for the fair sighs and wishes there were someone around today with the genial madness of Norman Bel Geddes, someone who knows that all the world's a stage and that we are such stuff as dreams are made on.

I like to compare our World's Fair to the Olympic games as I saw them last summer in Rome. The Olympics furnish common ground. They invite friendships of widely different and on the surface antagonistic people. They provide free, honest, open competition. They have nothing to do with diplomatic practices and ideologies. They say to every nation: Send us your best, These will be well received and treated, and will find new friends in congenial surroundings.

The Olympics teach us to be aware of the second-rater, the braggart, the bully, the hollow man with the big muscles, the stylized athlete, the clotheshorse, and to admire speed, coordination, supple strength, rhythm, iron nerves, stamina, courtesy, the instincts of what we loosely call a gentleman, modesty in victory, good sportsmanship in defeat, inoffensive pride of nationality. That's what we aim at in the field of culture, the arts, science, industry and the almost forgotten gaiety of nations. The Olympics are a call to action, not a monument to the futility of words.

I am often asked what are the relative roles of the Lincoln Square Center of the Performing Arts and the World's Fair in 1964–65. A neat little distinction could be made between the arts which perform and those which don't, between the dynamic and the static. That, however, is just a little too pat. We believe the fair should not attempt to imitate, duplicate or compete with what the performing arts can do better. It is the high hope of New York that at Lincoln Square and the fair we as partners may stimulate productive and friendly international rivalry and a generous reverence for talent wherever it may originate.

Not for us at the fair the magnificent artificialities of the grand opera, the lighter arias of comique and bouffe, the strained tenderness and grievous solemnity of philharmonic and chamber music. These are for Lincoln Square. At the fair, bands, popular music, jungle drums, and native dances. We have signed a memorandum of understanding with the performing arts. A memorandum of this sort in this legalistic vale of tears is an affirmation of high common public purpose and honest friendship. It is not an oath in the Bibical or Anglo-Saxon sense, nothing you expect to litigate, nothing that involves the quid pro quo and consideration of bargaining in the bazaar, market place, or Rialto. It says simply "This is our goal. We expect to reach it together."

We builders of pageants are not the only targets of the critics. The creators of culture at Lincoln Center too will have their little private purgatory, for the sidewalk superintendents are already hinting broadly that nothing original, distinguished, cleansing, and significant can rise from such brilliant facades and magnificent surroundings and that only the crust of loneliness eaten in rags, garrets, and tears can produce great art.

New York is a baffling, hurrying town. I make no apologies for it, because most of the time I am proud of it. The slaughterhouses go and the U.N. comes in. Soon the tides of trade and pleasure flow by as though it had always been there. An erstwhile President or Emperor of Japan rides the elevators in the Waldorf Towers and is unrecognized. A slum disappears and a cathedral of culture takes its place, an oasis of peace, harmony, and quiet in the midst of much senseless activity. There is a certain inexorability about every big city. This is our New York which, like time, devours all things, which swallows statesmen and generals and pauses not to reck the rede.

Do not however for a moment assume that New York is inhospitable or unfriendly. The fair, like New York itself, will have a thousand faces. It will also have a heart. Some of you may call us absurd, but we make bold to promise that in Gotham, so often and mistakenly advertised as a place of steel, stone, glass, tension, noise, wrath, and tears, visitors in 1964 and 1965 will find a friendly welcome, kindliness, and a sense of brotherhood.

Well, my press friends, if we avoid the conventional barker's ballyhoo, don't think we are snooty or supercilious. We shall have the goods, the showcase and the performers from all over what Al Smith called the "known world." I have not attempted to convince you that this is an ideal time to prepare for such an exposition. But what is an ideal time and when in the world we live in and project into the immediate future, will there be a perfect occasion?

Every effort at cooperation of nations outside of the conventional international organizations and procedures should be encouraged and exploited. The seeds of friendship take root, grow and flourish in strange places, reclaim deserts and change the face of nature and man. What can you of the fourth estate, who write so much about practical idealism and honest, free competition, lose by giving us your full support?

"Hope's" Cargo Is Medical Aid

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 25, 1961

Mr. HUMPHREY. Mr. President, Dr. Malcolm A. McCannel, a Minneapolis physician, has recently finished a tour of duty with the good ship *Hope* in Indonesia. His touching and enlightening letters describing the contribution which Project Hope is making to alleviate the human suffering in southeast Asia as well as to promote international understanding through compassion should be read by all, for they truly represent America's humanitarian spirit. Therefore, I ask unanimous consent that the May 14 Minneapolis Tribune article entitled "*Hope*'s Cargo Is Medical Aid," which contains excerpts from Dr. McCannel's excellent letters from Indonesia be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Minneapolis Tribune, May 14, 1961]

"HOPE'S" CARGO IS MEDICAL AID—CITY DOCTOR DESCRIBES INDONESIA VOYAGE

(EDITOR'S NOTE.—Project HOPE (Health Opportunities for People Everywhere) is operated by a nonprofit charitable organization and is designed to bring America's medical knowledge to newly developing countries. Malcolm A. McCannel, a Minneapolis physician, was abroad the hospital ship *Hope* earlier this year when the ship visited Indonesia. These are excerpts from his letters.)

(By Dr. Malcolm A. McCannel)

JAKARTA, INDONESIA, March 21.—When I arrived in Jakarta, it was in the midst of the 3-day celebration of Hari Raya, a Moslem holiday. This is not the time to arrive full of business and direct action plans, but it is a good time to see people in this tropical area celebrate their holiday with vim.

After clearing with Project HOPE, and being briefed, the rotators (volunteers, serving without pay) are flown out one way or another to the ship which has already been to Surabaja, Bali, Sumbawa Besar, Makassar, Ambon and is now in Kupang on the island of Timor, some 1,200 miles from Jakarta.

One of the early stories about the *Hope*, which I heard while in Jakarta, concerned an Indonesian woman who needed abdominal surgery for what turned out to be a far-advanced malignant disease.

Despite the poor prognosis, the *Hope* doctors and entire complement labored all one night and part of the next day in an attempt to make her more comfortable and help her condition.

Later, our American nurses found that their Indonesian counterparts were amazed at the concern and effort put forth toward helping this woman. In their minds "the case was hopeless, why bother."

In this Far Eastern country, nurses occupy a unique position in the Indonesian society and when they first came aboard the *Hope* it was noted that they were somewhat distant, standoffish and reserved in their treatment and care of patients—even the pediatric ones.

When they observed the American nurses evincing a great deal of compassion and what we call TLC (tender loving care), they began to follow suit and one of the chief nurses, Dorothy Aeschliman, San Francisco, Calif., pointed out with understandable pride, the warmth and playfulness of the nurses with their little Indonesian patients after being with the *Hope* a few months.

KUPANG, INDONESIA, March 24.—The *Hope* has arrived on one of the easternmost islands of Indonesia, Timor.

This 16,000-ton mercy ship is staffed by medical specialists from America as well as a full complement of technicians and nurses from Indonesia.

At sea and also while in port, an active teaching program goes on almost every night

with movies, seminars, lectures, and demonstrations being given on a very tightly organized schedule.

During the 2-week stay in port, an integrated medical program is carried out on the ship as well as at the local Indonesian general hospital.

Because Indonesia is woefully lacking in what we consider necessary medical staffing, the one doctor for every 80,000 persons has impressed all of the stateside medical staff very much.

Many local doctors are Chinese who have long called Indonesia their home. In no place has the *Hope* run into anything but a cordial, friendly, and hospitable reception.

The *Hope* clinic on land and the specialty clinics, the majority of which are conducted on the ship, screen an enormous number of people during the short day.

The X-ray department is doing a mass chest X-ray survey on shore.

James Youker, recently from the University of Minnesota medical school, is compiling interesting statistics on the incidence of diseases revealed by the roentgen ray.

The clinic in Kupang is situated on top of a hill overlooking the harbor and the *Hope* has anchored a quarter mile from shore. The launches ferry back and forth continually.

All of us have been impressed with the quickness with which the Indonesian nurses, especially in the operating room on the ship and on shore, have caught on to what to many of them have been brandnew techniques.

The 8:30 a.m. clinic is a pleasant but rather congested madhouse with every patient accompanied by four or five relatives.

Many are dressed in their native sarongs and grins are wide.

I had been told that Indonesians are quiet, reserved, unsmiling and somewhat shy. On the contrary, after the ship is 24 hours in port, they are smiling, gracious and most friendly.

In this patriarchal society, the women still walk a few paces behind their menfolk and are more reserved than the men. But their gentle stoicism stands them in good stead for all of the necessary but radical surgery which is often proposed.

ENDE, INDONESIA, March 26.—This morning the *Hope* steamed into Ende on the island of Flores, about 1,000 miles east of Jakarta.

The ship was responding to a call made because of the recent earthquake which had supposedly destroyed many of the dwellings here.

As in all the ports at which the ship has stopped, we were greeted by a welcoming committee consisting of hundreds of youngsters, possibly more charming than the children at home because of the nostalgia they evoke from the medical staff.

The local doctors, two from Ende and one from the other side of the island, had already anticipated our arrival and about 30 minutes later a *Hope* clinic was in operation.

The language of this island poses quite a problem because, although our many Indonesian doctors staff members speak the national language, each island has its own dialect.

So medical diagnoses are often made by looking, palpating, smelling and listening, rather than by compiling a long-drawn-out past and present history.

Most of the cases seen are problem cases that are beyond the scope and facilities available at each port.

PAMPHLET WELCOMES PATIENTS

When patients boarded the *Hope* during its Indonesian tour, nurses presented each a pamphlet introducing the hospital ship. Printed in English as well as in Bahasa, national language of Indonesia, the pamphlet reads:

"Welcome aboard the SS *Hope*. This ship is a hospital ship to exchange knowledge between the American people and the Indonesian people. It is a mission of friendship and understanding between our peoples.

"There will be no charge for anything you receive on this ship because this ship is supported by contributions from American schoolchildren, farmers, labor unions, business and professional people, workers and industry.

"Our ways may seem strange to you, but please be patient with us and we will try to understand your desires and make your stay comfortable and pleasant.

"We have tried to learn some of your language, but the few words we know are not sufficient to understand your illness and its requirements. Your Indonesian doctors and nurses will help us understand your needs.

"When you have finished reading this, the nurse will show you what to do. We hope you have a pleasant stay with us. The American people wish you well."

BIMA, INDONESIA, April 5.—The *Hope* has arrived at Bima, a small town nestled in a sailing cove on the north side of the island of Sumbawa.

Bima's medical problems were well organized prior to *Hope's* arrival by an energetic Chinese-Indonesian named Dr. Tan Hong Djwan.

The *Hope* actually does a great deal of good in catching up on the backlog of the local medical problems and at the same time bringing what we hopefully wish is a free expression of the American people that made the People-to-People Health Foundation possible.

Many Americans I talked to before I left did not realize that the *Hope* is financed by business, industry, labor unions and everyday people.

The only Government concession is the loan of the hospital ship, formerly the *Consolation*, brought out of mothballs and refurbished in Seattle, Wash., and San Francisco early last fall.

The ship is operated at cost by the American President Lines. The fuel is supplied by the American petroleum industry.

American pharmaceutical houses supplied the best and newest in medications.

The examination machines, surgery instruments and diagnostic equipment are of first-class quality, thanks to the surgical and medical instrument companies of America.

It may sound presumptuous to talk about the *Hope* "spirit," but since I am only a short time rotator rather than a year-long member of the medical staff, I can testify to the impact I felt when I arrived on the ship and saw the feeling and response to odd hours, difficult work shifts and all the other inconveniences of opening up and closing down a medical facility as well as trying to provide services during our short stays in port.

Here's the course of a typical day during the *Hope's* visit to Bima:

Breakfast begins at 6:30 a.m. for the surgical staff, who get off to an early start.

The ship to shore shuttle service starts promptly at 8:30 a.m. The first launch is loaded down with clinical doctors, nurses, technicians, box on box of gear, necessary equipment and additions to the depleted shore pharmacy.

This hospital ship has an intensive care unit as well as a pediatric ward.

The care unit keeps all post-surgical cases at least the first day, and longer if blood and other critical therapeutic procedures are needed. The beds are an interesting Navy type, steel rodded affairs hanging by chains from the bulkhead and supporting columns in the ward.

The patients are sturdy, uncomplaining and pleasant and many are very, very sick.

About 10:30 each morning, the first launch full of new patients to be screened and admitted to the hospital arrives and all are carefully wrist-banded. Routine admission work includes a chest X-ray, urinalysis, blood count, and temperature check.

In surgery, three spacious operating rooms are going full tilt. Dr. Robert Pulliam, Longview, Wash., this morning had six cleft lip repairs mostly in adults.

Tomorrow he is to remove a lower jaw tumor which is the size of a small watermelon. We judge it to weigh 10 or 12 pounds.

The general surgeons are removing growths, repairing hernias and performing many orthopedic procedures, often on neglected and untreated acident victims.

This is a Moslem land and often if "Allah wills it," a condition can get out of hand before the patient feels he should seek other consultation.

The ancillary services also deserve a mention. We have the best blood bank in the whole Pacific. Fresh blood is drawn from the local citizenry and this is no small problem when one considers the amount of systemic diseases and just plain anemia which so often exists in prospective donors.

The pathology department run by Dr. Robert Hanan, Durango, Colo., can do a frozen section for possible malignancy as slick as any at university hospitals.

Another interesting facet of the ship is a dairy department run by Al Adams, San Francisco. By ingenious use of powder concentrates, chilling and aeration, ice cream, milk and other dairy products taste like the real thing. Chocolate milk or "susu" is especially enjoyed by our Indonesian patients aboard ship.

AMPENAN, INDONESIA.—The *Hope* is at anchor on a gently rolling swell off the town of Ampenan.

Few tourists visit this island even though it is only 35 miles across the Strait of Lombok from famous Bali whose Mount Agung can be seen through the swirling mists like Bali Hai of the song.

The staff on the initial clinic launch that left early the first morning, was impressed with the beachside activity.

Myriads of piles of exportable produce stretched along the beach on either side of a rickety dock that required major repairs before our senior medical officer would give his stamp of approval for the heavy patient traffic that was expected.

Three kilometers from the beach at Ampenan is Mataram, a city of 80,000.

Three doctors greeted us, the chief one being Dr. Arzin, chief of the department of health; Dr. A. Teng Hway Nio, assistant to Dr. Azrin, and Dr. Liem Sik Lok, chief of the Mataram hospital.

Dr. Teng is a very efficient lady doctor who had supervised the registration of 143 patients.

We have learned not to be deceived by a low registration on the initial day because now, almost a week later, we are so jammed that several of the specialty clinics have stopped screening patients altogether for lack of operating time, bed space and just plain facilities until some of the backlog is caught up.

The eye, ear, nose and throat staff manages to do about 15 surgicals a day. General surgery follows suit.

Pediatrics has more than 20 full beds at all times. The internal medicine department keeps the laboratory hopping, evaluating odd fevers, lumps, coughs and strange parasites, as well as jealously taking its full quota of hospital beds.

Disaster struck the ship on the third day in Lombok when the air conditioning in the operating rooms conked out. The chief engineer, Charles Strohacker, managed to hook up some pipes to cool one room, and half the operating crew was moved to the little hospital in Mataram.

Although it may sound primitive to operate using a gondola-type operating table and a spotlight that seems to contain eight

fireflies, with an attendant holding an auxiliary hand flashlight, the work is turned out and very creditably too.

Every day from outlying villages come busloads of patients who have been screened in their locale by visiting Indonesian doctors.

Some days a certain gloom can be felt because of the seemingly endless number of cases that we will not have time or facilities to help.

The cases are tragic bizarre, difficult problems and it is strong medicine for the staff to take when the screening is such that only the sicker children and young people with very disfiguring tumors and short-time surgical procedures can be handled.

Those requiring two-stage operations and very elderly people with chronic disease problems, must be bypassed in favor of more acute conditions. Indonesia could well benefit from another two or three *Hope's*.

The project is set up so that a considerable amount of teaching is incorporated into the treatment program. The medical and surgical work seems endless, but the busy activities of the midwife nursing instructors, the baby care and feeding clinics, demonstrations of simplified nursing procedures and the films, lectures, and discussions held on board support this concept.

A question I could not answer before I left on this trip concerned the reaction of the local Indonesian doctors to the arrival of this floating medical training center with all of its 20th century gadgets and newer drugs and methods.

At no time have any of us felt any resistance; suspicion or lack of cooperation from the medical people. On the contrary, most of us have made what we think are lasting friendships.

It is a two-way enjoyment, as they teach us a great many things that are entirely new in our experience, especially in tropical medicine.

Through donations, the *Hope* has extra textbooks pertaining to many of the specialties in medicine and these are received with much pleasure by our host doctors.

Minneapolis' "Modern Medicine" furnished over 100 bound volumes of their yearbook, for use as gifts aboard the *Hope*.

Indonesia, although old in custom, is young as a political unit. Governmental administrative machinery has not yet begun to function well, particularly when adjudged by American standards.

It is quite frustrating to attempt an organized operation such as Project Hope and be held up by bureaucratic rubber stamping of endless papers around a desk; or by an emphasis placed on something we feel could be eliminated; or by the traditional midday siesta, a necessity for the permanent residents of a tropical country, but an annoyance to efficiency-minded Americans.

Detractors of the program have been few. I have seen a couple of form letters that view us with suspicion as "imperialists" trying to undermine the morals and the morale of the Government of Indonesia.

This seems to stem from a minority. Even the ship's crew enters into the planned outings and sports that are sponsored by each local committee.

The *Hope* has, at least to a measure, accomplished the goals which it set out to do.

Many cases have been treated, a great deal of the teaching program has been done, and the seeds of a good deal of sincere respect and friendship have been planted.

If this expression of the American people without any governmental intervention can be implemented to include a *Hope II, III,* or *IV,* all of the staff I have talked to feel that it would help promulgate the feeling which we think is a sincere one on the part of America to help those less fortunate than themselves and share some of the advantages that we take for granted.

National Aeronautics and Space Administration Appropriation

SPEECH
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 6874) to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction of facilities, and for other purposes.

Mr. DOOLEY. Mr. Chairman, I would like to take this opportunity to express my reasons for having supported H.R. 6874, a bill to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, and construction of facilities.

Although not a member of the Committee on Science and Astronautics, the evidence presented in the lengthy committee hearings and the detailed committee report indicates that the many programs of NASA are being conducted with the utmost urgency in relation with a well-balanced, thoroughly integrated and coordinated plan.

At this point, perhaps it would be helpful if I submitted a brief table which clearly indicates that, even in the wake of recent events, the authorizations agreed upon by the committee appear to be a reasonable compromise between the President's and NASA's budget requests:

NASA new obligational authority, fiscal 1962

[In millions of dollars]

	Kennedy budget	NASA request	H.R. 6874
Salaries and expenses	196,686	209,510	199,286
Research and development	919,539	1,056,309	1,023,539
Construction of facilities	119,075	152,002	[1] 154,075
Total	1,235,300	1,417,821	1,376,900

[1] Includes $15,000 for emergency construction of facilities.

But even with the broad, bipartisan congressional support for this bill, underlined as it was by an unusual degree of public understanding and support, we have no cause to rest.

It was developed at the hearings that Russia is reported to have set her sights on 1967 as the year for her first lunar landing, the 50th anniversary of the Communist revolution. The corresponding timetable for the United States has set the period 1969–70 as the target date. Officials of NASA have testified that a crash program of sufficient magnitude to close this gap would entail an annual expenditure of $4 billion to $5 billion a year—many times our current expenditures.

Dr. Robert C. Seamans, Associate Administrator of NASA, when recently questioned as to whether the United States could undertake such a program acceleration, said "I certainly don't feel this is an impossible objective. If as a matter of national policy this is felt to be a requirement, I would be the first to review it wholeheartedly and see what it would take to do the job. My estimate at this moment is that the goal may very well be achievable."

In other words, Mr. Speaker, the choice is basically one of national goals. Do we as a nation want to increase our civilian space effort from about 1.5 percent to approximately 6 percent of our entire budget in an effort to match Russian space objectives by 1967? The choice will not be easy, but make it we must.

In this connection, it is perhaps significant and reassuring that H.R. 6874 earmarks nearly three-fourths of its total authorizations for research and development activities. If we decide to greatly accelerate our space program, this current emphasis on research and development should make any such transition much easier and less costly.

If distribution of personnel in our space program is any criterion, a comparison with Russia, recently published by Missiles and Rockets magazine, would indicate that we might be in a position to move rather rapidly into a crash program if and when we so decide. The table follows:

Distribution of personnel

	U.S.S.R.	United States
Basic and applied research	140,000	60,000
Development	100,000	300,000
Design	170,000	100,000
Production	260,000	200,000
Total	670,000	660,000

The largest single project authorization under the research and development section of this bill is for Project Saturn. When operational, the first stage concept, based on the utilization of multiple off-the-shelf engines, will obtain a thrust of 1,500,000 pounds; this will greatly decrease, if not eliminate, the present thrust gap with Russia. The planned launch schedule for the 10 Saturn development vehicles is 1 in calendar year 1961, 2 in 1962, 5 in 1963, and 2 in 1964.

Since the Saturn booster is being developed at Marshall Space Flight Center, Huntsville, Ala., and will be launched at the Atlantic Missile Range, Cape Canaveral, Fla., means of transporting this space vehicle had to be developed. Because the Saturn vehicle dimensions exceed existing land bridge clearances, it was determined early in the Saturn program that barge transportation would be used. A contract has been let for the design and fabrication of the first barge and this will authorize funds for a second.

It is my understanding that a test barge run was made recently with a dummy Saturn and that the barge negotiated our inland waterway system from Huntsville to the gulf without incident, only to collide with a ship in New Orleans harbor. As a member of the Rivers and Harbors Subcommittee of the Committee on Public Works, I hope the officials of NASA in charge of this operation will let us know if they encounter any difficulties on our inland waterway system. It was just a little over a year ago that our committee was informed by military people that the

bridge clearances on our Interstate Highway System were not sufficiently high to permit the easy passage of Atlas missiles being transported by trucks. This we were told only after thousands of bridges has been planned and constructed. Mr. Speaker, I would hate to see our Saturn program slowed down because of any similar lack of communication between our space and river engineering people.

As I have stated at the outset of my remarks, I support the provisions of H.R. 6874. I think it presents a balanced program of development that varies only slightly with that requested by both the previous and present administrations and the original request submitted to Congress by NASA. I support this bill, however, with the knowledge that circumstances may warrant a complete reappraisal of our timetable of development at any time.

The New Farm Program

EXTENSION OF REMARKS
OF
HON. QUENTIN N. BURDICK
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. BURDICK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a letter to the editor, from Darrell Miller, Route 2, Wahpeton, N. Dak., appearing in the Farmer-Globe, Wahpeton, N. Dak., on May 22, 1961. It is an excellent analysis of the new farm bill.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DOES AMERICA NEED A FARM PROGRAM?

A study by the Department of Agriculture in 1960 indicated farm production would continue to increase by about 2 percent per year, if all acreage controls (except tobacco) were removed and price supports reduced to levels that would permit orderly reduction of current stocks of storable agricultural commodities over a 7- to 10-year period. According to the Department's calculations, increased marketings of farm products would result in the following prices by 1965: wheat, 90 cents per bushel; corn, 80 cents per bushel; other feed grains in proportion to corn; beef cattle, $15 per hundred; hogs, $11.20 per hundred. The estimated net farm income by 1965 would drop to a figure of 46 percent below agriculture's net income in 1958.

True, agriculture accounts for a much smaller proportion of our national economy than it did 20 or 30 years ago, but a large percentage of business and industry still is dependent on the farm market. In communities of 5,000 population and under, and on the farms surrounding these communities, you have 35 percent of the Nation's population. These people are earning their income directly or indirectly from agriculture; either directly in the production of agricultural commodities or indirectly in the business of providing goods and services for agriculture.

One can conclude from these studies and facts that an unhealthy agricultural economy would certainly mean an unhealthy national economy.

In production, agriculture is an outstanding success—where 20 years ago, one farmworker produced enough food for 11 persons, today, he produces enough for 25.

Today, U.S. consumers buy a balanced and varied diet for about one-fifth of their take-home pay—a smaller portion of their pay than anywhere else in the world.

Now we have before the U.S. Congress, the Agriculture Act of 1961, known as the omnibus farm bill, S. 1623, and H.R. 6400. This new farm bill does not establish agriculture programs, but provides the authority for, and the framework in which farmer committees with the Secretary of Agriculture can establish workable price improving programs for each farm commodity, if the producers want them.

It will mean less government in agriculture, giving the producers themselves the apparatus needed to tackle problems of supply adjustment on their own initiative through collective decision and action.

It will diminish the power of the Secretary of Agriculture. Existing laws give the Secretary broad, discretionary authority to fix price-support levels, prescribe acreage allotments, and establish marketing quotas for basic commodities without prior approval by Congress. Under the new bill, any new program for any commodity will be devised in consultation with the producers, subject to congressional approval and subject to approval by majority of the producers of the commodity.

It will give Congress a closer relationship to agricultural programs. It will establish basic objectives and guidelines for national agricultural policy in this bill. Congress will scrutinize every commodity program proposed by the producers in consultation with the Secretary. Congress will appropriate the funds and approve or disapprove every commodity program. If Congress disapproves a program, it can write and enact one of its own.

It will cut Federal cost of farm programs. By bringing supply in line with demand, cost of storage, handling, and interest in Commodity Credit Corporations will be substantially reduced.

It will allow farmers and consumers to be represented on the advisory committees. The advisory committees will be made up of actual farmers elected by county ASC committees (at least two-thirds of the producer committee members nominated in this way) and the remainder named by general farm organizations or commodity organizations, one member to represent consumers being appointed by the Agriculture Secretary.

The new farm bill is a good one for taxpayers, producers, and consumers alike.

The net results will be:

1. A healthy agriculture.
2. Prosperous farm communities.
3. Less cost to Government and the taxpayers.

Sincerely,

DARREL MILLER.

Wahpeton, Route 2.

The Democratic Creed

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Anthony W. Homer, 41 Brooklawn Terrace, Lynn, Mass., and a copy of the Democratic Creed which contains a vital message:

LYNN, MASS., *May 23, 1961.*

Hon. THOMAS J. LANE,
Congress of the United States, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN LANE: I am herein enclosing a copy of the Democratic Creed for your kind consideration.

I thank you wholeheartedly for your past and sincere interest in my work and your friendly cooperation in spreading its vital message.

I am sure you will deeply appreciate the important message embodied in this timely creed. It has long ago gained the enthusiastic acclaim of prominent laymen and clergy as well as that of the National Conference of Christians and Jews, and also of Winston Churchill himself.

I wish you may kindly consider the possibilities for its adoption by the U.S. Congress as a national doctrine along with the American Creed. Thus it may well fulfill in the present crisis the indispensable need of setting forth in concise language our fundamental aims and beliefs in the awakening world today which we are trying so hard to save and mold in the democratic ways of life.

I shall remain most grateful and with best wishes for abundant health and most rewarding efforts, I am,

Sincerely yours,

ANTHONY W. HOMER.

THE DEMOCRATIC CREED

(By Anthony W. Homer)

I believe in God, the creator of the universe, as our true Father, and in all peoples and races of mankind as the complete brotherhood of man animated with the ideal and purpose of perfecting human life; in the sanctity of divine law: that no man is a slave to another and no one a master of another, but all are sons of God and servants to our Lord; and that all men have been created with certain inalienable rights which they must be allowed to enjoy at all times and in all parts of the earth.

I believe in a perfect democracy within a state, the government of the people, by the people, and for the people, which guarantees man his natural rights and allows him to perform his sacred duty to God and to his fellowmen; in whose principles man is not the tool of the ruler, but the master of himself; and in which man does not exist for the state, but the state for man.

I believe in the state in which men are governed, but are also allowed to govern, by order and law; in the state in which men are not led forward in destroying and enslaving their fellowmen, but in liberating the oppressed and in defending their natural rights and sacred honor; in the state in which men share in all things for a common cause and live freely together to learn and progress according to the laws of human justice and equality; in the state in which men are treated as true citizens and are paid full consideration and respect.

I believe in the family of nations and in the democracy of the world by which all peoples and nations shall unite and live together under one flag and one world government, and shall forevermore enjoy the blessings of love, of freedom, and of peace; under which all men shall become citizens of the world and go forth in exploiting the richest of the earth for the common good of all.

I believe in a world democracy by whose virtues all the arts and sciences shall be employed only for the good and progress of mankind; and in whose dominion men shall destroy whatever is harmful to human life and shall keep on building only the things which contribute to the welfare of man and to the exaltation of his soul.

I believe in a world democracy which will cultivate the arts of higher learning and promote greater love and understanding be-

tween man and man and between God and man.

I shall exert all the power that is in me for the institution of a world democracy and help to promote world order and peace for the good of all races and peoples.

Worldwide Communications by Satellite—Business in Billions Is Forecast

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a splendid article written by George J. Feldman and appearing in the May 22, 1961, issue of the publication Missiles and Rockets relating to communication satellites and entitled "Business in Billions Is Forecast."

George J. Feldman is one of the outstanding lawyers of our country, a dedicated American, was formerly secretary to the late Senator David I. Walsh, and Director and Chief Counsel of the Select House Space Committee, of which I was chairman, and a principal author of the National Space Act. He has studied problems relating to this far-reaching and very important subject for many years.

The views of Mr. Feldman are worthy of profound consideration by everyone. In my extension of remarks, I am pleased to include the article which I have heretofore mentioned:

COMMUNICATION SATELLITES—BUSINESS IN BILLIONS IS FORECAST

(Worldwide communications by satellite is expected to be one of the earliest and most profitable commercial uses of space. But there are many problems still to be solved. George J. Feldman—former director and chief counsel of the Select House Space Committee, a principal author of the National Space Act and a well-known New York corporation lawyer—has studied these problems for many years. At this time when communications satellites are more than ever a subject of national and international interest, Feldman has written a comprehensive survey of the subject for Missiles and Rockets.—EDITOR.)

(By George J. Feldman)

The communications satellite promises to be the earliest big money payoff from space exploration.

Within the next few years, communication by satellite could easily become a multibillion-dollar business. Within 10 to 15 years, the communication satellite business could well become a $100-billion-a-year business.

Moreover, communication satellites promise to be the first form of space technology to enter our daily lives and revolutionize our ways of doing business.

Thus it is important to see just what communication satellites can do for us and to look at the many associated problems that we are going to have to face.

To begin with, why do we need communication satellites?

Capacity: They would permit the long-range transmission of higher frequencies (traveling in straight lines), and therefore could provide a great number of additional channels for long-range telephone, telegraph, radio and television service. Microwave channels already in use are badly congested, and the demand is rising rapidly. In 1960, for example, some 3 million oversea telephone calls were made or received in the United States. The number is expected to reach 21 million by 1970, and 100 million by 1980.

The rapid growth of technology and population all over the world is threatening the continued use of frequencies that Western countries have had to themselves. Also, the exploration of outer space will increasingly demand reliable communications between space vehicles and ground stations. Some of the very early practical applications of space technology—notably for weather forecasting, navigation, and surveillance—will also utilize wide bands of radio frequencies for communications.

Satellites offer the only known way to meet this expected increase in demand. A system of two earth-synchronous satellites could provide some 2,000 more telephone channels, compared to only 100 or so for an underwater cable.

Reliability: According to current estimates, satellite communication systems will prove to be more reliable than either cable or radio links. For example, they will not be subject to interference by sunspot activity or the cutting of underwater cables.

Costs: Will communication satellites give the first answer to the question, "How can you make a buck in space?" They probably will. It is still hard to estimate the costs, partly because they depend so much on the useful life of the satellite components. The minimum economical life of a communication satellite is about 1 year. Most cost estimates assume an expected life of about 5 years.

According to some estimates, an active low-orbit system would cost about $150 million initially and $10 million a year to operate. A system with 3 stationary (24-hour) satellites might cost twice as much. At present rates, gross revenues from a 1,000-channel telephone system would amount to nearly $100 million a year. From estimates like these, it appears that satellite communications will be profitable at least by 1970. Initial costs could probably be paid off within a decade.

Consumers will benefit, too. It is believed that the cost of satellite communiactions per voice-channel mile will eventually be lower than that of present long-range communications systems.

Satellites are expected to be useful in military as well as civilian communications, mainly for reasons of capacity, reliability, and security. In remote or undeveloped regions, furthermore, satellite relays can be set up quickly, while conventional long-range communication systems may take years to complete.

Thorns in the path: What policy problems will satellite communications create? At this stage of history we can give only a partial list.

Frequency allocation and use: Almost everyone agrees that early international allocation and domestic assignment of channels are needed for earth-space service and for radio astronomy. An international agreement will obviously be required, but may be difficult to negotiate.

International microwave communications will also raise the problem of equipment compatibility, particularly for television broadcasts.

Sharing of benefits and costs: Another problem will be the sharing of benefits and costs (a) among governments and (b) between governments and private users. For example, who will pay for what and how much? If the Government launches commercial satellites at cost, as NASA has already offered to do, then the taxpayers in general, and not just the users of the satellite service, will be footing the bill.

Control of program content: Controlling the content of radio and television programs transmitted by satellite will create new problems of licensing and regulation. No television system now available can send programs farther than 100 miles or so. Television programs relayed by satellite, however, could be sent from one continent to another. It is easy to foresee that this could become a hot international issue. Just imagine U.S. propaganda programs that could be received by private citizens in Communist countries.

Roles and relations of government and private industry: The American people enjoy a long tradition of leaving telecommunications to private enterprise. Our Constitution guarantees freedom of speech and the press. Yet government support seems inevitable, if only because the necessary technology involves high costs and heavy rocketry. Regulations, in any event, would be essential.

Apart from the central problem of the relationship between Government and private enterprise, we will also have to decide what agency within the Government will make the policies, lay down the rules, grant licenses, adjudicate controversies and enforce the rules and decisions. Here is an area full of pitfalls and controversies. On what grounds will the responsible agency decide to license one private company rather than another? What agency will be primarily responsible: NASA? FCC? the State Department? Other Government agencies are certain to be affected. What voice will they have?

Conventional legal problems: Private companies that own or operate satellite communication systems will expose themselves to new kinds of legal liability. In the first place, they may become liable for personal injury and property damage caused by launching accidents or the flight or landing of satellites. Remember the recent fall of fragments from the vehicle of a Transit navigation satellite last November on eastern Cuba. Numerous incidents of this kind have occurred, and will certainly become more common as more and more satellites are launched from the earth's surface.

Manufacturers may be sued for damages resulting from defective parts. At an earlier stage of the industrial process, companies may be held liable for accidents that occur in the course of research and development, manufacturing, testing or handling. For example, rocket fuels are highly explosive, and may cause blast or fire damage. The operation of communication satellite systems may also involve other forms of liability arising from radio interference, libel or slander.

Such legal problems will be international as well as domestic.

Private companies that enter the satellite communication business may also run afoul of the antitrust laws. Should the Government give a favored position to any one company? A favored position might become a monopoly if, as many people believe, only one communication satellite system could be run at a profit.

According to a letter of February 20, 1961, from the antitrust division of the Justice Department, "competitive considerations require that no one firm dominate satellite communications."

Some companies have proposed a "common carrier's common carrier"—that is, a joint venture providing service to all international communication companies desiring to use the channels of the system. It would also be possible for the Government to operate communication satellites just as it runs the Post Office.

Washington policy: What is our present national policy concerning satellite communication systems?

Shortly before he left office, President Eisenhower stated that the Government should "aggressively encourage private enterprise in

the establishment and operation of satellite relays for revenue-producing purposes." President Kennedy has not yet announced his policy, though he has said that this country would like to cooperate with the Soviet Union in several fields of space technology including satellite communications. Clues can be found, however, to the probable attitude of the Kennedy administration.

The report to the President-elect of the ad hoc Committee on Space (the "Wiesner report") proposed that the Government set up a special organization to direct Federal support of private space activities. This proposal evidently presupposes that space activities will be conducted by private enterprise, and will be directed and supported by the Federal Government. Furthermore, a staff report issued by the Senate Committee on Aeronautical and Space Sciences, formerly chaired by Vice President LYNDON B. JOHNSON, recently warned against "lending support to the image which often develops abroad—and which the Soviets would try to exploit—that any U.S. program of space relays would simply enrich the private communication interests."

The FCC and NASA have recently sanctioned the private development and operation of communication satellites, in a joint "memorandum of understanding" issued on March 15, 1961, the two agencies stated:

"In accordance with the traditional policy of conducting international communications services through private enterprise subject to governmental regulation, private enterprise should be encouraged to undertake development and utilization of satellite systems for public communications service."

The memorandum also referred to the fact that "at the present time oversea voice communications are provided primarily by a single company." The single company is A.T. & T., which operates the submarine telephone cables. In effect, this memorandum continues the Eisenhower policy favoring private communication satellites.

On our way: In 1959 the International Telecommunications Union (ITU) allocated six radio frequency channels (in the 890–16,000 mc. range) for experimental space use, effective May 1, 1961. The ITU is scheduled to hold a special plenary session on satellite and other space communications in 1963. Observers predict that some foreign countries will not easily be persuaded to stop using certain frequencies in order to release them for space communications.

In 1960 the Federal Communications Commission (FCC) held hearings on frequency allocations for space satellites. Several private companies had asked for the reallocation of frequencies above 890 mc. for space use only. The FCC decided that "in view of present uncertainties, specific allocations for space communications cannot be made at this time" (FCC Rept. No. 751, Sept. 29, 1960). The American Rocket Society has appealed from this decision to the U.S. Court of Appeals for the District of Columbia. Its petition for reversal states that the decision "vitally and adversely affected the allocation of radio frequencies for use in space activities."

In fact, a few frequencies (rather than broad bands) may prove to be sufficient for space use. Exclusive frequency allocations may not be necessary at all, except for services involving safety. There is a difference of opinion on this question, even among companies that plan to use communication satellites. True, a large number of low-altitude satellites may need exclusive frequencies. Earth-synchronous satellites, however, in 22,300-mile orbit, could probably share frequencies with land systems. (On the other hand, they would require very precise control as well as larger rockets than are now available. Whether exclusive space frequencies must be allocated will thus depend on what kinds of communication satellites are eventually adopted.

Perhaps some firmer answers will emerge from the long-range FCC inquiry now being made into the frequency allocations required for space communications (docket 13522).

In its decision of September 1960, the FCC not only refused to set aside frequencies for space communications, but instead opened up frequencies above 890 megacycle to private users for point-to-point communications on earth. Thus these vital frequencies would become available to banks, private shipping lines and other commercial companies. Commissioner T. A. M. Craven dissented, saying that the decision shows a "lack of long-range vision" and "fails to take into consideration the revolutionary effect which the future use of satellites will have on the lives of populations of the entire world, let alone citizens of this country, in terms of national and international communication, information, and propaganda."

A number of private companies—including the American Telephone & Telegraph Co. (A.T. & T.), the International Telephone & Telegraph Co. (I.T. & T.) and the General Electric Co. (GE)—have shown interest in commercial satellite communications.

For example, A.T. & T. has announced plans for using some 50 satellites to relay telephone conversations and television programs between the United States and Europe. It is already designing a satellite, and says it could begin test transmissions within a year. The FCC has assigned two radio frequency channels to A.T. & T. for this purpose (4100–4200 mc. and 6325–6425 mc., both common carrier frequencies). GE plans to use 10 relay satellites in conjunction with 19 ground stations. I.T. & T. will soon begin moon-bounce communication experiments with England. It has recently received an FCC license for experimenting with passive relay satellites. The frequencies assigned to I.T. & T. are 2299.5 mc., previously allocated by the ITU for space research, and 2120 mc. (until July 1, 1961, only), a common carrier frequency.

On March 1, 1961, the Radio Corporation of America (RCA) urged the Government not to give any one company a preferred position. It favored satellites owned and operated by a group of companies, and "open to full and independent access" for all international communications. In its brief, filed with the FCC, RCA disclosed that it was considering a joint venture with Lockheed Aircraft Corp. and General Telephone & Electronics Corp. to develop and operate a communication satellite system as a service to all carriers. According to its plans, an experimental satellite will be launched within a year. When the system becomes operational, "circuits will be made available to other communications common carriers for use in their business if they desire."

NASA has asked Congress for a total of $68.6 million—$24 million during the current fiscal year and $44.6 million for next year—to develop communication satellites. According to NASA plans, about $50 million of this amount will be used to develop a commercially adaptable active system (Project Relay.)

The Department of Defense is spending some $50 million a year on communication satellites, and will soon be spending much more.

Nor are such developments confined to the United States. Eventually they are bound to involve every nation on earth.

At present, it is true, the United States appears to stand alone in this field of space technology. The Soviet Union has not made any known experiments.

Other advanced countries, however, are already planning programs for satellite relays. British interest is especially keen. In late 1960, a team of British experts visited Washington for talks about communication satellites.

According to a New York Times dispatch of December 29, 1960, "The House of Commons was recently told that astronomical profits would accrue to the American Telephone & Telegraph Co. under a communications system using satellites. * * * Behind both the (British) government program and the criticism of it by Tory backbenchers lies a desire to compete with the United States in worldwide communication systems based on satellites."

The government-owned telephone agencies of Great Britain, France, and West Germany have expressed interest in establishing an international space communication system linking the United States and Europe.

Ten European nations have recently formed a "space club," tentatively known as the European Space Research Group. Member nations are Belgium, Denmark, France, Italy, the Netherlands, Norway, Spain, Sweden, Switzerland, and the United Kingdom. One of the first objectives of the group is a communication satellite system.

Evidently the age of space communications is no longer a distant prospect. It has nearly arrived. When it comes, it will have the same kind of impact on our lives as the inventions of the telephone and the radio.

Authorizing Appropriations to the National Aeronautics and Space Administration

SPEECH
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 6874) to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction of facilities, and for other purposes.

Mr. FULTON. Mr. Chairman, I yield myself 4 minutes.

Mr. Chairman, the question comes up with reference to these budget figures for solid propulsion for the fiscal years 1961 and 1962 approved by the Budget for solid propulsion. As of January 16, 1961, there is a figure of $3.1 million. The amended budget request by NASA, March 17, 1961, was $8.1 million. The amount allowed by the Bureau of the Budget on March 28, 1961, $3.1 million for solid fuel propulsion. That was a cutback of $5 million on the NASA amended budget request of March 17, 1961. The committee went back to the figure of $8.1 million, the NASA request, and then added another $10 million on my amendment, making the total committee figure for solid propulsion $18.1 million. I believe this is necessary because even in the current fiscal year there is $68 million for liquid fuel propulsion. We certainly should have a more proportionate approach.

Adm. W. F. Raborn, Director, Special Projects Office, Department of the Navy, who is in charge of the Polaris

solid fuel propulsion vehicle or missile before the Committee on Science and Astronautics on February 4, 1959, stated that the Polaris project was a bold strikeout in solid propellant developments while the rest of the national effort was being channeled into the liquid fuel path. He stated further that this two-pronged approach was a gamble that paid off handsomely.

If we in the United States want to equal or exceed the Russians in space, we need not only the liquid fuel propulsion but also the solid fuel approach, and likewise we should have the nuclear and the electric propulsion fuel as further approaches in the future for operating vehicles in space.

I would like to comment further on the supplemental views as contained in the committee report. There is really not a difference of $141,600,000 between the committee approach and the two Members filing supplemental views. There is only $126,600,000 difference. The $15 million for emergency construction of facilities is in each of the figures. So that our new figure of the committee of $1,376,900,000 is simply an increase of the Bureau of the Budget figure of $1,250,300,000.

Mr. O'HARA of Illinois. Mr. Chairman, will the gentleman yield?

Mr. FULTON. I yield to the gentleman from Illinois.

Mr. O'HARA of Illinois. I would like to make the statement that we miss the gentleman sorely on the Committee on Foreign Affairs, but we are so happy he is doing such a good job on the other committee.

Mr. FULTON. I thank my good friend, the gentleman from Illinois.

The John Birch Society

EXTENSION OF REMARKS
OF
HON. JOHN H. ROUSSELOT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. ROUSSELOT. Mr. Speaker, Newspaper Columnist Holmes Alexander has written an excellent article concerning the John Birch Society. It is noteworthy that Mr. Alexander is not a member of the society. The article was released through the McNaught Syndicate, Inc., on May 8, 1961. Under unanimuos consent I include the article in the Appendix of the RECORD:

ROBERT WELCH AND WALTER JUDD

(By Holmes Alexander)

WASHINGTON, D.C.—Many will write to say that it takes a foolhardy columnist to rise and defend the John Birch Society, especially when he's not a member. My answer would be that it took the touch of the desperado to discover the new world, the two polar regions, medical anesthetics, and many inaccessible but abstract truths as well. Nothing ventured; nothing gained.

Robert Welch, founder and president of the John Birch Society, has pondered long and reached the considered opinion that the Eisenhower brothers have not been anti-Communist enough, and that Chief Justice Earl Warren is a menace to the American Republic. These are extreme positions, rendered more extreme by misquotation and distortion. But Welch made them in hot blood in an era when the battle is going against us internally, externally, morally, and psychologically. With Mr. Kennedy's disasters in Cuba, Laos, and Geneva, added to Mr. Eisenhower's in Japan, Paris, the U–2 case, and Mr. Truman's in Potsdam, Korea, and Hungary, it doesn't seem too much to forgive a high-tempered man for using rough language.

If Welch owes some apologies (as I believe he does), many persons owe the same to him. It is insulting for a gray-haired superpatriot (why is that noun a smutty word?) to be called a Fascist, dictator, Nazi, hatemonger, and antisemite. All these are epithets capable of inciting personal and professional injury to Welch and, by unfair association, to his followers. Welch has denied that he is, or would ever be, any of these things. He and several John Birch Society members have asked to be examined before congressional committees so as to refute these accusations under oath.

Meanwhile, one of our largest and finest newspapers, which severely reprimanded Welch and the John Birch Society, has been deluged with letter from Americans who want to know how to join the society. There is the charge of sinister secrecy. But merely by asking an acknowledged member, I tucked under my arm and brought away for study a lot of John Birch Society literature. My haul included the much-discussed Blue Book, and the member's Monthly Message with a blank space and this notice: "John Birch Society, Belmont 78, Mass. Gentlemen, I should like to make the following comments or suggestions." It doesn't read like authoritarianism to me.

The society is a perfectly furious anti-Communist organization which advocates giving the Reds some of their own medicine. By implication, this could mean taking Havana as ruthlessly as Khrushchev took Budapest, training guerillas and subversives to upset Communist governments, making anti-Americans as unpopular in America as anti-Reds are in Communist lands.

Much of the John Birch Society policy is shocking to prudish Americans (and those who affect prudishness to show off their "couthness"), but the other day Representative WALTER JUDD, Republican of Minnesota, made the same philosophic points in much more eloquent, more cogent language. Speaking before the U.S. Chamber of Commerce, JUDD insisted (as does the John Birch Society) that we can't apply Judeo-Christian ethics or American codes of honor and chivalry to communism. JUDD said:

"The reason why it is not possible to get any real agreement with the Communist world—whether at Yalta or the U.N., at Panmunjom, at Geneva or at Paris—is because the Communists are not pursing the same goals as we, at our best, are pursuing.

"And why are they not pursuing the same goals as we? It is because they do not believe in the same things as we do—about man and about the universe; that is, about God. One reason for our difficulties is that we have been exposed so long and so consistently to the Judeo-Christian body of ethics that we take its moral standards for granted. We tend to equate "Christian" with "human"—and since the men in Moscow and Peiping are human beings we assume they will act as Christians do.

"We cannot readily condemn esthetic Communists for betraying Christian values which they have never professed, and which in fact they deny. It is absurd to believe that they can make moral judgments when their creed tells them that man is not a moral being, but is an economical animal."

Robert Welch and WALTER JUDD, though miles apart in their ability to articulate, are trying to say much the same thing, which is this: Let's stop treating Communists like moral equals.

Please Tell Us Why

EXTENSION OF REMARKS
OF
HON. DURWARD G. HALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. HALL. Mr. Speaker, soon the House will consider the controversial issue of Federal aid to education. A recent issue of the Aurora Advertiser in my district contains an outstanding editorial on this subject, and I submit it below for insertion in the RECORD for consideration by those who will be asked to vote on this issue:

PLEASE TELL US WHY

We have watched with puzzled amazement the almost fanatic fervor with which educators and many others have worked in a relentless campaign which seems, at last, headed for success—and wondered why.

The crusade, of course, is that for Federal aid to education.

Federal aid to education can come, of course, only from taxes paid by the people. State aid to education comes also from taxes paid by exactly the same people. Local tax support from schools comes from taxes paid by the same people, all of whom live in some school district.

Why so many should believe there is inherent magic of some sort in channeling tax money to Washington and then sending a part of it back that makes it different from sending it to the State capital and back, or the county seat and back we can not understand. We have asked proponents to explain the difference, and have never found one who could do so that we could understand.

Two things we know. There is not, at present, an expensive Federal bureau to receive tax money and distribute it to the schools. If the Federal aid program goes through, there will be. And the cost of this bureau will have to be collected to pay Federal aid, and therefore is an extra expense to the people.

Already, in every State, there is machinery for collecting school tax money and distributing it. Already in every county, there is the same sort of organization. Both will continue if Federal aid is instituted.

Though they deny it frantically, the real goal, we believe, of Federal aid to education is Federal control of education. Proponents want a sort of civil service for educators. They want national standards, handed down from above. In their hearts, they lack confidence in the ability of the people to make decisions concerning the schools their children attend. The educators concerned lack self-confidence in their own leadership.

Any long-time member of a school board in Missouri, can point out definite losses of initiative which have followed the shifting of the financial burden of schools from the local district to the State. Nearly all of the orders from above which have forced changes in standards and curricula have been for the good. But, in the wrong hands, and that governmental bodies do fall into wrong hands has been demonstrated in countless incidents in the history of the world, they could just as easily be bad as good.

That Federal aid to education will be accompanied by a certain amount of Federal control of education follows as logically as night follows day. It has been an inescapable aftermath of Federal aid programs in every field which the Federal Government has entered.

In the hands of a would-be Hitler, or a would-be Stalin, such power to control the education of youth is so dangerous that the American people should entrust it to no one.

We believe, sadly, that Federal aid to education is upon us. Only a last-minute storm of protest can head off its dangers now, and there are no signs of such a storm.

And we wonder why.

Police to Parents

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. BOGGS. Mr. President, about 4 weeks ago, I called attention of the Senate to an article in Parade magazine dealing with puzzling traffic situations on our highways. The answers to those situations were supplied by the Delaware State Police, an organization which has been accorded international honors. Today I would like to again call attention to an article in the same magazine which tells the story of Delaware's bold new plan to keep youngsters out of trouble. Very simply, the plan involves the sending of a letter to the parents of a boy or girl who has been contacted by the State police either for directly violating a law or being in a group which has violated a law. The letter merely explains the situation under which the boy or girl was contacted and serves to inform parents of the whereabouts and the doings of their youngsters.

This forward-looking plan was the brain child of Lt. Hugh Collins of the Delaware State Police and has been in effect for about 1 year. Its success is measured in the fact that it is a rare day when a youngster whose parents have received such a letter turns up in court. Also, the State of Connecticut has copied the program and youth workers throughout the country are watching this modern-day application of the old adage "A stitch in time * * *."

I commend the reading of this article to my colleagues and congratulate the Delaware State Police, under Col. John P. Ferguson, for their outstanding work in this and other fields of police work.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLICE TO PARENTS

(By E. D. Fales, Jr.)

DOVER, DEL.—A few weeks ago, the mother of a teenaged girl took an official-looking letter from her mailbox here. It bore the emblem of the Delaware State Police.

"Dear Mrs. Jones," the letter began. "On U.S. Route 40 last night your daughter Helen, 15, was contacted by State police. When she came to our attention she was a passenger in a car driven by a 17-year-old boy, who was arrested for driving in excess of 80 miles an hour and racing.

"Your daughter violated no law but was in great peril, and we thought you should know so you can advise her. The boy had been arrested before for dangerous driving. Respectfully, Col. John P. Ferguson, Superintendent of State police."

That same morning, identical letters went to the parents of 10 other teenagers who had been in the race. And in the past year, hundreds more have gone to families all over Delaware. For in a unique—and controversial—program State police here are using letters to parents to combat the new problem of teenage wildness. By stitch-in-time warnings, police hope they can help keep kids out of serious trouble and perhaps even save young lives.

WHERE ARE THEY TONIGHT?

The program deals not with delinquents but with "good kids" who might be led astray, and its premise is simple. In this age of speed and distance, police say, even the best parent can't know every minute what a youngster is doing or whom he's doing it with. The cop on the beat and the neighborhood grapevine used to keep parents informed. But today's teenagers roam far from home, and scant news of their conduct gets back to parents. Pointed notes from police seek to span that gap.

The Delaware program is being watched closely by youth workers everywhere, and one State, Connecticut, already has copied it. Not every parent approves. But police say it pays off: it's a rare day when a youngster whose parents have received a letter later turns up in court. Typical is the case of Helen Jones (a fictitious name, like all other names of parents and teenagers in this article). After her mother received the police letter, she wrote a grateful reply:

"I've been worried sick and I've been trying to warn her," Mrs. Jones wrote. "But she told me times had changed and I didn't understand.

"Then your letter came. Thank you for saving me from being an old fogey."

Since then, Helen hasn't been seen with her old companions. But, says Lt. Hugh Collins, who dreamed up the letter idea, police see many others like her. "They're nice kids, but naive," asserts Collins, a tall, quiet officer. "They run with bad companions and wild drivers. They're the kind we often pull out from some sickening wreck."

Just such a wreck inspired Lieutenant Collins with his idea in the first place. On a Delaware highway several years ago, a carful of frightened teenagers spun into a curve at 70 miles per hour, crashed through a fence, landed in a field and overturned. By the greatest of miracles, no one was hurt. The driver, a 17-year-old showoff, was arrested. But because there were no further arrests and no injuries, parents of the other youngsters were not notified.

Two months later, some of the same crowd were out with another wild driver. There was another wreck. This time, two of them died.

"That set me to thinking," Lieutenant Collins says. "These kids would have been alive if we had alerted their parents. It seemed to me that we ought to be able to warn parents in such cases, so that they could take action. The letters program was the result."

Since the program was launched, more than 1,200 letters have been sent out. The police have dealt with all kinds of situations and approached all strata of parents. The letters are usually extremely blunt.

"Dear Mr. and Mrs. Adams," reads a typical letter. "Saturday at 1:15 a.m. your daughter Mary Jane, 17, was contacted by a trooper north of Dover on U.S. Route 13. When brought to our attention she was asleep on the rear seat of a parked car operated by one Joseph Blank, 19. Mr. Blank was asleep in the front seat of the car."

"Dear Mr. and Mrs. Smith," reads another. "Sunday at 11:20 p.m. your son, Billy, 14, was in a car driven by Peter Jackson, 16. Peter was arrested for drag racing and running a red light. Both of these are dangerous practices and not in your son's best interests. Peter has been arrested before."

Sometimes a letter also contains a short lecture. Recently a carful of high school students was stopped after a minor accident. The letter that went to parents of one girl included these statements:

"The events that followed had all the appearance of a mob scene, with a lot of unnecessary shouting, crowding and smart remarks.

MOM WAS ALL SHOOK

"We feel reasonably sure this is not the way you would like your 14-year-old daughter Phyllis to act when abroad. Perhaps by having this brought to your attention you can prevail on her to act the part of a young lady."

How do most parents react when such a letter arrives? To find out, Parade went to the home of Ben Brown, who was stopped with a carload of drag racers.

"Mom was all shook when the letter came," Ben said. "Let's face it. I never would have told her about the race. But when the letter came she made me tell her every detail."

Mrs. Brown talked the matter over with Ben, admonished him, and then turned him over to his father. The two had a man-to-man talk. "I was able to explain that the one thing everyone has to guard against is being pushed into trouble by the 'someone' in every crowd who has a stronger will," Mr. Brown says. "Next time my boy won't be led."

In other homes, there are emotional scences, laying down of the law or the woodshed treatment. And often parents of teenagers "ground" their children, by canceling their car privileges.

HELPFUL OR HIGHHANDED?

Some parents take a dim view of the whole procedure. They deplore the fact that each letter is accompanied by a questionnaire, asking, among other things, "What is your attitude?" (toward the letters) and whether the teenager "admits to participation."

And parents who do not return the questionnaire receive another, sterner letter. They are asked why they did not return the questionnaire and even asked for the name of anyone who advised them not to reply.

Even more important, parents say, is the fact that the letter becomes part of a police file—albeit a confidential one, available only to the courts. Since no legal wrong has been committed, some parents consider this procedure highhanded and possibly even illegal. State police counter by saying that the file is destroyed when the youngster reaches 18.

But parents interviewed by Parade overwhelmingly approved the idea. "It closes a big gap created by the automobile between us and our children," one can said, "Maybe the police shouldn't be doing it—but who else could?"

Some teenagers said they were in favor of police vigilance; others gave approval grudgingly. But one summed up the minority feeling: "If we violate no law, what business is it of anyone's?"

Colonel Ferguson says he "only wants to do a good job," and likens the police-to-parents letters to the old cop-on-the-block. "If he saw a boy heading for trouble," Colonel Ferguson says, "he'd knock on the door and tell his dad. Most parents still want that friendly tip so they can help their kids—but today what boy is on the block? He may be 100 miles away, with new people you don't know and in new situations you can't conceive of. How can you help him?

The State police superintendent is first to admit that the program needs polishing. Already police have agreed to drop the line, "Reference: Helen Jones, W/F, 17," which sounds like something from a criminal record. And they may soften some of the formality, cut down on advice, and try to be a little less icy.

Should your town adopt a police-to-parents program? The way to find out is to talk it over with your police chief, your judges, your school authorities. You might hold a forum on the subject at your PTA. Or send a delegation here to see the Delaware program in action. Colonel Ferguson will be glad to explain it.

Before you decide to set up such a program, Colonel Ferguson says, consult your teenagers, too, and get their thinking. "They're the ones most closely involved," the police superintendent says. "Police-to-parents is for them. It's their future that is at stake."

Courage Needed in Geneva

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. DEROUNIAN. Mr. Speaker, the following article by Crosby S. Noyes, in yesterday's Washington Evening Star indicates how much better off the free world would have been had President Kennedy put into practice some of the principles in his book, "Profiles in Courage."

WATCHING THE WORLD—GENEVA PARLEY A TRAP FOR THE WEST

(By Crosby S. Noyes, foreign correspondent of the Star)

GENEVA.—The way things are going in the conference on Laos, some people here are beginning to wonder nervously if they will ever see their homes and loved ones again. It seems, in fact, that the representatives of the 14 nations here could between them keep this conference going indefinitely without coming any closer to an agreement which has any practical meaning at all.

What is more likely, perhaps, is that the negotiations will fritter along until there is nothing left to negotiate about. The developments in Laos since the conference began suggest strongly that the West has been drawn into a trap here in Geneva and that the Communist strategy is simply to paralyze any Western action while the takeover of Laos is completed.

Quite evidently the first condition for the conference laid down by the allies has not been met. From a variety of sources it is now admitted that there is no effective cease fire in Laos. On the contrary, the fighting is increasing throughout the country. While the neutral truce commission sits on its hands in Vientiane and complains that it is "powerless" even to investigate the reports of violations.

From the beginning the only real hope that existed for getting a government in Laos that might decently pass as "neutral" lay with the Lao themselves. If the three princes representing the royal Lao Government, the Communist Pathet Lao and the neutralist "Premier" Souvanna Phouma had been able to agree on some kind of formula for a coalition government some agreement might have been possible here.

LITTLE HOPE OF ACCORD

As things stand today, however, the chances of such an agreement seem very small, indeed. Even Cambodia's Prince Norodom Sihanouk, the ardent neutralist who dreamed up this meeting in the first place, now admits failure. The only reason he is staying on in Geneva, he says, is to give the conference a decent burial.

Without an effective cease fire and without an agreement between the Lao leaders there is, in fact, very little the 14 nations here can do about the situation. It would be possible, perhaps, to draft pompous statements about Laos' neutral status along the lines suggested by the French and get it ratified by everyone concerned. But no one could possibly deceive himself about the value of such a declaration as long as the fighting continues, and an agreement on effective control machinery cannot be reached.

On this last question a good many hopeful illusions have been rudely shattered. Some delegations, including the British, came into this conference believing that Russia really wanted a neutral Laos and would agree to a cease-fire commission capable of policing the truce.

From the outset, however, Soviet Foreign Minister Gromyko has made it clear that he will agree to nothing of the sort. Indeed, the truce commission which he proposes would be even more powerless than the one in Vientiane today. And the hope being expressed by some neutralist countries that he really doesn't mean it is not shared by the major powers here.

REDS WILL DELAY ACTION

In fact, everything that has been said by the Communists so far leads to the conclusion that they will do everything in their power to prevent a real cease fire in Laos. And since they are in a position to do this indefinitely, the longer the conference lasts the better they will like it.

In these conditions even the last-ditch American hope of a kind of de facto partition of the country also seems very unrealistic. In subversive guerrilla war there are no clear lines drawn between areas held by one side or the other. Control of any given area is largely a matter of which side happens to be physically present at the moment. As long as the Pathet Lao can keep up the pressure on the local civilian population as they are doing today, the prospects of survival of the Royal Lao Government will remain extremely thin.

Which brings the United States back to the point where it was a few months ago, facing a choice between military intervention or an outright Communist takeover in Laos. At this stage, the Geneva Conference hardly provides even a graceful alibi for inaction. And President Kennedy, who wants to impress Premier Khrushchev with American determination to hold its own around the world, would seem to have chosen a singularly difficult moment to make his pitch.

Congress Abdicates

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. MOORE. Mr. Speaker, I have long been an advocate of the necessity of having a severe reappraisal made of the trade policies of our Nation. Numerous times I have made statements with respect to our trade posture in the fields of, but not limited to, glass, ceramics, ceramic floor and wall tile, and coal and oil, citing the adverse effect upon these industries and their workers that these trade policies have had.

Recently I testified before the U.S. Tariff Commission in the peril point investigation in the case of window glass and ceramic floor and wall tile. In each instance, I strongly urged the Commission to grant some relief. I am happy to say in both instances, the U.S. Tariff Commission made a recommendation to the President that relief be granted.

I have written a strong letter to the President requesting that he place the recommendation of the U.S. Tariff Commission in the flat glass case and the ceramic tile case into immediate effect and urged that he make specific note that West Virginia's flat glass industry, ceramic tile industry and their respective employees would benefit greatly if the President would accept the recommendation of the Tariff Commission in these instances. I can only say that I am hopeful that the President will act favorably.

It should become all the more obvious to the Members of Congress that it is high time for us to regain control of our tariff policy and to shoulder ourselves the responsibility which is placed upon us by the Constitution of the United States. If we, as the Congress, had control of our trade policies, which is constitutionally ours, I am sure I would not now be in a position of urging the President of the United States to show compassion for these domestic industries that have so long suffered.

Mr. Speaker, Mr. Thomas O'Brien Flynn, the outstanding editor of the Wheeling Intelligencer, has on May 23, 1961, written an article in this field, entitled "Abdication." I ask unanimous consent to include this editorial with my remarks and I respectfully urge the Members of the House to give it very careful consideration:

[From the Wheeling Intelligence, May 23, 1961]

ABDICATION—HIGH TIME FOR CONGRESS TO REGAIN TARIFF CONTROL WITH CHECKREIN ON THE PRESIDENT

The Tariff Commission's recommendation that duties on certain glass imports be increased brings the whole pressing issue of foreign trade policy sharply to public and congressional attention.

The issue itself is not new. It is as old as national maturity, representing in its broadest aspect the fundamental clash between the economic philosophies of protection and free trade. It is pressing because the dollar deficit, the decline of exports, the rise of imports, the rapid expansion and improvement of foreign industry once dominated by the United States, the flight of American investment capital to foreign lands, the yawning gulf between American and foreign production costs and the organization of economic blocs in Europe suggest that there is something sorely amiss with our foreign trade relationship.

The cry for relief is going up from industry all over the land. This is an old story with some of our enterprises such as the manufacture of pottery and glassware, to name but two of many. They have been asking, largely in vain, for greater protection from underselling imports for years. As a result of this denial once flourishing factories long since have closed and others have been reduced to part-time operation. For many of these enterprises relief, even if it comes soon, will be too late. But there are new voices heard from. The coal industry not only complains about the inroads of imported residual fuel oil, but asserts that the trade policies of European countries restrict the use of American coal, although it can undersell the home product. The textile industry has been so hard hit that an import quota system and subsidy relief measures are being considered by the President. Even the giant steel industry is finding foreign competition more than it appears capable of coping with.

Which brings us back to the tariff. Under existing law the Tariff Commission is without any authoritative control over rates. All it can do is recommend. The President exercises control. Time after time since the so-called reciprocal trade program was adopted in the early days of the Roosevelt era, the Tariff Commission, following petitions from complaining industries and subsequent hearings, has recommended tariff increases. Almost invariably three Presidents—Roosevelt, Truman and Eisenhower—either disregarded the Commission's recommendations or granted less relief than the Commission proposed. Mr. Kennedy's position has not yet been clarified.

As a means of restoring to Congress the tariff control surrendered in the Trade Agreements Act, a bill was introduced during the last administration which would have given the Tariff Commission rather than the President control over tariff fluctuations within the statutory limits. Instead of recommending to the President that, as in the present case, the duties on cylinder, crown, and sheet glass imports be increased because these now are inflicting "serious injury" on the domestic glass industry, the Commission could have directed that this be done had that bill become law.

The justification for Tariff Commission control of duty revision—the bill here referred to was successfully resisted by the administration and by all supporters of the free trade principle—is that Congress, not the President, should dictate trade policy, and that control can best be exercised under the present setup through a creature of Congress.

This newspaper always has subscribed to the simple trade doctrine of a schedule of import duties designed to equalize selling costs on the American market between domestic products and their imported counterparts. If we must retain the trappings of trade agreements, however, the least we should do in the interest of industrial protection is to give Congressmen and Senators, who are in direct touch with conditions back home, a more direct voice in measuring the degree of protection.

The Future of American Foreign Policy

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. BRIDGES. Mr. President, I was very interested in a column written by James Reston of the New York Times for publication on May 20, in which he summed up his own thinking and perhaps that of most Americans, on the question of what direction the President and the administration are going to take in the days and months ahead in our foreign policy.

His discussion of the current situation is quite pertinent at this time, and I believe worthy of serious thought on the part of both the President and the average citizen. I ask unanimous consent that this article by Mr. Reston be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OFF THEY GO, TAKING THE WRONG GIANT STEPS

(By James Reston)

WASHINGTON.—For the moment everybody in Washington seems to be rushing off in all directions doing precisely what they originally said they wouldn't do.

The President, who said he was determined to decide what he wanted to negotiate before he went on the summit circuit, is now negotiating with the great men before deciding what he wants to negotiate.

The Vice President, who is an expert on domestic policy, is running all over southeast Asia negotiating foreign policy and making promises which Kennedy is probably not going to be able to keep.

Secretary of State Dean Rusk, who came to Washington 3 months ago determined to stay home and run the State Department and be the principal adviser to the President on foreign policy, is now doing neither.

And even the Washington Senators, who were supposed to lose to everybody, have won five in a row, including two from the Yankees.

In due course, all this will settle down; the Senators will descend into the cellar where they belong, and the natural intelligence of the Government will assert itself. But for the time everybody is restless and even a little quarrelsome.

President Kennedy apparently realizes this, and is finally planning to go to the country in an attempt to give a sense of direction and priority to his programs. This will be done before he goes to Paris at the end of the month to see President de Gaulle, and what he decides between now and then will therefore be of considerable importance.

His letter to Alicia Patterson, editor and publisher of Newsday, illustrates the problem. "Each time we make any move or commitment in foreign affairs," he said in that letter, "I am in need of the support of the American people, their understanding, their patience, their willingness to endure setbacks and risks and hardships in order that this country can regain leadership and initiative."

As a generalization, this is all right. But while there is quite a lot of patience in the country, there is very little understanding because on the major question of the Nation's strategy in the cold war, it is not clear what the President is asking.

He is asking for support but not telling what the country is expected to support. Is it being asked to block every move of the Communists into every area right up against and close to the Communist borders? In Laos, in the rest of southeast Asia, and in Iran? Or is it being asked to reconsider the assumptions of the past and defend areas that are more defensible?

Nobody knows the answer to these fundamental questions. Vice President Johnson has been scattering promises generously in Vietnam, the Philippines, and Formosa, but every time he makes another pronouncement, many of his associates in the Government wince, not because they all disagree with the policy of defending southeast Asia, but because they know that no careful decision has been made here about what can and should be done about the defense of these areas close to the Communist borders.

This uncertainty at the top of the Government is now being reflected in the criticism of the press. Because it is widely known or believed here that the administration has not decided on its strategy of what can and what cannot be defended, the press is engaged in a kind of campaign to persuade the Government to do this or do that.

Henry Luce is publicizing the hard line and glorifying intervention as a noble principle. Walter Lippmann is arguing for a reappraisal of past commitments and for detachment from what he regards as untenable entanglements.

Elsewhere, the old cliches and fighting words of past debates are beginning to appear. Thus those who do not think it wise to try to defend everything everywhere are being labeled as appeasers and isolationists and pacifists, while on the other side, those who want to be bold are being condemned as warmongers.

Obviously, there is very little future in such a dialogue. Everybody agrees here on one thing: That the present trend of policy has to be changed. They all agree, too, that any policy involves serious risks, and they are all waiting to see what lead the President will give to cut through the current fog and confusion.

The trouble is that the Government has been speaking before deciding, and promising more than they have to give, and acting without a set of priorities. The next 2 weeks will provide an opportunity to correct this. And what the President decides will be important, for nothing is more dangerous in the alliance at the moment than an ill-considered conference with de Gaulle, and nothing worse in the cold war than an ill-prepared talk with Khrushchev.

Authorizing Appropriations to the National Aeronautics and Space Administration

SPEECH
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 6874) to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction of facilities, and for other purposes.

Mr. FULTON. Mr. Chairman, I rise in opposition to the pro forma amendment.

The question comes up specifically, were there any delays in the NASA programs because of labor trouble, and the answer to that is no, there were not. Mr. Webb stated as of today in a written message both to the chairman and myself as follows:

The above cases represent the only labor situations in which NASA has been presented with serious threats to its national program. These did not cause any slippage or postponements in the NASA Canaveral booster program. The Saturn launch program, for example, is on schedule and, as indicated earlier, the Mercury man-in-space shots were not delayed by labor troubles.

Under those circumstances you would say, How much trouble has there been in various instances? The answer to that by Mr. Webb, Director of the National Aeronautics and Space Administration, is this:

While, as is inevitable in new programs such as those involved in the space effort, there have been other work stoppages and misunderstandings, these have been of short duration—a day or so—and we have been able to dispose of them quickly and fairly.

The House should remember this is the civilian space program and that most of our programs of research and development are in various agencies and locations other than under the Air Force, the Army, or the Navy. For example, on page 8 of the report you will find where our chief work is done on research and development: NASA Headquarters in Washington; Langley Center; Ames Center; Lewis Center; Flight Center; Goddard Center; Wallops Station; Marshall Center; western office; AEC–NASA Nuclear Office; Life Science Facility; and Space Task Group.

This is the space program, and it is a pleasure to report to you that it is moving on schedule for civilian purposes.

"A Message From Garcia"

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. FLOOD. Mr. Speaker, since he took office in 1957, President Carlos P. Garcia of the Republic of the Philippines has worked to develop an independent foreign policy which would best serve the interests of his country at the crossroads of the Far East.

In this, President Garcia has sought to develop closer relations with his Asian neighbors without in any way weakening traditional Filipino friendship for the United States as his country's "closest ally and friend." He has also guided Philippine policy along lines that would make his country serve as a magnet for drawing together the non-Communist nations of Asia and enhance the cause of economic development in his homeland and among the other Asian countries.

Since communism first appeared on the mainland of Asia, Filipino leaders have recognized it as a deadly enemy and President Garcia has repeatedly warned against its relentless drive for world domination.

I am happy to be able to quote a recent address by President Garcia as part of these remarks:

AN ADDRESS BY CARLOS P. GARCIA, PRESIDENT OF THE PHILIPPINES, BEFORE THE MANILA OVERSEA PRESS CLUB, FEBRUARY 23, 1961

A little over 2 years ago, I broached the idea of bringing about in this region (Southeast Asia) an association of states which, mostly in the cultural and economic sectors, might explore common areas of interest, common problems and perhaps avenues of cooperative action for a common good. Shortly afterward we had the pleasure of welcoming among us the Premier of Malaya, Tengku Abdul Rahman, who likewise saw merit in the concept and became one of its most vigorous advocates.

This month a beginning was made, a limited one to be sure, but one holding great promise. In the agreement between the Governments of Thailand, Malaya, and the Philippines to confer on the mechanics of such regional association is the beginning of the kind of understanding and cooperation so essential to the free world in this time of trial.

Before discussing this development more fully, however, it might be useful to sketch briefly the background against which elements of our foreign policy should be viewed.

First let us examine the current international situation and the nature of the tensions which constitute the crises of our day.

A great scholar and observer of world affairs makes the significant observation that it is inaccurate to speak of the conflict between the free world and communism as a contest of two similar power blocs. He points out that whereas the Communist bloc is a monolithic organism held together by violence and intimidation, such as the Russian tanks in Hungary, the free world bloc is a voluntary association impelled toward pooling its resources in the interests of collective security only by the threatening pressures of the Communist bloc itself. I think it is also useful to define more sharply the nature of the conflict.

It is a matter of Communist doctrine for all to read that the Communist revolution will not, indeed cannot, stop short of an all-Communist world. No Communist of any stature has as yet repudiated this basic doctrine of international communism. In fact, careful study of their most recent literature establishes conclusively that even the concept of peaceful coexistence is seen by top Communists as a temporary lull in armed hostilities during which they may consolidate their gains and prepare for the next violent phase of Communist expansion. The present world crisis therefore derives from the Communist Party's continuing attack, by whatever means possible, on all non-Communist countries, since the continued existence of free societies, of free men, cannot be tolerated within the concept of an all-Communist world. Thus, unless we consider surrender to intimidation, the initiative for ending the cold war and averting a hot war rests with the Communists—and only the Communists.

I think it is also high time that we demolish the distortion heard from some quarters that small nations committed to the free world bloc are merely pawns fighting the war of the United States in a big power contest with the Soviet Union.

The question has been asked in some quarters, for example, why the Philippines, a small nation, has chosen to take an active part in this decisive world struggle. Our reasons in terms of political and religious belief, of morality and justice, already have been adequately stated. For the benefit of those who claim to be practical realists, however, I think it might be wise to add this further "practical and realistic" reason. The free world is fighting for a world community ruled by law, the Communists for a rule imposed by force. As one of the small nations, a world of laws is our sole hope of stature and dignity. Under a world rule of force we can expect nothing better than national extinction and racial absorption.

There is little need to labor the obvious as to why we accept American leadership in this struggle. The American record for supporting freedom for all peoples is ample endorsement of their motivation and intent. In material resource and tenacity no other nation or combination of nations can claim the contribution already made to the fight, or match the strength and potential of America to sustain it. (In this connection, it is interesting to note that while some commentators go so far as to claim Soviet superiority over the United States, Mr. Khrushchev himself promises his people only that they will catch up with the United States in 7 to 10 years.)

To summarize up to this point, we may say that until the Communist bloc decides to abandon the world revolution, international tensions and conflict, regardless of temporary lulls of peaceful coexistence or peaceful competition, will continue. Further, by the Communist's own doctrine, every free society, committed or otherwise, will continue to be a target of whatever weapon is considered appropriate, whether armed aggression, assistance to internal rebellion, economic sabotage, or any of the many forms of subversion. It may also be assumed that America will continue to exercise the leadership and shoulder the major material burden of free world defense, while her allies gain the strength necessary to tip the balance so decisively that the Communists will be discouraged from further pursuing their aggressive expansion.

This brings us to the question of what may now be forecast as to the American posture of free world leadership under a new administration.

From President Kennedy's pronouncements to date, from those of his major appointees, and from the writings of those known to influence the thinking of the new administration, it is possible to derive at least a preliminary assessment. It now appears likely that there will be no alteration of basic policy and fundamental objectives. In executing policy and pursuing these objectives, however, it may be expected that full advantage will be taken of the opportunity afforded by change to secure a broader area of tactical maneuver, greater flexibility and variety in the instruments of policy brought to bear. Although for years the United States, almost alone, has carried the burden of military and economic assistance to the recovering and developing nations of the free world, and today is suffering in some measure from the economic consequences, it appears likely that neither of these programs will be abandoned or drastically reduced. There appears to be some inclination to lean more toward acceleration of economic growth, and it is predictable that because of economic pressures both military and economic foreign aid programs will be more sharply scrutinized and more carefully weighed, so that each dollar of investment in free world strength delivers its maximum yield.

In his inaugural address, President Kennedy said: "My fellow citizens of the world: Ask not what America will do for

you, but what together we can do for the freedom of man."

What can we do together for the freedom of man? What can a small nation such as ours do now?

It seems immediately obvious that maximum acceleration of economic growth and technical development serve not only the individual national interest, but also the objective of strengthening the free world alliance. It is toward this end that we are taking steps toward stimulating both foreign and domestic private investment, expanding and diversifying our pattern of trade and commerce, and developing new credit lines with appropriate nations of the free world.

Another contribution we can make to the free world effort, one wholly compatible with the national interest and aspiration, is in the political sector—not alone in terms of maintaining our own domestic stability but even more in terms of the posture and initiative we take in our regional and global international relationships. For example, the consultative conference held recently in Manila. I believe, established firmly for the information of all concerned the fact that the peoples and governments of this region see the situation in Laos not as a big power contest but as a serious threat to their own peace and security and a manifestation of renewed Communist expansionism.

Aside from the special and significant features of the free world bloc already mentioned, it should not be forgotten that the free world, precisely defined, includes the so-called uncommitted nations which nevertheless are as dedicated to the preservation of their own free societies and individual freedom as ours. With these nations, while we may differ on the measures taken to insure national integrity, we have much in common in terms of other problems and aspirations wherein mutual understanding and cooperation can be mutually beneficial.

For the most part, these common problems are characteristic of the developing new nations: security against external aggressions, internal defense and protection of free institutions, and the acceleration of economic growth and technological development. It is no coincidence certainly that each of these areas is today included in the broadened front of Communist attack. As the arms race reaches a point of stalemate, the political and economic sectors grow in importance, and whatever can be done to increase the strength of these sectors in every free nation, regardless of military commitment, is a net gain in terms of free world security.

This has been the underlying purpose of our determination to broaden the base of our relationship, first with neighboring free societies and later with those geographically more remote. It would be utopian to think that in the free association I have described there could be complete agreement in all matters, but it is a characteristic of a democratic community such as the free world comprises that the individual and the community may seek benefits wherever agreement and cooperation can be achieved.

While on the subject of the small nation—committed, uncommitted or neutral—we might stop to consider a particular phenomenon, of our times—a phenomenon, incidentally, which underscores my earlier emphasis on the fact that it is the small nation that has the greatest stake in realizing a world community accepting the rule of law.

Recently the General Assembly of the United Nations has been augmented by the admission of many new small nations. Small though each may be in resource and limited in experience, each enjoys numerical equality with the oldest and largest in that assembly of nations. The magnitude of the influence these nations acting in concert can wield has been demonstrated and commented upon. Some view the phenomenon with elation, others with concern. We of the Philippines, ourselves a small nation, experience both reactions. We are elated to have this confirmation of our most fundamental foreign policy outlook, but we are concerned that this power of small states, unique in mankind's history, not be lost or destroyed by abuse.

We must never lose sight of the fact that the power exists only by virtue of the organization in which it is exercised, the United Nations. This organization itself will exist only so long as it honestly and impartially reflects the intent of its charter, only so long as each member feels that its decisions and judgments are the result of sober and honest deliberation. The intrusion of petty or sordid motives, of ancient grudges or racial bias, could bring about the destruction of what the world has so painfully tried to restore since the tragic collapse of the League of Nations.

Before concluding, there is one other aspect of this administration's foreign policy I should like to clarify. Our determination to withhold recognition from nations of the Communist bloc has been questioned as being more rigid than that of the United States. "More popish than the Pope"—is one of the flippant criticisms.

In the first place it should be pointed out that the free world alliance by its very nature does not impose rigid conformity of policy upon each of its members. For its own reasons, the United States recognizes the Soviet Union and sits with its representatives in the United Nations. We have avoided such diplomatic relations without impairing our U.N. participation. Should Red China shoot its way into the United Nations, or even negotiate formal relations with the United States, we see no reason why either development need influence our own policy, which is based upon considerations of practical self-interest. In terms of trade, we certainly have not so thoroughly exhausted the markets of the free world as to turn in desperation to those of the Communist bloc. As for diplomatic convenience, we ask "Whose?" All too vivid is the experience of many of our neighbors, warning us of the tremendous burden that would be placed upon our security services should we permit an influx of hordes of spies, propagandists, and professional saboteurs, working from the protection of a diplomatic sanctuary in our very midst.

This then, in summary, is our position. The clash between world communism and free societies is not of our choosing and not subject to our evasion. We believe that the only way to avert war, or win it if it is forced upon us, is by a pooling of all free world strength in every sector, that weakness or disunity can serve only to invite aggression or piecemeal capture. For ourselves we choose active participation. In the case of those of our free world neighbors and friends who choose otherwise we are prepared to respect their freedom of choice, developing our relations with them in any or all of the other constructive categories of democratic activity mutually acceptable.

Contrary to Marxist dogma, we hold that tyranny—not the free society—carries within it the seeds of its own destruction. We believe, too, that the urge toward freedom is one of the strongest instincts, a divine endowment of all living things—including the people of Russia and Communist China. Therefore, the longer the free world can maintain and widen the margin of deterence, the closer we come to peace with justice and freedom for all mankind.

National Highway Week

EXTENSION OF REMARKS
OF

HON. FRANK M. CLARK

OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1961

Mr. CLARK. Mr. Speaker, National Highway Week, officially proclaimed by President Kennedy for this week, May 21–27, reminds all of us that we are indeed a highway nation.

Because nearly every family owns an automobile, our lives certainly revolve around and are dependent upon its use. Through a highly organized network of highways, our goods move from farm to market, from factory to store, from dairy to doorstep. Wheels carry us to work, worship and play. They carry our children to school.

But wheels must have strips of pavement to roll over. Highways must be economical, fast, safe and efficient as are the high-powered vehicles which roll over them hour after hour, day after day, year after year.

We do not now have that kind of highway, except in fragmentary segments, such as the short completed sections of the National System of Interstate and Defense Highways.

National Highway Week calls our attention to the fact that too many of our present highways are obsolete, dangerous and choked with traffic. And, as traffic increases with 114 million vehicles driving 1.2 trillion miles per year by 1976, existing roads become increasingly so.

To improve our highways to a state of adequacy—not only to meet the needs of today but to carry the tremendously increased traffic loads of tomorrow—requires completion of the expanded highway program on schedule.

National Highway Week is a fitting time to bear in mind that better highways save lives, save time and save money.

Mr. Speaker, under unanimous consent I include a copy of President Kennedy's National Highway Week proclamation:

THE WHITE HOUSE, *May 1, 1961.*

NATIONAL HIGHWAY WEEK, 1961—A PROCLAMATION BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

Whereas an adequate highway network is indispensable to traffic safety, to the growth of our economy and to the national defense; and

Whereas some 40,000 of our citizens are killed and 1,400,000 are injured every year in highway accidents; and

Whereas the orderly advancement of our expanded Federal-State highway program promises a sharp reduction in our annual waste of human and economic resources due to outmoded highways; and

Whereas the public should be reminded of the importance of completing the National System of Interstate and Defense Highways on schedule in 1972: Now, therefore, I, John F. Kennedy, President of the United States of America, do hereby proclaim the week of

May 21–27, 1961, as National Highway Week in recognition of the vital role of highway transportation in our way of life.

I also urge the Governors of the States to issue similar proclamations and ask the appropriate officials of the Federal and State Governments, public and private organizations, and the general public to join in observance of this significant occasion.

During this period I encourage all Americans to judge the value of highway transportation to their own activities and to our national welfare.

In witness whereof, I have hereunto set my hand and caused the seal of the United States of America to be affixed.

Done at the city of Washington this 29th day of April in the year of our Lord nineteen hundred and sixty-one, and of the independence of the United States of America the one hundred and eighty-fifth.

By the President:

JOHN F. KENNEDY.
DEAN RUSK,
Secretary of State.

Memorial Day, 1961

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the National Tribune, Stars and Stripes:

MEMORIAL DAY, 1961

On Tuesday of next week, May 30, Americans all over the Nation will commemorate Memorial Day. Tribute will be paid not only to those heroes who died to defend and preserve the Nation, but also to those living who fought for the ideals and principles that have made this Nation great.

The idea of honoring our Nation's defenders was first given birth in 1868 when Gen. John A. Logan, then commander in chief of the Grand Army of the Republic, called upon all members of his organization to pay tribute on May 30 of that year to those who had fallen in their heroic defense of the Union. This tradition has carried on to the present day but unfortunately Memorial Day, formerly known as Decoration Day, does not have to our younger generation the significance that it carried in previous years.

Today, we are prone to forget that as individuals we should pause to reflect and pay tribute to those gallant men and women who have offered their lives in defense of this Nation. Too often, perhaps to ease our consciences, we feel that ceremonies of this description are better cared for by patriotic organizations and veteran groups, but it should be pointed out that observances of this character are everybody's business, a personal responsibility not to be delegated or ignored.

There can be no denying that our citizens have become complacent in their expressions of patriotism. There have been those among us who have been cynically critical of our American system of government.

We realize that perhaps our system is not perfect but by and large it is the one form of government in the universe that offers more freedoms to the individual citizen than any other. It has given us the highest standard of living in the world but there has been a relaxation of the burning patriotism which marked the efforts and exploits of our forefathers. We need again to rededicate ourselves to the glory and privilege that is ours, to remember the heritage which has been handed down to us.

So, on Memorial Day let us pause and give sober thought to the sacrifices that have been made by so many in order that we can enjoy those priceless benefits and rights of which we are possessed today.

The opportunity to pay tribute to our honored dead should be a cherished privilege. Let us make use of it.

The Emergency Feed Grain Program

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I should like to include a press release from the Department of Agriculture which spells out the great success of the emergency feed grain program which passed this Congress earlier this year:

U.S. DEPARTMENT OF AGRICULTURE,
Washington, May 24, 1961.

SECRETARY FREEMAN SAYS FEED GRAIN SIGNUP IS "OVER THE TOP"

Secretary of Agriculture Orville L. Freeman said today the emergency feed grain program is over the top.

"The goal the administration sought—which is to adjust production of feed grains by converting 20 percent of the acreage into sound, soil conserving practices—now has been reached," the Secretary said.

"As of last Friday, 20.6 million acres of corn and feed grain land has been signed up by almost a million farmers for soil conserving use, and the program still has nearly 2 weeks to go before it closes.

"I am pleased that the farmers have responded to the program in such a positive manner.

"It is heartening to me that the first piece of major legislation proposed by this administration, enacted by the Congress and put into immediate operation by the Department of Agriculture, has reached its goal in less than 5 months.

"This response is an expression of confidence in the action of the Congress in passage of the emergency legislation, and it fulfills the faith which this administration and the Congress placed in the farmer.

"I believe the signup, in spite of the late start, clearly indicates the support of producers for farm programs which call for farmer participation in the development of procedures by which they can cooperate together in the management of the agricultural enterprise.

"The omnibus farm bill provides farmers with such a means, and I believe the interest shown by farmers in the feed grain program is a measure of their interest in the farm legislation which the Congress is now considering."

The emergency feed grain program, now in its sixth week of operation, will continue through to the end of May. Weekly reports will be made by the Department of Agriculture as of May 26 and June 2.

The fifth weekly report on signup under the program shows 20,664,607 acres signed to be diverted from corn and grain sorghum plantings on 920,529 farms this year. This is slightly more than 20 percent of the U.S. total 1959–60 average corn and grain sorghum plantings of about 102.3 million acres.

Today's report shows an increase of 4,010,551 acres from the 16,654,056 acres diverted under the program as reported last week.

The fifth report shows that 16,775,351 acres of corn have been signed up from the 41,083,532 acres of corn base. This is slightly more than 20 percent of 1959–60 average U.S. plantings of 83,648,000 acres. On farms signed up, the total diversion continues to stay at 41 percent of the base acreage for these farms. To date, almost 50 percent of the average U.S. plantings is on farms signed up under the program.

Grain sorghum diversion is now at 3,889,256 acres, which is almost 21 percent of U.S. total sorghum plantings of 18,674,989 acres for grain. The grain sorghum base of 9,246,632 acres on farms signed is almost 50 percent of the national plantings. The 3.9 million acres is more than 42 percent of the grain sorghum acreage on signed farms.

For all farms signed, possible advance payments under provisions permitting about half of the payments to be made this spring come to about $270,663,611. While the potential total payments under the program are not being determined for these initial reports, Department officials estimate that total payments will probably be more than double the value of the advance payments.

The 1961 feed grain program provides payments to farmers in the form of certificates for diverting corn and grain sorghum acreage to conserving uses. Producers may receive grain or the cash equivalent of grain for their certificates. Diversion of corn and grain sorghum acreage from production this year is expected to achieve a better balance between production and utilization of these grains. Payments to producers will maintain their income this year.

The report shows that certificates covering about $161.4 million worth of grain had been issued to farmers under advance payment provisions. Of the $161.4 million worth of certificates issued through May 19, farmers had received about $135.7 million in cashable sight drafts from county agricultural stabilization and conservation (ASC) offices. In these instances, as provided under the program the Commodity Credit Corporation pays farmers in cashable sight drafts and then later acts as their agent in marketing the quantity of grain covered under the certificates.

Through May 19, farmers had used $131,915 worth of certificates to purchase from CCC 126,630 bushels of corn from quantities that had been under price-support loan. In addition, farmers had purchased 54,437 bushels of CCC-owned corn with $57,184 worth of certificates and 2,670 bushels of CCC-owned barley with $1,922 worth of certificates.

The following tables show sign-up figures by States. The first table shows combined figures for corn and grain sorghum. It shows the number of farms with base acreage, number of farms signed up, the total acreage to be diverted, the advance payments that can be paid this spring, the value of certificates issued, and the value of certificates cashed.

The second table shows figures separately for corn and grain sorghum. It shows the average of 1959–60 planted acreages for corn. For grain sorghum, the preliminary total base acreages are shown. This table also shows the base acreages on farms signed up and the acreage diverted on signed farms.

State	Number of farms with base acreage	Number of farms signed up	Total acreage to be diverted	Advance payments that can be paid this spring	Value of certificates issued	Value of certificates cashed
Alabama	107,993	26,586	406,945	$2,696,553	$2,435,746	$2,360,244

Udall's Park Program

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. SCHWENGEL. Mr. Speaker, a recent editorial in the Des Moines (Iowa) Register, entitled "Udall's Park Program," calls attention to a vital need in the United States today. I agree with the editorial, especially in the recommendation that more parks be developed and that means be explored to finance the development outside of tax revenue. Any plan which would let the users of the parks pay the freight certainly would be in keeping with a principle which most people in this country accept.

I have not always been in agreement with the programs of this administration, but I cite this editorial and my approval of it as evidence that I will support the administration when I think it is right and oppose it when I think it is wrong.

The editorial follows:

UDALL'S PARK PROGRAM

Secretary of Interior Udall's statement that there is an urgent need for the expansion and improvement of national park facilities is not open to serious challenge. The rapidly increasing use being made of these areas today, together with the Nation's growth in population, provide clear evidence in support of it.

More than 50 million people visit the national parks every year. The number doubled in the short space of 5 years during the past decade. As the Interstate Highway System nears completion, cutting down travel time over long distances, the rate of increase in the use of national parks will continue to rise.

The 30 major parks account for most of this sharp increase in public use. The pressure on the more scenic areas, such as Yellowstone, Glacier, and Zion, will continue to be the greatest. But there are others that are growing rapidly in popularity as roads and other facilities are improved.

Four hundred thousand acres of land and two new parks have been added to the park system in the last few years. But even with those additions, Secretary Udall was correct in emphasizing the need for continued expansion.

The problem, as always, is money. Secretary Udall apparently feels that Congress is not inclined to provide more money for parks in the regular appropriation bills. He is searching for other sources of funds. Among his tentative suggestions are special taxes on soft drinks, higher fees for park visitors and levies on manufacturers who produce articles used by park visitors. The latter, we presume, would include tents, trailers, camp stoves, sleeping bags and the like.

Special taxes that are earmarked for a particular purpose are attractive to the departments that get the money because Congress is less likely to take it away once the tax has been authorized. Earmarked taxes, however, have a tendency to remove a portion of the Government's tax income from competition with other Government programs and needs when Congress and the taxpayers try to form judgments as to what is most essential and how much the Nation can afford to spend.

Great as is the need for expanding recreation facilities, the expenditures should still be put to the test of competition with other needs. The earmarking of taxes for parks is not wise.

Secretary Udall should be able to increase park revenues substantially by raising the entrance and service fees paid by park visitors. The possibility of obtaining more funds through higher lease and rental charges on public lands might be worth exploring.

Unused recreation areas could also be added to the present national park facilities and be preserved for future parks if Secretary Udall and the Kennedy administration would make a concentrated effort to get the wilderness bill enacted into law. The proposed wilderness project would cost very little money. The Government owns the land. Construction of highway and tourist facilities would be prohibited. Nature alone would build and preserve these natural parks.

The Honorable Arnold Olsen, of Montana

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. KOWALSKI. Mr. Speaker, in his most appropriate and extraordinarily informative remarks on Norwegian Independence Day—May 17—the honorable gentleman from Montana paid fitting tribute to the remarkable people of Norway. I would like to congratulate Representative OLSEN for this splendid talk and take this opportunity to thank him for the fine things he said about this gallant, gifted, hard-working, sturdy, and stouthearted people. The honorable Members of this House are always eager to hear of peoples in other lands, living in different climes and under differing types of government, but I hope I am right in saying that we are always delighted to hear about peoples whose deeds we admire, whose accomplishments in many fields of human activity have enriched Western civilization in numerous ways, and whose pioneering experiments in democratic processes of communal and national life have become models for many other countries.

The lot of the Norwegian people has been conditioned by the geography of their beautiful land, and by its invigorating and bracing climate. But these are only the physical factors, and these alone seldom determine and direct a people's destiny. In the case of these venturesome, pioneering, intelligent, and indomitable Norwegians their individualistic and freedom-loving spirit, their social-mindedness, their constant awareness that public welfare and common well-being are for the good of all concerned, these supremely admirable traits have made them what they are. Because of these fine traits, and because of their pioneering work in scientific fields, such as polar explorations, in oceanography and seamanship, and in social-educational endeavors, their great accomplishments bear no relation to their number of a mere 3 million in a world of 2,600 million people. Norwegians can always disprove the mistaken notion that bigness in size and greatness in accomplishments go hand in hand.

I can hardly improve upon what the honorable gentleman from Butte, Mont., said about Norway and the Norwegian people, and of their signal contribution especially in the field of international civil service. Incidentally, during the interwar years on the world's best known and most admired statesmen was Norway's Dr. Nansen, the foremost civil servant in the League of Nations, just as Norway's Trygve Lie was the first Secretary General of the United Nations. In conclusion I would again congratulate this fine, direct descendant of that great and gifted people, Representative OLSEN of Butte, Mont.

To Outlaw Genocide

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. TOLL. Mr. Speaker, in the New York Times of Sunday, May 21, 1961, appeared a letter from Will Maslow, executive director of the American Jewish Congress, deploring our failure to join 64 ratifying nations to outlaw genocide. In view of the recent events in Israel the attention of the world has been called to the nature of such activities, and I believe Mr. Maslow's letter, which is included below, will be of interest to all Members of Congress:

TO OUTLAW GENOCIDE—OUR FAILURE TO JOIN 64 RATIFYING NATIONS DEPLORED

(The writer of the following letter is executive director of the American Jewish Congress.)

To the EDITOR OF THE NEW YORK TIMES:

The disclosures of the Eichmann trial have again directed mankind's attention to the rudimentary condition of international law and the lack of effective international means for preventing and punishing even such crimes as mass murder.

As Americans we must accept a special responsibility for this lack. Following our country's energetic advocacy of a Genocide Convention when it was first considered by the United Nations, today—almost 13 years after the unanimous adoption of the convention by the General Assembly—we have not yet joined the 64 nations that have ratified the agreement.

This aloofness is incompatible with our country's traditional championship of international morality.

President Theodore Roosevelt rebuked the Rumanian Government's religious massacres and instructed his Secretary of State to declare that "this country cannot be a silent party to an international wrong."

President Taft denounced an American trade agreement with the Czar because of pogroms against Russian Jews. President Wilson instructed his Ambassador in Turkey to intervene on behalf of persecuted Armenians. President Truman gave leadership following World War II in helping convene the historic Nuremberg Tribunal, whose judgment for the first time formally made genocide criminally culpable.

COURT RULING ON TREATIES

Repeated decisions by the U.S. Supreme Court make it plain that there is no merit to the spurious claim that such treaties as the Genocide Convention could possibly endanger constitutional rights. Ever since the decision in *Geofroy* v. *Riggs* in 1889 it has been well-established that no treaty may invade or impair constitutional liberties.

In the words of the Court, no treaty may "authorize what the Constitution forbids, or [work] a change in the character of the Government or in that of one of the States."

The Genocide Convention is today the most widely ratified United Nations agreement with the exception of the U.N. Charter itself. Among the 64 countries that have signed it is the Soviet Union. By contrast, our failure thus far to become a signatory to the treaty has exposed the United States to allegations of insincerity, has embarrassed our friends abroad who look to us for affirmative leadership, and has seriously damaged the convention's effectiveness as an international instrument.

In June 1949, President Truman submitted the Genocide Convention to the Senate, accompanied by an enthusiastic endorsement. Shortly thereafter, Dean Rusk, speaking for the Department of State, appeared before the Senate Foreign Relations Committee urging ratification of the Genocide Convention.

On April 12, 1950, following extensive public hearings, a special subcommittee of the Foreign Relations Committee recommended ratification. Yet more than 10 years later the Genocide Convention, still languishes in committee without recommendation.

Ratification of the Genocide Convention during the current session of the Senate would stand as a singularly appropriate and forceful response to the Eichmann trial.

WILL MASLOW.

NEW YORK, *May 16, 1961.*

Authorizing Appropriations for Aircraft, Missiles, and Naval Vessels

SPEECH
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1852) to authorize appropriations for aircraft, missiles, and naval vessels for the Armed Forces, and for other purposes.

Mr. GUBSER. Mr. Chairman, this amendment has been well debated and it is not my intention to prolong the debate except to emphasize several points which have previously been made.

First, the question has been raised as to why these naval officers who have recommended a program of 45 were not able to convince the previous administration. The answer is simply because of the fact that the *George Washington,* our first operational Polaris submarine, did not go to sea until November 15. Second, this is the first time that the Congress has been able to make a decision on this program with an operational submarine in being, and to benefit from the information that we have gained from its operation.

Secretary Gates, in the Appropriations Committee hearings last year said that if the *George Washington* trials were successful he would—I quote—"have no hesitancy whatsoever" in accelerating the program.

Mr. Chairman, this is not a partisan matter, and the present occupant of the well of the House has never considered it as such. I am not attempting to saddle Secretary McNamara with the decision of his predecessors, nor would this amendment so saddle him. He admits that he is currently studying the ultimate objectives of the Polaris program. This is right, this is proper.

But if he should decide to continue beyond No. 29—and by his own words, this is a possibility—should we by the terms of S. 1852, build in an automatic and an inevitable disruption of the orderly program schedule which we will achieve under the Kennedy acceleration of one submarine per month?

We do not obligate the Secretary to build these submarines. We do not obligate the Appropriations Committee to approve their findings. We only make it possible.

Remember that we have a new law. We have 412(b). Under the terms of that law we cannot, by Chairman VINSON's own words appearing in the hearings, authorize long leadtime items unless you have the ship authorization, because "the ship is the basis of the appropriation."

All we are asking for is an insurance policy so that if Secretary McNamara, in his wisdom, decides to go ahead beyond No. 29, we will not force him to lose time which can never be regained. The Polaris system is our only present operational deterrent system, with the exception of the Atlas. Should we now when we have this in being, when we can keep it coming into our inventory, build in a 1-year delivery gap? I say we should not. We do not obligate the Congress to vote a single dime, nor do we obligate the administration to ask for it.

On that basis, Mr. Chairman, I request support for my amendment.

The People Are Entitled To Know Where the Administration Is Going

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. ALGER. Mr. Speaker, before it is too late the American people deserve a straight-from-the-shoulder statement, without qualification, from the President, setting forth the direction in which his administration is going. He has taken such a zig zag path from the promises of the campaign and the noble statements made in his inaugural address, that we, and the world are completely confused. Did we or did we not set up the invasion attempt in Cuba? Who was to blame for the fiasco? Are we preparing to appease the Communists in Asia, at Geneva, or in the forthcoming meeting with Khrushchev? The extent of the confusion in the minds of Americans everywhere is shown in the short paragraphs taken from this week's edition of the U.S. News & World Report which follow:

Fidel Castro, while turning back an invasion attempt, lost at least 2,000 troops killed before getting the upper hand against an invasion force of 1,400. The overthrow attempt would have succeeded if air support promised by United States had not been withdrawn near the last moment.

At least five departments or agencies of the U.S. Government were in on the venture into Cuba, including the White House. Stories deliberately fed out to center blame on the U.S. Joint Chiefs of Staff were an effort to clear skirts in other directions. Military chiefs then were ordered not to talk.

So-called intellectuals are urging President Kennedy to seek "stabilization" in the world by making a deal—involving concessions—to placate or appease the Communists whenever they become aggressive. Military leaders are telling the President that this is a sure way to get the United States backed into a corner.

Dean Rusk, Secretary of State, got nowhere with President Kennedy with his argument that it is unwise to meet with Khrushchev without first having much preliminary groundwork done and an assurance that something will come of the meeting.

With Russia Adding to the World Oil Surplus U.S. Fuel Markets Must Be Afforded Greater Protection Against Imports

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. VAN ZANDT. Mr. Speaker, on May 24 the gentleman from West Virginia [Mr. STAGGERS] raised a highly explosive question in calling attention to Russia's frontal attack on the world's fuel markets through price-cutting barter, threats, and other devices. It is a question with which we must come to grips as quickly as possible. It must be settled at the diplomatic level, because the Red campaign cannot be countered with improved salesmanship on the part of the free world's oil producers. No amount of improved automation will do the job. And no matter how low competitive prices might go, the Kremlin can always underbid because in a slave state any commodity can be priced according to the exclusive wishes of the tyrants at the helm.

The statement made before the Department of Interior by Stephen F. Dunn, president of the National Coal Association, last February and his address in Chicago last week should be studied carefully by every Member of Congress. I also call your attention to

two documents that have been published within the past 10 days. One is "Soviet Oil in the Cold War," a study prepared by the Library of Congress at the request of a Senate Judiciary subcommittee. The other, "The Soviet 7-Year Plan, 1959–65 for Oil," produced by the U.S. Bureau of Mines, contains additional information that would serve to substantiate Mr. Dunn's warnings.

For the past 10 years I have insisted that Congress reclaim some of the authority on matters of international commerce that it has in the past relinquished to the Department of State. I have watched our domestic oil and coal industries decline in structural strength as a consequence of the surging tides of residual oil emanating in Venezuela and the Dutch West Indies.

There is no ground for controversy on the necessity of maintaining strong domestic fuel industries. Both parties have taken notice of the vital role which American producers must assume in a war emergency. The oil imports control program was established by the Republican administration as a security measure. It has been continued by the present administration without philosophical revision, although the levels of imports have been raised so high as to virtually destroy the effectiveness of the whole program. Nevertheless, acceptance of this concept—of having to protect our domestic fuel industries in the interest of national security—at least gives us a start. The White House acknowledges the importance of domestic producers. Congress concurs in the appraisal. The job before us is to determine to what extent residual oil quotas need to be reduced, and then reduce them without equivocation.

The Russian oil threat may have one wholesome effect: of goading the U.S. Government into adopting precautionary measures against a potentially fatal fuel gap among the free nations. If our alliances with non-Communist nations are to have any lasting value, it is folly to sit by and watch them stake their future on Russian oil. The Kremlin is in effect loading both barrels, then giving shotguns to our friends to play Russian roulette with national security.

To permit Red oil to crowd out the products of free nations is as suicidal as to bank domestic steel mills in order to purchase the output of plants in the Donets Basin or in Manchuria. In an emergency, Khrushchev would merely order shipments stopped. When producing oil wells in the United States, the Middle East, and Venezuela are capped and tankers put into mothball fleets, Moscow will hold the key to complete confusion and chaos.

I commend to your consideration this quotation from "Soviet Oil in the Cold War," which has been printed for the use of the Senate Committee on the Judiciary:

> In the course of the year 1960, Soviet production actually surpassed that of Venezuela and made further inroads on the more slowly growing rate of oil production in the United States.

Here is another excerpt:

> The dependence of any member of the NATO alliance on Russian oil in a substantial measure inevitably has a significant bearing on its position relative to the security of the Western World. With Italy becoming increasingly bound up in Soviet oil schemes, the question is bound to arise as to its probable behavior in the event of a serious crisis in the cold war.

Italy is not our only concern. The Russian oil is moving in increasingly greater volumes into other European countries, South America, Africa, and the non-Communist nations of Asia.

The Bureau of Mines report on Russia's 7-year plan states:

> Growing Russian oil exports have contributed to the world oversupply of petroleum, have forced prices down, and have taken sales from Western oil producers.

An additional consequence of the new Soviet-free world trade manipulations is that Dutch-Anglo-American oil producers and distributors in the Middle East and Venezuela must look elsewhere for market outlets. Unless adequate royalties continue to be collected by the kings, shahs, dictators, and juntas in producing lands, leases are jeopardized. For too long the fuel markets of the United States have been the dumping grounds for world surplus oil. As the Soviet menace—with distending pipelines and bulging supertankers now under construction—continues to grow, progressively more cargoes of foreign oil will be carted into our ports and offered at distress prices. Russia is capable of underbidding on oil contracts around the world; that much is clear. Until other non-Communist countries rise in patriotic resentment against Red proffers, the United States may be the sole holdout against Soviet shipments—or at least I assume that any attempt on the part of Russia to ship oil onto our shores will be rejected forthwith. For this reason our own markets will appear increasingly attractive to shippers whose Middle East and South America production is crowded out elsewhere in the world.

Congress must be ready to defend America's domestic oil and coal industries against the new threat. Meanwhile the Office of Civil and Defense Mobilization has begun an inquiry to determine whether the present residual oil import control program meets national security objectives. I am confident that a close study will disclose the program's weaknesses. I hope that the OCDM will recommend without hesitation that the level of imports should be lowered sharply in defense of our domestic fuel industries.

While the OCDM investigation is taking place, Congress and the State Department should concern themselves with Russia's oil offense and take every precaution, in liaison with our allies, to cope with it before it gets entirely out of control.

The Problems of Credit

EXTENSION OF REMARKS
OF
HON. HOWARD W. CANNON
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. CANNON. Mr. President, much interest has been generated by a recently published book, "Buy Now, Pay Later." It deals with the problems of credit and is authored by Hillel Black.

An introduction has been written by our colleague, the Senator from Illinois [Mr. DOUGLAS] whose work on legislation calling for truth in lending is well known to the Senate of the United States and to the country.

There appeared in the May 21 edition of the Washington Post and Times-Herald an excellent review by Senator WILLIAM PROXMIRE which contains a summary of "Buy Now, Pay Later." The junior Senator from Wisconsin [Mr. PROXMIRE] has succeeded in his review in capsulizing the importance and significant study by the author and presents an excellent case, in my judgment, in support of legislation which would require that consumers be informed of the true annual interest charge and hidden costs of their purchases.

I ask unanimous consent to have this review printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE DOLLAR DOWN—AND DOWN
(Reviewed by WILLIAM PROXMIRE)

If you are buying your home, your car, your refrigerator, have a credit card or a credit account, this book is going to shock you. It will also save you money.

By far the most dramatic economic change for the American family in the past 15 years has been its increase in debt. Since 1946, the average American family has increased its time buying (consumer credit) from $193 to $1,000. Mortgage debt has soared from $724 to more than $3,700.

This means that the typical American family today owes almost $5,000, a huge 413-percent climb in 15 years. While our family income fell short of doubling, our debt has increased an enormous fivefold.

Americans this year must work 2 months out of 12 to reimburse their creditors. Four times as many families will go bankrupt this year as 10 years ago.

In a colorful, brisk style, Hillel Black describes in "Buy Now, Pay Later" how with charge accounts, credit cards, revolving credit, instant money checking service, teenage credit accounts, Americans have speeded up this dizzying go-in-debt habit.

Black is no foe of debt. He agrees that widespread use of credit has raised our standard of living and provided more comforts and more jobs. His thesis is "that the American consumer who buys on credit is often being abused and deceived and in some instances outrageously swindled." The author abundantly and entertainingly documents this thesis. A few of his revelations:

One third of college-educated persons estimate the cost of installment credit at 6 percent. Usually it is three times that high.

Federal Reserve Chairman William McChesney Martin, perhaps the most expert man in finance in the United States, confessed to a Senate committee that he was badly confused in computing actual annual interest by present retail credit practices.

Purchases through department store or mail order installment credit require true annual interest charges ranging from 18 to 40 percent.

Borrowing from small loan companies often costs as high as 36 percent true annual interest.

True annual interest at a typical high-pressure furniture store is 60 percent.

Credit life insurance charges for identical benefits vary as much as 400 percent, depending on where you borrow. In many cases, consumers are not even told that they are sold credit life, although it is loaded into the "pack" of finance charges they have to pay.

The president of the Better Business Bureau of Greater St. Louis charges that some auto dealers hike finance charges depending on the gullibility of the customer. The finance company receives the standard payment. But the dealer has a hunting license to squeeze whatever he can out of the gullible buyer. In the past few years finance charges have jumped the fastest of all auto costs; generally, they have quadrupled.

Selling credit has become so profitable to merchants that this attitude expressed by a New Jersey car dealer is not unusual: "Cash? Let me tell you something. You couldn't buy one of our cars if you wanted to. Every car we have here is sold on time."

In a far cry from America's pioneer devotion to thrift, the go-in-debt spirit is actually promoted for teenage children in some areas through schools and PTA's. In one such area, the youngsters join a teenage credit plan and receive a charge card with the credit limit set at $25. The limit is gradually pushed up to $50 in easy stages.

This book is a telling brief for the passage by Congress this year of the Douglas truth in lending bill, which would require that consumers be told the true annual interest charge.

President Garcia's Great Speech

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. PHILBIN. Mr. Speaker, I have read the recent insertion of my able and distinguished friend and colleague, Hon. WAYNE N. ASPINALL, of a timely and admirable speech of the great President of the Philippines, His Excellency, Carlos P. Garcia.

I was very much impressed with this forceful address and desire to compliment President Garcia for his brilliant analysis of the world situation and his stirring appeal to the free world to join to preserve its heritage against world communism.

The great historic nation which President Garcia so ably leads and its courageous, liberty-loving people are honored and cherished by the entire American people. Our Nation is especially proud of the glorious history of the Philippines, and of the close association and loyal friendship which has continued for many years to subsist between us.

We are also proud to stand by the side of the Filipino people and their leaders and to work with them in the fateful struggle to sustain the precious values of freedom and the integrity and security of free nations in a dangerous world threatened by Communist infiltration, aggression and violence.

The message from Garcia is not only a strong statement of the aims of the free world but a great state paper and an inspiring message to the American people and all those interested in human freedom.

News Comments on TV Programing

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24, 1961

Mr. MONRONEY. Mr. President, at a recent meeting of television broadcasters Newton Minow, newly appointed Chairman of the Federal Communications Commission, delivered a courageous and thoughtful speech on the quality of television programing and the responsibility of both the broadcasters and the Commission in improving it.

It is indeed refreshing to hear the problems of television again discussed in terms of the public interest. I have been most encouraged by the perceptive and favorable comment which has appeared in the Nation's press since Mr. Minow's statement. I offer for inclusion in the RECORD some representative samples of this comment; a column by John Crosby from the New York Herald Tribune, an editorial from the New York Times, an editorial from Life magazine, on editorial from the St. Louis Post-Dispatch, and two articles by Jack Gould from the New York Times.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

TOUGH TALK OF GLARING TRUTHS
(By John Crosby)

Newton N. Minow, the Chairman of the Federal Communications Commission, has done the unforgiveable thing for a man in his position; he has watched television. Already, the wiseacres on Madison Avenue are spreading the word that the man's an amateur in broadcasting. If he were a professional, he'd go yachting with the broadcasters whose affairs he regulates (as did one of his predecessors), or drink with them and be rewarded with a fat legal job after his tenure of office is over.

Minow's tough talk to the broadcasters, probably the toughest speech ever made by an FCC Chairman in office, will be followed—you mark my words—by a fog of propaganda from the broadcasters which will follow these lines: First, it is un-American for the Chairman of a regulatory Commission to regulate; second, it is a violation of the first amendment for the Chairman of the FCC to look at television (none of the others ever did) or to harbor opinions about it; third (this has been the battle cry against the critics the last couple of years), the Chairman doesn't understand the economics of broadcasting. (The broadcasting industry earns a mere $1,100 million a year, with a mere $222 million profit, and how can you expect anything good for that kind of money?)

Trying to put good programing into effect is considered censorship, and maintaining the general level of mediocrity is freedom of the press. That's the way those broadcasting people argue.

The charges Minow made against TV programing—"a procession of game shows, violence, audience participation shows, formula comedies about totally unbelievable families, blood and thunder, mayhem, violence, sadism, murder, Western bad men, Western good men, private eyes, gangsters, more violence and cartoons, and endless commercials"—have all been made before by TV critics, by various other editorial writers and just plain people.

But this blast is different because it comes from the head of the FCC, a man usually seduced or intimidated or both by the lobbyists and propagandists of the broadcasting industry. There was the clear threat that if the broadcasters didn't do something about cleaning their houses, licenses would not be renewed. Well, I've heard that before and nothing has ever happened. We shall just have to wait and see.

While everything Mr. Minow said was not only true but glaringly obvious, the remedies are not so simple, so long as the business is run the way it is. I mean personal sponsorship of particular programs. If I were a manufacturer of toothpaste which sponsored a television program, I'm afraid I, too, would go along with the mob and sponsor a private eye or a situationer (as they call them) or some other popular program. It's asking too much of the toothpaste manufacturers to sponsor an unpopular program, although many of them do just that—more's the wonder of it.

It's the system that's wrong. No single sponsor should have the ownership or responsibility of any single program. And I'm willing to venture the prediction that no amount of railing from either critics or FCC Chairmen is going to change the dismal picture of TV programing. No cigarette sponsor is going to give a tinker's damn about what other programs are on the air, only his own.

The solution, I'm convinced, is the British system with the insertion of ads, as in magazines. The station or network can then take its total revenue and bring about some semblance of unity and sanity in its total programing.

"The squandering of our airwaves is no less important than the lavish waste of any precious natural resource," Mr. Minow said. I'm pleased he put it like that; waste is the proper word for it. Television is a national treasure and it should be used for something besides the waste of time. It should not be used as a soporific, draining the national energy and blanking the national imagination.

Newton Minow is a courageous man to state these glaring truths. Now let us see how the broadcasters plan to grapple with them and the man who uttered them. As for the threat not to renew a license just because the licensee asks for it in perpetuity, we should all live so long as to see a single license revoked.

TV'S COUNTERASSAULT

The counterassault on Newton N. Minow, new Chairman of the Federal Communications Commission, has begun.

Because of his forthright indictment of much of television as a wasteland, lobbyists of the broadcasting industry are now determined to thwart the long-overdue reorganization of his agency's operating procedure. Their objective is deplorable. The conse-

quences of an FCC hamstrung by delay and redtape have been painfully evident in constant scandals and flagrant cynicism toward enlightened trusteeship of the airwave.

The broadcasters appear to have found support from some Democrats in Congress who claim to be piqued over the reorganization method chosen by the Kennedy administration. The plan for revising the FCC becomes automatically effective late next month unless either House of Congress disapproves. There is nothing new about this method; it has been followed in other reorganization plans many times before; but some Members of Congress are now demanding specific legislation. If the previous fate of substantive legislation affecting the FCC is a criterion, the commission would continue to languish in the status quo that the broadcasters have found so comfortable.

Neither hunger for revenge nor political pique are sufficient reasons to sacrifice the public's stake in a competent FCC. The spectacle of seven members of the Commission solemnly voting more than 100 times in a single day on different matters, many of them minor, is not to be condoned. The reorganization plan would enable the chairman to reassign the workload within the Commission, relegate specific problems to smaller panels, and relieve the full Commission of much routine.

Extracting order out of chaos cannot be accomplished without putting someone in charge of the job. Mr. Minow, who, incidentally, would on important matters still be subject to the restraining vote of his colleagues on the Commission, has shown the energy and fearlessness that are required. That clearly explains the industry's opposition to the reorganization proposal.

[From Life, May 9, 1961]

WHAT'S WRONG WITH TV

The general mediocrity of U.S. television—which a youngster aptly called "chewing gum for the eyes"—last week brought it a stern admonition from within and a threat of punishment from without.

THE ADMONITION

LeRoy Collins, the National Association of Broadcasters' own new president (and ex-Governor of Florida) warned the industry it will deserve "the governmental controls we want to avoid" unless it corrects old abuses and prevents new ones. He urged the three networks to devote more prime evening hours—on a pooled, equal-share basis—to high quality, "blue ribbon" programing, urged broadcasters themselves to take editorial positions like the press: "Your voice must be great as well as strong—so great that beyond soothing people it will stir them; beyond entertaining people it will challenge them; beyond praising right it will damn the wrong."

THE THREAT

Hard-hitting Newton N. Minow, 35, the New Frontier's new chairman of the Federal Communications Commission, put broadcasters on notice that station licenses—which the Government controls for "the public interest, convenience and necessity" because their number is limited—hereafter will not be automatically renewed. Instead, "performance" will be judged against "promises." He left no doubt what he thought of present performance: "A vast wasteland" of "game shows, violence, audience participation shows, formula comedies about totally unbelievable families, blood and thunder, mayhem, violence, sadism, murder, and most of all, boredom."

Is TV really all that bad? Actually, the two top networks, NBC and CBS, have been trying to produce more "blue ribbon" programs (Minow himself praised "CBS Reports" and NBC's "Project 20"). But all too frequently the local outlets pass up these shows to run old movies or "package" serials, complete with ads, which provide them bigger revenue. Minow warned he is going to run checks on the programing of individual stations, particularly as to how much time they devote to the public affairs of their own communities.

A sort of Gresham's law also operates to drive good programs out by bad. The worst offender in network "wasteland" programing, American Broadcasting Co., which devotes about half its prime evening hours to adventure shows or gangster bloodbaths like "The Untouchables," has been taking both sponsors, viewers and outlets away from its rivals. If the public taste is so shoddy, and sponsors so servile to it, how can better quality emerge out of such ruthless and irresponsible competition?

One answer is to make competition itself much broader, with so many different types of programs that there will be room for everything—Hamlet as well as Eliot Ness, opera as well as Ed Sullivan. One approach to this happy condition might be to increase the number of TV stations. Most are now in the very high frequency band of 12 channels (2 through 13). The ultra high frequency range could add 70 more channels (14 through 83). This could provide many new outlets—for everything from nonprofit cultural stations, like the famed ones in Boston and San Francisco, to pay TV and classrooms of the air. There is ample proof that large potential audiences exist for serious things; last year when NBC put on a course in chemistry, an estimated 500,000 people rose at dawn each morning to see it. As for pay TV and its promise of better quality, the broadcasters are trying to stop it (experiments are now going forward in Hartford and Toronto) but Chairman Minow promised: "We are going to protect [the infant] from those who would strangle it in its crib." Something else could stimulate commercial stations to better efforts. The U.S. public itself could have its own channel, run like the BBC by public trustees of highest caliber, and paid for by rentals charged the commercial stations for use of the public's airwaves.

For the present, programing may show some improvement as a result of Chairman Minow's warning, even if no station actually loses its license. Minow purposely declined to set any bureaucratic standards to measure performance: "Why should you want to know how close you can come to the edge of the cliff?" His deliberate vagueness should make broadcasters uncertain and uneasy enough to stave off investigation and possible Government control by reforming on their own.

[From the St. Louis Post Dispatch, May 14, 1961]

PAUSE FOR PUBLIC ANNOUNCEMENT

Newton N. Minow, the new Federal Communications Commission Chairman, has told broadcasters to their faces that television programing is a "vast wasteland." The National Association of Broadcasters has not heard such language from an FCC Chief since 1942 when James Lawrence Fly, a New Deal curmudgeon, told members in St. Louis that their attitude "reminds me of a dead mackerel in the moonlight—it both shines and stinks."

Yet Mr. Minow's devastating analysis of TV programs is less significant than what he proposes to do about them. First, he will expect stations to justify their performances in terms of what they promised in public service programing when they sought Federal licenses. Second, he intends to hold hearings in the stations' own communities.

Like Mr. Fly so long ago, Mr. Minow faces some thoughtless outcries of "Government intervention." We say such outcries are thoughtless because broadcasters ought to welcome more definite regulatory standards in place of the chaotic conditions of the past. A station which tries to put informational or cultural programs in the midst of horse operas ought to have some assurance that its competitors face similar obligations.

The new FCC Chairman refuses to accept the nonsensical notion that his agency can protect the public interest without considering programing. The FCC's job is not to censor bad programs but to encourage better ones. While Mr. Minow's policy may seem revolutionary to some broadcasters, it is a plain duty to the public.

[From the New York Times]

TV: WITHERING CRITIQUE—MINOW'S CONDEMNATION OF IMBALANCE IN PROGRAMING STUNS MANY BROADCASTERS

(By Jack Gould)

WASHINGTON, May 9.—The speech by Newton N. Minow, the new Chairman of the Federal Communications Commission, marks a historic change in the fundamental concept of the regulation of broadcasting.

First, his critique of TV—certainly the most withering, complete and searching ever to emanate from a head of the regulatory agency—casts aside what always has been a ridiculous notion: That somehow the public interest, convenience, or necessity could be protected without ever really taking into account the industry's end products: Its programing.

Second, the youthful and energetic chairman has made it abundantly clear that he expects TV to acquire a purposefulness and determination to lead public taste and awareness, that the hoary rationalization of merely doing what's most popular is incompatible with the deeper urgencies of 1961.

In his address to the membership of the National Association of Broadcasters, Mr. Minow went further than any of his predecessors since broadcasting's earliest days in analyzing the programing content of the medium. He cited specific TV shows that he felt deserved praise and then embarked on a sweeping condemnation of the lack of balance in staple fare.

The scope of his remarks and his blunt directness stunned many of the broadcasters; the traditional hue and cry over governmental interference in the freedom of the home screen began to be heard almost immediately.

But when the dust settles and his remarks are more calmly analyzed, his strategy should prove a boon to all broadcasting. Because his intent is not to intrude in programing as such but to use the powers of the FCC long in existence but never vigorously applied, to put a flooring under the house of broadcasting.

In actual practice, the regulation of TV has been chaotic because it has been nonexistent. Mr. Minow is entirely accurate when he said licenses traditionally had been renewed automatically; those broadcasters hopeful of aspiring to better standards were at the competitive mercy of those who played the game selfishly. There was no day of judgment for the willful laggard.

Take for example Mr. Minow's heartening concern for child viewers. In the earlier days of TV there were some constructive efforts along these lines; but invariably a rival station or network would counter a worthwhile program with a western or the "Three Stooges."

Though he was being depicted in some quarters here tonight as a villainous novice in broadcasting, Mr. Minow may prove the best friend that television has had. The eroding consequences of the material successes of TV have gone on much too long; free enterprise in business was being hurt the most.

In addition to his welcome concern for giving practical implementation to his progressive concept of what TV could and

should be, the vividness of his words will be heady wine for discriminating set owners. At long last there is a man in Washington who proposes to champion the interests of the public in TV matters and is not timid about ruffling the industry's most august feathers.

Tonight some broadcasters were trying to find dark explanations for Mr. Minow's attitude. In this matter the viewer possibly can be a little helpful; Mr. Minow has been watching television.

On the other hand, if all stations realized that they had to incorporate something more stimulating and substantial for the young viewer, the obligation would be shared and the sacrifice equal.

One of the critical observations in Mr. Minow's speech was his mention of the acceptance of network public-service offerings by affiliated stations.

New York City viewers are very fortunate in this regard; they see all these programs. But in many sections of the country such presentations have not been carried and routine mediocrity substituted for financial gain. Merely by announcing that this problem would be a subject of inquiry, Mr. Minow already may have greatly strengthened public-service TV on a national basis.

What Mr. Minow is really hoping to do is to fill a need that the thoughtful leaders in broadcasting and advertising privately acknowledge does exist but so far have been relatively powerless to correct. It is the establishment of some ground rules that the broadcaster will be emboldened to enforce because he has the assurance that his rivals will be similarly obligated.

Put another way, Mr. Minow's goal could be described as the hope of rearranging the competitive environment so that the pursuit of quality and diversity will become economically feasible.

The Ambitions of Nikita Khrushchev

EXTENSION OF REMARKS
OF
HON. WM. J. RANDALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. RANDALL. Mr. Speaker, in the March 15 issue of Bank News, a publication published in Kansas City, Mo., and distributed to all the banks of the Southwest there appeared an article written by the Honorable Henry A. Bundschu, a veteran Kansas City attorney and retired former referee in bankruptcy for the western district of Missouri. Judge Bundschu has long been a careful observer of international affairs and while he is known among the banking fraternity of the Southwest, he has also authored numerous articles on subjects of historic interest.

It has been our pleasure to know Judge Bundschu almost our entire lifetime and we regard him as a friend as well as one of our best informed constituents. The following article entitled, "The Ambitions of Nikita Khrushchev", we commend to everyone as necessary reading. In view of world events in the Congo, Cuba, Laos, and all of southeast Asia the article should be particularly helpful as an aid to the interpretation of things to be said and done by Mr. Khrushchev at Vienna.

THE AMBITIONS OF NIKITA KHRUSHCHEV

(By Henry A. Bundschu)

There is an old Chinese proverb that says: "A house established by oppression cannot enjoy it long." I hope that this is true, for as said by Bret Harte's Truthful Jane:

"Which I wish to remark
And my language is plain
That for ways that are dark
And for tricks that are vain,
The heathen Chinese is peculiar."

Nikita Khrushchev was born in the year 1894 in Kalinooka, a Ukrainian village, the son of a blacksmith and coal miner. As a youth he worked as a shepherd boy, and learned the trades of blacksmith and locksmith, but he received very little schooling. He is now 67 years old and fully realizes that he has but a few years left to accomplish his objectives.

As Patrick Henry wisely said, "I know no way of judging the future except by the past," so let us take a look at the history of this despicable character to see what light it might throw upon his diabolical intentions.

In 1931, after having been an active Communist since 1918, Khrushchev became a party official in Moscow and started his rapid climb to the top of the Communist hierarchy. He was very active in Stalin's "big purge" of 1936–38, which killed thousands of people and sent millions to slave-labor camps. In 1938, Stalin sent him to the Ukraine to direct a purge of party officials. In 1943 German troops, who had invaded the Ukraine, dug into an area which had been used by Soviet secret police. They found 95 mass graves containing nearly 10,000 corpses whose hands were bound and who had bullet holes in the backs of their necks. From objects found on the bodies, they were identified as victims of the bloody purge that had been carried on in the Ukraine in the years 1937 to 1939. These victims included peasants, workers and priests, as well as party officials. Masses of Ukrainians were deported to Siberia. Keep in mind that Nikita Khrushchev had been sent to the Ukraine by Stalin to direct that purge.

In 1944, as Stalin's personal dictator over the Ukraine, Khrushchev directed another bloody purge. Ukrainians describe this postwar purge as being worse than the one which preceded the war. They claim that 3 million Ukrainians were killed, imprisoned, or deported to slave labor camps. By some Ukrainian estimates, 400,000 people were killed in a single year of Khrushchev's prewar purges.

ONLY NO. 5 IN 1958

When Stalin died in 1958, Khrushchev was only No. 5 man in the party hierarchy. The No. 1 man was Georgi M. Malenkov, who became Premier, No. 2 was V. M. Molotov, the diplomat. No. 3 was Lavrenti Beria, the chief of police, and No. 4 was Marshall Nikolai A. Bulganin. Now it might be enlightening to see how they disappeared under the fine, treacherous hand of Comrade Khrushchev. Within 9 days after Stalin's death, he displaced No. 1 Malenkov, as the secretary of the central committee, Stalin's old job that carried the leadership of the Communist Party. He then spotted Beria as his most dangerous rival, so he teamed with Malenkov to get rid of Beria. In June 1953, just 3 months after Stalin's death, Beria was lured to a Kremlin meeting. Here Khrushchev used the same tactics that had worked so well for him in the Ukraine in 1938. He deployed troops to cut off Beria from his own men, then arrested him. The following December, Beria's execution was announced, along with that of 29 of his confederates. There was no public trial. It was another Stalin-type purge.

In February 1955, Malenkov made a public confession of errors and resigned from the post of Premier. Here Khrushchev introduced a new purge technique. Instead of having Malenkov shot, he merely demoted him to an obscure post. Khrushchev's candidate, Bulganin, succeeded Malenkov. He was a puppet for Comrade Khrushchev, who in 1958 had Bulganin removed and took over the Premiership himself. By now, he had everything that Stalin had: Control of the government and control over the Communist Party. Khrushchev alone stood at the top.

Now this shepherd boy had, by purge, murder, deceit, and treachery, become the boss of the world's biggest empire, and never since the dark ages has western civilization been more dependent upon the voice of the Good Shepherd to guide and comfort them.

The Honorable Harry Truman said: "From Yalta to Potsdam to Geneva, we have had many meetings, all of which have resulted in failure, not because of any act of ours, but solely because the Communists have not lived up to their promises." The only way to insure peace is to make certain that they who threaten understand that we will fight if given no other choice.

The Germans compare Khrushchev with Hitler. They say that he, like Hitler, believes he has a messianic mission. He wants to build a great empire. He underrates the democracies that give the appearance of disunity.

MR. K. A GAMBLER

Also, like Hitler, Khrushchev is a big gambler, who trusts his bluffing ability and is ready to take great risks. He likes to rattle his latest weapons to intimidate his foes. He can be expected to exploit every sign of weakness by the West. If the West stands firm, the Germans predict that Khrushchev will most likely pull back when confronted by an iron will.

The Swedes believe that Nikita is playing a dangerous game of bluff. The Italians believe that he really wants a summit meeting because he thinks he is stronger than our President and would like a chance to prove it.

This treatise would be pitifully weak if I did not say something about Hungary. Therefore, I will quote from a speech made by U.S. Senator THOMAS J. DODD, Democrat, from West Hartford, Conn.

"It was Khrushchev who in 1956 ordered the Red army to invade Hungary, deposed the legal government of Imre Nagy and ruthlessly massacred Hungarian civilians in all areas where there was open opposition. It was Khrushchev who invited the Hungarian commanding officer and patriot, General Pal Maleter, to negotiations under the flag of truce, historically, traditionally, from ancient times, a custom of honor, and once he got him under the flag of truce, had him arrested by the chief of the Soviet secret police, General Surov. It was Khrushchev who lured Premiur Imre Nagy and his colleagues out of their sanctuary in the Yugoslav Embassy by perfidiously offering them an assurance of safe conduct and then kidnaped them as they emerged from the Embassy.

It was Khrushchev who 1 year ago horrified the conscience of the free world by ordering the murder of General Maleter and Prime Minister Nagy after secret trials on fradulent charges.

Nikita Khrushchev rose to Communist prominence as the hangman of the Ukraine. He maintained himself in power as the butcher of Budapest. He had on his hands the blood of countless thousands of innocent people who were murdered under his personal direction. He is responsible for the continued suffering of millions in slave labor camps. He is the principal world

spokesman for the ruthless attack on religion under which Cardinal Mindszenty, Archbishop Beran, and countless other churchmen of various faiths have been persecuted. In addition to his personal crimes, he is the principal representative of the system of concentration camps, mass murder, brainwashing, militant atheism, the organized promotion of falsehood and lies and planned ultimate enslavement of the entire non-Communist world.

On December 2, 1959, Khrushchev indicated that he sent troops and tanks to put down the 1956 revolution in Hungary over the opposition of some of his Kremlin comrades. This was noted in the Kansas City Star of December 3, 1959.

There are today in Russia 45 slave labor camps. Most of them seem to be in European Russia but, of course, there are plenty of them in Siberia. If you would want more details about these camps, I would suggest that you read the book entitled "I Was a Russian Prisoner."

WOULD WRECK U.N.

At a meeting in October 1960, of the General Assembly of the United Nations, Khrushchev pounded the table with his shoe and demanded in a loud voice that Secretary Dag Hammarskjold be replaced by a committee of three, each of which would have absolute veto powers and one of which would be a Communist, so that the Soviets would be able to block the General Assembly in the same manner that they have managed to frustrate the Security Council.

He has contacted 66 nations throughout the world, in a deliberate effort to wreck the United Nations or make it subservient to his wishes.

Furthermore, he sponges on the United States and the other free nations by not paying Russia's share of the expenses of the United Nations.

In 1960 it cost about $218,390,000 to operate the United Nations. The United States paid $88,575,000 while the Russians paid only $18,245,000. There is also the additional cost of approximately $116,300,000 per year for policing the Congo, for refugees and for food programs ordered by the General Assembly. Russia has refused to pay any of these expenses, not even a slick dime, while the United States paid $57,610,000 for this purpose in 1960. The Soviet colonies, of satellites in Eastern Europe, have likewise weiched on paying any part of such expenses, though each of these Soviet colonies is entitled to a vote in the General Assembly of the United Nations.

EXPLOITS LUMUMBA DEMISE

When Patrice Lumumba, ex-beer salesman, ex-embezzler, ex-Premier of the Congo died, crafty old Nikita staged anti-Belgian and anti-United States demonstrations in 12 countries. The riotous students and sympathizers, regardless of their native language, showed up with placards in English for the benefit of the United States. Here is a sample: "Lumumba murdered, but his spirit will live forever to carry on the freedom struggle of Congo." This placard was carried at the Belgian Embassy in Moscow, even though the Belgians speak French. Now, does the old scoundrel think that we are so dumb that we really don't know who he is shooting at?

Similar crowds were in action about the same time in Belgrade, Amsterdam, Paris, Colombo, Dublin, Rome, Teheran, Melbourne, and New Delhi. The Communists were there trying, with some degree of success, to turn the anger of people all over the world against the United States, which had never even possessed an African colony. The Ghana Communists pranced through the streets with placards reading, "United States murdered Lumumba," besieged the U.S. Embassy, ripped the emblems from over the door, and smashed an outdoor light with rifle shots. The same thing happened in Nigeria.

So much for the Congo—now let's take a look at things that are happening closer to home. Fidel Castro's revolution, which looked so innocent at first, invoked sympathy in the United States and our State Department has been accused of aiding and abetting it. Finally it reared its ugly head, bared its poisonous fangs, and showed its true self to be nothing but communism in its worst form, with purges, mass executions, and suppressions of liberty.

This happened in the Western Hemisphere, only 90 miles off the coast of Florida—in Cuba, which we liberated from Spain in the Spanish American War in 1898. Were we taken in? Yes; hook, line, and sinker. Franco in Spain can rightfully be laughing at us, but of course, he remembers when the Soviets stole all the Spanish gold during the revolution. It is possible in all Bolshevik history, since the Germans smuggled Lenin and his comrades into Russia during the First World War, to find that they have done even one decent, admirable thing? Perhaps they can point with pride to the murder of the 7,000 Polish officers, while pretending to be their friends, and the murder of the czar and his family, including the young children.

Furthermore, just off the shores of Alaska, a Soviet fishing fleet with floating canneries and mother ships is operating the year around while our fishermen remain in dock to protect and preserve the fish in accordance with our laws and treaties.

SOUTH AMERICA SCOFFS

Fortunately, South America scoffs at Castro. Prominent nations have broken with him: El Salvador, Peru, the Dominican Republic, Haiti, Paraguay, Guatemala, Nicaragua. Panama, Colombia and Uruguay have expelled their Cuban ambassadors for interferring in domestic affairs. The United States was insulted so often that its patience was finally broken and it broke off diplomatic relations. Guatemala labeled Castro's late denial of any effort to export his Communist revolution as a "delaying maneuver to conceal the real threat (to their hemisphere) posed (?) by his alliance with the Communist bloc."

CHICANERY IN BERLIN

Just a few words about Berlin. A dispatch from Bonn, February 23, 1961, stated. "The Soviet Union has told West Germany that any temporary solution of the Berlin problem must provide for the eventual transformation of West Berlin into a demilitarized free city as proposed by Premier Khrushchev in 1958." Here again is more of the same chicanery.

So much for Khrushchev's background. What about the future? With all of his heart and soul Khrushchev is a Bolshevik so their shoes should fit him perfectly. Listen to what they say: "War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we shall need the element of surprise. The burgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard of concessions. The capitalistic countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we will smash them with our clenched fist." Dimetri A. Manuilsky, who presided over the United Nations Security Council in 1949, said this 30 years ago while speaking at the Lenin School of Political Warfare in Moscow.

"As Isaac said unto Jacob, come near, I pray thee, that I may feel thee, my son, whether thou be my very own Esau or not."

"And Jacob went near unto Isaac his father; and he felt him and said, The voice is Jacob's voice, but the hands are the hands of Esau."

America's Democracy: A Defense of Freedom

EXTENSION OF REMARKS
OF
HON. HENRY C. SCHADEBERG
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1961

Mr. SCHADEBERG. Mr. Speaker, with great pride I place in the CONGRESSIONAL RECORD for all to see, the winning essay in group I of the Americanism Essay Contest sponsored by the Wisconsin American Legion Auxiliary. The winning essay was written by John Chudada, a senior at St. Mary's High School in Burlington, Wis.

Since Burlington is my home city, I am doubly proud of the eloquence with which John Chudada defends freedom.

His essay is inserted at this point in the RECORD:

AMERICA'S DEMOCRACY: A DEFENSE OF FREEDOM

(By John Chudada)

"That this Nation under God, shall have a new birth of freedom, and that government of the people, by the people, and for the people, shall not perish from the earth." These great words were spoken by a great man, a man who realized that democracy was freedom itself. Freedom is that God-given right to make one's own laws; impose one's own restraints; and control one's thoughts, feelings, and actions. But as all good things, freedom must be protected from the onslaught of dictatorship and infringing human greed. The transgressions of so-called authority since the dawn of time, has left upon the pages of history the stain of oppression.

Power in the hands of a Napoleon, a Mussolini, or a Hitler is the sword that pierces the heart of freedom.

As time goes on, monarchies may transgress, oligarchies will oppress, but democracy will respect. It has no other choice. From where does democracy get its power—from the people, and these would be defeating their own interests, if they proposed and advanced legislation that would endanger justice and freedom.

Truly, then, democracy is the most effective defense of freedom. It has withstood the test of time. Since democracy was first conceived in Athens in 500 B.C., it has had to combat the domineering greed of absolutism, the errors of individualism, and the present-day mania of communism. Through all these it has survived. After each battle, democracy has come forth with renewed vigor and strength.

Within the past 200 years, the American people have experienced, tested, and molded for themselves the world's great democracy, a true defense of freedom. This democracy, through its ministers, has rendered to the American people a government so effective, so workable, that it is looked to as a model by all the other free world nations.

As we draw near to commemorating the centennial of the Lincoln years, we should recall a great man's efforts to preserve a democracy, forced to fight a war as his extremist measure.

It was after much deliberation and thinking that I chose to open this essay with the familiar closing lines of the Gettysburg Address. For herein lie the meaning, the devotion, and the faith of a man who guided our Nation through a bitter conflict, thus preserving America's democracy—a defense of freedom.

The Dividend Credit Should Be Increased

EXTENSION OF REMARKS
OF
HON. CHARLES McC. MATHIAS, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. MATHIAS. Mr. Speaker, I am interested by the concern which is being shown by the people of the Sixth Congressional District of Maryland over the administration's proposal to amend the Internal Revenue Code of 1954 to remove the present 4 percent tax credit on dividend income and to remove the $50 dividend income exemption. There is an erroneous view in this country among some persons that the 4 percent dividend credit is some kind of a windfall or unfair tax advantage. I am inserting a statement on this subject by Mr. James L. Rankin which contains thoughts that everyone interested in this subject should consider:

THE DIVIDEND CREDIT SHOULD BE INCREASED

The dividend credit should be increased, not eliminated. Canada allows 20 percent; we allow 4 percent; and yet some urge this should be ended. Many countries give relief to the shareholder—some levying no tax on dividends and others giving a credit in excess of 4 percent.

Corporate income is doubly taxed nationally and also in many States. No credit is given to the corporation for dividends paid; but other disbursements—wages, interest and royalties—are deductible by the corporation and thus taxable only to the recipient. Capital and labor are both essential in the operation of business. Fair dealing with the investor should lead to a higher rate of tax credit on dividends because of the double tax burden on the same earnings.

We should encourage investment in equity capital and thus avoid excessive corporate debt. This will increase the tax income from corporate income and it will help in times of poor business.

Generally, corporations pay out 60 percent of net earnings in dividends and retain 40 percent for expansion and other needs. This means that out of each $100 earned, $55 is paid for Federal and State income taxes, $18 is retained and $27 is paid to the owners of the business (15 million shareholders). If the shareholder is in the 26 percent bracket ($4,000 for a single person and $8,000 for one who is married) the individual tax bite is $7 and the recipient retains only $20. Those in the higher brackets retain only $5 or one twentieth of the corporation's $100 earnings.

Some argue that the credit unduly aids those with high income. This contention is not valid. Generally it is now agreed that our tax rates in the high brackets are excessive. The single man with $22,000 income pays 56 percent tax on the top $2,000 and this same rate is paid by the married man with $44,000 income. It is difficult to justify such a high rate, particularly on dividenls already reduced necessarily because of a high corporate tax rate. The Secretary of the Treasury in his testimony has conceded that relief must be given in the form of lower rates in the higher brackets, but postpones this aid to a later year. This promise should not lead to the elimination of a credit now too low.

We believe the recent increases in the number of shareholders—6.5 million in 1952 to 12.5 million in 1959 and 15 million in 1961—were encouraged in part by the 1954 code provision for dividend credit. We also believe the number will be further increased and the national income and growth raised if the rate of the credit is higher than 4 percent.

To produce the funds required for more plants and machinery leading to more jobs, three tax incentives are necessary, namely, tax credits based on expenditures for new buildings and equipment, liberalized depreciation for some industries and higher dividend credit so as to attract the needed equity capital from investors.

A New Honor for Rutgers

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. WILLIAMS of New Jersey. Mr. President, Rutgers, the State university of New Jersey, has been selected as the first campus site for Peace Corps training. It is my understanding that up to 160 young men will arrive at the university next month to begin training for assignments in Colombia, South America.

We in the Garden State are proud that our State university has been selected for such an important assignment. Rutgers has often taken the lead in pioneering efforts; it has been receptive to new ideas ever since it was founded almost 100 years ago.

The faculty and students at Rutgers will, I am sure, do their utmost to extend their hospitality, as well as opportunities for effective training. In fact, I have already received word from the United Fund of Middlesex County that special efforts will be made to make the stay of the Peace Corps volunteers a pleasant and productive one.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Newark (N.J.) Star-Ledger of May 17. It gives details of the forthcoming project. I also ask consent to have printed portions of a letter from Mr. Nathan Barnett, executive director of the United Fund in Middlesex County. I believe his letter gives some indication of the community feeling stirred by the announcement that the Peace Corps training will take place at Rutgers.

There being no objection, the editorial and excerpt were ordered to be printed in the RECORD, as follows:

RUTGERS UNIVERSITY SELECTED AS PEACE CORPS TRAINING SITE

Rutgers University announced yesterday that it has been selected as the site for the first campus Peace Corps training program. CARE, Inc., which is under contract to administer the program to send 64 young men to Colombia, South American, selected Rutgers.

Dr. Ralph Greenlaw, program department director for CARE, said the university was chosen because of the wide range of subject matter taught, including agriculture, and and the ample facilities available.

A contingent of 120 to 160 young men are scheduled to arrive at the university June 26 for an 8-week training period.

From those accepted, 64 will be selected to work in a community development program in Colombia. They will team up with a corps of young Colombians who have been training several months for this work.

Greenlaw said community development may include practical assistance ranging from road building to agriculture, water supply, environmental sanitation and elementary public health work.

The men coming to Rutgers will have a sound agricultural background, a minimum of 2 years in Spanish and experience in the construction of simple farm buildings or basic roads.

Their training at the university will include rigorous physical conditioning, intensive language drill and a condensed course in Latin American history, culture and politics, with special reference to Colombia.

To make them competent representatives of their own country, they will be given a thorough review of American political history and American civilization.

The teams from both countries will try to teach rural Colombians to upgrade the economic and physical life of their villages.

The Rutgers program will serve as a pilot program, Greenlaw said.

The Colombian program is the second Peace Corps program announced. The first is for Tanganyika but no training program has yet been disclosed for Tanganyika.

MAY 19, 1961.

Dr. RALPH GREENLAW,
CARE, Inc.,
New York City, N.Y.

DEAR DR. GREENLAW: We in New Brunswick were very pleased to learn that the Peace Corps has selected Rutgers University as its first campus site.

The eagerness of the hundreds of young volunteers to serve, affirms the sense of idealism and dedication that is so much a part of our historical heritage, and yet is often markedly absent in our materialistic world.

Although the young men will no doubt have a rigorous 8-week training program, there will obviously be some free time. In gratitude to these young men for renewing our spirit and reminding us of our goals, we wish to do our small part in welcoming the Peace Corps to New Brunswick, by offering complimentary memberships to the YMCA and the Jewish community center. Both organizations have indicated they hope many of these young men will accept these memberships. You will find two finely equipped establishments, with highly trained and competent personnel.

The services of other organizations within our United Fund are also available, but for the most part will not be needed by these young men.

It is my sincere hope and belief that other offers of a similar nature will be made so that the young men coming into New Brunswick will know that the whole community is behind this wonderful program 100 percent.

Sincerely yours,

NATHAN BARNETT,
Executive Director.

Votes of Confidence in the House Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. ALPHONZO E. BELL, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. BELL. Mr. Speaker, I received the other day an editorial from my good

friend, former Congressman Donald L. Jackson. This editorial points out recent expressions of confidence in the House Committee on Un-American Activities, its work, and its objectives. These views I am wholly in accord with. Under leave previously granted, I include that editorial in the CONGRESSIONAL RECORD and commend it to the attention of our colleagues:

DOUBLE VINDICATION

We are happy to report some cheering news this week, in contrast to the doleful temper of the times. The House Committee on Un-American Activities has received a vote of confidence from both the judiciary and the legislative branches of our Government.

Last Monday, in a split decision, the U.S. Supreme Court upheld the right of the committe to investigate Communist activity. On Wednesday, the House of Representatives overwhelmingly approved the full annual appropriation of $331,000 necessary for the committee to carry on its work.

At first sight, this action of the House may seem like nothing more than a detail of fiscal housekeeping. Actually, in view of the spirited and determined attempts by some groups to curtail the activities of the committee or to abolish it entirely, the House appropriation amounts to a resounding vote of confidence.

In a more intimate seense, it reflects the conviction of the broad mass of the American people that the committee is performing a useful and necessary work. For the Members of the House are responsive to the views of their constituents. Part of the campaign against the committee consisted in a letter-writing program urging its abolition. In addition, there were paid newspaper ads and sundry salvos of denunciation circulated through other media.

Fortunately, these attacks did not have the effect intended. While the committee had no mysterious angel to supply funds for advertising its own defense, and lacked the vehement spokesmen which its opposition enjoyed, it did have the sympathy and the confidence of large numbers of our citizens. These reacted in a letter-writing campaign of their own, which, though unorganized, was extensive and sincere. They apparently impressed their representatives in Congress. Wednesday's vote was 412–6 in support of the committee.

While the voice of the people did not correspondingly influence the Supreme Court in its decision earlier in the week, it is consoling that the committee was sustained there also. Actually, the decision was a reaffirmation of the Barenblatt decision of 1959, which upheld the committee's power to investigate activities advocating overthrow of the Government.

This field of investigation, in the words of Justice Stewart, is the committee's "legitimate legislative interest." And this seems reasonable enough. If the Congress is to be guided in its formulation of legislation touching on security as well as other national interests, it needs to have factual information at its disposal. Hence the appointment of investigative committees from within its own ranks.

Some of these committees function on a temporary basis, since the scope of their investigation is a specific field or problem, limited in duration. Others are of a continuing nature, dealing with matters which are pervasive and enduring. Experience attests to the persistent and relentless threat of communism. Wisdom demands the continued existence of an active committee to investigate and combat it.

Among the charges raised against the House Committee on Un-American Activities are the accusations that it is unconstitutional, that it engages in smears, that it is contrary to the ideals of the American people. We do not believe that these charges stand up.

On the first, the U.S. Supreme Court has provided the answer in two decisions. On the second, the validity of the charge depends upon the source from which it comes. On the third, the American people themselves have provided the answer in the support which they have given to the continuance of the committee. The individual has rights, but so has the group. Every traffic law and fire or safety ordinance is a testimony to this. The American people have ideas, but they also have an instinct for self-preservation.

Full Employment Through Government Spending: A Lesson From Western Europe

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. REUSS. Mr. Speaker, the distinguished economic and financial correspondent of the New York Times, Mr. Edwin L. Dale, Jr., now stationed in Paris, has written incisively on the difference between fact and myth in the fiscal policies of the booming Western European economies. In an article which appeared in a recent issue of the New Republic, Mr. Dale reveals the key to the success of Western Europe in attaining full employment, sustained high growth rates, and price stability—successively higher, not lower, levels of government expenditure. The text of the article follows:

CONFESSION OF A ONETIME CONSERVATIVE

(By Edwin L. Dale, Jr.)

It is always a kind of macabre pleasure to confess error. As a onetime conservative in the United States who has lived a while in the extraordinary economic atmosphere of Western Europe, I should like to indulge the pleasure.

The dazzingly simples lesson from Western Europe appears to me this:

The way to achieve the best of all possible economic worlds (rapid economic growth, full employment, stable prices, favorable balance of payments, more investment, no recessions, more consumption, better living standards) is to spend as much government money as possible, and make sure that the amount the government spends rises rapidly each year.

The reason for this is not that government spending is inherently better than private spending, though that may be true. The reason is that a very high level of government spending, no matter where the money goes, assures a very high level of demand. And a high level of demand is the open seasame to everything else.

It means full employment. It gives the incentive for more investment in plant and equipment. It means operation of plants at efficient level, and thus at lower costs. Therefore, it means relatively stable prices and competitiveness in export markets. It permits higher wages without inflation as productivity rises rapidly. And, mirabile dictu, it permits the government to spend more and more each year without raising taxes because the economy, and thus receipts, is growing as fast as the government spending.

Let us look for a moment at the "economic miracle" of Germany. Its creators have misled the world about it. Dr. Erhard says it came about because Germany let loose the creative forces of private enterprise and rejected "statism" and "dirigism." True enough, and perhaps that helped. But what Dr. Erhard does not say is that West German taxes and spends (and elects and elects) 34 percent of the gross national product—the highest in the non-Communist world. This figure compares with only 26 percent in the United States, State, and local taxes and spending included in both cases. By the test of the National Association of Manufacturers, or even the Committee for Economic De elopment, West Germany is not conservative but radical.

Now let us look at the one laggard in continental industrial Europe. It is Belgium. Belgium spends only 23 percent of its gross national product through government. It doesn't tax, it doesn't spend—and it doesn't grow.

Britain is the other laggard in this part of the world. It spends only 28 percent. More important, it is constantly taking measures to restrict demand, through high interest rates or consumer credit control or changes in the tax-spending equation of the budget. It let demand run free—actually pumped it up—only once in the last 5 years, and only then did its economy perform brilliantly. France, Sweden, and Austria have practically nothing in common except one thing: They spend, and they grow.

Outside of Belgium, there is only one nation in industrial Europe, Denmark, where government spending is a smaller proportion of gross national product than in the United States. It is a special case, with an unusually heavy concentration of agriculture in the total economy.

It seems reasonably clear to me that when government spends as much as it does here in Europe, business is good and stays good. And when business is good, a lot of other problems just go away. For example, there is very little fuss here in Europe about "technological unemployment"—fortunately, because it means that Europe can and does automate merrily away with all the resulting advantages for productivity, costs, and the like.

Now a couple of qualifications. They do not change the main point, but they should at least be made.

The first is that there must be some reasonable relation between government receipts and spending. Many governments in Europe run chronic deficits in their budgets by American accounting standards—which helps account for their success—but they cannot safely permit spending to run away from receipts without inflationary trouble. France showed that before 1958. European governments spend enormously—but they also tax enormously.

The second concerns the "mix" of taxation. Judging strictly from results—and leaving out the theory—it seems that there is great merit in "soaking the poor." This not as harsh as it sounds.

What it means in practice in Western Europe is far greater reliance than in the United States (or Britain) on a set of taxes that indirectly hit the poor man hardest: excise and sales taxes of all kinds, turnover taxes, tax-on-value-added, heavy employer social security contributions. These taxes are collected in prices, and thus from consumers. They do not "raise prices" unless they are increased; once imposed, they are practically painless. But they do soak the poor, relatively; no government in Western Europe relies nearly as much as the United States on taxes for its revenues.

A final point. Why isn't very high government spending, and the resulting constantly high pitch of demand, "inflationary"? The answer is: It is inflationary, but only very mildly so now, in contrast with the first

7 or 8 years after World War II when there was a worldwide chronic excess of demand over supply. Euporean prices have risen, as American prices have risen. Since the Korean war, however, European prices on the whole have risen no faster than American, and in some cases they have risen less, despite much higher government spending. And in neither Europe nor America has there been any significant inflation since mid-1957.

The point is that the word now has a large and elastic supply to meet higher demand; thus it is a world in which demand cannot only be profitably increased but, within reasonable limits, safely increased.

Unless appearances—and hard facts and figures—are grossly misleading, the lesson in all this for America is clear:

Raise Federal Government spending as rapidly as possible to $100 billion (i.e. $120 billion on a cash basis) and make sure it rises at least $4 billion a year.

Count on more rapid economic growth to provide the receipts for most of this increase in spending—and do not worry about fairly large deficits for a while until there is full employment again—and raise consumer taxes eventually to cover the rest.

Then sit back and start enjoying real prosperity again.

Remarks by the Honorable John Morgan Davis, Lieutenant Governor, Polish Falcons of America, Sunday, May 21, 1961

EXTENSION OF REMARKS
OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1961

Mr. TOLL. Mr. Speaker, last Sunday I attended the 50th anniversary celebration of the Polish Falcons of America, who have a branch in my district in Manayunk, known as Nest No. 171.

The speaker of the evening was the Lieutenant Governor of Pennsylvania, the Honorable John Morgan Davis, who is also one of my constituents.

His remarkable presentation of the pioneering efforts of Polish Americans was so well received, and is such a fine commentary on the contribution of the Polish Americans to the American way of life, that I am asking that it be included in the extension of my remarks so that his observations can be read by all the Members of Congress:

REMARKS BY THE HONORABLE JOHN MORGAN DAVIS, LIEUTENANT GOVERNOR, POLISH FALCONS OF AMERICA, SUNDAY, MAY 21, 1961

This is indeed, a great night for all of us.

For you, the members of Nest No. 171, the Polish Falcons of America, with which many of you have been associated for many years, the golden jubiliee of a great and wonderful organization.

For myself, it is a grand occasion, the opportunity to spend this happy moment with you as you celebrate 50 years of accomplishment, and equally as important, the chance to spend an evening with my neighbors and friends of many years.

When a man has had the happiness, and joy, of the friendships which I have enjoyed here in the 21st ward, he can never forget those days, nor can he ever fail to enjoy his return time and again to the scene of that happiness.

For many years, I lived here in this section of our great city—and often I come here to visit friends such as you—and to reminisce about the days when we worked together here. As many of you know, I was a committeeman in this ward for over 10 years and know its people well, and I am happy that I know them still and can call them my friends.

I know, as well as any man, the kind of people you are; people who give me so much happiness when I visit them and attend their meetings.

I had many Polish friends in my place of birth in the hard coal regions in Shenandoah, Pa. The Welsh and the Poles were good Americans. To be Welsh or to be Polish; to have the heritage of Poland or Wales in your blood; is fortunate for it is a great foundation for the good things we call American.

For the heritage of the ages is in the blood of both our peoples; the heritage which our forefathers brought here to this blessed land of ours has helped us be good Americans.

They came here many years ago, your forefathers and mine, and they established themselves in our city; they brought up their sons and daughters in the way of the old country and it became the best way of our great new country.

It was a way of faith; it was a way of hard work; it was a way of hope in the future; it was the American way.

It was something which lay dormant in their hearts in the cruel old world; and it was the very thing that meant happiness in the wonderful brave new world, which they sought and which they found in America.

They instilled this faith, and hope, and love of this new land in us, their sons and daughters, and here, in this new generation of the Polish Falcons and in the work you do through this great organization, you show the way to your sons and daughters, the way to the pursuit of happiness guaranteed in our blessed land.

I have seen, through the years, the things which you have done. The youth programs of the Falcons; the good musical events; the charities for you and yours—and for others—this is the American way, the sharing way, the loving way which our forefathers brought from the old country, and which became so much a part of the belief as Americans.

Poles did not bring it with them, only 50 years ago. Poles were among the first to come to this great continent; the first after the English settlers at Jamestown, the Welsh in Pennsylvania, yes, before the Pilgrims landed on Plymouth Rock, Poles were in America.

The pioneers of Jamestown sent to Poland to bring the great craftsmen of Europe here—the glaziers who could make glass; the craftsmen whose crafts should be learned and who could make this new place a better and more productive land. So the Poles came in small number, but come they did—and they were here before so many others.

But this Welsh American came here tonight to talk about and to talk to his friends the Polish Americans. So let us speak of this Polish American heritage.

This is your heritage; almost four hundred years in America.

Four hundred proud and glorious years.

Kosziusco came to fight and help win our glorious American independence.

Pulaski came to fight and die—a Polish martyr in the cause of America.

Paderewski came to our shores to play divine music, and together with Woodrow Wilson to plan the emergence of Poland as a nation.

Yours is the heritage of Kosziuscko, of Pulaski and of Paderewski.

Yours is the blood of Copernicus, the astronomer; of Chopin the musician, of Curie, the discover of radium.

But above and beyond that—yours is a heritage of faith, of hope and of love—of deep and abiding belief in God which has sustained Poland throughout its turmoil and bloody years, and sustains it today. It is the heritage which America must retain if America is to remain the great free country she is today.

But yours also is a heritage of fun and of happiness, for no peoples despite their hardships are happier than the Poles.

Is there a gayer dance than the polka; strong men swirling beautiful women in whirling circles, with the stamping of happy feet?

Is there a better food than your kielbasa, the soft sweet smell of baked bread to wrap it in; or the maddening delight of ground meat wrapped in cabbage, that only a Polish-American girl can produce?

Is there a harder attempt made than that of a good, blond Polish boy as he plays so well at every sport; the drive in from the end of my dear friend, Charley Yadusky, the smash into the goal line by an Evashevski, or the swing-around of a Klewzewski as he hits a ball a mile?

Food, and dance, and fun—that's the heritage which the Polish-American brings to us today. And we love him for it.

But more than these things we admire his faith in God, a faith still tested in the old country. And that test brings pride to all of us. Where behind the Iron Curtain is the faith and courage of Pulaski more displayed than in the pulpits of the great churches, where a Cardinal Wyszynski defies the might of anti-God communism? His stalwart faith is a symbol to the free world that Poland retains its spirit of freedom despite adversity, and that Poland will emerge from the hell of communism as your forefathers emerged from the tyranny which they fought.

It is that never-ending fight for morality that marks the Pole above most men. You have it in your hearts as Poles have had it since their beginning. And your forefathers brought it here to America, and blessed all of us with it.

It is the heart which we find today in the newly consecrated Archbishop Krol of your diocese who, I know will bring blessings in great volume, to Philadelphia and its people.

It is in the heart of the Polish Falcons and their children and their children's children; it is the heritage your fathers brought with them and left instilled in you. It is a great contribution which you can give to all Americans.

But above and beyond that this firmness of faith, this heritage of hope and this cherishing of charity—these are the virtues not only of Polish-Americans, or the Polish Falcons, but these are the virtues which God cites as man's greatest contributions to his fellow men.

As long as these are the firm beliefs of the Polish Falcons, Nest No. 171 and your people will long endure and prosper in this land. This was the hope and the desire of your fathers; it should be your greatest wish as you enter the second half-century of this fine organization. You have my hearty congratulations on your first 50 years and my best wishes for Godspeed in your work during the next 50 years.

Thank you so much for including me in your celebration of this great occasion.

International Confidence in the Dollar Would Be Enhanced by Enactment of H.R. 6900

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the Washington Post of May 21, 1961. It is one of many such articles and editorials which have supported my position with regard to repeal of the 25 percent gold reserve requirement:

TROUBLED WATERS

Like trout fishing, the management of international currency movements is a delicate and esoteric art. In both, the first principle is to move gently; one mustn't frighten the fish.

The administration correctly declined in January to ask Congress to abolish the law requiring the Federal Reserve System to hold a gold cover equal to 25 percent of its currency and deposits. Coming right at the end of a heavy speculative run on the dollar, the request might have set the traders off on new flights. But the gold rush has dropped to a dribble. Secretary of the Treasury Dillon is once again correct in deciding he can now safely support Representative MULTER'S bill to drop the gold cover requirement.

The speculators have been following this arithmetic: The gold stock of the United States has dropped from $24.6 billion to $17.4 billion in the last dozen years. Of this, nearly $12 billion is now tied up as the cover for Federal Reserve money. That means the Treasury has less than $6 billion in gold available to pay international debts.

If our deficit runs at a rate over $3 billion a year, as it has been running for the past 3 years, how long will it be before a gold shortage forces devaluation of the dollar? Leaping to a superficial conclusion, the traders sent large quantities of dollars abroad late last year to be converted into gold bars and sit hopefully in the vaults of Swiss banks. This arithmetic is visionary; the United States is not without other resources, although it prefers not to use them. But gold speculators tend to be optimistic as well as imaginative.

The gold cover was written into the Federal Reserve Act 48 years ago as an antiinflationary safeguard; it was intended to limit the expansion of credit. But it has never done so. It has been an unsuccessful experiment that now serves no purpose but the encouragement of troublemakers.

This spring a wide range of bankers, businessmen and politicians have called for repeal of the gold cover requirement. The only opposition will come from those who confuse symbols with reality, and for whom the very word "gold" evokes, by a process of subconscious association, a memory of the halcyon days when steak was 30 cents a pound.

But it must be conceded that to repeal the gold cover rule would be to treat symptons rather than causes. When a genuine trade deficit results in sales of gold, speculators watch the outflow and begin to gamble that things will get worse. In doing so, they buy more gold and make them worse. The effect snowballs.

The immediate answer is to work out international agreements to diminish the use of gold for balancing short-term deficits. The Treasury Department is considering several proposals to broaden the International Monetary Fund's capacity to act as a banker carrying the temporary debits and credits of the world community. Diplomats also went to work last month in Paris through the OEEC to persuade creditor nations to practice restraint in turning their foreign currency holdings into gold.

While this is being accomplished, Congress can help by putting the gold cover rule, quietly and rapidly, out of existence.

Authorizing Appropriations for Aircraft, Missiles, and Naval Vessels

SPEECH
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1852) to authorize appropriations for aircraft, missiles, and naval vessels for the Armed Forces, and for other purposes.

Mr. GUBSER. Mr. Chairman, I heartily approve S. 1852 with one exception.

I object to the fact that S. 1852 builds in a Polaris gap of 1 year. In plain unadulterated language, this will be the result unless the bill authorizes additional Polaris submarines.

The Nation heartily approved when President Kennedy asked for acceleration through the 29th boat. This was a dramatic announcement which caused those who believe in the fleet ballistic missile concept to sit back and relax.

But beneath the dramatics of the acceleration announcement, there is a fact which has not been publicized; in fact it has been hidden. Here is that fact: S. 1852 will decelerate the Polaris program recommended by naval experts by the same amount as it has been accelerated. A look at a few simple facts will prove my point.

The 29th and last Polaris submarine authorized in this bill will be ready for sea by November 1964. It will be operational some 4 to 5 months later.

Now look at what happens to the next, or the 30th submarine if S. 1852 becomes law. It requires approximately 42 months leadtime to secure delivery of the reactor and other components for a Polaris submarine. In other words, a boat must be authorized and the long leadtime items purchased 42 months before it can be ready for sea. I remind you that this bill does not authorize anything beyond the 29th boat.

We will not consider another authorization bill until about 1 year from now. Before the reactor and other long leadtime items can be even ordered for the 30th boat, it must be authorized. Add the 42 months leadtime to the date when we will consider an authorization bill next year and the earliest the 30th boat can be ready for sea is November or December, 1965.

This is a Polaris gap of at least 1 year. This is a deceleration which cancels out the Kennedy acceleration.

This is like carefully nurturing a crop through a long and difficult growing year and then picking only part of the crop. True, you might get another crop next year, but you will never regain what you failed to pick this year.

Our President has recommended long-range planning in the field of foreign aid He has recommended that a continuity of policy must be assured to allow effective planning. Planning for our national defense should also be long range. We cannot allow procurement of important items like Polaris submarines to progress in gasps, fits, and spurts. We cannot allow a year's Polaris gap.

During debate on the rule I cited a wealth of official and unofficial statements by naval experts over a long period of time in support of my premise that these experts have gradually and definitely recommended a fleet of 45 Polaris submarines. It can best be summarized with this quotation by Admiral Raborn:

Forty-five is the number that it looks like we could keep where we would have an adequate number at sea and constantly on station.

I believe I have proven that 45 is not a dream figure which has occurred by happenstance or coincidence.

It is important to note at this time that all preliminary planning for this program has been to eventually reach the production schedule of one submarine per month. It can be presumed that once this schedule was reached, it should logically be continued until the full number of planned boats were constructed.

Now without a single word of testimony having been given to the Congress in support of a different policy than that which has been gradually and definitely recommended, we will disrupt that one per month schedule and build in a 1-year gap in delivery.

We all know of the sorry state of the shipbuilding business in this country. Major shipyards are going out of business each year because, among other reasons, we are not providing a steady flow of shipbuilding. To maintain their high overhead, these yards cannot operate with a flurry of orders one year and a dearth the next year. This Polaris gap will not help us to maintain a healthy shipbuilding industry.

I am sure Congress does not wish to give the impression to the public that we are renouncing expert opinion regarding the necessity for 45 boats nor do we wish to give the impression that we endorse the achievement of a 1-per-month schedule followed by a 12-month interruption. I am sure the Department of Defense does not wish to create this impression.

It is clear that the long leadtime items cannot be acquired under the terms of section 412(b) of the Military Construction Act of 1959 for any boats except those authorized in this bill.

I expect the allegation to be made that we can continue beyond the 29th boat without interrupting the delivery schedule. I expect that reprograming procedures or supplemental authorization will be offered as devices which could pre-

vent interruption. That allegation, if it is made, is not supported by the facts.

In page 1454 of the hearings on H.R. 6151 for April 14, 1961, the following interchange occurred between myself and Admirals Beakley and James:

Mr. GUBSER. I would like to ask, if it is appropriate at this time: We have accelerated the full 29 fleet ballistic missile submarines by 2 years. All well and good, but our eventual program, as I understand it, is for 45. Is there anything as a request for fiscal 1962 for the long leadtime components of the ships or the boats beyond 29 and up to 45?

Admiral JAMES. No.

Admiral BEAKLEY. There is not at this time.

Mr. GUBSER. Well, Admiral, now we had hoped to build these on a schedule of 10 per year?

Admiral JAMES. Right.

Mr. GUBSER. Now if we are to maintain that 10 per year beyond the 29th boat, should not there be an authorization for long leadtime components in fiscal year 1962? Isn't that necessary?

Admiral BEAKLEY. I will let Admiral James speak to this, if I may.

Admiral JAMES. If there are to be ships beyond the 29th boat, the answer is "Yes."

Mr. GUBSER. In other words, if we don't authorize additional long leadtime components in fiscal year 1962, the schedule beyond the 29th boat is not at all sure.

Admiral JAMES. That is correct, sir.

On page 1474 of the hearings, the same point is further clarified by Admiral James. I quote another interchange at that page:

Mr. GUBSER. Do you need additional authorization in this bill to maintain—that is, to purchase long leadtime items, so that you can maintain—a construction schedule of 10 per year beyond the 29th boat?

Admiral JAMES. Yes, sir.

Later, on the same page, Admiral James said in a response to Mr. Smart, the committee counsel:

If there were more boats that were to be built—that is, there was a 30th, or 35 to 45 boats—there would be a requirement in this budget for long leadtime items on the critical items, such as the nuclear reactors and some of the other propulsion systems.

Now let me quote the greatest authority of them all. On page 1475, Chairman VINSON, whose knowledge of military affairs is exceeded by no other Member, said the committee counsel was absolutely correct when he said, as paraphrased by the Hon. SAMUEL STRATTON—

that you could not use any money for additional submarines unless the submarines were specifically authorized.

On the same page, the chairman said in response to Mr. STRATTON that if we wanted to fund additional leadtime items for submarines above the 29, and I quote: "You would have to authorize more submarines."

On page 1476, the chairman said once again, after a discussion of the effect of the brandnew section 412(b):

You can't increase the authorization for long leadtime items until there has been an authorization for the ship. The ship is the basis of it.

The chairman does not play fast and loose with words. His words do not flow from inexperience.

During the so-called posture hearings of the Committee on Armed Services, the question was raised on page 928 as to the legality of full funding of five submarines when only the long leadtime items had been authorized in law. It was agreed that tonnage authorization of these boats existed under the terms of the Vinson-Trammel Act of 1934. Then the gentleman from Texas [Mr. KILDAY] said, "this would be the last time, in view of 412, it could be done." Chairman Vinson replied, "That is right."

Later on page 932, the gentleman from Texas [Mr. KILDAY], one of the most brilliant and analytical lawyers I have ever known, said:

So even though we and the Appropriations Committee are both thoroughly convinced that these (five boats) have been authorized within the meaning of 412, out of abundance of precaution, we should specifically authorize them.

And the committee did authorize them for the second time.

Mr. Chairman, here we acted, "out of abundance of precaution" to reauthorize boats for which the long leadtime items had already been funded before section 412 took effect. Can anyone contend that reprograming would allow future funding for boats beyond No. 29 in the absence of specific authorization? If we are to be consistent, they cannot properly contend it.

Any member of the Defense Subcommittee on Appropriations will tell you that any reprograming beyond the 29th boat can only be done at the expense of other authorized items. In this case, because of the nature of the long leadtime items involved, it would be necessarily be at the expense of attack submarines which we desperately need. In fact, I would go so far as to predict that naval officials have so testified this year before the Appropriations Subcommittee. Since writing these remarks Secretary McNamara has admitted it.

Furthermore, if reprograming could take care of submarines beyond No. 29, why was not the same argument used by the Armed Services Committee with respect to the procurement of B–52 and B–58 bombers? The administration had not requested authorization but the committee wanted to be sure that we were not phasing out the "manned bomber" concept. So they authorized manned bombers. If reprograming was a sure device, why did they specifically authorize? The answer is clear—"reprograming is not at all sure."

At page 1688 of the hearings Secretary Hitch was discussing a paper laid before the committee which outlined reprograming procedures. He said, that under the provisions of this paper "we could reprogram funds necessary to handle the long leadtime items—for manned bombers.

And the reply from the gentleman from Texas [Mr. KILDAY] was:

If your reprograming procedures are written on that theory, I don't see how we can agree to it sir.

On the same page Chairman VINSON said:

You see, Mr. KILDAY's argument is this: There are no B–52's or B–58's authorized under the date of this law. And if you don't have any authorization, you can't reprogram.

The next day the gentleman from Texas [Mr. KILDAY] said:

What section 412(b) does is to effect the appropriation of funds.

It says:

No funds may be appropriated after December 31, 1960, to or for the use of any armed force of the United States for the procurement of aircraft, missiles, or naval vessels, unless the appropriation of such fund has been authorized by legislation enacted after such date.

So the question is not the possibility of delegating the responsibility to the Secretary, but what we must have is an authorization on the statute book which will support an appropriation.

On page 1700 Mr. KILDAY said:

The thing I hope we will avoid in using 412 is to never authorize by type or equivalent things of that kind, because then you completely emasculate 412.

On the next page he states that not to specify a type of plane would abrogate the provision of 412.

I know what the chairman would say at this time if I were to yield. But when the coon is all alone against an army of lawyers he'd better stay out of a tree and keep going. The chairman would say that the previous authorizations for ships listed on page 47 of the committee report would allow reprograming. He would quote the language on page 48 of the report about previous authorization. But this is tricky language. All it says is that the Navy would have to charge new authorization against those already existing.

Look to the words of section 412(b). It says in effect that no funds can be appropriated for any vessel after December 31, 1960, for the procurement of naval vessels, unless the appropriation has been authorized by legislation enacted after such date.

Section 412(b) did not specifically repeal existing statutory authorizations but the rule is that unrepealed authorization shall be given construction not inconsistent with subsequent enactments. How then could you reprogram and appropriate money for anything which has not been authorized after December 31, 1960. To do so would be to violate a duly passed law which has never been repealed. Report language cannot repeal a law nor should the Secretary of Defense be allowed to violate or circumvent statutory law.

I expect the allegation to be made that we can continue beyond the 29th boat by the device known as supplemental authorization. Of course, this is true but we cannot use this device without building in a "Polaris delivery gap" of at least 9 months and a resort to procurement in "fits, gasps, and spurts."

The earliest Congress could consider a supplemental authorization bill would be January 3, 1962. I know you will agree when I say that if action on this bill were complete and the supplemental appropriation bill were complete by February of 1962 this would be unprecedented speed and an alltime record. Now look at the "Polaris delivery gap" this would create.

If the funds were available in February 1962, the earliest the 30th Polaris sub-

marine could be ready for sea would be August of 1965 with a delivery gap of 9 months. If the date were March, the gap would be 10 months. If it were May of 1962—and this is more reasonable—the gap would be a full 12 months. Is this orderly long-range planning? Does it make sense to expand our production facilities to "one per month" and then cut it off for a full year? Is not this procurement in "fits", gasps," and "spurts"?

Mr. Chairman, I repeat, it is clear that the long leadtime items cannot be acquired under the terms of section 412(b) of the Military Construction Act of 1959 for any boats except those authorized in this bill.

It is clear that if a one-per-month schedule is to be maintained, the long leadtime items for the 30th and succeeding boats must be funded in fiscal year 1962. Without authorization in S. 1852, they cannot be funded in fiscal year 1962.

Therefore, no matter how we look at it, and no matter how much we point with pride to the Kennedy acceleration, we will have a Polaris delivery gap of 1 year and a disruption of the one-per-month schedule.

During the hearings on H.R. 6151, there was much concern expressed over the fact that no authorization for new manned bombers was requested. The entire committee, including myself, felt that failure to authorize additional bombers could be interpreted as the total adoption by the Congress of the missile concept and the final rejection of the bomber concept. A great deal of concern was expressed that assembly lines manufacturing the B–52 and B–58 bombers would be closed down and that orderly procurement would stop. As a result, we authorized additional bombers.

Although it is true that S. 1852 does contain authorization for more Polaris submarines while the original bill contained no authorization for bombers, the two situations are comparable insofar as the maintenance of orderly production is concerned. Achieving the one-per-month schedule of Polaris deliveries and then stopping it for 1 year does as much violence to the orderly production of ships as no new authorization would have done for bombers. I respectfully suggest, Mr. Chairman, that the same argument successfully applied for bombers should be applied for Polaris submarines.

I do not wish to tie the present administration to the policy of its predecessors, nor to the previous planning of naval experts. But additional authorization of six Polaris submarines in S. 1852 will not do this. It only provides insurance against delay while the new administration is determining its own policy regarding the number of submarines we should eventually build. The funding of long leadtime items in fiscal year 1962 could not possibly be a waste even if the decision was finally made to terminate the Polaris program at the 29th boat. The items are identical with those which can be used in other nuclear submarines. The administration would not be committed to request funding nor would the Appropriations Committee be committed to granting it. It would merely be an insurance policy which would preserve the gains of the Kennedy acceleration without building in the deceleration presently contained in S. 1852.

I am not enough of an expert to say how many of these submarines should be built. But in the absence of testimony to the contrary, I must accept the clear case which has been built over the years for a fleet of 45. I have every hope that the present Secretary of Defense will see the wisdom in the program recommended by experts and eventually recommend such a fleet. But, in the meantime, we should not tie his hands so that he is forced to lose a full year in achieving his recommendation when he makes it.

I only recommend additional authorization. Without it we cannot achieve a strength of 45 boats without the loss of a year's time. With the authorization we do not procure a single item which will be wasted. My plea is for time which, once lost, can never be regained.

Long-range planning is essential for our Defense Establishment. Let us not plan in fits, jumps, and spurts. Let us give the Department of Defense the chance to continue orderly procurement. We must authorize six additional fleet ballistic missile submarines in this bill.

Mr. Charman, at the appropriate time, I shall offer an amendment authorizing six additional Polaris submarines.

The issues involved in my amendment are quite clear.

First of all, do we want a Polaris gap of 1 year?

Secondly, will we nullify a dramatic acceleration with a 1-year deceleration?

Thirdly, when there is no risk of waste, can we afford not to be sure?

And lastly, are we going to allow an interruption of 1 full year in the orderly procurement schedule we have fought so hard to achieve?

At the appropriate time, I earnestly hope the House will support my amendment.

Castro's Extortion

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD editorials from two outstanding newspapers in the Nation—one which appeared in the Boston Herald, Boston, Mass., May 22 entitled "Millions for Tribute," and the other entitled "Castro's Extortion" from the May 23 edition of the Oakland Tribune, Oakland, Calif., which is published by our former colleague, William Knowland.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Oakland (Calif.) Tribune, May 23, 1961]

CASTRO'S EXTORTION

"Millions for defense, but not 1 cent for tribute," sums up a philosophy deeply ingrained in Americans and in the political tradition of the United States.

It was first enunciated in the early days of the Republic and means flatly and categorically that the United States will always resist international blackmail, subtle or overt.

Because we have been raised in this tradition and used it as a guidepost in our foreign relations for nearly two centuries, is why Castro's extortion attempt is so dangerous.

Castro's brazen demand for bulldozers and tractors in exchange for the pitiful freedom fighters he now holds up for ransom is doubly dangerous because the American public has always put their hearts before their pocketbooks. They have always favored the underdog.

But consider these questions:

What if Castro had asked for commercial airliners or cargo ships instead of farm equipment. The logic is the same and remember that Cuba squats only 90 miles from our American shores.

Perhaps more important, however, is the effect that making a blackmail payment to Cuba would have on the cadre chiefs in the international Communist conspiracy.

Would it not be interpreted as a show of fear on the part of America, a position of weakness, and a clear example that we have abandoned our opposition to paying tribute? The answer, of course, is a strongly affirmative "Yes."

It must also be remembered that the effects will be the same whether the tractors and bulldozers are paid for through the generous donations of a sympathetic American public—the anti-Castro Cubans now in the United States, or the U.S. Defense Department.

It would mean that any time a Communist-inspired coup was successful anywhere in the world, Americans would be seized and held for ransom. Where would it end?

Before any commitment is made to ransom these men—however gallant their undertaking—the American public must search deeply into its collective conscience and consider the real eventual price it will pay by giving in to this present blackmail.

No one can help but sympathize deeply with the plight of the prisoners and understand the selfless desires of the mercy fund organization being formed on nonpartisan lines to rescue them.

What we are suggesting is that the men-for-machines swap has far deeper and fundamental implications for Americans and our country than merely raising a few million dollars to pay off a kidnaper.

[From the Boston Herald, May 22, 1961]

MILLIONS FOR TRIBUTE

Once upon a time there was a small but proud nation that refused to buy protection from anyone. When a piratical country several thousand miles away seized its ships and demanded ransom, the small nation fitted out a fleet and blew the pirates off the map.

Its motto then was, "Millions for defense but not one cent for tribute."

A century and a half later the small nation had grown rich and powerful. But when a piratical neighbor 90 miles off its coast seized persons under its protection and demanded a ransom of 500 tractors for their safe return, it couldn't make up its mind what to do.

Finally a group of leading citizens announced that it would raise the ransom price. It sent a telegram to the pirate leader saying that it was paying the tribute out of humanity toward the prisoners and "a deep

sense of friendship" for the rank-and-file pirates. The government, relieved to have the decision taken out of its hands, agreed to facilitate the export of the ransom tractors.

The arrangement naturally pleased the pirates, who were anxious to cultivate such profitable friendships. When the ransom was paid they turned over the prisoners, only slightly the worse for wear, and then looked around for more friends of the rich and powerful country whom they could seize and hold for ransom. Indeed, the thing looked so good that everybody began grabbing prisoners and sending off ransom notes.

Soon the rich and powerful nation was poor and small again. But it was a long time before it recovered its pride.

Murder Is Not a Childish Prank

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. ALGER. Mr. Speaker, it is time we faced up to the fact that coddling criminals because they happen to also be teenagers is not the answer to so-called juvenile delinquency. There is a difference between breaking windows and committing murder. Our laws must recognize serious crime for what it is if we are to meet and solve one of America's gravest problems:

GETTING AWAY WITH MURDER

On reading President Kennedy's proposals for a federally directed "total attack" on juvenile delinquency, a responsible parent may wonder whether he and Mr. Kennedy are worrying about the same thing.

The President, it seems to us, has missed an opportunity to inject some clarity into the discussion of a fogbound subject, perhaps because he misses the point of the Nation's concern. Nowhere in his remarks is the euphemism "juvenile delinquency" pulled apart to reveal the multitude of evils it embraces.

What alarms a community is not truancy, window breaking, and apple filching. It is robbery, rape, and murder, committed by criminals who happen also to be teenagers or even younger. And "criminal" is the exact word. In New York City the other day, a 15-year-old stabbed to death a 14-year-old he had never seen before. His explanation: "He got snotty." This was the seventh youth gang murder in that section of the city this year, and the fourth in just 17 days.

In too many places, the merely wayward youngster and the truly dangerous youth alike have enjoyed society's impartial solicitude. In the face of alarming evidence to the contrary, the sentimental assumption persists that every young hoodlum can be redeemed if society will only love and understand him. But this turns the issue upside-down. The necessity for understanding does not rest with society, but with the young criminal who is contemptuous of its rules.

The remedy for the worsening problem of juvenile crime does not lie mainly in more study, workshops or projects. Indeed, there is no pat solution. But a big step toward a solution would surely be for all communities to draw the line between delinquency and crime.

No community needs Federal help to make that commonsense distinction. Those communities which let young criminals literally get away with murder are already shirking their responsibilities. If they let Washington try to take over the problem, they are abdicating their responsibilities.

Memorial Day

EXTENSION OF REMARKS
OF
HON. RICHARD L. ROUDEBUSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. ROUDEBUSH. Mr. Speaker, this is our Memorial Day around the world. Memorial Day, May 30, is distinctly an American institution. It is a deeply significant, sentimental custom established by our people more than 90 years ago.

The American Memorial Day is being observed in every community across our Nation, also in many foreign lands upon the high seas.

This special day is the brief moment we set aside from our busy lives to pause before the resting places of our departed loved ones—to remember them and to eulogize the honored dead. This is the day of tribute to those who live only in history.

When we have concluded our short ceremonies here and turn back to our daily tasks, we shall leave with the dead our tributes, expressed in words and with flowers. But of even greater import is the fact that we, ourselves, will have gained new spiritual and mental enlightenment through this experience.

This is not a day for sadness. In fact, when we consider all of its facets, we find that Memorial Day has great beauty and that it has truly inspiring depths.

There are the colors of our flag and flowers for the eye to admire. There are the carefully chosen words of prose, poetry, song, and prayer for the ear to hear. All these touch our hearts and minds and our conscience. They reawaken in us a new realization that we are influenced in large measure by those who have gone before us, and by their contributions to our lives.

It does not matter who we are, nor the differences between our religious thinking on racial stock. The principles represented by this Memorial Day are the same to each of us. We are all Americans. This is our special day, and here we stand together in tribute to our own national family.

Following the same line of thought, when we honor the dead we do not weigh the stations they held in life. It does not matter whether they were rich or poor, young or old, whether they were intellectuals, craftsmen, students, or laborers. At the poet John Ingalls expressed it, in the democracy of the dead, all men at last are equal. There is neither rank nor station nor prerogative in the republic of the grave.

In those days of combat, it did not matter who our fellow defenders were. And so it is now in our homage to them. It makes no difference whether they were native sons or the foreign born, whether they were white or black or brown, gentiles or Jews, Protestants or Catholics. In the final analysis, all that has ever counted is the fact that they were Americans and that they gave their lives in the defense of our homes and of our ideals of freedom.

Now, it may be a little difficult for us who are gathered here to realize that we are part of a vast, worldwide, commemorative service on this special day. We are but a small portion of the living who are honoring the dead. And these souls to whom we are directing our immediate attention are but a very few of the total number of American honored dead around the world.

What we are doing here is actually symbolic. Our contribution to the overall Memorial Day observance is being duplicated by millions of other people throughout our land and in several foreign countries. To make the point clear, let us consider the following facts:

There are more than 1 million names on the honor rolls of the American war dead. Those are the men who have fought and died for our country since this Nation was founded some 185 years ago.

What we say here today expresses our tribute to all of those honored ones. The praise we give the other departed war veterans of our personal acquaintance is, in reality, praise for all who have served in the Armed Forces of our Nation.

We cannot return the dead, therefore the only remaining course is to extend ourselves to them through the sincerity and beauty of our memorial services. That is what our people are doing today at home and abroad. Let us look at the whole picture for a moment.

Throughout the United States and in some 25 American military cemeteries beyond our shores, the mortal remains of some 400,000 Americans who gave their lives in World War I, World War II, and the Korean conflict are buried—or they are recorded as missing in action.

On this Memorial Day, special ceremonies are being held at 8 American military cemeteries or special memorials in France, England, and Belgium, where nearly 31,000 World War I dead are buried.

Similar services are being held for 76,000 World War II dead at 14 other American cemeteries in England, France, Belgium, Luxembourg, Holland, Italy, and Tunisia.

Also, special services are being held for more than 90,000 other World War II and Korean war dead buried or recorded as missing at American cemeteries in Puerto Rico, Hawaii, Alaska, and the Philippines.

In addition, special services are being held for the war dead at the Tomb of the Unknowns and some 99,000 other war dead buried at Arlington National Cemetery, on Virginia soil, across the Potomac from Washington, D.C.

Most of these final resting places are a long way from us. But, in reality, they are very close to our hearts.

Once again we find our wonderful country faced with grave danger. There are loose in the world those forces who would destroy us.

And, even as our honored war dead were called upon to summon their last ounce of courage and endurance, we citizens of today must once again face the foe with forbearance and unswerving determination.

For if the proud heritage we cherish today is to endure, Americans again must meet the clarion call to oppose those who would doom us.

If we can but equal the qualities possessed by the men we honor here today, there is no foe we cannot conquer, no conspiracy we cannot overcome, no challenge we cannot meet.

This is the message for each of us here today as we pay honor to the departed ones of all wars. Glory to the battle dead. And honor to those who returned home and have since passed on.

Honor to the sons and to the father, to the husbands and to the brothers. Also, honor and comfort to the beloved survivors of those departed ones.

May our thoughts, our words and our deeds always fulfill the high ideals for which the brave have sacrificed. The obligation is ours to assure that the honored dead shall not have died in vain.

The Accrual Accounting Act

EXTENSION OF REMARKS
OF
HON. CHARLES McC. MATHIAS, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. MATHIAS. Mr. Speaker, my colleague, Congressman BRAD MORSE, has been performing a noteworthy task for the American taxpayer in urging that President Kennedy implement a law which the President, during his Senate days, played a major part in enacting. The following editorial from the Washington Star is a well-deserved tribute to Congressman MORSE's efforts in this area:

[From the Evening Star, May 19, 1961]

TIME TO RESURRECT IT

Representative BRADFORD MORSE of Massachusetts has given President Kennedy a timely reminder that a law which the President sponsored as a Senator has been buried alive. This is the Hoover Commission's plan for curbing the piling up by Federal departments of unexpended appropriations from previous years. We agree with Representative MORSE that it is time to put this money-saving plan into action—and the President, who worked so hard to obtain passage of the law 3 years ago, is in a good position to start the ball rolling.

The law, known as the Accrual Accounting Act, requires the departments to report fully on all funds appropriated in previous years but not spent and to justify such funds as carryover items. Congress then would decide whether to put a limitation on specific accumulations and to what extent. Mr. Kennedy told the Senate in 1957 that this system would "prevent a great carryover of funds, both with respect to foreign aid and defense, which makes it almost impossible for us (Congress) to know exactly what we are doing, and the effect our actions will have on the amount of money available to the executive branch."

The Eisenhower administration asked Congress to place an accrued-funds limitation on several appropriations, but nothing was done. The new administration so far has made no request that the law be made effective through congressional limitations on carryover funds. Apparently it will take pressure from the White House to obtain action at the Capitol. We hope that the President, as author of the law, will make every reasonable effort to see that it does not remain a dead duck.

Indecision Hurts the United States Abroad

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. ALGER. Mr. Speaker, the free world is looking to America for leadership. If we fail to take a firm stand, and just talk about freedom, we will lose the confidence of the uncommitted nations and when that happens we could well lose the cold war. It may be well for Members of Congress to think about the thoughts expressed in the following excerpt from the U.S. News & World Report so that whatever pressure possible may be brought upon the President to stop talking and back up some of the fine sentiments he has already set forth, before it is too late:

Trouble for United States is out in the world, not so much at home.

Trouble's cause? Lack of an objective. Lack of nerve. Wavering allies. A feeling by politicians that Americans would rather be comfortable than act.

A new President, too, has appeared uncertain, somewhat bewildered.

Cuba, more and more, appears as a major blunder. Invasion of Cuba was going well. Defections from Castro had started. Castro's militia did suffer heavy casualties. Castro's tanks were sitting ducks to air attack. Also an aircraft carrier was just offshore. But air support, vital to the whole operation, promised by United States for the invasion, was denied.

Why? Because the original plan, endorsed by military, was not used. Back of that? CIA took hold, moved on its own, not on military recommendations. Civilians interfered with a military operation in progress, got disaster. Pilots, begging to answer pleas from shore, had to sit on their hands.

Who was in on the operation? Everybody who gets in on any operations of a military nature. White House, CIA, military services—all of them, including Coast Guard. Could it have worked? Military answer: Yes, if plans as drawn had been given a chance to work out, instead of being changed in middle.

What about Laos? Was that the same? Not quite. There U.S. allies just faded away. Nobody, including United States, wanted to take a chance on shooting.

Khrushchev, using others to do his fighting, played it tough and won.

Result of Cuba and Laos: U.S. word is in question. All around the world it's being openly wondered whether U.S. promises will be honored if tested.

It now might take actual shooting to prove United States means what it says.

Isn't Kennedy to straighten out Khrushchev in Vienna? It's unlikely.

Remember this: Kennedy's public life is that of a debater, a talker. Khrushchev's life—a long one—has been that of a ruthless man of action.

Words, to Kennedy, mean much. Words, to Khrushchev, aren't important. The Russians use words as a cover, while getting ready for actions.

So now what? New idea in Washington is to "stabilize the periphery." The meaning? Deal with Khrushchev on the future of "fringe" countries.

Something new? No, not really new. It formerly was called "appeasement," but that word came into disrepute so a phrase is being substituted. Trouble is that the "periphery" for Russia keeps pushing out as Communism spreads.

Khrushchev's technique: Deal. Nail down new conquests. Then push on.

Actually, if the world only knew it, Communists are in trouble, too.

Red China's population is on short rations. Communism in China, as in Russia and elsewhere, is unable to solve the problem of agriculture. Russia, too, is having continued trouble with farmers. In the Soviet Union there's a return to capital punishment for a wide range of offenses.

Eastern Europe, Russia's colonial empire, has the troubles of all of today's colonies. People are restive and can be stirred up.

Then why all the fear of the Communist countries? It's a mystery.

Western Europe, alone, is vastly stronger than Russia. Add United States and there is no comparison in potential strength. Add Japan and the comparison is even more one-sided. It's probably three-to-one odds on the non-Communist side.

But: Except for United States, no country seems much interested in defense.

The trouble? Apparently only the Communists have a real objective for which they keep working. It seems that no country wants to try very hard to buck the spread of Communism. There's a great desire to live in ease.

Result is that Khrushchev is having things pretty much his own way.

Robert Welch Has No Connection With the Candy Industry

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial from the May 9, 1961, issue of the Candy Industry and Confectioners Journal, which gives some sidelights about the controversial founder of the John Birch Society. The most important point made is that Robert Welch has no connection whatsoever with the candy industry.

This editorial was written by Don Gussow, a brilliant gentleman who has become the acknowledged spokesman for the candy industry in the United States. Candy Industry is edited and published

in New York and is probably the greatest single influence in the candy industry today.

The editorial follows:

THE BOB WELCH STORY

This editorial deals with an unusual subject. The subject is Bob Welch and the John Birch Society.

This writer has known Robert Henry Winborne Welch, Jr., for over 25 years. We have not seen, nor been in contact with him for the past 4 years, when he resigned his post as vice president and sales manager of the James O. Welch Co., Cambridge, Mass.

We remember Bob Welch as an articulate, highly intelligent, imaginative and very much involved person. We do not recall Bob Welch's taking the middle road on any subject. When Bob Welch became involved in a situation, he was fully and wholly involved. Almost literally bouncing with nervous energy, Bob Welch could not remain sitting or standing still in one position for more than a second. A compulsive worker, Bob Welch toiled almost around the clock. After a full, hectic, rat-tat-tat day in his office (which usually included a series of conferences, numerous telephone conversations and voluminous dictation given to a patient, highly competent secretary) Bob would rush off to deliver a talk before some political or community group, return to his office and, after a biref nap, go on with more work until the early hours of the morning. This was par for Bob Welch's working day course.

His after hours work more often than not pertained to chores other than those of the candy business. During the hours from 10 at night until 4 in the morning, he would dash off a few chapters of a book, write a speech, or spend the time in researching a particular problem in which he might be involved at that particular time.

Among his many activities, Bob Welch participated in candy association work. He served on many committees and at one time was chairman of the Washington Committee of the National Confectioners Association. He won the Kettle Award in 1947. He was the second to receive this honor.

Bob Welch always seemed to have been offbeat. He loved chess and played with experts. At one time he carried on a game by mail. He hasn't played much chess during the past dozen years. We remember Bob Welch as a gifted writer with a fine sense of humor. He could and did write humorous verse. He also wrote one of the easiest to read and most meaningful books on salesmanship.

Bob Welch had the benefit of a good education. North Carolina born, Bob attended a 1-room country school, high school, and had 4 years at the University of North Carolina, 2 years at the U.S. Naval Academy, and 2 at Harvard Law School. Bob never did become a lawyer.

In 1946 and again in 1948 Bob went to England, primarily to study the effect of the Socialist government. In 1949 Bob took a month's flying trip around the world, spending most of the time in Asia. Shortly afterwards he wrote a book dealing with the dismissal of Gen. Douglas A. MacArthur, entitled "May God Forgive Us." It was published by the Henry Regnery Co., Chicago, in 1952. About 200,000 copies (both hardbound and paperbound) were sold in the first year of publication.

From that time on Bob was not quite the same. Now intensely serious, gaunt in appearance, he began to develop a morbid fear of communism and Communists. In 1955 he went to Asia once again, this time visiting Syngman Rhee, then President of Korea, Gen. Chiang Kai-shek, and other high-ranking members of the Chinese National Government in Taipei, Taiwan. In the fall of 1956 he called on Chancellor Conrad Adenauer in Bonn, West Germany.

In 1956 he began to publish a little magazine called One Man's Opinion, which carried long, involved dissertations on communism. He did this at his own expense and in his spare time—probably between the hours of 10 at night and 4 in the morning, and on weekends.

He dabbled in politics, made hundreds of speeches, and even made an unsuccessful attempt to obtain the Republican nomination for lieutenant governor in the Commonwealth of Massachusetts.

When Bob Welch felt that he could not give up his outside political and doctrinaire activities and at the same time continue his job as sales manager, he resigned his post in the James O. Welch Co. That was late in 1956. He was succeeded by his very competent assistant, Bob Daugherty. For the record, Bob Welch never owned and does not now own any stock in the Welch Candy Co.

From then on Bob Welch became even more obsessed with the job of fighting communism than ever before. He expanded the publication of his magazine (the name was changed from One Man's Opinion to American Opinion), wrote pamphlets and tracts and made endless speeches. Two years ago he founded the John Birch Society. (In 1954 he wrote a book on the life of John Birch, published that year by the Henry Regnery Co.)

At this writing Robert H. W. Welch is one of the most controversial figures in the country. So much has been published about the John Birch Society in the past few months that a detailed report is not needed here. It is not for us to criticize or question its motives.

Every right-thinking American is opposed to communism. Our Nation (together with its allies and friends) today is involved in a serious, life and death struggle with the Communists. Whether the methods used by the John Birch Society are the right or wrong ones, seems to be the concern of many as evidenced in reports in the daily press. Certainly the use of communistic tactics is abhorrent to those who love and are devoted to freedom. Immoral means still do not justify moral ends.

One of the purposes of bringing this story about Bob Welch and the John Birch Society to the attention of our readers is to underline its possible implications in the industry. Obviously, it is unfortunate that news dispatches almost invariably refer to Mr. Welch as a retired candy manufacturer. This is not good public relations for candy and the candy industry. But we have complete confidence in the fairmindedness of our people. We question whether anyone would stop eating candy because he did not approve of what Robert Welch is saying or what the John Birch Society stands for.

We credit candy jobbers and dealers with the same fairmindedness. We question whether they will equate Bob Welch's activities with the marketing policies of the James O. Welch Co., with which he has no connection whatsoever.

In a statement to the press the other day, James O. Welch, president of the company bearing his name, stated that neither he nor his company shared his brother's point of view. "I know that there must be many of our customers who not only disagree with Bob Welch's viewpoint, but may be very much disturbed over his activities," Mr. Welch said.

"Our company emphatically has nothing to do with the John Birch Society, and my brother Robert has no connection with this company and owns no stock in it," Mr. Welch added.

In a measure, it is a pity that the highly respected head of a very important candy company has found it necessary to defend himself in this manner. Jim Welch is one of the most honorable, highly respected of men in the candy business. His integrity is unquestioned. He is not interested in headlines. He has had but one interest since he started making fudge in the kitchen of his home, when quite young, just married, and in need of finding a way to make a living. And his single interest today is to make the best possible candy and sell it in the most honorable fashion.

We have full confidence in the fairmindedness on the part of members of this industry and their human qualities to understand this difficult situation.

East Central Parts of Oregon Attract

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. ULLMAN. Mr. Speaker, the following article from the Oregon Journal of May 15, indicates a few of the reasons for the increasing popularity of central Oregon among visitors from other parts of the State and tourists from other States:

EAST CENTRAL PARTS OF OREGON ATTRACT

(By Paul Manley)

To the road traveler, central and east-central Oregon presents an ever-changing panorama of scenery.

The hilly country around Bend, with its breathtaking views of snow-capped Cascades Range peaks, rapidly gives way to flat, treeless rangeland en route to Burns; and northward from this cattle capital, rugged, pine-studded skiing terrain is encountered abruptly.

These are but surface impressions, and the motorists who pauses to delve beneath the rought exterior will find friendly people in quaint, historic communities with enough unusual, off-the-beaten-track phenomena to make the endeavor rewarding.

North of Redmond, for example, a turn-off on U.S. Highway 97 provides a spectacular view of the Crooked River Canyon. (Nearby, incidentally, the Deschutes River fishing is not to be overlooked.)

At Bend, the highway leads directly past peaceful Pioneer Park, a pleasant enough sight and well worth more than a cursory glance. Springtime plantings of vivid red and yellow tulips will soon be replaced by summer blooms, and there are a pair of blackheaded Canada geese and a horde of multicolored mallard ducks almost tame enough to let youngsters pet them.

Burns, like an oasis in the desert, caters to the traveler's needs. Service stations and motels dominate the intersections, but there are also window displays of water skis and fishing tackle, which excite the curiosity of visitors to this arid region.

From Burns, tourists and sportsmen with time and energy will point their cars southward, to the picturesque Steens Mountains and the Malheur Game Refuge, which teem with wildlife and migratory birds, while the pedal pusher hurrying homeward will be treated to reminders of the past in the valleys of Canyon Creek and the John Day River to the north.

Beside the highway between Burns and John Day lie the rotting remains of many a homesteader's cabin, amid luxuriant stands of ponderosa pine; and less than 2 miles

from John Day, the biggest community in Grant County, sits the little village of Canyon City, which had the temerity to fight for—and win—the designation of county seat. Here, too, is the Joaquin Miller house, where the famous poet lived, and a museum preserving countless reminders of the days when this was "gold rush" country.

John Day itself, hemmed in by hills and mountains, has decided to come to terms with nature and make the most of its position. On one of the heights overlooking the town, residents are finishing construction of an airstrip. And a little farther west, in the foothills of the Aldrich Mountains, they have carved out a nine-hole golf course which must rank with the most famous for splendor of setting.

More than 30 miles east of John Day, along the John Day River, are some of the most productive fossil beds in the Nation, and their fascination has not been lost on Tom Weatherford, octogenarian proprietor of a "fossil ranch" fronting on U.S. Highway 26. Weatherford has worked the fossil beds for decades, unearthing hundreds of museum pieces—including mastodon teeth and skulls of three-toed horses—which he keeps in a cave in a hillside near his home. With a little prodding he will drag out a few of his treasured specimens, for which he reportedly refused offers exceeding $40,000, and which he delights in showing to paleontology students.

South Immoral?—Poppycock

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. FORRESTER. Mr. Speaker, the Albany Herald, a daily newspaper published in Albany, Ga., carried an editorial in its May 23, 1961, issue, entitled "South Immoral?—Poppycock."

This editorial was written by the Honorable James H. Gray, publisher of that newspaper, who also happens to be the distinguished chairman of the Georgia State Democratic Executive Committee. Mr. Gray was reared in Springfield, Mass., and, having lived more than half of his life in the East, has had an opportunity to observe the race problem in the various sections of our country.

The statements of Mr. Gray set out in this editorial reflect the sentiments of the people in the South and, additionally, reflect the sentiments of the southern Democrats.

The editorial reads as follows:

SOUTH IMMORAL?—POPPYCOCK

A great deal of nonsense is being disseminated about the latest racial troubles in our region by assorted sentimentalists, bleeding-hearts and equalitarians, who fancy themselves as the "liberals" of the Space Age. These self-appointed social critics are sorely distressed. They are seized by the notion that the South in general, and the State of Alabama in particular, is acting both immorally and illegally in its resistance to the scatter-gun efforts to integrate the races.

Their argument runs to the effect that the South is immoral because it is opposing a moral movement. The moralists, in this instance, are the Negro men and white women, traveling together in public carriers in interstate transport, who are sufficiently courageous to be willing to test the various segregation laws of the Deep Southern States in this dramatic manner. They are "moralists" by definition of their sponsoring agency, the Congress of Racial Equality, because they are supposedly practicing the brotherhood of man. And because the South does not hold with this kind of social experimentation, and because the South has legislated against such, it is immoral.

From a legal standpoint, these "liberals" argue with much more logic that a U.S. statute permits this mode of travel, that Federal law takes precedence over State law, and that the Southern States therefore are in an intolerable legal position when they attempt to block the freedom riders.

To our mind, however, both of these arguments miss the point. In the first place, we cannot perceive any morality entailed in transportation by bus—or by any other conveyance. The CORE people are on record that they are testing Southern stautes by nonviolent means. But the fact is indisputable that, in so doing, they are engaging in a direct provocation for the avowed purpose, in the words of Georgia's Governor Vandiver, "of disturbing the people of a section who are otherwise peaceful." Is this a moral purpose? Far from it.

In the second place, the question of race relations, the judicial and executive branches of the Federal Government to the contrary notwithstanding, forbids a strict legalistic solution. For example, in the 7 years which have transpired since the U.S. Supreme Court first struck down the 85-year-old "separate but equal" dictum for the Nation's schools, only a handful of southern schools have integrated their classrooms—and none voluntarily. The so-called law of the land is observed in the breach simply because southern society—and not a few eastern and western communities—will not support it with a popular will.

This circumstance, one of but many, argues eloquently the southern case that racial relations must be established and maintained through mutual confidence and good will, neither of which can be achieved in an atmosphere electric with naked hatreds, suspicions and, above all, the application of force in the most sensitive area of all human contacts.

This is not to say, of course, that the mobs in Alabama—in Birmingham, Anniston, and Montgomery for the last week—can or should be condoned for their actions. Mob rule is alien to the American tradition. It is invariably destructive, never constructive. Neither is it a safety valve for the discharge of emotional energy, for it leaves in its wake festering sores which heal slowly, if ever, and destroys the middle ground on which the fairminded can maintain communications with each other to reach accommodations equitable to all parties.

But this is to say that millions of southerners cannot, in truth, be branded as "immoral" for the irresponsible actions of a group of unthinking men reacting predictably to an unending campaign of clever harassment designed to enrich the treasury of the sponsoring racist organization. Try as it may, neither CORE nor the NAACP can resell this nation the false doctrines first preached by "Uncle Tom's Cabin." Nor, more to the point, can either they or the national administration achieve racial equality at the point of a bayonet or the muzzle of a marshal's pistol.

The South's racial relations, like those everywhere in today's troubled world, will be established ultimately by men—not by laws, not by courts, not by self-serving politicians and, above all, not by dictation from any outside source.

JAMES H. GRAY,
Editor.

Let's Rededicate Ourselves to the Home of the Brave

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. ALGER. Mr. Speaker, how proudly, over the years, have generations of Americans sung

"The Star-Spangled Banner, Oh long may it wave,
O'er the land of the free, and the home of the brave."

The stirring words of our National Anthem have been an inspiration to countless millions throughout the world who had the dream of freedom in their hearts. With what assurance can we sing these words today? What has happened in the home of the brave that would let us be a party to submitting to the demands of a tinhorn dictator, would send us, hat in hand, to offer ransom for prisoners held in captivity 90 miles off our coast? It is time, Mr. Speaker, for Americans to rededicate themselves to the great traditions of America, to our undying belief in freedom and in the dignity of the individual. We make no trade with bandits. We offer no bribes which are morally wrong. We are still the home of the brave and 170 million Americans, I am confident, will prove it even though the Administration may not think so. For some stirring thoughts, recalling some of our glorious traditions, I refer you to this editorial which appeared in the Indianapolis News, May 22, 1961:

WHAT GOES ON HERE?

As of this writing, self-appointed private citizens' groups—the most notable headed by Eleanor Roosevelt, Walter Reuther, and Milton Eisenhower—are raising money for the release of some 1,200 Cuban rebels, captured during the recent unsuccessful attempt to rescue their homeland from Communist rule. The money, $20 million, will be used to purchase tractors or bulldozers for Fidel Castro's Red regime.

One newspaper, supporting the idea of a trade with Castro, declared in a front page editorial that it believes "a human life is worth more than a machine," and so do we. But if, for the purpose of preserving human lives, we submit to Castro's brazen blackmail attempt, we will be opening the door to every future tyrant and bully boy, large or small, who decides to make a laughing stock out of the United States. Also, there is the little matter of the law, conveniently overlooked by the State Department, prohibiting private citizens from negotiating with foreign governments. The activites of these self-appointed committees, unofficially supported by our Government, are unprecedented in our own history or in the history of international diplomacy.

Castro is not offering this deal because he especially needs 500 tractors, although he certainly could put them to good use in helping to solve his dire farm problem. He offered the deal precisely because he and his Communist bosses want to see exactly how far they can push the United States before it stops acting like a sniveling coward and once again flexes it's national muscles. Why else did Havana radio gloatingly announce

that Castro would deal only with the United States—and remember, the 1,200 prisoners are Cubans, not U.S. citizens—and not with a neutral country.

What happened to that national pride we displayed in 1797, when after the unsavory French foreign minister Talleyrand demanded a bribe as the price of negotiating with the United States, our envoy Charles C. Pinckney replied with his memorable, "Millions for defense, but not 1 cent for tribute." What happened to the courage displayed by our Nation in 1853, when, after Austria kidnaped a former citizen who had since taken out his first U.S. citizenship papers, an American war sloop pulled into the harbor of Smyrna (where the prisoner was being held) and its commander ordered the Austrian commander to return the man or face immediate consequences? (Naturally, the man was returned.)

How different today. It's bad enough we supplied the push to the rebel invasion of Cuba, and then lacked the courage to see it through to victory. It's bad enough that we allow Castro to insult our Nation, and publicly declare his island a part of the Soviet bloc. But to pay blackmail to his Communist government, just days after both our President and our House of Representatives agree that it constitutes "a clear and present danger" to our sovereignty, is nothing short of fantastic.

Patrick Henry once asked his fellow men, "Is life so dear or peace so sweet as to be purchased at the price of chains and slavery?" Today, 186 years later, during which time we have grown from an infant nation of unlimited courage to a mighty nation which appears suddenly to have lost her national conscience, we might ask whether life is so dear or peace so sweet as to be purchased at the price of blatant blackmail? We think not.

Shades of George Washington, shades of Patrick Henry, shades of Thomas Jefferson, shades of Capt. John Paul Jones, shades of Admiral Farragut, shades of Abraham Lincoln, shades of Teddy Roosevelt, shades of Iwo Jima and Anzio.

What in heaven's name goes on here in the home of the free and the land of the brave?

Protest Trade of Tractors for Prisoners

EXTENSION OF REMARKS
OF
HON. PETER H. DOMINICK
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. DOMINICK. Mr. Speaker, the recent proposals, backed by the White House, to indulge in a subrosa exchange of tractors for Cuban rebels captured during the ill-fated invasion of their homeland has prompted a wave of local reaction. Fully typical of the sentiment being expressed by the people is the telegram sent to me by the secretary of the Boulder County, Colo., Farm Bureau. Under unanimous consent I include this telegram in the RECORD.

LONGMONT, COLO., *May 23, 1961.*

PETER H. DOMINICK,
Member of Congress,
House Office Building,
Washington, D.C.:

We wish to vigorously protest the action of any group to trade tractors to Castro for the release of prisoners, and urge that it be officially discouraged. Aside from bolstering the Castro Communist economy it is making the United States ridiculous in the eyes of the world. It is the feeling here that if our government feels they are responsible for these prisoners we should use force—not barter.

O. E. PERASON,
Secretary, Boulder County Farm Bureau

Intervention in Alabama

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include a well-considered, temperate, intelligent, and thought-provoking editorial, entitled "Intervention in Alabama" which appeared in the Charleston News and Courier on Monday, May 22, 1961.

If ever the Nation was faced with the need for calmness in the face of strife; if ever the Nation was faced with the choice between the road to communism or the road to continued freedom; if ever the Nation demanded the best of its leaders, that time is now.

I measure my words carefully when I say that our Republic is in its darkest peril, right at this moment.

We face a Communist state 90 miles from Florida; Laos is crumbling before us; Thailand, Burma, and South Vietnam are sitting on time bombs and the fuse has been lit; Indonesia is faced with many problems, and a single incident could send her irretrievably into the Soviet sphere of influence.

As if that were not enough to worry about, there is the problem of the Soviet Union and its direct operations in Iran, East Germany, and Africa.

And now, in an effort to profit at the expense of America itself, there are those who enter the South for the sole purpose of inciting to riot and creating turmoil, conflict, and tension among two races who have striven over the years to solve their differences through a process of evolution.

Here then, Mr. Speaker, is an editorial with a clarion call, warning us of the trap, set by those who participate as so-called freedom riders in the South.

And in addition, unfortunately, but politically understandable, our own Federal Government has intervened once again in the affairs of a sovereign State.

In many ways what is going on today in the South is a greater conflict than appears on the surface, for it has now become the conflict of a minority race versus a minority ethnic group. It is becoming clear that we in the South are now being treated as a minority within the United States by our own Government. A cleavage is taking place as far-reaching, perhaps, as that which occurred in 1861 and the Nation will be the loser if it continues.

If ever a period in history called for a level-headed analysis of an internal challenge which threatens the heartstone of the Nation, it is now.

I commend this editorial to those in the North, the South, the East and the West, white and colored, who profess to be Americans. Those who put their Americanism above their race will agree with the editorial; those who put their race and individual interests above their Nation, will disagree:

[From the Charleston (S.C.) News and Courier, May 22, 1961]

INTERVENTION IN ALABAMA

Though it was unwilling to intervene effectively in Communist Cuba, the U.S. Government moved armed men into Alabama despite the protest of the Governor of that State. Outside demonstrators, using the familiar scheme of starting riots in order to demand protection, furnished the pretext to invade State authority.

President Kennedy acted under an 1871 (Reconstruction) statute empowering Federal intervention to quell disorder in a State.

The face of white mobs at Birmingham and Montgomery is ugly. That is the face of Alabama and the South being shown the world today. Mobs are ugly in any race or nation. What lies behind the mobs in Alabama is even uglier.

Back of the freedom riders is an organization called CORE (Congress of Racial Equality). In its high command are people with records of Red-front affiliations. Whether any of them could be convicted in court is beside the point. The turmoil in Alabama is following the pattern that Communists all over the world pursue in setting up for the kill.

Once they seize power, Communists permit neither disorder nor protest. Those who don't like Red rule and 20th century slavery disappear in dungeons or unmarked graves.

We do not say that white and Negro demonstrators, including earnest college students of both races, are Communists or even conscious tools of communism. Like many others today, they confuse freedom, social justice, and democracy with subversion and revolution. Perhaps they are only muddle-headed idealists and fiery youths in search of excitement. But they are being used to tear out the vitals of the Republic.

If State and local authorities are suppressed—as happens with dispatch of U.S. marshals to Alabama—the whole country could be brought under central police control. This would simplify enormously the mission of revolutionists. Subversion and seizure at the top would be far simpler than taking America State by State.

Communist leaders know this. That is why they welcome, if indeed they did not engineer, such incidents as occurred at Birmingham and Montgomery.

Someday, as Lenin predicted, our country may fall like ripe fruit into the lap of communism. Russian soldiers need not tramp our streets. Occupying forces could wear the badge of the U.S. Government—as they do today in the State capital of Alabama.

Do we then despair for freedom? Not yet. A little time remains to waken the American people. While the alarms are ringing, southerners of both races must guard their homes and firesides. They must not succumb to hatred and violence. The deep reservoir of respect and affection still can save white and Negro skins.

Economic changes already are at work. They will bring gradually and peaceably many of the things that militant race leaders are trying to ram through by force. These things cannot prevail without an atmosphere of good will.

Meanwhile, our people should not fall into traps set with Red bait. Despite provocation, calm heads on both sides must hold the line. Southerners whose forebears rode out Re-

construction can endure hardship and humiliation. They also must maintain civilized decency and human kindness.

These people and these qualities will help to save the Republic if it can be saved. The goal is worth the gamble.

Attorney Bernard Beerman, of Chelsea, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a well deserved eulogy to a former public official in the city of Chelsea, Mass., who has given his entire life to the service of the people in that city and that State. He was one of the finest men that I have ever met in my years of public service. He was a kindly person, thoughtful, considerate, and helpful at all times, not only as adviser to the city officials as clerk of committees of the board of aldermen, but to the people. He was one who enjoyed helping others with their problems, public and private. Ever ready to serve on all the various civic and patriotic committees for the betterment of the municipality, Bennie Beerman was highly respected and admired by all. I, too, join with his countless friends and associates in extending to his wife and family my sincere and deepest sympathy in the loss of this outstanding citizen.

[From the Chelsea (Mass.) Record]

BERNARD BEERMAN

The death this week of Attorney Bernard Beerman, eminent counselor and city official for more than four decades, in effect closes a colorful era in local politics and municipal administration.

Perhaps more than any other figure in local history, Attorney Beerman exerted tremendous influence and impact on local politics and the administration of the city, particularly from the late twenties to the early fifties.

Barney, as he was familiarly and affectionately known, was clerk of committee of the board of aldermen for 41 years, holding the post through 15 mayoralty administrations.

He was adviser, consultant, and confidant to hundreds of members of the board of aldermen through the years, to just about every mayor, and to city employee groups. His opinions were sought by many who had any municipal position or dealings.

Many actions of the boards of aldermen through the years were not taken until advice had been sought from Barney. He knew politics and municipal administration as no other individual did. And he knew his law thoroughly.

As clerk of the board, he became quite noted for his ability to draw up resolutions, whether they were expressions of sympathy for widows of deceased city officials, or commendations for worthy feats on the part of policemen, firemen, or other employees.

He was even an ambassador of good will representing the board and the city in dealings with the MTA, the MDC, or other State agencies, winning the respect of all with his courteousness his humble mien, and his willingness to cooperate. He maintained these fine traits whether he dealt with a peddler seeking a permit, or a railway president involved in a $100,000 proposition with the city.

In addition to his work as clerk of committees which occupied the better part of each of the working days, he found time to serve as chairman of the stadium commission from 1934 until his death. He was chairman of the body when the present Memorial Stadium was build, and which stands today as one of the finest stadiums in the Commonwealth, a fitting tribute to his memory.

Perhaps least known about him, is the fact that he was a great benefactor of his fellow man, both financially and in other ways. He gave of his time and service to unfortunates who could not afford to pay a fee, and he asked men and women to whom he gave aid to keep it secret.

Proposed Mergers by Railroad Companies

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1961

Mr. MACDONALD. Mr. Speaker, early this summer, the Interstate Commerce Commission will commence its deliberations upon the proposed merger of the Chesapeake & Ohio Railway Co. and of the Baltimore & Ohio Railroad Co. It is expected that some railroads, some transportation organizations, and various other groups from among our population will oppose this merger on grounds determined either by their own economic situations or by their view of the public interest.

I would like to call the attention of my colleagues to some of the problems of this merger as they would affect the 60,000 employees of the New York Central system, who work at their jobs across almost one-quarter of the United States.

Adherents of the merger claim savings from economies. On this point, the New York Central says that the savings will primarily come in one way:

That is by the ability of the combined system to take traffic away from other railroads in the territory.

The New York Central Railroad is the obvious prime target for the C. & O.–B. & O. raid on other freight business—the business which permits the continuation of any passenger and commuter services.

The freight traffic most susceptible to raiding by the C. & O.–B. & O. provides the backbone of Central's revenues. These revenues make it possible to provide essential Central freight and passenger service over the entire New York Central system, as well as the New York area commuter and terminal freight services. If these essential services are to be maintained, the New York Central must have the revenues which make them possible.

Thus, a C. & O.–B. & O. merger would not benefit the public through major savings achieved by eliminating duplicate facilities. There aren't that many duplicate facilities. And a C. & O.–B. & O. merger would hurt the public by depriving competitors of revenue they need to continue their freight, passenger and commuter services.

I cannot speak for the New York Central or its employees. But, what the company says here gives me deep concern.

Let us stop for a moment and translate this into human terms. Employment on the New York Central system for the past 30 years has been as follows:

Year	Employment	Index
1930	136,752	100
1935	89,711	65
1940	92,516	68
1945	124,461	91
1950	110,950	81
1955	81,552	60
1960	59,262	43

While the Congress has provided for a readjustment period, so that workers displaced by mergers cannot be laid off precipitously, this does not apply to workers displaced through loss of traffic to another line—enabled by merger to, as the New York Central says, "raid" another.

For the most part, no protection against mergers applied to the 51,688 jobs lost on the New York Central between 1950 and 1960, a fall of 46.5 percent.

Most of these 51,688 workers were breadwinners. They were earning, on the average over the 1950–60 period, perhaps $5,500 a year. Each had approximately three dependents. Thus, we have an annual average purchasing power loss of $284,284,000 and the financial support of 206,752 individuals was lost, no doubt in some cases perhaps forever. The more of this type of catastrophic loss we have, the worse our economy is bound to become. Those are facts.

Certainly at a time of economic stress like this, we should not move hastily into an action of fundamental economic importance, one which can cause even more people to lose their jobs.

It is easy enough for someone unconcerned to say that the loss of one New York Central job will mean that one B. & O. or C. & O. worker will keep his, or that a new B. & O. or C. & O. worker may be hired to replace the man who lost his job. That may sound reasonable enough to anyone with a callous attitude on humanitarian matters.

But, it does not sound good to the man who loses his job and cannot support his family. Nor does it sound good to me.

There is a better way, one which will avoid cannibalism and permit the railroads eventually to reenter their era of dynamic growth—and thus create more jobs.

That way is by developing an intelligently planned program for joining roads together into strong and stable competitive systems which will thrive, and grow, and answer the human need for more and more jobs. We must, once and for all, put behind us the mergers which typified the era of the Goulds and the Fisks.

We must move into the modern era of railroad consolidations that make sense for the worker and the general public.

This cannot be done overnight. But it affords a far better answer than hastily designed mergers aimed at the short term and the quick buck. No merger should be undertaken unless it envisions where we want our country to be economically 10 or 20 years hence, and how many new jobs that will mean to our workers and their families. Otherwise, we will destroy not only the possibility of a sound rail transportation system, but also an important part of our human capacity.

Traffic Safety Is Tied to Good Roads

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. SCHWENGEL. Mr. Speaker, I wish to call attention to an editorial which appeared in the May 17 issue of the Mason City (Iowa) Globe-Gazette, "Traffic Safety Is Tied to Good Roads."

The points raised in this editorial are facts all of us should keep in mind as we work to bring our highway system up to date to handle the increasing traffic flow. I am especially aware of them since I serve on the Subcommittee on Roads of the House Public Works Committee and I am also a member of the special "watchdog" committee on the Federal-aid highway system. We are charged with the responsibility of keeping the interstate highway building program on schedule and with seeing that the tax money spent on this project is wisely and legally used. The sooner we have the Interstate System completed, the greater reduction we will see in traffic accidents.

Under leave to extend my remarks, I ask that the editorial appear in the Appendix of the RECORD.

TRAFFIC SAFETY IS TIED TO GOOD ROADS

National Highway Week will be observed from May 21 to May 27 in Iowa and in the 49 other States. It's being given prestige and momentum by gubernatorial proclamations.

Adequate streets and highways represent engineering in the three "E" concept of safety. This element is more stable and more predictable than the other two—education and enforcement.

The proofs are too numerous and too impressive for questioning that well-designed and well-constructed highways promote safety. Nowhere is this more dramatic than in States with modern turnpikes or expressways.

With traffic density many times greater than on lesser roads, and with materially higher speed, the rate of fatalities and the rate of accidents are impressively reduced.

This isn't, of course, meant to minimize the importance of education and enforcement. They are imperatives in any effective safety program. The point is that those two "E's" in the safety arc—and especially education—are long-term programs whereas adequate roads can be had almost overnight.

Good roads cost money—a lot of money. But they aren't as costly in the long run as poor roads. It's more than picturesque language to suggest that the motoring public pays for good roads whether it gets them or not.

Three decades of contact with organized safety have persuaded this writer that the accident problem on our highways is linked in a very real way to public attitude.

When 9 out of 10 persons want safety enough to pay the price of safety, we'll be on the way to having it. The course will be clear ahead.

With the blessing of the public, law enforcers will take care of that 10th person, the one who won't play the game. And safety education will be an integral part of our school system.

By the same token, there will be an insistent demand that roads adequate to the expanding needs of the traveling public be built and maintained.

Safety in industry started some four decades ago with (1) a conviction that the problem could be solved and (2) a determination to carry through on the program irrespective of cost or resistance.

That story can—and ultimately will—be repeated in the field of traffic safety. And nowhere else will its manifestations be more prominent than in the realm of roadbuilding.

What the Right Hand Giveth, the Left Hand Taketh Away

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Paul J. McMahon of Binghamton, N.Y.:

McMAHON BROS., INC.,
Binghamton, N.Y., May 19, 1961.

Hon. HOWARD W. ROBISON,
U.S. House of Representatives,
House Office Building, Washington, D.C.

DEAR CONGRESSMAN: Please, Mr. ROBISON, ask the U.S. Congress: Why does the U.S. Congress continue to support contradictory and self-defeating policies? It is difficult to reconcile—

1. Federal aid to education with the need for same.

2. Public housing which local proponents state is necessary so that young married couples may be able to save enough money for a downpayment on their own home with—

(a) Farm and crop subsidies and storage costs of same which make food and clothing cost this same young married couples more.

(b) New York State's income tax personal exemption reduction from $2,500 to $1,200 for young married couples which increases their tax bill.

(c) The 2 cents per gallon increase in gasoline tax in New York State March 1, 1959. Increase in cost to this corporation, $1,300 per year and a proportionate increase in cost to employees in their personal automobiles.

(d) The increasing number of tax-exempt foundations in the United States of America, as recently placed in the CONGRESSIONAL RECORD by the Honorable WRIGHT PATMAN. (To help the poor?)

(e) Urban renewal, Federal roads, airport and aircraft, and other subsidies.

(f) Foreign aid to Communist governments while the poor young married couples are asked to pay their share of a $43 billion annual defense cost against communism.

(g) The constant rise in the cost of living (inflation) which decreases the purchasing power of all citizens including young married couples and pensioners including those receiving social security benefits.

These and other items of equal uniqueness cause wonder and dismay to plague the citizen-taxpayer.

Can you explain why these things are supposed to make financial sense? I would like to be able to explain it to employees who ask for wage increases so that they may retain their normal purchasing power, pay their increasing real estate and school taxes, feed and clothe their children without moonlighting; and to customers when the point is reached where affecting economies such as reducing personnel, driving compact cars to obtain greater gas mileage is no longer possible and we must raise prices.

Or is it the intent of the U.S. Congress to preside over the liquidation of small business in the United States?

Respectfully,

PAUL J. McMAHON,
Chairman, Board of Directors.

A Doctor Reports on Project Hope

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks, I include herewith an article from the Medical Center Memo of the Stanford University Medical School.

Stanford University has provided many doctors who have served aboard the SS *Hope* during its Indonesian trip, which ends at the beginning of June. Some of these medical people who will serve with this mercy vessel at the South Vietnam capital of Saigon until September are members of the faculty at Stanford Medical School.

The enclosed article "A Doctor Reports on Project Hope," is a tribute to the splendid work done in the cause of mercy by Stanford people:

A DOCTOR REPORTS ON PROJECT HOPE

A member of the Medical School's voluntary faculty has returned from Indonesia with a firsthand report of Project Hope, the people-to-people floating medical center now in southeast Asia.

"The impact of the *Hope*," says Dr. John Ratcliffe, "was tremendous from the first. There's demand now for the ship to visit all over Asia."

Dr. Ratcliffe flew to Djakarta with a first group of doctors from this area, arriving last October 19, the day the *Hope* made port there.

"From the start, Project Hope had as much work as we could handle," Dr. Ratcliffe says.

This was not surprising in a country with only 1,500 doctors, about one for every 60,000 of a population in the midst of a terrific explosion.

"The amount of surgery to be done is incredible," Dr. Ratcliffe says. "Indonesians are pleasant people, but they are unfortunates beset by parasites and millions of flies. They are also particular victims of thyroid and neck cancer, and of such congenital defects as cleft lip."

It was an operation on such a lip that gave the Indonesians one of the first, dramatic

examples of Project Hope surgical skill. Dr. Ratcliffe is not a plastic surgeon, but the 14-year-old girl had a badly disfiguring cleft lip. After a morning spent in the *Hope's* "excellent medical library," Dr. Ratcliffe operated. Today this 14-year-old is free of her disfigurement.

Project Hope surgery is done on board the ship or in Indonesian hospitals. "The heat was extreme," Dr. Ratcliffe says. "We often kept patients packed in ice. We ourselves simply soaked in our own perspiration."

The climate is hard, the work harder, but doctors who fly to Project Hope for 2- to 4-month tours take it in stride. About 18 are aboard at a time. The nursing and technical staff of 25 is signed on for a year, among them two from the Stanford Medical Center: Harriet Seipel, head technican in the Center's Cardiology Laboratory and surgical nurse Delia Dorame.

The sort of easily recognized help Project Hope is giving brought a quick reaction from the Indonesians, according to Dr. Ratcliffe. From the first the people came to see the *Hope* for themselves, and in such numbers they even made a traffic problem.

"The impression of Project Hope is all the greater because Indonesian medicine, even with the backing of the 11-year-old republic, is in such low gear," Dr. Ratcliffe says.

When independence from the Dutch came, there was no reservoir of native physicians on which to draw; in 1940 only 40 students were graduated from the combined Indonesian schools of law, medicine and engineering. Consequently, native doctors today are all very young and comparatively inexperienced. And these young doctors, on government orders, are facing up to 200 clinic patients singlehanded every day. This pressured practice leaves no time for the sort of help that Project Hope is giving.

This alone would make its people-to-people mark for American good will. But when the *Hope* sails for home refurbishing in the fall, it will leave behind something even more tangible. In Djakarta there is a fine new hospital that the impoverished country could not equip. Project Hope has undertaken to complete this Ibu Sukarno Hospital as an American model institution that will soon be exclusively Indonesian. The project is also training a corps of Indonesian nurses on board for 6 months. Excellent students, these 25 young women will form a nucleus of well-trained Indonesian nurses.

"Project Hope cost $3,500,000 to start," Dr. Ratcliffe says. "But the benefits to Indonesian-American friendship may well justify this expenditure which also happens to be the cost of a single jet fighter."

Saving the Potomac

EXTENSION OF REMARKS
OF
HON. CHARLES McC. MATHIAS, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. MATHIAS. Mr. Speaker, for 30 years the historic associations and natural beauty of the Potomac Valley and the Chesapeake & Ohio Canal have been recognized as worthy of preservation. At one time, this recognition was purely local, but it is now widespread. I am glad to note the nationwide interest which exists in the Potomac Valley and the Chesapeake & Ohio Canal National Park. As evidence of this interest, I append a copy of an editorial in the New York Times published on May 22, 1961. Since this editorial deals directly with the subject matter of H.R. 4684 and S. 77, I am sure that it will be of interest to other Members of the Congress.

SAVING THE POTOMAC

The valley of the Potomac River is still largely unspoiled. For 180 miles, from Cumberland, Md., to the Nation's Capital, it cuts through historic land—a surprising amount of it still wilderness—accompanied by the famous old Chesapeake & Ohio Canal. A rarity among rivers, the Potomac has not been used heavily by industry; it traverses the fringe of the excessively urban, highly commercialized eastern seaboard.

This fringe position has protected the Potomac in many ways, but each year encroachments threaten. They are worse this year than last, and were worse then that the year before. The bulldozers come closer, the unspoiled areas shrink. Each session recently Congress has considered legislation to ward off that encroachment by converting the long C. & O. Canal, with some adjacent acreage, into a national historical park.

Some reason for delay has always been available. Although the Senate has passed the measure twice, the House has failed to act. This time the argument is made that the favored proposal of the Corps of Engineers for a high dam is again under study.

We submit that there is no more time for delay. Protecting the Nation's natural resources, providing areas for recreation, and appreciation of the very land which gives us strength, is increasingly urgent. The Chesapeake & Ohio Canal National Historical Park may well prove to be the central park for the eastern seaboard's coming megalopolis. Its need has been strongly endorsed by the Kennedy administration. Congress should assure its preservation now.

Senior Specialist Corps

EXTENSION OF REMARKS
OF
HON. HOWARD W. CANNON
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. CANNON. Mr. President, a great amount of legislative study and public enthusiasm has attended the proposal that a Peace Corps be created to assist the Government of the United States in achieving an improved atmosphere between this country and other nations abroad.

While I believe that the suggestion of a Peace Corps has merit and could fulfill an important need, I do believe that we would be missing an opportunity if we neglected to recognize an important contribution that can be made by our senior citizen to the cause of international harmony and mutual assistance for nations of the free world and neutral countries.

The president of W. R. Grace & Co., Mr. J. Peter Grace, has written a column in a recent issue of the magazine Quest, in which proposals that a Senior Specialist Corps be created to tap the great knowledge and human resources of our senior citizens, many of whom seek with great enthusiasm to make their contribution toward improved international relations and peace.

I believe the proposal will be of interest to, and warrants the attention of, Members of this body, and I ask unanimous consent to have printed in the Appendix of the RECORD the column of J. Peter Grace.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GUEST COLUMNIST—J. PETER GRACE

As President Kennedy's Peace Corps gets organized, it is continually amazing how this program has galvanized the imagination of the young people of the United States.

But the Peace Corps, with its emphasis on youth, diverts the spotlight from another major resource of the United States, the increasing number of highly trained senior citizens that we have, men who, after many productive years in business, at colleges and universities, in governments, have retired.

This reservoir is increasing; it will continue to do so as more and more business concerns institute mandatory retirement plans that specify an age at which employees must retire. (And the trend to allow employees to retire, at their option, ahead of the mandatory age, will further increase it.)

In some cases, of course, these senior citizens, with their skills and talents, find productive ways to use their time. But too often, they end up in an idleness that they themselves do not want and that the Nation and the world cannot afford.

Thus it is time to consider not only a Peace Corps of young people but a senior specialist corps as well.

This is something for the Federal Government to consider. The procedures used for the Peace Corps could, in large part, be used for senior specialists.

These men and women could be used in a wide variety of fields. For instance, there are thousands of people in this country whose talents could be used overseas in the fields of capital formation, home financing and construction, city planning, business administration and the professions, agriculture, including soil management, land development and forestry, teaching, administration of schools, hospitals, and libraries, public health, laboratory research and administration, industrial productivity and incentive programs, engineering in all its branches, transportation, roadbuilding, labor relations, and many others. Such a listing is seemingly endless.

From this tremendous reservoir of highly skilled and experienced talent, the United States could develop a Senior Specialist Corps, which would be a valuable complement to President Kennedy's youthful Peace Corps. These senior specialists could be advantageously used on short-term special missions in the underdeveloped areas of the world, particularly in Latin America, where they could provide technical advice and organizational assistance.

There are a number of U.S. and international organizations which are now engaged in technical assistance programs which could immediately make use of these talents, which unfortunately today are going to waste. I have in mind, for instance, the International Cooperation Administration, which operates the United States point 4 program, the United Nations, and the Organization of American States, which render technical assistance to member states.

There are many private organizations in the United States and the foreign countries which are engaged in financial consultation, and which could make efficient use of these senior specialists.

Many of the countries of Latin America, with which I am most familiar, and underdeveloped nations in other parts of the

world, are today anxiously facing many of the same problems which confronted the United States some 30 to 50 years ago. In our country we developed unique techniques to resolve them such as the savings and loan associations, mass construction of housing, opening up of new lands, road construction, the FHA, the FNMA, RFC, and countless others. Many of our senior citizens who are now retiring are the same men and women who helped to develop these techniques to their present stage of high performance.

It is my thought that these men and women, experts in their chosen fields, would enthusiastically lend their services to other nations to organize similar institutions, adapted to local conditions, which could help these countries to help themselves on the road to greater prosperity and economic development. At any rate, the wealth of America is not only in its financial resources but in this vast reservoir of American men and women who have helped to make America great.

Irrigation Beware

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. SAYLOR. Mr. Speaker, for some time, there have been increasing signs that the philosophy of the Department of the Interior was shifting from the production of power as an incidental benefit to help pay the cost of irrigation.

Several statements have been issued from time to time by the Commissioner of Reclamation that they were turning to the production of power as their principal purpose.

The public utility concept has been growing for some time and the article in today's Wall Street Journal, which quotes the Commissioner, should serve as a warning to all who are truly interested in reclamation:

POWER SWITCH: ADMINISTRATION TO PUSH DEEPER INTO RIVALRY WITH UTILITY COMPANIES—IT AIMS TO MOVE INTO AREAS PRIVATE FIRMS SERVE, CUT EMPHASIS ON IRRIGATION—BONNEVILLE-TVA TIE STUDIED

(By Daniel M. Burnham)

Public versus private power appears headed for a new phase of spirited controversy.

After 8 years of declining activity under President Eisenhower, the Department of the Interior is now hard at work on a number of proposals that would put the Federal Government much more deeply into the power business. If President Kennedy succeeds in pushing his program through, it undoubtedly will mean stiffer competition for the Nation's privately owned utilities.

The Government's policy on its role in building and operating electricity generating plants appears to be undergoing two significant changes. For one thing, Federal planners are talking about stringing transmission lines through areas where utility-owned lines already exist. This would be a sharp departure from the past. Furthermore, the Kennedy administration is publicly expressing considerable interest in building dams simply to develop power sources; in the past the Government usually had claimed it constructed dams primarily for their value in irrigation and flood control and secondarily for their power.

AIM: TO SELL POWER CHEAPLY

Declares Floyd E. Dominy, the Interior Department's Commissioner of Reclamation: "I don't think we'll ever again decide not to build a dam simply because it's only a power project. Our main point of interest will be to sell power cheaply to the public."

Mr. Dominy puts his finger on a point of contention. Spokesmen for private utilities argue that in fact the Government does not serve the best interests of taxpayers by supplying power at rates lower than those charged by the utilities. The utilities reason that not only must taxpayers put up the money to build the power projects, but also they must forego the Federal, State, and local taxes that private utilities would pay if they built the same projects.

The utilities are worried, of course, that expansion of Government power will cut into their profit potential.

Whatever the merits of the public-private power feud, there is no doubt the years of close cooperation between the utilities and the Government are at an end. During Mr. Eisenhower's two terms in office, the capacity of privately-owned utilities was boosted by 9 percent during each 4-year term; these were the largest such increases since former President Hoover's tenure early in the 1930's. At the same time, under Mr. Eisenhower, Federal power capacity increases were cut back from 14 percent during his first term to 8 percent during his second. The latter figure was the lowest since the 1920's.

RENEWAL OF INTEREST

But a look at the administration's plans shows the extent to which the Government's interest in power has been renewed. Toward the end of the Eisenhower administration, the Government adopted a policy of no new starts on major power projects. By contrast, the Interior Department during the present session of Congress expects to seek authorization for about a dozen new water resources projects, including five with hydroelectric power facilities; requests already have been made on three of the projects. Mr. Kennedy's budget for the fiscal year starting July 1 includes $10.7 million to start construction of six projects already authorized by Congress and $6.6 million to investigate new projects.

In addition to stepping up the Government's participation in power development, the present administration also is altering its standards for estimating benefits of its new projects in an effort to make them more salable to Congressmen. President Kennedy not long ago directed the Budget Bureau to reevaluate current standards for appraising the feasibility of water resource projects. This has led to an important change in the method of evaluating such projects.

In the past, the Interior Department arrived at the probable total cost of a project and then added up the benefits expected from the project over a 50-year period. Taken into account were such anticipated benefits as the value of new crops that could be grown in the project area, increases in land value and the value of some added recreational facilities. The reasoning was that if a proposed project could show a dollar of benefits for each dollar of cost, it probably could be pushed through Congress.

Under President Kennedy, the period for figuring benefits is being doubled, to 100 years, and some intangible benefits not previously given consideration—the value of improved fishing and hunting, for example, are being counted. This, of course, will increase the claimed benefits sharply without affecting estimates of construction costs.

NETWORK OF LINES

Most spectacular of the power programs now being considered by the Kennedy administration is a plan to hang a huge network of powerlines around the Nation. These lines would be capable of transmitting big blocks of power and, in the long run, would tie together such major power tools as the Tennessee Valley Authority in the Southeast and the Bonneville Power Administration's dams in Washington and Oregon. Lines would be strung—in some cases by helicopter—on high towers over some of the Nation's toughest terrain: The Rocky Mountains, the Sierra Nevadas, and the vast stretches of desert in the Southwest.

Department of the Interior officials decline to estimate what the project would cost, but some authorities figure the cost would be at least $1 billion.

The extra-high-voltage lines would be so-called common carriers, open for use by private utilities as well as by public utility districts, cooperatives, and the Government. Uncle Sam would recover the cost of erecting the lines by charging users a small sum per kilowatt.

Why build the lines? The Government's explanation is that it would allow private and public power producers to shift large amounts of power from one part of the Nation which has a power surplus to another which has a power shortage. For example, inexpensive electricity generated from the abundant water of the Northwest could be used to supplement high-cost, steam-generated power in the arid Southwest. Or, if existing generators became over-taxed, power could be sent from north to south in summer for air-conditioning and from south to north in winter for heating. And in the case of a national disaster such as war or drought, power could be shipped to areas where generating plants were inoperative or inadequate.

IMPROVING PROFITS

Federal officials also concede that in some parts of the land, the lines are wanted to move power to more distant points to improve the profit picture of existing Federal projects. A case in point is the Bonneville Power Administration, which sells the Government's power in the Northwest.

In recent years the Northwest power picture has changed from one of shortage to one of surplus. As a result, in the fiscal year ended last June 30, the Bonneville Power Administration's revenues after operating expenses fell about $8.5 million short of what was needed to pay the Treasury a scheduled installment on construction costs. For both the fiscal year ending next month and for the fiscal year ending in June 1962, the shortage is expected to rise to about $13 million. However, if the Government put up high-voltage lines between Bonneville and southern California, authorities figure the extra revenues from Government power now going untapped and from the small charge levied on users of the inter-tie would be sufficient to almost cover the Bonneville Power Administration's loss.

It's no coincidence that the Interior Department intends to bring together the private and public power pools west of the Mississippi River in the first phase of erecting its power line network. The Bonneville-Southern California link, under one plan now being considered, would consist of a pair of cables stretching more than 900 miles down the west coast. The cables would cost about $210 million to put up and would be capable of moving close to 11 billion kilowatt-hours of electricity annually—enough for five cities the size of San Francisco. An Interior Department task force is currently studying the feasibility of the project and is scheduled to make its final report on November 1.

It has been only recently that technological developments in power transmission have made extra-high-voltage lines possible. The trick has been to develop cables, generators and other equipment that could withstand the high voltage needed to send big blocks of electricity over long distances. Electrical engineers liken voltage to water pressure:

The higher the pressure, the farther the water can be piped.

CLEANING UP STATIC

To handle higher voltages, larger generators have been built that are capable of stepping up generation without loss of efficiency. And new types of cable have been designed to clean up an old high-voltage line bugaboo—static which often drowns out communications within a certain range of the line.

The static, or corona as it was called, was caused by electricity escaping from single power lines. But engineers found that if three or four lines were strung together from the same pole, but separated, each by a few inches, the amount of escaping electricity was reduced. The reason: The wires and the space between them act as one line with a huge circumference; thus, the voltage puts less pressure on any one part of the line.

As these problems have been solved, the voltage capacity of lines has been increased dramatically. At the start of this decade, lines in the United States could handle only 287,000 volts; this has now been raised to 345,000. Preliminary planning for the Bonneville-California intertie calls for a capacity of 500,000 volts. And Westinghouse Electric Corp. and American Electric Power Service Corp. are preparing tests to send kilowatts over lines with jolts of 750,000 volts. The tests will be conducted at a new laboratory at Apple Grove, W. Va.

Most private utilities take dim views of the Government's new power plans, particularly of the plans to put up power lines. At a hearing held by California last summer on the feasibility of the Bonneville-California intertie, Robert H. Gerdes, executive vice president of San Francisco's Pacific Gas & Electric Co., said: "It does not appear that we could be a party to any arrangement under which power would be brought in from the northwest over common carrier lines." Mr. Gerdes says P.G. & E. considers construction of new lines part of its responsibility to its customers and that it will build "whatever additional lines are needed whenever conditions justify such construction."

Much the same argument is advanced by Arizona Public Service Co. and other utilities fighting a Government proposal to spend $176 million on circuits in the Upper Colorado River Basin area. The main artery of this system eventually would be fitted into the Government's nationwide power line network, according to the Interior Department's plans.

Will the President Learn His Job in Time To Avert Disaster?

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1961

Mr. ALGER. Mr. Speaker, even a casual reading of the record of the first 100 days of the new administration will show that the President knew little about the job or what it entailed. This is understandable and a certain period of grace was necessary for him and his subordinates to learn the ropes. They have now had 5 months, but have they learned from their mistakes? I sincerely hope so, but from the events of the past few weeks, I am sorely afraid it may take the President too long to learn his job with disastrous consequences for our country. My fears are not lightened by the following news story in the U.S. News & World Report:

SECOND "100 DAYS"—EDUCATION OF A PRESIDENT

New ideas for running the complex business of Government are colliding with hard realities when put in operation.

The Kennedy team is having its troubles.

Insiders complain of confusion, a lack of clear chains of command and responsibility.

Experience, in the early days, reveals that making decisions is a lot easier than getting decisions transformed into action.

Episodes, pieced together, give a picture of problems encountered by a new President.

Now there are reports of change. Easy informality is giving way a bit. Formal policy meetings, once scrapped, are back in favor.

From inside and outside the Kennedy administration come stories picturing a new team in Washington still struggling to get its feet on the ground.

Some of the stories tell of ideas going wrong when put into practice. Others concern administrative confusion. There are stories about professors and their influence in the administration.

Few things appear to have turned out to be quite what Kennedy had expected when, as a candidate for office, he told of what he planned to do if elected.

The job of running the vast machinery of a Government which has expenditures of $80 billion each year obviously is neither simple nor easy. As a new President moves into his second "100 days," this fact seems to be impressing itself more and more upon the White House.

The latest example of how things can go wrong occurred in South Korea on May 15. Leaders of the South Korean Army staged a political coup on that day. Americans who supply and lead that army reacted as though caught completely by surprise—even though there had been ample signs, noted by intelligence services, that something was stirring in that country.

Two days after the coup, officials in Washington still were confused. And the views of U.S. officials inside Korea appeared to be only vaguely correlated with the views of officials in Washington.

In the case of Cuba, in Laos, in South Korea—among other places—events had appeared to catch the U.S. Government off guard.

High officials of the Eisenhower administration say that they are not surprised by the trend that affairs are taking in Washington.

The following story is told:

When key members of the new Kennedy team came to Washington to be briefed on problems and programs of the outgoing administration, they are pictured as often having been interested, but not too much impressed. The members of the Kennedy team are described as having definite and strong ideas of their own on how to run the Government.

One strong idea was that the White House staff should be cut down and that staff operations should be replaced by centering more direct responsibility in the President himself. On February 18, the new President abolished the Operations Coordinating Board that Eisenhower had created to make sure that decisions were recorded, interpreted and made known to those operating the machinery of Government. Where Mr. Eisenhower depended upon advice of the National Security Council to help appraise world problems, the new President bypassed this council.

More emphasis was placed upon doing business by telephone.

Crisis then began to pile up on top of crisis. Time after time events caught the White House by surprise.

Change now is reported to be under way.

Meetings of the National Security Council are becoming regular. Less business and fewer decisions are being left to telephone conversations. White House meetings are getting larger. Records that had been neglected earlier are beginning to be kept.

A trimmed-down substitute for the Operations Coordinating Board is being created in the Department of State.

McGeorge Bundy, a special assistant to the President, is reported to be taking on more responsibility for White House operations to free the President for more time to think. One official who served in President Eisenhower's administration said: "What Kennedy most needs is a 'Sherman Adams' of his own." Mr. Bundy, insiders say, may become just that.

One night, rather late, an incident occurred that required the President's attention. Mr. Kennedy sought to contact key people for consultation. None could be found.

President Kennedy, as a result, has directed that watch officers be kept on duty around the clock, 7 days a week, so that there will be no delay in learning of, or in acting upon, important developments no matter where they occur in the world.

The new President had sought to cut through Government redtape and to get more direct action more quickly. Change did come inside the White House itself.

A man doing business with the Government on a big scale reported the following about operations below the top:

"In all branches and departments of Government, including the Pentagon, there has not been a bit of change. The old orders requiring countless signatures on a piece of paper before a businessman can do business with Government—these orders all stand.

"One of these days, some of the highpowered professors around Kennedy are going to step down out of their ivory towers and stroll around the little offices—thousands of them—where the real business of Government is carried out. When they do they are in for a shock.

"Maybe the White House professors can pick up a phone and talk to anybody anywhere and get a quick decision. But that little guy at the desk can't. He's still wrapped up like a mummy in carbon copies which require his signature and those of officials in a dozen offices in a dozen other buildings.

"All this informality at the top may someday seep down to a lower level, but it hasn't yet."

The same story is told by key officials, just below the top, who try to get prepared so that emergencies around the world will not continue to catch high officials flatfooted. They complain that, under Kennedy, as under Eisenhower, it takes dozens of signatures and weeks of time to get the simplest of wheels to turn in Government.

President Kennedy is described by some officials who have been critical of him as learning by experience.

There is a feeling that the President is becoming aware of mistakes made in early days of his administration and of the problem of cutting through barriers of paperwork to get things done.

Yet inside the administration, too, there is more tendency to place a lid on information and try to tailor news to give to the country a strictly favorable image of the President at work.

Disaster in Cuba remains a highly sensitive subject at the White House. Military officials have been under strict orders not to talk.

At the same time, stories fed to newspapermen by White House sources have been

aimed at placing blame first upon the Central Intelligence Agency and then upon the Joint Chiefs of Staff. These stories were fed out following a statement by President Kennedy assuming responsibility himself.

This is heard from a White House source:

The President did not expect that the press would take at face value his statement that he assumed responsibility for what happened in Cuba. He had expected that there would be reporting of the part that the Eisenhower administration had played in the buildup of an attempt to overthrow Castro. He expected that intelligence miscalculations would be referred to, and that newspapers would take some responsibility upon themselves for their detailed reporting of the buildup for an invasion attempt.

When the White House found itself accepting the blame, it was felt necessary to feed stories to columnists in order to shift blame to others. The Joint Chiefs of Staff were singled out.

What are the facts of the Cuban fiasco? Did the heads of this country's armed services, experienced in amphibious warfare, approve the invasion attempt of Cuba as it was made?

The answer, from more than one well-informed source, is this:

There was a plan for invasion of Cuba that members of the Joint Chiefs of Staff did describe as "feasible." This plan, however, was not the one that was followed when the attempt was made.

The plan described as feasible called for a main landing and a diversionary landing of troops. It was to be preceded by air strikes on key targets for 3 days before the invasion. These strikes started on schedule, but were stopped after the first attack. The landing attempts themselves were to be provided with air cover. Signed up as volunteers were 60 U.S. pilots, and 100 U.S. warplanes were ready for their use. U.S. marines were on Vieques Island, off Puerto Rico, ready to move into Cuba at a later stage, if needed.

U.S. military men remain convinced that this plan would have worked, if carried out. Troops did get ashore without opposition. There were defections from Castro forces. Things were rolling. However, at this critical juncture, air support that had been promised by the United States was denied. Castro's U.S.-made jet trainers, piloted by Czechs and unopposed, sank the ships carrying the ammunition and communications equipment of the invaders. Without air support, it became clear that the invasion could not succeed, so that further defections inside Cuba could hardly be expected.

Who pulled back on air support? Fact is that the Central Intelligence Agency went ahead with its own plan, without assurance of military support.

That's the story that is told by informed sources. The Joint Chiefs of Staff did not describe as feasible the plan for invasion of Cuba that was used when the first landing actually occurred.

If military services at the Pentagon in Washington cannot be blamed for what happened in Cuba, they are in the line of fire on other counts.

The following story is told by an important Government official whose work must go through the military services:

"The Pentagon has itself tied in such incredible knots of paperwork and internal politics that getting anything done, conservatively, involves a delay of 20 days or more.

"As an example, I had to ask that studies be made of a particular country in Europe to bring planning up to date. Before that letter left the United States, it had to be approved by the Joint Chiefs of Staff, the Army, Navy, Air Force and the Department of Defense. In each of these five sections of the Pentagon, the letter ran into a clique of politicians, strategists and thinkers who tried to outguess each other as to just what our department was up to and what it would mean to their special interests.

"Finally the paper reached CINCEUR (Commander in Chief Europe), and there the business had to begin all over again, since CINCEUR has miniature copies of the political setups in the Pentagon. I mention this because it gives you an idea of what the President and the freewheelers in the new group at the White House are up against. They had thought it would be a snap to operate this Government."

Many Washington newsmen who are admirers of the President, personally, are beginning to complain that he and his aids are "too thin-skinned."

One reporter remarked recently that he had the feeling some decisions are shaped, to an extent, by an "excessive fear of criticism." On several occasions, reporters have been called in by the White House press secretary—or even by the President, himself—because of news accounts that were deemed to be too critical of the administration.

Mr. Kennedy goes to considerable lengths to watch over his press relations. He sometimes dines in private with individual correspondents. He is finding, however, that such special treatment doesn't keep these men from being critical of White House deeds.

Another early complaint: that the President has tried to do too much—to be "in on everything." Said one official:

"The President's staff is so loosely organized that responsibilities are not clearly defined. During the meetings on the Cuban invasion, aids came in and out of the President's office, and so did Cabinet officers. Sometimes there would be a meeting of three or four officials, sometimes five or six. When it was all over, no one—not even the President—could say exactly what each man had contributed to the plan."

Comment by a man with an intimate knowledge of the White House:

"When historians get around to the start of this administration, they're going to go mad. During the first 100 days there was no record of who said what to whom, of who recommended, who dissented from major decisions. Nothing was put on paper."

Now there are some signs that that is changing. New aids appear to be moving up. Although there is criticism that there still are no real channels of command, staff responsibilities are being more clearly fixed.

The President, in his second 100 days, is reported to be applying some of the lessons learned in the first.

The Federal Trial Examiners Conference, May 1961

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1961

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include a message of greeting from President Kennedy and excerpts from the address of James M. Landis to the Conference of Trial Examiners in Washington, D.C., May 18, 1961.

The message and address follow:

I am pleased to greet on this occasion the Federal trial examiners and their guests.

One measure of the strength and vitality of government is its capacity to perform day-to-day jobs with fairness and with dispatch. In no part of the Government is this strength more subject to difficult strain and stress than in the administrative process. In few places is the efficiency and fairness of our Government more importantly or more constantly put to the test before the eyes of all our citizens.

I am conscious that the success or failure of our regulatory agencies in meeting that test falls initially, and sometimes ultimately as well, upon the hearing examiner. Matters of the greatest significance to the public and to the private interest involved are the daily subject of your work. Their disposition turns upon what you personally bring to the decisional process—upon your integrity, your ability to seek out the crucial facts, your capacity for difficult decisions, your sense of the public interest as expressed in law or regulation.

This process is, as yet, a relatively young one. In recent years the growth of regulatory functions in a context of changing economic and technological conditions has made us aware that we must reappraise our successes and our failures with honesty and objectivity. We must do what is necessary and what is right to insure that our regulatory system is efficient and fair. The reorganization plans already before Congress, and the recent establishment of the Administrative Conference of the United States evidence the interest and the determination of this administration in seeing that these goals are met.

An expectancy of change and challenge now pervades the whole administrative process. I know that the Federal trial examiners, today as in the past, will help in this job of reappraisal and reexamination and I feel sure they can and will contribute substantially to improvements in the administrative process.

JOHN F. KENNEDY.

MAY 17, 1961.

EXCERPTS FROM THE ADDRESS OF JAMES M. LANDIS TO THE CONFERENCE OF FEDERAL TRIAL EXAMINERS IN WASHINGTON, D.C., MAY 18, 1961

The trial or hearing examiner is, in a true sense, the core of the adjudicatory phase of the administrative process. Under the Administrative Procedure Act he is assigned the responsibility of handling the initial trial of cases required to be decided on the record—cases that can vary in importance from a few dollars to issues of great magnitude—air routes, TV licenses, rate increases, the safety of nuclear reactors as well as claims, minor and major, for compensation under the Social Security Act. The issues he tries, the evidence that he must sift, may be simple; it may also be incredibly complex. He must distinguish truth from untruth, the verity of a statistical exhibit from the tortuous testimony of experts whose conclusions are frequently not their own but those dictated by their clients. No police court judges have such extensive responsibilities. Nevertheless judges of our lesser tribunals can, if they choose to do so, effectively control the records of the cases that they are called upon to try, control the conduct of witnesses and lawyers. They can insist upon the respect that should be paid to a judge. Their decisions are frequently final, at least in minor matters committed to their jurisdiction.

This is not true of the trial examiner. His power to control the record is limited. Unable to rule with finality on many interlocutory matters, he is forced to permit expansion of records rather than their contraction. He is too often legally incapable of controlling the conduct of claimants and their lawyers. His means of compelling the production of testimony is by appeal to outside authority and never direct. His deci-

sions are so-called initial or recommended decisions appealable as of right, no matter how inconsequential, to the agency itself.

This is a system that calls for review. It breeds delay; it involves unnecessary costs. It invites endless and time-consuming appeals. It militates against developing the stature and prestige that our judicial systems vest in the lowest of our judicial tribunals.

No simple legislative act will cure these defects. Certainly the mere provision of higher grades of compensation for our examiners will not give us more than a slight answer to the basic problems. Nor can we hope overnight to establish a system infinitely better adapted for the administration of justice, swiftly and surely, in our regulatory agencies.

But the adoption of the principles underlying the plans of reorganization recently submitted by the President to the Congress can do much to improve the system as a whole. They authorize the agencies to remold the system rather than to take it for granted. By granting at least a modicum of finality to the examiners' decisions, they will increase the examiners' responsibilities. And men, however timid, however bereft of the qualities of genius, will respond to the imposition of responsibility. The hearing examiner corps will grow with these added burdens. And under these plans wise regulations can solve the perplexing problem of interlocutory determinations. Under these plans the powers of examiners to limit records through prehearing procedures can be immeasurably strengthened and their issuance of subpenas duces tecum confirmed. At the same time, nothing is taken away from the responsibilities that rest on the agency heads themselves. The manner in which these agency heads discharge these responsibilities will, of course, be in their hands, just as the manner in which the Supreme Court of the United States discharges the responsibilities of molding the supreme law of the land has been put in the hands of that Court by the Judiciary Act of 1924.

A second potentiality of advance lies in the establishment of the Administrative Conference of the United States. Here is not merely a forum but an institution capable of continuing and sympathetic examination of the system. The possibilities of the Conference are in a true sense infinite. It can question the existing methods of recruiting and qualifying examiners, the mechanical and physical aids with which these officials should be supplied, the degree to which they should be entitled to draw upon the expertise of the agency as a whole rather than merely upon their own judgment, the canons of ethics that should govern them, and the scope of their jurisdiction confined as it is now to one agency and sometimes to a mere branch of that agency's activities. I stress this latter point because too great specialization tends toward a narrowness of outlook. It begets concern with one facet of a problem to the exclusion of the understanding that problems too often are interlocked, are what Sir Henry Mason said of our law, namely, parts of a seamless web.

A third potentiality of advance must come from the inside rather than the outside. By that I mean the trial examiners themselves. Just as the bar has concerned itself with the improvement of the techniques of the profession by the organization of such institutes, exemplified by the Practicing Law Institute of New York, the trial examiners as a corps and as a profession have a responsibility to perfect their own techniques. Institution of new as well as old examiners in such techniques as pretrial procedures, in the submission of expert evidence in documented form, in the limitation of cross-examination, in the submission of proposed findings, is essential. The experience and wisdom of those who are experienced and who possess wisdom must be imported by means still to be devised to the new recruits. I can sympathize full well with your precent concern with essentially mundane matters. But you should be ready now to raise your sights. It is important to your profession and to the administrative process as a whole, that you should do so. Leadership in thought, in creative action, in professional advancement, must stem to a large degree from those who, for themselves and their inner satisfaction, would achieve it. And, I sincerely believe, that those who seek by these means to serve the public interest will in return have the support of that very interest they seek to serve. This is the ultimate reward—to do a job, better, surer and with greater firmness.

Communism at the Doorstep

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a press account of a recent speech I delivered at Milford, Mass., in my district on the occasion of the 15th anniversary of the local chapter, Disabled American Veterans:

REMARKS IN PART OF CONGRESSMAN PHILIP J. PHILBIN SPEAKING AT THE 15TH ANNIVERSARY OF THE DAV CHAPTER AT MILFORD, MASS., MAY 20, 1961

Speaking Saturday night at Milford on the occasion of the 15th anniversary celebration of the local chapter of Disabled American Veterans, Congressman PHILIP J. PHILBIN, hailing the veterans for their sacrifices and great contributions to the Nation in war and in peace, declared that the unselfish spirit and willingness to serve which they exemplified is urgently needed in these days of crisis and peril.

"The American people will never forget the great debt the Nation owes to you and your comrades," said the Clinton Congressman, "and your spirit of sacrifice and loyalty will serve as a shining example and powerful inspiration to this generation, and indeed to all Americans, to rally once again with unflinching determination to the great cause of freedom, security and enduring peace."

"It is too late to cancel out some of the mistakes in policy that have brought us to the current impasse in world affairs," said PHILBIN, "but it is imperative now that every loyal American be aroused and reawakened to the perils and dangers of the hour which confront us with such stark reality both at home and abroad."

Deploring the steady pressures, gains and continued threats of Marxist communism which has been steadily advancing throughout the world, PHILBIN said: "This dire threat is no longer remote. It is not confined alone to helpless nations of Western Europe, or to Asia, the Middle East or Africa, to Laos, Cambodia, or the Congo. It has spread, and it now exists right on our own doorstep, 90 miles from the mainland of the United States, and in accordance with the Marxist timetable it is pointing its bloody finger toward Latin America and the American Continent."

Referring to the relatively rapid spread of communism in the world, the Congressman asserted: "Communism has made these impressive gains by incessant, deceitful propaganda, cleverly engineered infiltration, the brazen employment of threats of aggression, and where the occasion demanded it, the use and support of force and violence."

"This has been possible," said PHILBIN, "because of certain mistaken diplomatic policies, the inability of the United Nations to face up realistically to the dangers, and indecision, vacillation and complacency on the part of governments and peoples of the free world, including our own. It is clear that practically the only deterrent to further aggression, territorial aggrandizement, and perhaps even resort to war itself, has been the great economic strength and most destructive military power which our own country has found it necessary to develop, and which seems unfortunately to be the only language which Communist dictators and their allies understand.

"What a great pity it is for humanity that because of the current world situation and the unwillingness of the Soviet to consult and confer in a wholehearted, honest spirit concerning grave world problems, especially the establishment of lasting peace, that the entire world is penalized and denied in large measure the golden opportunity to reap the tremendous human betterments that could be so readily derived from the remarkable advances of modern science and technology and enlightened governmental, economic and social techniques which, if properly and peacefully applied, could record unprecedented gains, prosperity and happiness for all mankind.

"But we must deal with the present realities as they are and we cannot further temporize or delay in making and implementing decisions that look to the preservation of the values of our free way of life, the security of the country and a world organized and protected for freedom and justice."

The Congressman expressed firm confidence in the preparedness and power of the national defense.

"Let no one be deceived," he said. "that we now possess great and growing military and economic strength is undeniable and this is well known to the Soviet. In the immediate time ahead that strength must and will guard the United States until the day when good will and honor and respect for international agreements and the rights of all nations can be substituted for force, violence and devastating weapon systems as the true measure of man's humanity to man and as evidence of the Soviet's unequivocal intention to seek an honest, just peace."

Touching on domestic conditions and the need for renewed devotion to the established principles and values of the Constitution and the American way of life, PHILBIN declared: "In this presently dangerous world great strength and power is most assuredly necessary, but standing by itself, this is not enough to meet and conquer our present problems.

"It is not enough for us to be strong in military and material things, though this is of utmost importance.

"We must be strong and unalterable also in the things of the spirit, because it is the spiritual values, moral principles and ethical concepts which this country has followed and defended throughout the years which are the true source of our greatness and strength. We must resolutely preserve them.

"No one can tell what the future will bring. It well may be that sacrifices and austerity will be required over a period of time to sustain free institutions. It also could be that even dedicated Marxists may, in their own interests, come to early realization that conciliation and an honest, just peace would provide a better solution to world affairs than continued methods of aggression and ultimate, widespread destruction.

"Be that as it may, this Nation must firmly resolve to pay any price necessary

to defend its birthright, to work, hope and pray for peace, but be prepared to meet every challenge of those who would assail our free institutions and endanger our security.

"On the homefront, so vital to us all, the preservation of free enterprise for all the people, and the encouragement of the initiatives and incentives that are the very heart of our system, must be zealously safeguarded."

Calling for recognition of the demands of social justice, civil rights, health, education, economic and social progress and advancement, PHILBIN pleaded for the strengthening and improvement of every component of American life, the integrity of the family and the regenerative forces of the Nation.

"High levels of economic activity, social standards and broad opportunities must be insured", he said. "We must keep the huge expense of running the Government on an efficient, economical basis, truly consistent with our needs, so that the American people may be spared, where at all possible, the most burdensome taxes which in recent years have been weighing down so heavily upon them, smothering incentives, penalizing enterprise and reducing living standards. We must tirelessly and doggedly hold the line for the American way and its precious values so vital to our liberties and welfare."

The Congressman hailed President Kennedy's able, courageous approach to vexing Government problems and urged united, bipartisan support for his efforts to check communism and stabilize world peace. "The youth, vigor and spirit, and informed awareness of the President, has given fresh heart and courage to peoples everywhere," PHILBIN said. "No Chief Executive has had greater burdens and the American people must stand behind him and assist and cooperate with him as he strives to bring order and the rule of law out of the confusion, misunderstanding and perils that confront us.

"In these great tasks our beloved veterans can and will furnish the firm, loyal leadership that they have always shown.

"I heartily congratulate the chapter upon its great work and wish for you all continued good health, success and happiness in all your undertakings."

West Virginia Plans Centennial Celebration

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 25, 1961

Mr. BYRD of West Virginia. Mr. President, the year 1963 will mark the 100th anniversary of the State of West Virginia—a State of unsurpassed natural beauty in the eastern half of the United States. To commemorate this forthcoming century of statehood, the West Virginia Legislature, in 1955, authorized the establishment of a centennial commission of distinguished citizens, who would freely donate their time and energies planning for the kinds of statewide celebration activities most wholesomely in keeping with the State's history and progress from the year of its inception.

One distinguished West Virginian appointed to this centennial commission is Mr. Charles Hodel, publisher of two newspapers in the State—the Beckley Post-Herald and the Raleigh Register. On May 19, Mr. Hodel was the guest speaker at a dinner meeting of the West Virginia University Alumni Association, held in the Army-Navy Cub, in Washington, D.C. On this occasion Mr. Hodel revealed some of the thinking and the planning of the centennial commission.

Because many Americans are keenly interested in West Virginia, and perhaps are planning to visit the Mountain State during its centennial year and would thus appreciate having a little advance knowledge of what is shaping up in the way of celebration activities, I ask unanimous consent to have Mr. Hodel's speech printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I take it, though you are West Virginia University alumni, you are not all native West Virginians. Neither am I. I'm a West Virginian by choice—by adoption, rather than birth.

I am a full-blooded Swiss, descended from long lines of Alpine mountaineers, both paternal and maternal. So I fit in well.

This month—in fact a week hence, on the 26th—will mark the end of my 50th year of living in Beckley, which stands a half mile high on plateau country, where there are always breezes of pure air. As a consequence my health has improved as I've grown older.

But to get to the subject for discussion of which I am here: I suppose I was appointed a member of the West Virginia Centennial Commission because advocacy of such a move first appeared in our Beckley Sunday paper on February 21, 1954. Yet it wasn't my doing, but that of my youngest son.

Now to the centennial celebration program itself:

As the years of high decision for the people of West Virginia were 1861–63, so will 1961–63 mark the period when we shall pay homage to the founders of our splendid State. To commemorate the act and the actors of a century ago and to point up developments since, the West Virginia Legislature in 1955 authorized a centennial commission of nonsalaried members. Within the framework of the organization are a number of committees, including an advisory committee, and the finance committee organized only last year.

The first work of the commission naturally has been in the area of how to celebrate. Many helpful suggestions have come in, ranging from the scheduling of football games and the holding of mountaintop Billy Graham revivals, to the erection of a tourist auditorium, equipped so that visitors may gather there near the site of the national radio astronomy observatory at Sugar Grove in Pendleton County, to hear sounds from outer space as far as 38 billion light-years away—which is scheduled to be in operation by the middle of 1963. The commission welcomes all helpful suggestions. It is planning a statewide celebration and it will need statewide participation and cooperation to make a go of it.

Alfred Stern of the American National Theatre and Academy is consultant and director-to-be. He has rounded out a program which contemplates a statewide celebration. Broadly, the objectives include: Increasing pride in the State's accomplishments, greater recognition of its opportunities and of its traditions and history, by its own citizens. Greater emphasis on young people and encouragement of bright youngsters, the State's greatest asset, to remain in their native State. There is also need of correction and redirection of present conditions to place West Virginia in position to complete with other States in the utilization of its brains as well as material resources. This emphasis on the State's resources and opportunities is also designed to develop industry and to attract new enterprises, as well as to induce favorable attention to the State's tourist and recreation facilities.

The centennial program is also designed to combat a fairly prevalent national impression that West Virginia is a backward, impoverished State, largely populated by indolent people; to create a climate of increased understanding between rural and urban areas, between north and south, east and west; in short, to develop a pride in all communities in every nook and corner of the State; and to frankly recognize the State's problems in a manner calculated to mobilize the people, their leaders, and representatives, in an all-out effort toward the successful solution of such problems and deficiencies. The centennial program will be developed so as to encourage virtually every citizen to participate in, or to attend one or more centennial events—if we are to achieve a maximum amount of publicity in national, regional, and State press and other communications media, as well as a maximum attendance.

The legislature has recognized the merits of the centennial's objectives, and has allocated the sum of $400,000 to be contributed on the basis of an annual appropriation of $100,000 over a 4-year period. The centennial gross cost is approximately $965,000 and, while most of the projects and events are to be free, certain events will produce income and thus net cost will be about $785,000. This sum is less than 50 cents per citizen. Certainly a program which costs so little, yet will dramatize the past and dedicate the present to a greater future, justifies this comparatively modest cost.

Surely we shall use the centennial year to reassure ourselves and to advertise to the world our greatest resources and finest achievements. West Virginia has much to be proud of. Already plans are well-advanced to present West Virginia in her best dress on a stage for all to see.

One of the prime centennial projects is to be the centennial special exhibits' train, containing a number of cars devoted to exhibits of agriculture, industry, natural resources, history, and heritage, education, tourism, and recreation, arts, crafts, folklore, State government, etc. This train will visit many West Virginia communities; also Washington, D.C., and the capitals and principal cities of the five States bordering West Virginia. For smaller communities where railroad sidings and technical facilities make the exhibit train less practical, a second motorized traveling exposition, containing similar exhibits material on a more modest scale, is proposed through the use of trailer trucks. It is estimated that both the railroad and motorized units will reach approximately 3,500,000 persons in West Virginia and the neighboring States, and will expose them to comprehensive exhibits of West Virginia's accomplishments and resources.

Another centennial project is the creation of a series of eight overnight group campsites in State parks and forests. This would be a part of the Campways-U.S.A. program of the Boy Scouts of America, including the use of national and local tour permits.

Another contemplated event is the West Virginia Forum of the Future, a conclave of nationally recognized industrial, economic and sociological leaders, to be held at the Governor's invitation in Charleston. These authorities will discuss the State's most pressing problems and deliver papers expressing their own thinking regarding their solution. Such papers would be published either by the centennial commission or by

an appropriate educational institution, and subsequently distributed throughout the State.

Theme center centennial stages are proposed for several communities. Indeed any community which can assist the centennial commission in underwriting the construction of such a stage may well develop such a project. These outdoor theaters-in-the-round will be located in downtown squares or city parks, and each night during the peak centennial period, various civic and community organizations will present their own salute to the centennial at such theme centers. Thus, one night youth organizations may present a program; another might well be devoted to music and folk dance organizations; Sundays will be devoted to church programs, etc. This will permit every conceivable type of civic, educational, religious, fraternal, cultural, and service organization to actively participate in the centennial. Communities can also invite groups from neighboring communities to use their centennial stages, thus encouraging an influx of neighboring visitors to the host communities. All such programs will be presented free.

A spectacle show, which in terms of popular entertainment, music, dance, and pageantry, presenting West Virginia history, is contemplated for several larger cities. The script for this spectacle will be so developed as to include a major episode devoted to the contribution to the history of the State of the particular community where the show is appearing. Thus, for example, the show will be different in Clarksburg than in Charleston, Wheeling, or Parkersburg. The professional cast and key technicians involved with the production will travel from city to city, but in each community large groups of participants such as bands, square dancers, choral groups, drill teams, and others, will be integrated into the spectacle.

Fireworks festivals are proposed for several communities, to be held either on the date of the State's admission to the Union, or on the Fourth of July. These are expected to have great popular appeal.

There are many other elements of the centennial program, too numerous to discuss. But basically, every annual event which occurs in West Virginia, including fairs, festivals, symphony programs, little theater activities, art exhibits, major sports events, etc., will all be tied in with the centennial from a promotional standpoint; and most centennial events will reach their peak in the summer and early fall of 1963 when tourism is at its height.

Surely we shall use the centennial as the occasion to come from behind in those things in which we have lagged. Few will deny that we should take a second look at our hospitals and related institutions. Our roads, roadsides, forests, and streams should have continued attention such as they are even now getting from Governor Barron's cleanup crusade. And we should give more than lipservice to cultural programs, which include our schools, our libraries, public museums, and an adequate department of archives and history. We are not a dying State, but like the giant in the fable, a sleeping one bound down by our own inertia and indifference.

Somehow we must use the centennial year for getting rid of the impression that we are washed-up. We must use it to throw off the opprobrium of backwardness. Perhaps it will be a good time to revive the idealism of an earlier day, when we had high hopes for great things; and provide for ourselves those services necessary to getting us out of the Nation's doghouse.

To be sure, we shall use the centennial as the occasion to brush up on our history. The citizen who does not know his country's past is like the chairman who has not seen the minutes of the last meeting. We cannot blink at the facts of life which gave us birth in the middle of the Civil War, a war calculated today to stir us with pride rather than unhappy memories. More than that, much lasting good came out of that conflict—including West Virginia. So let us commemorate it as years of greatness here as elsewhere in the Nation. As it has been aptly said by a member of the U.S. Civil War Centennial Commission, "Never before nor since have Americans been called on to make such enormous sacrifices as in the terrible years of 1861 to 1865."

We will indeed use the centennial as the occasion to mine, refine, and polish, the finest gems of our history; for it is history alone which can bring into focus that greatest of all our natural resources—the high character, quality, and abilities of our citizenship.

West Virginia has not been without contribution to art, literature, science, technology, and the rest. Forty-six years ago, there is good reason to believe the first 4–H camp was held in Randolph County, and 5 years later we can be certain the first State 4–H camp in the United States was established at Jackson's Mill. The 4–H movement and the conservation movement illustrates what we have done and what we are capable of doing, if we wake to our full capabilities and opportunities.

Since its birth, West Virginia has made notable contributions in war and peace—from national marble championships to the Nobel Prize in literature. Who has not heard of Nathan Goff, John E. Kenna, and William L. Wilson in politics; I. C. White in conservation and geology; Anna Jarvis, founder of Mother's Day; Eleanor Steber, Metropolitan opera soprano; Pearl Buck and Melville Davisson Post in literature; and Charles "Chuck" Yeager, the first human to break the sound barrier in flight? John Barton Payne, Louis A. Johnson, Newton D. Baker, Howard M. Gore, and others have served in Presidents' Cabinets. Nor should be overlooked John W. Davis, U.S. Ambassador to Great Britain and presidential candidate in 1924; H. T. Webster, cartoonist and creator of "Casper Milquetoast"; James E. Allen, Jr., commissioner of education of the State of New York; and Andrew Summers Rowan, who carried the "Message to Garcia" in 1898.

In conclusion, I would like to stress the fact that the centennial affords a unique opportunity for all of us to present West Virginia, its institutions, organizations, and citizenry, to the world in the most favorable light and in a manner calculated to benefit our State and all of its many interests and activities. In the final analysis, though, the lasting values and the complete success of the centennial celebration depends on the enthusiasm, financial support, and active participation of the State's organizations, enterprises, and individuals—particularly those with the interest, inspiration, and will-to-do, of the men and women of today. If centennial plans develop successfully, communities and organizations will be asked to participate in the centennial program in a number of ways. I am convinced that such participation will be a long-term investment, a lasting benefit to the community as well as our beloved State.

I think that the essence of what the centennial means was admirably expressed by former Governor Underwood:

"The centennial year allows us to play host to many thousands from all parts of our country who will find hospitality and great natural beauty within our borders. The centennial celebration will also increase civic pride among our own citizens. As such it constitutes a major effort worthy of the collective support of all West Virginians, and indeed all who have affection for and interest in West Virginia, wherever they may live.

"Ultimately, however, the success of the centennial will be determined by the citizens and institutions of our State. This is a challenge to all of us, an opportunity. I know that West Virginians will participate in the centennial with the enthusiasm and success which has marked our first 100 years of statehood."

National Library Week Observed at Donaldson Air Force Base, S.C.

EXTENSION OF REMARKS
OF
HON. ROBERT T. ASHMORE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1961

Mr. ASHMORE. Mr. Speaker, recently National Library Week was observed and I commend Mrs. Verena L. Bryson—Mrs. William J.—librarian, Donaldson Air Force Base—located in my congressional district—for her efforts to encourage greater use of the base library by all military personnel and their dependents. I heartily congratulate Mrs. Bryson and all librarians for their concerted emphasis on the value of reading by Americans in every walk of life.

As a means of affording well deserved recognition of those who participated in the observance at Donaldson Air Force Base, and as a possible source of information for future use by other libraries, both military and civilian, I ask unanimous consent that an account of it be printed in the RECORD, as follows:

NATIONAL LIBRARY WEEK, 1961, DONALDSON AIR FORCE BASE, S.C.

During the first week of February 1961, it was determined that National Library Week would be observed at Donaldson Air Force Base as a part of the base library's continuing program of encouraging a more comprehensive use of library facilities and services by military and civilian personnel, and their dependents. The methods and materials suggested by the National Library Week Organization Handbook and by the Armed Forces and National Library Week Pamphlet (DOD Pamphlet 7–8A) were evaluated by the librarian and adapted to meet local circumstances.

A committee to plan and coordinate the program observing National Library Week was established. That committee consisted of Col. M. H. Strickler, deputy wing commander; Lt. Col. A. L. Klinge, chief of personnel; Chaplain (Maj.) John D. Barringer; Maj. B. D. Wofford, secretary, officers open mess; T. L. Tilman, education services officer; and Mrs. William J. Bryson, base librarian, who served as vice chairman. On March 23, the base newspaper, the Troop Courier, printed an article announcing that National Library Week would be observed and named the committee.

The committee determined the activities to be conducted during National Library Week, and the manner in which the attention of base personnel would be directed toward those activities. First, actions were undertaken to make the library more accessible and appealing to patrons. On April 1, library hours were extended from 48 to 68 hours per week.

A pending request for new reading tables and chairs were expedited, so that these more attractive and comfortable furnishings were in place for the observance. Displays and exhibits incorporating organizational hand-

book suggestions and subjects of special interest to Air Force personnel were planned, created, and erected in the library.

These attractions included:

(1) A mockup of a large book opened to its table of contents which listed topics to be found in other displays;

(2) A display of the notable books of 1960;

(3) A display of books appropriate to the theme "Democracy versus communism";

(4) A display concerning newly created nations;

(5) A display of books suggested by the Air Force reading guide; and

(6) A display of letters from South Carolina's two U.S. Senators, OLIN D. JOHNSTON and STROM THURMOND, and three of its U.S. Representatives, L. MENDEL RIVERS, W. J. BRYAN DORN, and ROBERT T. ASHMORE, calling attention of servicemen to the benefits to be realized from the use of library facilities and services.

The children's room of the library was decorated with posters, pictures, and book displays depicting the lives of renowned leaders of democracy.

It was decided by the committee to use as the local symbol of National Library Week a large reproduction of a scene depicting the cartoon character, Beetle Bailey, asleep in his bunk being told to "wake up and read" by his sergeant. Such a scene was displayed at the entrance to the library and another was incorporated in a display within the library itself.

During the first week of April, two posters suggested for military service libraries by the National Library Week Headquarters were reproduced and posted on 29 squadron orderly room bulletin boards. A large sign reciting the National Library Week slogan and the dates of National Library Week was placed at the base main entrance, which is the most heavily traveled area. In the April 6 issue of the Troop Courier, an article was published itemizing the various events planned for National Library Week.

During the second week of April and during NLW, the base daily bulletin contained information regarding the observance.

On April 13, the observance officially began, through an address by a local newspaper columnist at a luncheon of the Donaldson Air Force Base YWCA. An article regarding his address and recapitulating the plans for National Library Week was subsequently printed in the Troop Courier.

On April 16, an invitation to the public to visit the base library appeared in the Greenville News. On the same date bulletins of Protestant and Catholic chapels on the base contained notices regarding National Library Week.

Special events designed to appeal to each interest group within, or related to, the personnel of Donaldson Air Force Base were conducted during National Library Week. These activities included the following:

April 17, noncommissioned officers and their wives were conducted on a tour of the library. Special exhibits and displays were explained and instructions in the use of the library's facilities and services were given. Coffee and refreshments were served. A reporter from one of the local radio stations attended as a special guest. During her visit, she recorded interviews with the assistant librarian and the librarian. These interviews were broadcast at different times throughout the week. In a special feature article, accompanied by photographs, the Greenville News of the same date reported on the facilities and services of the Donaldson AFB library and recited the activities and events which were planned for NLW.

April 18, Capt. Harley H. Halstead, the commander of Maintenance Headquarters Squadron, a regular patron of the library, and a member of the Base Toastmaster's Club, was interviewed on a local television station. He called attention to National Library Week in general, and to the library facilities and services of Donaldson Air Force Base, in particular.

On the evening of April 18, a dance was held at the service club for airmen. Airmen and their guests were dressed as their favorite book characters, and were awarded prizes for the best and most original costumes. A picture of the winners of the contest was subsequently published in the Greenville News, along with a brief story concerning the event. Another photograph of some of the contestants appeared in the Anderson Independent.

April 19, a tour of the library, similar to that for noncommissioned officers and their wives, was conducted for officers and the Officers Wives' Club. The chairman of the library week committee, Col. M. H. Strickler acted as host and Mrs. Joel C. Stevenson, president of the Officers Wives' Club acted as hostess. Refreshments were served. Special guests included members of the library staffs of Furman University, the Greenville Public Library, and several local public school libraries. In addition, the chairman of the local USO, and members of the local volunteer USO committee were present. The occasion was reported by another local radio station and by the Greenville Piedmont.

April 20, in cooperation with the service club director, Miss Elizabeth Mahon, airmen and their guests were served refreshments and conducted on a tour of the library during evening hours.

The staff of Donaldson Air Force Base Library, consists of a librarian, an assistant librarian, a library assistant, a military clerk and a part-time civilian employee. The library maintains a collection of approximately 14,500 volumes.

As a result of National Library Week observance, circulation of library materials and attendance of patrons at Donaldson Air Force Base Library increased approximately 15 percent. The program was conducted at a cost of only $75, appropriated from central base funds, and expended in the preparation of displays and decorations for the library.

Donaldson Air Force Base is the home of the 63d Troop Carrier Wing (MATS), a unit of the Nation's only strategic airlift force. Brig. Gen. Andrew B. Cannon is commander of the 63d Troop Carrier Wing and Col. Floyd M. Johnson is commander of Donaldson Air Force Base.

Vice President's Words Inconsistent With Administration Policy

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. ALGER. Mr. Speaker, in reading the reports of the press conference held by the Vice President upon his return from his trip to Asia, I was struck with the inconsistency of what he is reported to have said to the peoples of that part of the world and the performance of the administration in these first months it has been in office. In the news article below, the Vice President is quoted as telling the Asians "the United States is prepared to make any sacrifice and risk any danger necessary to block the spread of communism." I believe the American people are ready to do just that, but is the administration?

Our action in failing to support those who were fighting to free Cuba from a Communist dictator did not indicate we were willing to make any sacrifice or risk any danger to block the spread of communism only 90 miles from our own coast. The President's action in setting up a committee to deal with Castro in accepting his blackmail offer to trade prisoners for tractors, is not the action of a government that is willing to make sacrifices and face danger.

Mr. Speaker, it is imperative that the actions of this Nation back up the many fine sounding speeches which are being made. The American people are ready, willing, and anxious to stand up for freedom regardless of what it takes. I suggest the administration catch up with the rest of the country and either give leadership to whatever action is necessary or stop making pretty speeches which sound pretty silly when not backed up.

ASIANS WANT FUNDS AND GUIDANCE, JOHNSON SAYS

(By Robert Young)

WASHINGTON, May 24.—Vice President JOHNSON said today at President Kennedy's request, he assured leaders of Asia on his round-the-world trip that the United States is prepared to "make any sacrifice and risk and danger" necessary to block the spread of communism.

JOHNSON said no Asian countries asked for American troops to defend them against Red aggression. They already have the manpower, he said, and want financial help and technical guidance from the United States to make it possible for their own military forces to fight "an unscrupulous enemy."

JOHNSON discussed his 2-week, 29,000-mile good will trip at a press conference. JOHNSON returned from the trip this morning and flew directly from the airport by helicopter to the White House, where he was met by the President and Secretary of State Dean Rusk.

EFFORT TO SHOW CONCERN

President Kennedy called JOHNSON's trip an effort to show the peoples of Asia this country's deep concern for the cause of freedom. JOHNSON said as he went into the President's office for a 45-minute conference that his report on his talks with Asian leaders "embodies much more hope than I thought possible when I left."

JOHNSON later told his press conference, however, that the American people must be warned that the Communist threat to South Vietnam and other countries in Asia confronts the United States with "a dangerous and disturbing situation."

He said he submitted military and nonmilitary recommendations to the President and Rusk which "they may use as they see fit."

CARRIED LETTERS

He commented that he had not returned to Washington "with any miraculous solutions," but the personal letters he took to Asian leaders from President Kennedy pointed the way to the cooperation essential to halt the totalitarian menace of communism.

"I was disturbed," JOHNSON said, "that so many Asian leaders should express doubt as to American intentions. Some are afraid that the danger of atomic attack has produced a stalemate in which the system that is most unscrupulous, or willing to stage the biggest bluff, will triumph.

"I think they know now that no amount of peril is going to cause the United States to shrink away as human liberty is stifled in Asia. The Asian leaders to whom I talked have been reassured that we shall honor our commitments.

"WILLING TO SACRIFICE

"While I made it clear, at the President's request, that we shall make any sacrifice and risk any danger that the protection of liberty may call for, nowhere in Asia was there a request for American troops.

"The free nations of Asia have the manpower. What they want from us now is the financial support and the technical guidance that will make it possible for their own forces to meet an unscrupulous enemy."

JOHNSON said he was convinced—and most Asian leaders concurred—that the current piecemeal approach to the problems of southeast Asia is ineffective. What is needed, he said, is the uniting of non-Communist nations on a broad regional basis—militarily and in the fields of economic justice and social progress.

The Midwest, Our Merchant Marine, and Oversea Markets

EXTENSION OF REMARKS
OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1961

Mrs. SULLIVAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

THE MIDWEST, OUR MERCHANT MARINE, AND OVERSEAS MARKETS

(Remarks by C. D. Gibbons, president, United States Lines, at St. Louis World Trade Luncheon, May 18, 1961)

Thank you, Mr. Holland, for those kind words. Before proceeding with my remarks, I want to thank all of you in the St. Louis business community for the friendly reception you have given to our group during the past few days. It does us a lot of good to get away from the coast for a few days and get back inland to talk over mutual problems with those who are either producing or consuming the things we carry across the sea.

We have found in St. Louis a vigorous, lively, interest in foreign trade, and in new marketing opportunities developing overseas.

We appreciate the support given this luncheon, and the series of meetings and clinics we are holding, by the distinguished group of St. Louis businessmen who have sponsored our visit to your city. We appreciate also the sponsorship of the Mississippi Valley Association and the Propeller Club of St. Louis, as well as the cooperation by your chamber of commerce. My associates and I thank you all.

There may be those who find it strange that so many salt-water steamship men should journey inland 700, 900, or even 2,100 miles from their gulf, east, and west coast home ports to talk about shipping with St. Louis businessmen. It really isn't so strange, after all, that we visit an inland port to talk with you in St. Louis on the largest river in our Nation. As deep-water men we have a mutual interest in the expanding opportunities before us in international business.

We have come to talk with you about these opportunities. On the basis of our knowledge of trading areas around the globe, we believe that American business is on the threshold—I almost said new frontier—of a vast overseas market expansion.

The peoples of the world are demanding higher standards of living. Thus, massive new spending power is being generated, and with it major markets are opening up for many of the products that American industry and agriculture can supply.

In the underdeveloped areas of the free world there lies a latent potential yet to be fully explored by American enterprise. As we penetrate these developing markets, we also have an opportunity and a challenge to demonstrate the vigor and the promise of our system of Government.

Our Government is increasing the number of its trade missions overseas and strengthening its overseas commercial staffs. It is establishing more permanent trade centers abroad, it is developing new financing arrangements. Our own world-wide system of steamship offices, know-how and experience are being made available in this effort.

Ten years ago, American companies maintained some 7,400 foreign corporations or branches abroad. Today, there are more than 10,000.

Ten years ago, these overseas American investments were valued at just under $12 billion. Today, they have nearly trebled to better than $30 billion.

Overall, American business in 1960 increased its total investment in overseas facilities by more than $2½ billion.

At the same time, commercial exports last year hit a new level of more than $19 billion, a 20-percent increase over the year before.

There are signs of the advancing times for alert businessmen. It used to be in many companies that overseas business was a secondary market. And it got secondary attention. It was a handy overflow for products that couldn't otherwise be absorbed in the domestic market.

Today, oversea marketing, manufacturing, and distribution are getting priority attention. A whole new generation of internationally trained executives is entering American business management. They are young, aggressive, and energetic. The world is their oyster. They add a new dimension to our industry and agriculture.

Now, you may say: "Mr. Gibbons, this is all very interesting, but what does it have to do with Missouri and with St. Louis and with me?"

My reply: it has a great deal to do with you, your State, and city, more perhaps than you realize. Before coming here, our committee put some of our research people to work. We asked them to find out as definitively as possible just what foreign trade does mean to Missouri and St. Louis. The answers were surprising to us, and I hope they will be informative to you. For example:

Did you know that your State's share of U.S. exports last year, both manufactured and farm goods, amounted to an estimated $427 million, and that of this amount about $250 million originates in the Greater St. Louis area itself?

And did you know that more than 82 percent of the people employed in Greater St. Louis in both production and service industries is directly or indirectly affected by foreign trade? And that the production people alone in 1959 received $1.5 billion in wages that mean spending power for your city and area?

Were you aware that of your State's total working force of 1.6 million more than 340,000 people are employed in production industries directly affected by foreign trade, and that more than 80 percent of those employed in production, service, and agricultural industries are directly or indirectly affected by foreign trade?

And did you know that the wages, salaries, and earnings of these people contribute better than $5 billion yearly to your State's spending power?

These are only some of our findings. But they are enough to demonstrate that there is nothing "foreign" about foreign trade in St. Louis. It is a personal, and vitally important part of everyday living in your city. It represents wages, tax revenues to National and State Governments, money in the till to merchants, profits for St. Louis industry.

Your city is one of the greatest transportation centers in the United States.

The 21 railroads serving St. Louis make you second only to Chicago as a railroad center.

Your spacious new airport and the fine service it offers are the envy of many other communities.

You are a vital part of our highway trucking system.

The barge and waterways traffic passing through your port and up and down your river is an essential part of your daily life and that of the entire Mississippi Valley region. Your port is the No. 1 inland port in all America. St. Louis is truly a transportation city of distinction.

Exposed as you are to all other modes of transportation, it is unfortunate that, as an inland city, you are unable directly to see the impact which ocean shipping has upon your lives.

In this visit to St. Louis we, as shipping people, are seeking to expand your awareness of American shipping. As we meet with your exporters and importers, we will be discussing with them the growing number of oversea marketing opportunities available to them.

We will also be talking about our steamship services and the fact that you can ship your cargoes, either inbound or outbound, on American liners at the same rates you can ship on the vessels of competing maritime nations.

We will show that you can reach more than 400 major world ports on a regular, frequent basis by utilizing American-flag services.

And by using these services, we will point out, you can enhance your competitive position in export sales by quoting laid-down prices of your product at the customer's home port. You can exercise close control of your shipments, gearing them to your plant production schedules, and controlling your routing so that you can build strong, reliable sales relationships with overseas customers.

Transportation of this country's foreign trade is our business—our only reason for existing.

American-flag shipping is essentially a service industry. We provide transportation, and kindred services of many kinds. Not the least of these is the assistance our trade development staffs can give you in finding new overseas markets.

Let me be specific. Not too many years ago, the government-owned railway of a foreign country was embarking upon a program to modernize its transportation system with diesel electric locomotives.

There appeared to be little likelihood that American locomotive manufacturers would be considered because the government purchasing mission seemed to be strongly inclined toward Austrian, German or English manufacturers.

Through the interest taken by American-flag steamship line representatives, who had been serving this particular trade for many years, American locomotive makers were given an opportunity to bid which otherwise would have been denied them. Their sales organization and their superior product did the job, and the end result was 2 orders for more than 150 American locomotives at a sales price of better than $35 million.

A Colorado manufacturer of arc welding machines wished to develop a market for his machines in the Far East. He contacted an American steamship company. The Colorado manufacturer now has a contract with a major Japanese firm representing him throughout the Far East.

A California producer of dried raisins sought help in marketing his products in Trinidad. One of our lines introduced him to a Trinidad importer and the first of many shipments of dried raisins has been made.

A company in Brazil, seeking a certain specialized type of graphite electrodes, asked one of our shipping lines for help. It was put in touch with a midwestern manufacturer and a sizable order resulted.

A New York firm wished to open new markets for its record pressing machines in Venezuela. Steamship officials put the manufacturer in touch with a Caracas purchaser and five reorders of the equipment have resulted.

A San Francisco chemicals producer asked a west coast line to help him develop sales contacts in Barcelona, Genoa, Switzerland, and the Far East. Three major shipments of borax have developed.

These are daily occurrences. They are examples of what American shipping can do for you if you call on us for assistance.

These are some of the obvious benefits. There are others that are less obvious, yet make a valuable dollar contribution to our Nation's economic health, and to the economic well-being of your State and city.

One of these concerns the unfavorable balance of payments, about which we have been reading so much lately.

I mentioned earlier that the steamship business is essentially a service industry. A recent study by one of our leading universities showed that American shipping annually provides between $700 million and $1 billion toward a favorable balance of payments. Thus, when St. Louis exporters and importers ship on American-flag lines, they are helping to narrow the gap in dollar balances and improving the economic climate for all American business. To the contrary, when you ship on foreign vessels, you are exporting dollars and weakening our balance of payments position.

There are other benefits flowing from American shipping, and closer to home. Today, as I talk with you, there are at least a dozen, and probably more, St. Louis manufacturers at work fulfilling orders for equipment to be placed in new ships that our lines are presently building in American shipyards. These orders run from coils, pipefittings, heaters, and ventilators to massive steam-generating equipment, and other important equipment.

In dollar volume these current orders placed with St. Louis business amount to close to $1 million. When you consider that these orders arise from the present building of a relatively few ships, and that within the next decade some 300 such ships will be built by our lines at a total cost of more than $4 billion, you can see that St. Louis has a direct and personal stake in American shipping.

It is to your great credit that the diversification of your industry permits St. Louis to share so heavily in this program. We look forward to doing even more business with you on future ship construction. Naturally, we hope you will reciprocate when you can.

We, as a nation, are not as nationalistically minded when it comes to shipping as other nations. For instance, more than 50 percent of the United Kingdom's foreign trade is carried on British ships.

Fifty-seven percent of Japanese cargoes are carried in their ships.

By contrast, only 10 percent of America's waterborne foreign commerce is carried by American-flag ships. This, of course, includes all kinds of commodities in all types of ships. We are gravely disturbed by these figures.

The regularly scheduled American liner services represented in our committee carry a somewhat healthier percentage—about one-third of our U.S. waterborne commerce. But surely this is not maximum use of American shipping services by American business.

Maybe these figures indicate that we have not done as good a selling job as we could about the advantages of using American ships. That is one reason we are here. This visit is part of an aggressive national program undertaken by both Government and industry to increase exports aboard American-flag ships.

This program includes national advertising, intensified cargo and passenger solicitation by American lines and with it a stepping up of the service we are able to render shippers. We think the timing of this effort is appropriate, both because of the benefits it brings to our Nation's critical balance-of-payments position and because of the values it offers American manufacturers at a time when they are themselves moving aggressively to expand their foreign manufacturing, marketing, and distribution.

Upon the success of this effort depends the general health of our American merchant marine in the future, and with it the general health of our economy and of our defense posture in the free world.

We can't have a healthy merchant fleet without cargoes—and, I might add, without passengers. Yet, even in this missile age, if our country is to maintain and strengthen its position of world leadership we cannot do so without being a strong maritime power. Historically, maritime powers that have allowed their merchant fleets to deteriorate have become second-rate powers in world affairs.

We cannot afford, nor can the free nations of the world afford, to have the United States become a second-rate power in any sense. This is not only a matter of national prestige. It is a question of survival.

Our industry—and let me emphasize this—does not seek a monopoly position in carrying our foreign trade. However, it does seek a fair share, and by this I mean at least 50 percent of the oversea commerce generated in our own country. The remaining half would be available to the ships of friendly maritime nations.

We recognize that it is in our national interest, and that of the free world, that the fleets of our allies be kept strong. But we do not think that they need be kept strong at the expense of America's own maritime strength. This would not be in our best interest or theirs.

The necessity for a strong U.S. merchant marine is recognized by Congress through our national maritime policy, set in the Merchant Marine Act of 1936. The act establishes and reaffirms that the United States must have a privately owned and operated merchant fleet in being sufficient to carry a substantial proportion of our waterborne foreign commerce. By substantial portion we mean half.

The act also states that a strong merchant marine is vital to our defense, and an important instrument of our national policy.

Atoms and missiles have not changed this basic fact. Korea, Suez, Lebanon, southeast Asia, and Africa, have reemphasized the need for a merchant fleet in being to serve at times of crisis. In recent weeks, leaders in the administration have underlined that, even with atoms and missiles, we still face the challenge of limited wars fought in more conventional ways. There is no question of the need for seapower, and seapower includes commercial freighters, tankers, and passenger ships.

Even in the event of atomic war, our defense chiefs have time and time again reiterated the need for ships and especially for ships under our own flag which will form the hard core of the free world shipping requirements. Not so long ago the survival of world democracy hinged upon our American merchant ships. Just a few short years ago, we built a bridge of ships to snatch victory from defeat. Who is to say it won't happen again?

Our Government has recognized that if we are to maintain an adequate fleet at American standards in comparison with low-cost competition of foreign maritime nations, this fleet and its supporting shipbuilding facilities must have some Government support.

Our problem as shipping companies in relation to foreign competition are not unlike those of American manufacturers who are now building abroad to sell abroad.

The American producer who builds abroad to sell abroad is impelled to do so in order to take advantage of lower foreign wage rates and material costs so that he can meet foreign competition.

We in the steamship business have the same problem. But we do not have available to us the same solution. We cannot meet foreign competition by transferring our ships to foreign flags. Our Government believes that it is necessary to keep a certain portion of our merchant marine operating under the American flag with American crews paid at American wages. This is basic national maritime policy.

The result is, therefore, that our merchant marine operates at disadvantageously high costs. How, then, does the Government compensate for these and other restrictions inherent in operating on American standards against low-cost foreign competition?

The answer is a sound and equitable parity principle established under the Merchant Marine Act. Parity seeks to equate the differences between foreign and U.S. costs and it achieves this through the Government making operating differential payments to those shipping companies willing to accept certain restrictions.

In return, steamship companies under contract with Government obligate themselves to build their ships in the United States; hire only American labor; use only American supplies and materials; provide regular, scheduled sailings over world trade routes declared essential by the Government; replace their fleets at periodic intervals and keep them available for national defense.

Like a golfer's handicap, these operating-differential payments only enable us to stay in the game, to compete on even terms with foreign ships. From that point on—win, lose, or draw—we are on our own to earn a profit or not, according to our ability. Operating-differential payments in no sense guarantee a profit. When earnings are good there is provision, unique among Government assistance programs, whereby the operators pay back part or all of the money advanced by Government. We are pleased to say that in some periods this has happened.

Our Government also pays directly to shipyards the difference in cost between building a comparable ship in low-cost foreign yards and in a shipyard in the United States. We must build our ships in American yards and with American materials, some, as I have noted, from this area. This is essential if our Nation is to maintain and support a U.S. shipbuilding capacity and its needed technical skills for both peacetime and defense needs.

So, as taxpayers as well as businessmen, you have a real interest in fostering a strong American merchant marine.

We also believe that the American shipper has a similar interest. That interest could best be demonstrated by the decision he makes in selecting the ships to carry his cargoes.

We know that some decisions, regarding what ships to use are forced by terms of the sale because some foreign buyers insist that cargoes be carried on ships of their country.

We know that some are strongly influenced by discriminatory actions or Govern-

ment regulations of foreign nations and by other considerations beyond the shipper's control. While we may not like these things, we can at least understand them.

But we also know that many of these decisions are based on disinterest. Too many shippers don't really care how their cargo travels, so long as it arrives at the necessary destination at the necessary time. This is understandable, because rates are generally the same, and frequency and regularity of schedule are competitive, and they don't see the necessity for maintaining, through active commercial support, an American merchant fleet.

So, oftentimes the shipper just doesn't particularly worry about the flag of the ship on which his cargo travels. His primary concern is producing and selling.

This we would like to change. We want you, as shippers, to care whether your cargoes travel American or foreign. We hope you will interest yourself in this important fact. We want to substitute enlightened self-interest for disinterest.

We think it is advantageous to you to do so. It is certainly in the national interest. We do not ask you to ship via American-flag lines if it means that you would lose the sale by so insisting, or if it would be unprofitable for you.

We do invite you to patronize American shipping whenever and wherever possible, and where rates and service are competitive. We stand ready to assist you in the growing competition for world markets with every facility of our worldwide organizations at your command.

Thank you.

Differences Between Republicans and Democrats

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. GOLDWATER. Mr. President, Arizona State University, wishing to be ever helpful in adding to the knowledge of man, has been engaging in research into human behavior. A series of five articles describing this research by Arizona State University has been written.

I hold in my hand one of the articles, written by Jerry Eaton. It is an amusing and interesting article, because it relates to measurement of the differences between Republicans and Democrats. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DIFFERENCES MEASURED

(By Jerry Eaton)

TEMPE.—Republican men are more active, but less restrained than their Democratic counterparts, according to Arizona State University research measuring the personality differences of members of America's two major political parties.

Dr. Henry L. Manheim, of ASU's Department of Sociology and Anthropology, said his study indicates Republican men possess great energy, vitality, enthusiasm, and liveliness.

They have a liking for speed, quickness of action, and prefer a rapid pace of activities, he said.

In his study involving four political clubs, two Republican and two Democratic in the San Fernando Valley in suburban Los Angeles, Dr. Manheim concluded the GOP "had a very significantly higher level of general activity than the Democratic men."

However, the Democratic men were significantly more restrained and serious-minded than the Republicans, the ASU educator declared.

The self-control and deliberateness of the Democratic men contrasted to the happy-go-lucky, carefree impulsive, and excitement-loving Republicans, the research indicated.

Democratic men tend to be more friendly, Dr. Manheim said.

Friendliness was one of 10 traits of personality and temperament measured and 1 of 4 in which big differences were noted between the parties.

Republicans and Democrats also differed strongly in general activity, restraint, and friendliness among men, and in restraint among women.

While the Republicans are not as friendly and agreeable, they possess a "rather strong fighting spirit," according to the report.

A finding in the survey indicated Republican men and Democratic women tend to be the most sociable.

"No inference will be made from this," Dr. Manheim grinned.

As for the women, the Democrats with consistent voting records had significantly higher scores on restraint than the Republicans, but otherwise the women showed no marked differences in any of the other traits measured.

Dr. Manheim said, "It may be inferred that, regardless of political party preference, activity in either of these political parties tends to be selective of individuals with patterns of temperament traits which fall within the most favorable ranges."

He continued, "It would be somewhat less than realistic to draw the conclusion that because of their significantly greater excitement-loving, impulsiveness, and happy-go-lucky characteristics, Republican women with consistent voting records are less suited for supervisory positions than are Democratic women.

"Nevertheless, it makes for interesting speculation." Dr. Manheim conducted tests to measure 10 independent factors of personality and temperament, general activity, restraint, ascendance, sociability, emotional stability, objectivity, friendliness, thoughtfulness, personal relations, and masculinity.

Obsolete Money Costs Taxpayers

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. WESTLAND. Mr. Speaker, for nearly 4 years the Congress has delayed action on the old-currency bill, a delay that has cost the American taxpayers some $10.5 million. When I first introduced this legislation I had hopes of speedy and favorable action, but this has not been the case.

Last week, the other body passed S. 1619, a version of the old-currency bill which I have introduced three times. I sincerely hope that the Committee on Banking and Currency will hold early hearings on S. 1619 and will recommend that it be passed by the House of Representatives.

Mr. Speaker, I have received many letters from all sections of the country suporting this money saving bill. Many newspapers across the Nation have published stories and editorials to show the nature of the old-currency bill and how it would save the Federal Government money. One of the stories was written by Mr. James McCartney of the Chicago Daily News Service and was published in the Seattle Times, May 18, 1961. This story reads as follows:

MONEYSAVING BILL SHUNTED ASIDE 4 YEARS

(By James McCartney)

WASHINGTON, May 18—This is the story of how a campaign to try to save $10,000 a day in needless Government spending has fallen flat for 4 straight years.

It is a story of shoddy politics, bureaucratic fumbling and congressional inertia—all at the expense of the taxpayer.

The incredible part about it is that no one appears to be against the campaign.

Apparently $10,000 a day in waste just has not been enough to get Congressmen and Senators excited enough to act, according to the campaign's sponsors.

The story involves funds kept by the U.S. Treasury to back up obsolete paper currency.

At the moment the Treasury has about $100 million of these reserve funds.

The funds have been kept to provide backing for old, large-sized dollar bills issued before 1929, gold certificates issued between 1923 and 1934 and old Federal Reserve notes.

Senator PROXMIRE, Democrat, Wisconsin, and Representative WESTLAND, Republican, Washington, are seeking to end the requirement for maintaining the reserve. This would free the reserve for other uses and would reduce Government borrowing by $100 million.

The $10,000-a-day saving would be in interest charges. This money is now being paid out in interest to those who loan money to the United States by buying its securities.

Treasury Department officials as well as officials of the Federal Reserve Board agree that keeping the reserve, and paying out the interest, is waste.

Yet every attempt to change the law since 1957 has bogged down. And the waste actually goes back many years before that.

"Nobody is against changing the law," WESTLAND says, "but something always seems to go wrong."

Last year a bill actually passed the Senate. But in the House, loaded down with election-year problems, it never got to the floor.

A couple of years ago the Treasury Department sent a copy of a reform bill to the Senate Banking and Currency Committee, urging its adoption.

An official of the committee, however, did not like the way the proposed bill was worded and insisted on rewriting it. By the time he got it rewritten Congress was out of session.

On Monday a bill sponsored by PROXMIRE to end the reserve requirement was approved by the Senate without opposition.

But the House has yet to act and the situation there is considered unpredictable. It is likely to be a question, according to one Congressman, of whether the House can find time.

The first move to change the law was made in 1957 by WESTLAND, who says the situation was called to his attention by an accountant friend in Seattle.

WESTLAND promptly introduced a bill but it "got lost."

WESTLAND says that when he asked the Treasury Department about his proposal an official there replied: "Gosh, why didn't we think of that?"

The Treasury Department, however, did not take any initiative in trying to get the law changed until 1959.

That was the year the committee official rewrote the bill.

"The situation is a clear indication of the lack of interest in saving $3,500,000 a year in these days of multimillion-dollar budgets," PROXMIRE says.

"You can imagine what that kind of saving would have meant to the First Congress in the 1700's."

Also, Mr. Speaker, under leave to extend my remarks in the RECORD I include an editorial from the May 22, 1961, issue of the Passaic (N.J.) Herald-News, which I believe is worth the attention of my colleagues. The editorial follows:

A CHANCE TO SAVE $10,000 A DAY

For 4 years, a campaign has been conducted unsuccessfully in Washington to save the American taxpayers $10,000 a day. Apparently to a government accustomed to thinking in terms of millions and billions, $10,000 is too little to be concerned about.

The Treasury has a fund of $100 million to back the old, large-sized paper currency. Officials of both the Treasury Department and Federal Reserve System agree that keeping the reserve fund is a sheer waste. If the fund could be abolished, Government borrowing would be reduced by $100 million and $10,000 a day in interest saved. Nevertheless, since 1957 efforts to end the waste have failed.

Representative WESTLAND, Washington Republican, who was first to introduce corrective legislation, says: "Nobody's against changing the law, but something always seems to go wrong." U.S. Senator PROXMIRE, Wisconsin Democrat, who sponsored legislation in the Senate, says: "The situation is a clear indication of the lack of interest in saving $3.5 million a year in these days of multimillion dollar budgets."

Illustrative of the things which have gone wrong is the fate of a corrective bill sent to the Senate Banking and Currency Committee by the Treasury Department with a request for its adoption. An official of the committee objected to the wording and insisted on rewriting it. By the time he had rewritten it, Congress was out of session.

This year, another effort is being made to stop the waste. The Senate has approved a bill introduced by Senator PROXMIRE without opposition. It has gone to the House. The problem there, according to one House Member, is whether the House can find time to save $10,000 a day.

Why the Delay

EXTENSION OF REMARKS
OF
HON. DURWARD G. HALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1961

Mr. HALL. Mr. Speaker, several months ago I submitted a bill, H.R. 3535, calling for basic tax reform to stimulate economy growth and provide new jobs. My bill was similar to the Herlong-Baker bill now pending before the House Ways and Means Committee. I deeply regret that no hearings on this bill have been scheduled and that the chance for consideration appear to be remote. Instead, the administration has recommended a tax revision plan which one paper in my district has described as a "Rube Goldberg system of tax concessions." The Carthage Press on May 17 compares the administration's proposals with the Herlong-Baker approach. I submit this editorial for the consideration of those who must make the choice between private enterprise or Government dictation:

WHY THE DELAY

To "encourage" businesses to expand and modernize, the administration has come up with a Rube Goldberg system of tax concessions, while announcing that basic income tax reform is necessary but will be put off at least until next year.

The House Ways and Means Committee is now hearing witnesses on this year's proposal, which would extend tax "forgiveness" allowances to businesses that spent more than before for new plant and equipment. This plan boils down to dictation by Government as to how individuals and corporations shall conduct their businesses.

The Treasury estimates that $1.7 billion in tax breaks would go to businesses that built new facilities. But with the other hand, the Treasury would take back this amount plus $250 million more from businesses by levying new taxes. Thus, American business is expected to be "stimulated" by a net loss in funds—an incredible supposition.

Of course, the businessman who could best expand by hiring more salesmen, spending money on promotion, increasing his advertising, or marketing a new product, would be hit by new taxes and get none of the tax breaks. Yet, his way of "getting the country moving again" is as good as a new plant—which he may not need. He will be impeded, not helped.

Some businesses, under the administration plan, undoubtedly would be "stimulated" to spend unwisely, especially as new taxes would diminish the prospect for profit on the new facilities. Many businesses don't grow, or even shrink, if their product is one in merely steady or declining demand, or if the section in which they are situated is not a growing one. For them, expansion might be folly. Yet, they are presently providing jobs and performing essential services.

This "investment credit" approach to business health is a novel nostrum of no great promise. Hearings are scheduled to be short, and a vote will come quickly.

Congress would do well to defeat it, and enact real income tax rate reform to accomplish economic growth. This year would be infinitely better for the job than next.

And the Herlong-Baker bill for the purpose, already well known to the lawmakers and fully explored, would be the ideal vehicle for the job.

Washington Post Editorial Stand on Textile Industry Answered in Cotton Speech

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1961

Mr. WHITENER. Mr. Speaker, on May 10, 1961, the Washington Post carried an editorial which suggested that the United States has outgrown the need for a domestic textile industry.

In a speech at Cleveland, Miss., today before the Delta Council annual meeting, Mr. J. M. Cheatham, of Griffin, Ga., president of the American Cotton Manufacturers Institute, took issue with the contents of the Post editorial.

You can bet your bottom dollar—

Mr. Cheatham said—

that no responsible textile manufacturer in this country regards our industry as a terminal case, and I can assure you we are making no arrangements for a funeral.

With the belief that my colleagues will be interested in it I insert a release concerning Mr. Cheatham's speech in the Appendix of the RECORD:

WASHINGTON POST EDITORIAL STAND ON TEXTILE INDUSTRY ANSWERED IN COTTON SPEECH

CLEVELAND, MISS., May 25.—A major cotton farmer organization today received assurance that the American textile industry does not regard itself as a terminal case.

J. M. Cheatham, of Griffin, Ga., president of the American Cotton Manufacturers Institute, told the Delta Council annual meeting the baleful phrase was used in a newspaper editorial to characterize the industry and added:

"You can bet your bottom dollar that no responsible textile manufacturer in this country regards our industry as a terminal case and I can assure you we are making no arrangements for a funeral.

"All of us—producers and processors of cotton—know we possess the resources, the talents, and the strength of leadership—political and otherwise—to fight this battle for survival through to victory."

Mr. Cheatham alluded to a Washington Post editorial of May 10 which suggested that the United States has outgrown the need for a domestic textile industry.

The editorial, he continued, suggested that "the death of the textile industry as we know it is only a matter of time and that efforts of President Kennedy to provide assistance to this industry are 'temporary protection' against the inevitable day when textiles as a major American industry will no longer exist."

"Nowhere," added Mr. Cheatham, "did the editorial mention the cotton economy, and what would happen to that basic segment of U.S. agriculture if the textile industry were allowed to die. So I'll ask you to ponder with me that one, What would happen?

"Nobody can say, and that is precisely the danger of the situation we are in right now.

"But we know that the economy of a vast area of the United States, involving millions of individuals and billions of investment dollars, would be wrecked.

"The future is confused and uncertain at best, and our business operations will only become more disrupted unless some kind of stabilizing action is taken soon."

"I deny that we are a terminal case," Mr. Cheatham continued, "but our condition is not healthy, to put it mildly. We are doing poorly because the Government's trade policies have beckoned foreign textile nations to invade the American market instead of meeting the needs of underclothed areas of the world. * * *

"The best medicine appears to be a system of flexible market-share allocations to friendly nations, arrived at on a country-to-country, category-by-category basis."

Mr. Cheatham also told the gathering of Mississippi cottongrowers that the cotton industry's productive life could be prolonged by a number of actions, including the following:

1. Improvement of product quality;

2. Increased efficiencies in the production of cotton and cotton textiles alike;

3. Intensified market development by expanding textile utilization of cotton; and

4. Regulation of imports of textile products from nations with wage and manufacturing conditions which give them overwhelming advantages over American production.

"The inseparable relationship between your agricultural and our industrial interests," Mr. Cheatham added, "makes it desirable for us both to fight the conditions which are designed to destroy us both.

"We are dedicated to preserve the jobs and livelihoods of the millions of people who are the backbone of this agricultural-industrial complex called the American cotton industry."

The 2,809 Miles of Dyspepsia

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. HARRISON of Virginia. Mr. Speaker, Mrs. Inez Robb, a syndicated columnist, recently traveled across the country from Tucson, Ariz., to New York City. She reported in her column that she suffered a series of gustatory frustrations in public eating places until, happily, she reached the Elms Motel in my home community of Winchester, Va., where she was served "the first good meal we had after leaving Tucson, except in private homes."

Mrs. Robb also commented that it was a myth to expect good food merely by patronizing establishments at which truckdrivers ate. This finding was not surprising to me. I never regarded Jimmy Hoffa as one to follow either in the legislative halls or as a logical successor to the late Duncan Hines.

Under leave to extend my remarks in the Appendix, I include Mrs. Robb's column as a suggestion that routing one's motor trips through Virginia may insure that at least one stage of the journey includes a good meal:

THE 2,809 MILES OF DYSPEPSIA

The voyager who makes up his mind to travel across this country by auto must make up his mind, at the outset, to live dangerously.

He will not, as might be expected, meet with maximum peril on the road, although the annual highway toll in the United States is tragic and disgraceful. No; the moment of truth will come when the motorist decides it is time to eat and starts casing the roadside for a likely looking diner, dog wagon, or restaurant.

My own, my native land, produces the most food and the worst roadside cooking in the world. Thank heaven, I have but one stomach to give for my country. If the wayfarer, like the cow, had two, he would never survive such a cross-country trek as the Robbs have just completed, 2,809 miles from Tucson, Ariz., to New York City.

Basic advice to the millions of my fellow countrymen who will take to the road the minute school is out is to avoid, at all costs, diners frequented by truckdrivers. It is beyond me to explain why the myth still flourishes that any diner patronized by truckdrivers is a reasonable facsimile of Maxim's or the Pump Room.

It is my theory that the truck-driving stomach, through long abuse, has become anaesthetized and is capable to absorbing nails as well as barbecued ribs, turnip greens, fried potatoes, soggy biscuits and pie like mother never used to make alamode.

From the time I left Tucson until I reached Harrisonburg, Va., I was unable to get a plain chicken sandwich. For 2,400 miles, waitresses offered me chicken salad sandwiches instead, and don't ask me why. Maybe it is some secret rule of the road.

Once, in Paris, Ark., I asked the waitress why there was no plain chicken, when the chef had to cook chicken to produce chicken salad. She went out to the kitchen to consult with the maestro and returned to say, "He only cooks enough for chicken salad." But let me not leave the impression that Paris, Ark., has not contributed to worldly cuisine no less than Paris, France.

Paris, Ark., is the home of the three-decker hamburger with two generous patties of hamburger, each with melted cheese on top and served with special barbecue sauce, dill pickle relish and assorted condiments.

At dinner time, we found it best to order a grilled or broiled steak and pray that it wouldn't be fried. The fact that neither one of us wanted french fries was, I believe, regarded as subversive in most communities.

My husband, a cheerful man, reached his nadir in an Oklahoma community when he ordered roast prime ribs, as advertised on the menu. Fried steak had begun to pall, and the prospect of prime ribs say hope triumphing over experience in his case.

When the slab of prime ribs arrived it had, obviously, been fried. But why, asked my husband in bewilderment. But why not, countered the waitress. The cook, she said, baked the prime ribs early in the morning and then, at dinner time when a customer ordered it, heated up the hapless meat by frying it on both sides.

In a day of fresh and fresh-frozen vegetables, do you know who eats canned vegetables, especially canned peas? The answer is simple: Motorists.

The first good meal we had after leaving Tucson, except in private homes, was in the Elms Motel in Winchester, Va. Now it is obvious that in the midst of national overabundance, the summer motorist won't starve. Starvation, no; indigestion, si.

But the next time I go on a long motor trip, I am also going on a 900-calorie diet. I believe that ought to lick the problem.

From the Minaret

EXTENSION OF REMARKS
OF
HON. CLAIBORNE PELL
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. PELL. Mr. President, many of us recall George Orwell's "1984" where the Communists movement was described in terms of an animal farm. Today, I invite for your attention a similar and equally pungent vignette along the same line.

I am referring to an article written by Chaplain Emeritus John D. Kettelle, which appeared in the June 1961 issue of the Scimitar magazine of the Palestine Temple (Rhode Island) AAONMS. Here the Communist movement is reduced to the growth of dandelions and how their tendency to spread should be treated by the suburban garden.

Mr. President, there is real food for thought in Chaplain Kettelle's article and I ask unanimous consent that this piece be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FROM THE MINARET

(By Chaplain Emeritus John D. Kettelle)

From May through September we spend a lot of time digging dandelions out of our (ha! ha!) lawn. We push an old table knife into the ground to cut the long central root, then carefully pull up the plant, making sure that we have it all. Each day we try to leave the lawn completely clear, but the very next morning the sun seems to bring out nearly as many new blossoms as there were the day before.

Our experience has led us to call the dandelion the "subversive weed." No fence is a barrier to its immigration. Its agents are parachuted in unnoticed. When the lawn is thick and healthy, they land on top of the grass where they do no harm, but if the grass is thin, they settle down into the soil and take root.

For a long time they keep out of sight while they are getting themselves organized. The first leaves stretch along the ground between the grass stems, and with their saw-toothed edges, are practically indistinguishable from the blades of grass among which they grow.

The first open sign of their presence is the appearance of a "front," or blossom. These bright sunny buttons look very pretty to the unsophisticated. "See," they say, "the lawn is sprinkled with lovely golden stars." To the experienced gardener, however, they are a signal that he has a battle on his hands.

It is the first rule of lawn care to keep the grass well mowed so that the weeds do not get a chance to grow.

Sure enough. The first time over with the lawnmower, the dandelion blossoms go flying with the grass clippings. Next day, however, there is a new crop. This time, the long flexible stems nestle the blossoms snugly down among the grass blades where the lawnmower cannot touch them. If the mower is set close enough to cut them off, the lawn itself will be shaved down to nothing.

It is not safe to leave them, for in another day or two they begin to reveal their true character. The pretty blossoms have disappeared, and standing tall in their place is a somber, bristling mass of new subversive troublemakers. Now they are clearly within reach of the lawnmower, but cutting them will do no good, for the very act of mowing will only scatter them to the breeze to initiate new invasions.

Wherever the plant is allowed to grow unchecked, it slowly pushes the grass aside and eventually kills it, until the territory is completely taken over.

You cannot hold dandelions back by picking the blossoms as fast as they appear, for as long as the plant itself is untouched it has an endless supply of new buds waiting to spring into bloom. Starting at the blossom, you have to trace the fragile stem back to the main plant, then, after cutting the deep underground connections, you must pull the entire organism out of the soil.

The only defense against an invasion of dandelions is both to fertilize the lawn so that the grass will grow vigorously, and to dig up each new plant as soon as possible after it appears. Digging dandelions becomes very tiresome, it is true, but if we are to have a lawn at all we cannot afford to stop as long as the weed continues to grow in our neighbors' yards.

Ronald Reagan Blasts Hollywood Reds

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. BRIDGES. Mr. President, on several occasions I have read with admiration patriotic statements by Ronald Reagan, the well-known actor who is president of the Screen Actors Guild.

His comments at the 24th annual Supermarket Institute in Chicago were the subject of an excellent editorial which appeared in a recent edition of the Manchester (N.H.) Union Leader.

I believe Mr. Reagan should be commended for his obvious awareness of the menace of international communism and I am pleased to see his statements receive the plaudits of New Hampshire's only statewide newspaper. I ask unanimous consent that the editorial entitled "Ronald Reagan Blasts Hollywood Reds" be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RONALD REAGAN BLASTS HOLLYWOOD REDS

Actor Ronald Reagan, president of the Screen Actors Guild, is one of the most feared men in Hollywood by the Communists. As one of those who helped break the hold the Communists had on the motion picture industry, Reagan is well qualified to speak on the subject.

And his recent comments at the 24th annual Supermarket Institute in Chicago are anything but reassuring

The Screen Actors Guild president said the Communists are "crawling out of the rocks" in Hollywood, aided by those he described as "well-meaning but misguided people willing to give them a hand."

The Communist Party, Reagan pointed out, "has ordered once again" a massive infiltration of the motion picture and television industries and is even now attempting to consolidate the motion picture industry trade unions "under the umbrella" of Harry Bridges' Maritime Union.

The picture is far from encouraging. The Hollywood Academy of Motion Picture Arts and Sciences has long since lifted its rule barring awards of Oscars to Communists and fifth amendment pleaders. Hollywood personalities who were identified as members of the Communist Party or who refused to answer when asked about their ties with the party have now moved into positions of prominence.

The press as a whole has remained silent or given tacit approval to the influx of leftists. Time magazine, to cite but one example, in hailing a new movie produced in Europe by Jules Dassin, said that Dassin "was blacklisted in Hollywood after a witness told a congressional investigating committee that he was a Communist." Actually, Dassin was listed as a Communist who had tried to stop production of a movie because it opposed the Communist Party line. His role was exposed by James McGuiness, a supervisor at Metro-Goldwyn-Mayer. Time magazine could have informed its readers of this fact—but it chose not to. We could cite many similar examples.

It is small wonder that the late Ward Bond, president of the Motion Picture Alliance for the Preservation of American Ideals, commented: "We've lost the fight."

It is small wonder that Ronald Reagan feels compelled to speak out forcefully to warn the American people of this dangerous development in Hollywood.

What Did We Do Right?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article of Sylvia Porter which appeared in the Washington Star of May 24, 1961. Miss Porter's comments strike me as being sensible and thought provoking.

The article follows:

WHAT DID WE DO RIGHT?

(By Sylvia Porter)

Before the 1960–61 recession is forgotten. let's ask ourselves one vital question: What did we do right to make it mild and short?

The most important thing that we, as consumers, did was to spend steadily throughout the downturn, and the reason for this is that incomes held up remarkably well. At the bottom of the recession last March, personal incomes were at a rate of $409.6 billion against $397 billion at the peak of the previous upturn a year ago March. In the face of a major drop in factory payrolls, wages and salaries actually rose because higher payrolls in the service industries and in Government more than offset the decreases. Federal payments in the form of jobless insurance and social security benefits rose billions during the recession—putting immediate spending money in the hands of the least fortunate.

INCOMES HELD UP

What we did right, then, was to maintain personal incomes so that we could maintain buying and thereby assure that the downturn would be mild and short. Our great built-in stabilizers worked wonders, and millions continued to get pay raises. A lesson this offers is that we should use this time of upturn to overhaul and update the jobless insurance system and other stabilizers so they'll be even better anti-recession weapons next time they're needed.

The most important thing the Federal Reserve System did was to start pumping credit into the banking system the instant it recognized the economy was weakening. By taking the brake off financing of projects which make jobs and paychecks, the Federal Reserve cushioned the downturn and laid the basis for the current expansion. Tight money contributed to the 1960–61 recession; easy money contributed to its end.

What the Federal Reserve System did right, therefore, was to act quickly and aggressively at the first hint of trouble. A lesson this presents to the Federal Reserve is that it should use these months of upturn to perfect its money market techniques to improve its function of cheapening credit at the start of the next downturn.

The most important thing businessmen did was maintain and increase their spending on research, for this is the spending which will create our future booms. Outside of this, their actions don't deserve many orchids. They slashed their inventories in 1960, thereby magnifying the downturn. They reduced their spending on new plants, putting some drag on the economy. Their pricing policies weren't much help.

SPENDING SPEEDED UP

What businessmen did wrong is more intriguing than what they did right. A lesson here is that businessmen can and must develop ways of controlling their operations so that accumulation of inventories doesn't exaggerate upturns and cutting of inventories doesn't exaggerate downturns.

The most important thing the Federal Government did was to increase spending. A speedup of spending on defense and highways began last spring—long before the Eisenhower administration officially admitted anything was wrong. Big sums have been poured out in new emergency jobless benefits, accelerated tax refunds, GI insurance dividend payments.

What the Federal Government did right was to erase the budget surplus which was depressing our economy and to channel new spending where it counted. The lessons here are that we can develop far more effective budget and tax policies so that changes in the budget and taxes can automatically start offsetting downturns in their infancy.

We did plenty of things right in this recession, which is why it ended in March-April and was so moderate. From the lessons of this recession we can learn how to do more things right and better to modify the next retreat.

Mayor Tom Establishes Notable Service Record

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. THORNBERRY. Mr. Speaker, Mayor Tom Miller of Austin, Tex., has just completed an outstanding record of service to the people of the city of Austin as their mayor.

As pointed out in an editorial of the Austin American, Austin, Tex., May 18, 1961, Mayor Tom Miller has served 28 years as mayor of the city of Austin. It was my privilege to serve as a member of the city council of this city from May 1946 to May 1948, during the time Mr. Miller was mayor. Over the years I have had an opportunity to be associated with him in working for the welfare of the city of Austin and knowing him as a close personal friend. All of us who are citizens of Austin owe a great debt of gratitude to Mayor Tom Miller and to his family for the great personal sacrifices he has made to make Austin a great city. Whenever I think of devoted and unselfish men I think of Tom Miller.

Mr. Speaker, the editorial to which I refer is as follows:

[From the Austin American, May 18, 1961]

MAYOR TOM ESTABLISHES NOTABLE SERVICE RECORD

When Austin City Council members were sworn in, former Mayor Tom Miller rounded out a record of public service which, in length had few rivals and in devotion dedication no comparable record within our knowledge.

He entered on his duties as a member of the Austin City Council in 1933, when the depression was at its worth, and so his services spanned a full 28 years. In all of his numerous terms on the council, he was chosen by his colleagues to serve as mayor,

and his personality came to be identified in a unique way with city government in Austin.

During the long span, he voluntairly retired from the council, and Mayors Taylor Glass, Billy Drake and C. A. McAden came on to serve. Then Miller returned to the council and again to the mayor's office, serving until he voluntarily left the council this year due to ill health.

Appropriately his colleagues and the new members of the city council bestowed upon Miller the title of mayor emeritus, thus at the same time honoring his service and associating him in a continuing way with the government of the city to which he is so devoted.

State and National recognition have been his. He served as finance director for Texas of the national Democratic Party several times. He served, during part of the 6-year interruption of his duties as mayor, as a member of the board of Texas Southern University.

His service as Austin mayor has been synonymous with good municipal government. The pride he has always felt in his city and its government can equally well extend in lasting pride of his contribution to the city's progress, to its reputation of fine government.

"Mayor Tom is an institution in Austin which will not be dimmed by the retirement of a devoted public servant from the office in which he so represented and embodied the spirit of Austin.

Major LaPierre Cited by the Army

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include therein a recent article from the Leominster, Mass., Daily Enterprise, entitled "Major LaPierre Cited by Army."

Major LaPierre is the son of former Mayor and Mrs. Mathias P. LaPierre of Leominster. Major LaPierre to whom the article refers has rendered outstanding service to the Army and richly deserves to be honored for meritorious achievement.

Major LaPierre's citation is, of course, a great mark of honor and distinction and his fine service is in line with the traditional spirit of dedication that animates his family.

His father, Hon. Mathias P. LaPierre, former mayor of Leominster, and his brother Councilor Raymond LaPierre, are distinguished and highly respected political and civic leaders.

Major LaPierre's career in the Army has been marked by numerous commendations and steady advancement. His ability, zeal, patriotism and high measure of efficiency and superb leadership have brought him repeated recognition by the Army.

Over a period of time, I have watched this young man, by virtue of great ability, devotion to duty and sheer determination forge his way ahead in the Army, and I am very proud indeed of his splendid accomplishments and sterling contributions to the national defense.

On this occasion, I take genuine pleasure in congratulating Major LaPierre and his family upon the exceptional honors that have come to him, and wish for them continued success and happiness in the time to come. The Army may well be proud of such an outstanding officer. As the Congressman from his District and as his dear friend, I am very proud of his distinguished record.

The article follows:

OFFICER TRANSFERRED—MAJOR LAPIERRE CITED BY ARMY

Maj. Paul M. LaPierre, son of former mayor and Mrs. Mathias LaPierre, 213 Mechanic Street, has been awarded the first oak leaf cluster to the Army Commendation Medal for meritorious achievement as a U.S. Army company commander and battalion staff officer.

A native of Leominster and graduate of Leominster High School, Major LaPierre was cited for his service with the headquarters unit of the Army Transportation Training Command at Fort Eustis, Va.

He has been transfererd to California and will assume his duties in that State soon.

The citation reads: "Maj. Paul M. LaPierre, Transportation Corps, U.S. Army. Major LaPierre distinguished himself by meritorious achievement as company commander and battalian staff officer during the period September 1, 1959, to April 13, 1961.

"As a company commander, he was responsible for his company attaining superior ratings from the commanding general.

"As a battalion staff officer, he made a significant and lasting contribution to development of the combat support capability of the U.S. Army Transportation Corps.

"These meritorious achievements reflect great credit upon himself and the military service."

Major LaPierre was the recipient of a letter of appreciation from Lt. Col. A. J. Silvestri, commanding officer of the 159th Transportation Battalion at Fort Eustis.

The letter: "On the occasion of your departure from the 'Red Patch' Battalion, it would be redundant for me to repeat the highly laudatory praise which I have written to you and which I have indorsed to you from higher headquarters during the 8 months you have served under my command. I do want you to know, however, that I am aware of no other single instance wherein any officer has been commended so frequently during such a comparatively brief period of time while assigned to CONUS garrison duty.

"Small wonder that your outstanding performance of duty with the battalion has been appropriately recognized by the award to you of the Oak Leaf Cluster to the Army Commendation Medal. But your recent promotion to the grade of major ahead of so many of your contemporaries is ample proof that the high calibre of your duty performance with the battalion has been a continuation of many years of dedicated and outstanding service to the Army.

"I am sure that the future holds interesting and challenging tasks in store for you. Possessed, as you are, of total dedication to the military service, I am confident that you will meet these challenges boldly, imaginatively, aggressively and with consequent benefit to the Army which you serve.

"Speaking for all members of the battalion, our pride in seeing you move on to greater things is mixed with regret that you must leave us. Wherever you go, whatever you do, we trust that you will frequently remember 'Red Patch' with the same degree of fondness with which 'Red Patch' will always remember you."

Major LaPierre in 1958 received three citations for the performance of his duties as transport coordinator at the second International Conference on the Peaceful Uses of Atomic Energy. The conference was held at Geneva, Switzerland.

In 1960 Major La Pierre gained high commendation from the commanding officer of the Transportation Battalion at Fort Eustis. He was cited for developing techniques to guide Army landing craft and amphibious vehicles from ships at sea to shore under total blackout conditions by use of infra-red equipment. As project officer for the undertaking, Major LaPierre procured the necessary equipment, developed techniques for its employment and trained personnel in its proper use.

The Administration Cannot Clear Itself of Complicity in Ransom Deal With Castro

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. ALGER. Mr. Speaker, it is a tragic fact that at this time of crisis when the need is paramount for a clear-cut foreign policy the President seems to be doing his best to cause confusion in the minds of the people. We are told on one hand the Government cannot be a part of any deal with Castro to bring about the release of the 1,200 prisoners he is offering for ransom. In the same statement the President admits setting up the volunteer committee to solicit contributions, the President urges the people to contribute, makes an arbitrary ruling that such contributions will be tax exempt and clears the volunteer committee of any violation of the Logan Act.

We dare not afford the luxury of playing games while the Communists continue to spring carefully laid traps which further reduce our prestige before the world and pose new dangers to this hemisphere. A clear-cut statement from the President is needed. A strict adherence to laws already on the books is a must. A strong declaration of policy is imperative, warning Castro, and all other Communist stooges that we cannot be coerced, we cannot be humiliated, we will not barter human lives, the liberty of individuals, or the freedom of mankind.

In order to make the record complete I am including, as a part of my remarks, a news story in which the President gives his position, followed by an editorial pointing out the inconsistencies of his statements. I agree wholeheartedly with the thoughts expressed in the editorial.

KENNEDY ASKS GIFTS TO BAIL OUT CAPTIVES
(By Willard Edwards)

WASHINGTON, May 24.—President Kennedy today announced his personal backing of a tractors for freedom committee which is seeking to ransom 1,200 captured Cuban invaders.

Ignoring cries on Capitol Hill that Cuban Premier Fidel Castro's offer to free the

prisoners in exchange for 500 tractors is blackmail, the President called upon all Americans to contribute to a $15 million fund to buy the tractors.

Mr. Kennedy responded to a telegram to the White House from Senator HOMER E. CAPEHART, Republican, of Indiana, asking if the tractor committee headed by Mrs. Eleanor Roosevelt, Walter Reuther, and Dr. Milton Eisenhower, carried official Government approval.

RULES LAW NOT APPLICABLE

The President's answer was that the U.S. Government could not be a party to such negotiations but would not interfere with the efforts of private citizens to help prevent suffering in other lands through voluntary contributions.

The Logan Act, which forbids private citizens from dealing with foreign governments in any matter in dispute with the United States, was not applicable to this case, the President said.

He also endorsed the granting of tax exemption to contributions and export licenses for shipment of the tractors. Then he concluded:

CANCEL QUIZ OF RUSK

"If they [the Cuban prisoners] were our brothers in a totalitarian prison, every American would want to help. I happen to feel deeply that all who fight for freedom—particularly in our hemisphere—are our brothers."

The statement had the immediate effect of canceling plans for questioning of Secretary of State Dean Rusk about the committee's program. The Senate foreign relations committee had announced Rusk would be called.

It did not quiet critics such as CAPEHART, Senators FRANK J. LAUSCHE, Democrat of Ohio; BARRY GOLDWATER, Republican of Arizona; THOMAS J. DODD, Democrat of Connecticut; JOHN J. WILLIAMS, Republican of Delaware, and others. They continued to term the "ransom" plan a surrender to Castro, establishing a precedent which would plague the United States in future relations with dictators, small or great.

PROPOSED DEAL TO TRIO

In his statement, the President said that he had been concerned that "a single representative group of citizens" should handle the fund raising movement and that he was grateful to Mrs. Roosevelt, widow of President Franklin D. Roosevelt; Reuther, AFL-CIO leader; and Dr. Eisenhower, president of Johns Hopkins University and brother of former President Eisenhower.

Andrew Hatcher, assistant White House press secretary, revealed additional details. Mr. Kennedy had phoned Mrs. Roosevelt first, then Reuther, and finally Eisenhower, and asked them to lead the movement. Hatcher said also he expected that Mr. Kennedy would make a personal contribution to the fund.

"GREAT AMERICAN TRADITION"

Voluntary contributions by private citizens in humanitarian efforts are in the great American tradition, the President asserted, continuing:

"Neither law nor equity calls upon us to impose obstacles in their path as they seek to save those who fought to restore freedom in our hemisphere.

"I am advised that the Logan Act is not involved, inasmuch as it covers only negotiations in relation to any disputes or controversies within the United States or to defeat the measures of the United States; that tax exemption is granted as a matter of course to any 'charitable' organization engaged in rehabilitation and assistance to needy refugees; and that export licenses are routinely granted for humanitarian reasons to ship farm produce and medicines to Cuba and would be granted for shipment of agricultural implements.

"OK'S INTERNATIONAL BLACKMAIL

"While this Government is thus putting forward neither obstacles nor assistance to this wholly private effort, I hope that all citizens will contribute what they can."

Senator WILLIAMS said he could not understand the President's contention that contributions to the fund would be tax exempt.

"I don't see how, under the law as it is written, that tractors for Castro can be classified as a religious, charitable, or educational effort," he commented. "Mr. Kennedy has indorsed international blackmail and thrown a cloak of respectability around it."

"By paying Castro's price for a thousand good men," DODD told the Senate, "we only give him the means to strengthen his enslavement of 6 million others. If we start to pay tribute now for Communist hostages, where will it stop?

"This calls for drafting a new Logan Act, equal to the task of controlling the activities of a rash of self-appointed emissaries without portfolio."

[From the Chicago Daily Tribune]
1847]

THE GREEN LIGHT

President Kennedy issued a statement yesterday denying that his administration had any official connection with the fund-raising campaign to pay off Fidel Castro in tractors for release of 1,200 prisoners captured in the abortive Kennedy invasion of Cuba.

All he had done was to get Mrs. Roosevelt, Walter Reuther, and Milton Eisenhower to coordinate the campaign; to assure them that subscriptions would be tax deductible as charitable contributions, and to grant them immunity from prosecution under the Logan Act, which forbids private citizens to negotiate with foreign governments. Mr. Kennedy contended that the act did not apply, although it covers negotiations in "disputes or controversies with the United States, or to defeat the measures of the United States."

This is to say that the United States has no dispute or controversy with Castro's Communist Cuba and that none of its measures or policies are affected in dealing with Castro. The logic of the President's contention is less than crystalline, for it would argue that although Kennedy mounted the Cuban rebel invasion, he had no dispute or controversy with Castro, and that the invasion was not a "measure" taken by his administration, with the implication, from Kennedy's subsequent dark threat that the story in Cuba was not ended, that continuing measures of the same sort would follow it.

Having thus got himself on both sides of the same fence, Mr. Kennedy was not confounded by the fact that a Government embargo forbids exports of tractors, among other things, to Cuba without provision of special licenses. He said that export licenses are "routinely" granted for "humanitarian reasons," so that he put himself in the position of violating the embargo decreed by the Government for which he speaks.

Mr. Kennedy was moved to make his statement because muttering had broken out in Congress that the administration was trying to hide behind the skirts of the Roosevelt committee in order to avoid open humiliation. Senator DODD said that private persons were being permitted to conduct international policy by proxy. Senator MORSE said that if the committee had administration clearance, that amounted to open admission "that this committee is acting as an agency of the State Department."

Mr. Kennedy, while rejecting the interpretation, admits the fact. The private committee, by seeking a meeting with Castro to define terms and conditions, affirms the same fact, for Mr. Kennedy acknowledges that he prevailed upon the members to form an organization and is grateful for their leadership.

Castro's response to the plea that he receive the committee was that he would not deal with Reuther, perhaps on the theory that the boss of the United Auto Workers, from long habit around the bargaining table, would automatically start demanding fringe benefits. Milton Eisenhower was not even deemed worth notice by the dictator, but Mrs. Roosevelt would definitely do.

Thus Castro achieves two ends. He levels his sights on the greatest bleeding heart on the team, and at the same time compels the widow of a President of the United States to walk under the Communist yoke in Havana—a symbolic triumph of the first order.

All this would pass for pure comedy if it were not for the signal disgrace that a great nation must humble itself by paying a ransom to a tinhorn dictator as the price of its miserable failure to unseat him, and that it must, in the process, shield itself with petticoats. If this does not occasion a blush on Mr. Kennedy's downy cheek, nothing can. Perhaps he had better let Mrs. R. escort him to the Vienna summit with Khrushchev, for that is likely to prove unpleasant work, too.

Memorial to Franklin D. Roosevelt

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, May 25, 1961

Mr. WILLIAMS of New Jersey. Mr. President, a municipality in New Jersey is planning a unique tribute to Franklin D. Roosevelt. Roosevelt, a community in Monmouth County, has had its present name since the death of President Roosevelt in 1945. The change in name was meant to be a symbol of affection and respect for a President who originated policies that made the early growth of that town possible.

Now as the Roosevelt Town Council prepares for the town's 25th anniversary, the citizens and municipal officials are joining together to build a memorial, a small amphitheater where residents of Roosevelt may remember the great American who served his Nation so well.

The memorial will remind other citizens about New Deal achievements in other communities throughout the Nation. It will have an importance beyond the boundaries of the town of Roosevelt; it will become one more shrine where all Americans can express their gratitude to a great man.

Mr. President, an editorial in the Elizabeth (N.J.) Journal of May 22, tells the story of this memorial and the plans now under way in Roosevelt. I ask unanimous consent to have it printed in the appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ROOSEVELT MEMORIAL

Roosevelt, a community of 200 homes in Monmouth County, has plans for a memorial to the New Deal President to whom it owes much.

The town itself is a living reminder of the hectic days of the 1930's. It was created on the central Jersey flatlands as a depression project for unemployed garment trade workers.

President Roosevelt's New Deal cooperated in the venture, one of the social experiments that characterized its attempts to bolster a nation's flagging spirt. The concrete block homes were built around a garment factory in which the residents were employed.

At the death of the President in 1945, the town immediately renamed itself in his honor. From the social experiment which fostered it, the town of Roosevelt has developed into a model American community. Its residents are a diversified group; the garment factory is only one of the town's industries.

The residents have not forgotten their debt to President Roosevelt, however. The memorial they hope to raise is part of the town's 25th anniversary celebration. The proposed small amphitheater around a bronze likeness of the Roosevelt head will be the first monument of its kind in the Nation.

The project is entirely local, from the sculptor to the contractor who will pour concrete for the amphitheater steps. Town council has provided a generous sum and citizens have added more.

Contributions from outside the community are being solicited to close the gap between its contribution and the total cost of the project. For New Jersey residents who remember the dark days of the depression, participation in the project would be an expression of gratitude to the man who gave them leadership.

West Virginia's Industrial Complex Strengthened by Establishment of New Technical Service Laboratory at Martinsburg

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. RANDOLPH. Mr. President, at a time when West Virginia has been the object of much consideration as an economically depressed area, I would call attention to one of the more hopeful aspects of the picture.

This morning I was to have delivered an address at the dedication of the recently completed technical service laboratory of the Standard Lime & Cement Co. at Martinsburg, W. Va. The one-quarter-million dollar laboratory, one of the finest in the industry, is the culmination of a $10 million 5-year expansion and modernization program of Standard which was inaugurated by the American-Marietta Co. after it acquired control of Standard Lime & Cement at Martinsburg.

Though Senate business has prevented my attendance at the official ceremonies of this event, I would make note of the fact that the American-Marietta investment program in Standard Lime & Cement Co. has made this old and established Martinsburg firm one of the most modern and strongly competitive producers in the industry. It has more than doubled its original capacity of 1,700,000 barrels annually, and in its new 450-foot rotary kilns it has constructed the largest moving machinery in any industry.

As a West Virginian, I express my appreciation for this acknowledgement of faith in the people and the economic potential of our State. American-Marietta, which now has operations in five West Virginia cities, is but one of many companies which will bring to our State a revitalized and diversified economy.

Mr. President, I ask unanimous consent that the remarks which I prepared for delivery at the dedication ceremonies this morning be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Mayor Golliday, President Rumford, distinguished guests, and ladies and gentlemen, this is an auspicious moment in the economic and industrial life of Martinsburg and West Virginia. The unveiling of the dedication plaque is the culmination of 5 years of investment and an extensive modernization and expansion program in the facilities of the Standard Lime & Cement Co.

I am privileged to share your pride, not only in the complete and modern facilities of the technical service laboratory, but also in the impressive array of production equipment that Standard has brought to this area.

The American-Marietta Co., which was joined by Standard Lime & Cement in 1954, has fulfilled its pledge to supply the necessary capital to modernize and to make this established firm thoroughly competitive in the cement industry. And in so doing, it has also registered its faith in the people of this section and in the future economic and industrial development of our State. By more than doubling the original capacity of 1,700,000 barrels annually, not only has this old and reliable firm been revitalized, but it has been placed in a stronger position to supply an even larger portion of West Virginia's needs in the future.

The technical service laboratory—one of the finest and most modern in the industry—will also serve to strengthen the competitive position of Standard's other operations in West Virginia—not only in Martinsburg, but in Millville, Clarksburg, New Martinsville, and Parkersburg as well. Thus, the importance of these facilities extends well beyond this community, and beyond the 600 families supported by, and the more than $3 million contributed in payroll by Standard's operations in West Virginia.

It is important also in offering another sign of the vigor and dynamism of American enterprise. And for those of us—and there are many—who have worked to attract new capital to West Virginia, it is a vindication of our faith in the industrial potential of our State. The initiative and leadership exhibited by the management and personnel of Standard and American-Marietta are the sort that once served to place West Virginia in the vanguard of the fuels and minerals industries. I have no doubt that the same kind of leadership will bring our State to the fore once again in the future with a more diversified and firmly grounded economy.

It is worth noting, in this respect, that no matter how dynamic and forward looking our leadership at the national level, no program of national goals will be achieved if these aims are not embraced and carried forth by the actions of individual men and women at the community and local level. One of the main sources of strength of the American system of enterprise is that it offers the flexibility and freedom for such initiative to operate.

In the present instance it has served to prevent the occurrence of a serious economic void in the Martinsburg community, and it has helped to bring an established Martinsburg firm near the end of its eighth decade with renewed strength and industrial vigor.

We have good reason, therefore, to be delighted by the considerable investment in modernizing Standard's facilities here in order to provide it with a healthy and promising future—for itself, for the industry it serves and, most important, for the community of which it is such an important part. And it is my further hope that this may be seen as part of a trend of other industries to expand their facilities in the greater exploration and utilization of the rich natural resources of West Virginia.

It is almost axiomatic these days to think of our industrial development in relation to the unremitting contest between international communism and a democratic way of life. I believe we will all agree that our Nation is more secure every time a basic industry invests in new, modern plants and equipment. For, although "hot spots" will continue to flare up in the cold war, the fundamental and underlying struggle with the Soviet Union will probably remain largely political, ideological, and economic.

If this be so, a central factor in our eventual success in the conflict will be our capacity to maintain the industrial and economic development necessary to supply the increasing needs of our own people and also help bring the emergent nations into freedom and independence.

Though it is only one cement plant of the 170 in the United States, the Standard plant in Martinsburg has its part, and an important one, to contribute in this great power struggle.

It is gratifying to know, therefore, as Standard ends its eighth decade in Martinsburg, that, as a new and youthful member of the American-Marietta family of industries, it is assured more years of prosperous and productive life. This is our wish—and with it go our congratulations.

Knowledge of World Labor Policies Needed

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. WILEY. Mr. President, the labor movement—in the United States and elsewhere in the non-Communist world—is becoming an increasingly strong voice in international affairs.

Among workers around the globe, there is a common bond. Because of this mutual cause, free trade unions have a great opportunity to promote the concepts of free collective bargaining, of freedom itself, of the democratic principles of government, and of combatting efforts of the Communists to make inroads through trade unionism. By experience, we have learned that labor is one of the major targets of Red propaganda and infiltration.

Recently, the Green Bay Press Gazette published an informative article entitled "Knowledge of World Labor Policies Needed," written by John Herling.

The article reflects constructively upon the opportunities and challenges inherent in a strong, free trade union

movement, as well as upon the possible opportunity for labor to serve the cause of freedom in the conflict against communism. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KNOWLEDGE OF WORLD LABOR POLICIES NEEDED—FOREIGN TRADE UNIONS STUMBLING BLOCK FOR COMMUNISTS, SPECIAL AID BELIVES

(By John Herling)

WASHINGTON.—This is a report on the importance of labor organizations in evaluating what is going on in Africa and Asia, and in other American Republics.

Failure on our part to assess the role and function of the labor organizations in these areas will more than any single factor undermine our relations with their people, and their leadership.

How important labor has become as a political, social and psychological influence in the nations of the world has been stressed again and again since World War II. But it has not become an essential part of our national purpose and program. When Vice President Nixon returned from his disastrous trip to Latin America in 1959, some of the bitter wisdom he brought back with him had to do with the indispensable nature of labor groups in the relentless war for the minds and hearts of people. But the repetition of this noble phrase deteriorates into a vapid generality and then into a cliche. Action is what counts.

PROMPT MOVES URGED

In this area, President Kennedy must move promptly with precise understanding. No administration in our time can so readily command the insights and dedication of people concerned with this field. In various agencies of the Government—State, Labor, International Cooperation Administration and the United States Information Agency—specialists and generalists in this area are at work.

But urgency still has not shaped policy. That's what bothers George Weaver, the special assistant to the Labor Secretary and prospective Assistant Secretary of Labor in charge of the Bureau of International Labor Affairs.

His analysis of the world situation therefore compels attention:

"The growth of the Labor Department's responsibilities in the field of international labor reflects the worldwide rise of the labor movement. This is especially so with regard to the newly emerging nations of Africa, Asia, and Latin America," Weaver says. "These unions, although in many cases small in membership, wield a strong influence in the social and political affairs of their nations. Many of their leaders are also active in government and politics."

Kenya's Tom Mboya, for example, is not only general secretary of the Kenya Federation of Labor, but also a member of his country's legislative council and a leader in its struggle for independence. John Tettegah doubles as secretary-treasurer of the Ghana Trade Union Congress and as a member of the Central Committee of Ghana's ruling party. In Bolivia, Juan Lechin Oquendo is the executive secretary of the nationwide Central Trade Union Organization, head of the Federation of Mine Workers, a senator, and the leader of the government's opposition.

"Another measure of the strength of these unions is their close relationship with the political parties in power," Weaver says. "Tunisian President Bourguiba's Nee-Destour Party owes much for its power to the support of organized labor. President Lopes Mateos of Mexico is a former minister of labor and counts on the labor movement to provide the basis for his popular support. Guinea's Sekou Toure launched his drive to the presidency as a labor leader. In country after country, throughout much of the free world, labor speaks with the dominant political voice.

REDS FACE DIFFICULTY

"The Communists have been quick to recognize the strategic importance of these unions as a means of spreading their Marxist and Leninist doctrines. For the most part, however, their efforts to exploit it have been unsuccessful.

The trade unions have been their principal stumbling block. The vast majority of the labor leaders, rising from the impoverished masses of the newly awakening areas of the world, are true nationalists, as much opposed to Communist encroachments as to the colonialism they are struggling so hard to shake off.

"But to deny that the Communists have made headway in these areas would be a serious self-delusion," Weaver warns. "They are making large-scale efforts to win over the most promising young men within the union ranks. Each year large numbers of young African, Asian, and Latin American labor leaders are invited to Moscow for intensive indoctrination courses. Present-day leaders from these areas are given little attention. The Communist investment is long-range, and the Communists are willing to wait a few years for the returns to come in.

"The free international labor movement, then, confronts a challenge that we cannot afford to ignore. The challenge demands two basic courses of action:

"First, we must continue to aline ourselves with the legitimate striving of the newly developing nations for freedom and economic improvement;

"Second, we must parry the Communist threat by demonstrating with our words and actions that freedom and democracy promise a better future, especially here in the United States."

Such a wide-ranging course requires a program of vast dimension. On this the Kennedy administration—with all governmental and private resources—must go to work without delay.

A Tribute to Harris J. Booras

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. MORSE. Mr. Speaker, for many years the late Harris Booras, of Belmont, in the Fifth District of Massachusetts, which I represent, was a good friend. With his recent death, the Commonwealth of Massachusetts lost a devoted servant, the American-Greek community a stuanch and active member, and his host of friends, a warm and loyal companion. It is with pride that I insert in the CONGRESSIONAL RECORD the following editorial tribute to Harris Booras:

A TRIBUTE TO HARRIS J. BOORAS

In the Pass of Thermopylae is situated a monument erected in commemoration of the heroic stand of Leonidas and his 300 men, a reminder of the "Glory that is Greece." One of the great projects inspired by the genius, acumen and forward thinking of Harris J. Booras of Boston, Mass.

Booras' outstanding leadership qualities were early recognized by Ahepa's Boston chapter, and through the years, every one of the organization's great, major projects bore Booras' stamp of inception or endorsement.

It can be said without fear of contradiction that no one did so much for Hellenes in America and Hellas as did Harris J. Booras in so short a lifetime. Booras acted big, talked big projects, and produced big accomplishments. When the history of our people is compiled, Booras will be found as one of the prime cultural movers of sentiments for ancient and modern Hellas, the progress of Americans of that decent.

More than 100,000 visitors annually travel to Thermopylae and marvel at Booras' significant mark of Hellenism's glory, via modern roads built to that site by the American Government, by Booras' suggestion.

Booras was part and parcel of the Statute of American Phil-Hellenes at Tripolis Square, Arcadia; the American Foundation for Greece; Justice for Greece Committee; the Ahepa Hospital in Greece. They were inspired and projected through Booras.

It is not believed that America has a substitute who can readily take Harris J. Booras' place as proponent of every great imaginative project for the benefit of Hellas' glory.

The distinguished, lovable, likeable, imaginative and dynamic Bostonian will be sorely missed, not only by his family but by all of Ahepa and Hellenism in America. He was a giant in thought and actions.

I had the privilege of traveling to Greece during 1957 with Harris. To this day I remember the esteem, affection and regard in which he was held.

I mourn his passing. Harris J. Booras was as American as Boston, as Greek as the Foustanella and Tsarouchia he so proudly wore as Commander of the famed Ahepa Boston Patrol of almost 30 years ago.

NICHOLAS D. MOUSMOULES.

The New York-Montreal Seaway

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. SANTANGELO. Mr. Speaker, recently I received a letter from William Lathrop Rich, chairman of the Committee for the New York-Montreal Seaway. Since the construction of the St. Lawrence Seaway, a great deal of the port business has been diverted from the port of New York and the port of Boston and sent to the Midwest through the St. Lawrence Seaway. The eastern seaboard is seriously interested in the New York-Montreal Seaway so as to provide increased business for the ports along the seaways and also for an alternate route in the event of war.

The New York-Montreal Seaway is practical and requires the joint cooperation between Canada and the United States. For a long time studies have been made with regard to the feasibility of this seaway, and it is time that we have affirmative action to bring to reality a dream that is practical and will bring benefit not only to the eastern coast but also to the United States. The letter from Mr. Rich follows:

MY DEAR CONGRESSMAN: The Committee for the New York-Montreal Seaway, of

which I am chairman, has been advocating just that for the last 5 years because it is essential for the economic expansion of the region along its route and it is the shortest waterway route between New York City and Montreal, Canada.

Six months after my committee had first made the proposal that this route be modernized, its chairman discovered that his committee's recommendations were in accordance with a report, made by the International Joint Commission in 1937, that concluded with the statement that the route, from the St. Lawrence River at Sorel, Province of Quebec up the Richelieu River to Lake Champlain and by way of the Champlain Canal to the Hudson River at Albany, is the most practicable from an engineering standpoint and the last impracticable from an economic point of view. Four other routes have been considered.

No improvements have been made on the Canadian part of this route since 1938 and on the U.S. part since 1918, which would alter its capacity.

Is it not time for something to be done to improve this waterway?

Our Government is spending millions to expand the commercial capacity of the Mississippi and the Missouri Rivers and on January 17, 1960, the then President Eisenhower and Canadian Prime Minister, John G. Diefenbaker, committed the two Governments to spend a total of nearly $3 billion on improving the Columbia River.

Have the waterways in the eastern part of both our countries become "stepchildren," neglected and left to become obsolete?

Senator ALLEN J. ELLENDER, of Louisiana, stated on February 27, 1959, that "waterways are neglected by the U.S. Government."

The New York State Barge Canal System has become so obsolete that the New York State set up a committee in 1960, Senator Robert C. McEwen, chairman, to dispose of the canal system or turn it over to the Federal Government. The Champlain route is part of that system.

My committee's recommendation that the 1936 report be updated by the International Joint Commission, the U.S. Army Engineers to do the actual resurvey, was endorsed by the State of Vermont, in a joint resolution approved by Gov. J. B. Johnson on February 20, 1957 and again in a joint resolution approved by Gov. Robert T. Stafford on May 6, 1959.

New York State also endorsed our proposal by a concurrent resolution on March 30, 1960, which I had the satisfaction of writing.

On July 3, 1958, the then President Eisenhower, signed a bill authorizing the U.S. Army Engineers to update the 1937 survey.

Before work could begin interest on the part of Canada was required, no committments, just interest. Accordingly, in November 1958 our State Department sent a communication to the Canadian Government, inquiring as to their attitude.

As yet no reply has been received in Washington, D.C., to date.

The United States has done more than its part in furthering this proposed modernization of this waterway.

Why are the Canadians, as Senator GEORGE D. AIKEN, of Vermont, said, "dragging their feet?"

How can any Canadian Government conscientiously hold back the economic growth of any part of Canada and retard its financial enhancement.

This waterway, when modernized, has potential capacities for enormous growth in tonnage of newsprint, grain, ores, and many other commodities. As an example, 1 million tons of newsprint could be shipped yearly, by this shortcut, to the Metropolitan New York area, at a saving, according to Mr. Lawrence Tombs, vice president of Guy Tombs, Ltd., of Montreal, Canada, of from $9 to $10 per ton, or a saving of from $9 million to $10 million in freight charges, alone, to the New York publishers per year. At present only 25,000 tons are shipped over this restricted route yearly.

As for the saving in distance traveled, it will be the difference in mileage between 1,800 and 450 miles or 1,350 miles for one way or 2,700 miles for a round trip. The saving in travel time is secured by the recommended reduction in the number of locks for this route to a maximum of 5 from the present number of 23 but the time of passage will be controlled by the speed of travel of your boat.

One part of this project includes the elimination of an annual loss, due to spring flooding around Lake Champlain, of about $850,000—$600,000 Canadian, $250,000 American. Also the drying-out and return to production of about 45,000 acres of land in Canada alone.

The elimination of flooding will be accomplished by the stabilization of the level of Lake Champlain at 98 feet above sealevel, as recommended by the Canadian engineer in his report to the Canadian Cabinet last December.

If this waterway is constructed with adequate capacity, it will be a shortcut for ocean shipping between New York City and Montreal, Canada, each commercial site along its route, a potential seaport and it will, as a result provide Canadian and American mariners with a large stable inland lake devoid of any current like that of the St. Lawrence River, which they can enjoy.

Keel boats, those with tall Marconi rigs and large motorboats can reach Lake Champlain, Canadian waters such as the Thousand Islands and the Great Lakes, via the Hudson River.

This modern waterway, it is proposed that it be self-liquidating and not built with moneys secured through taxation.

As of this moment, the whole project is being held up because, so far, the Canadian Government has not seen fit to reply to our State Department communication of November 1958 which according to Senator GEORGE D. AIKEN, of Vermont, is that the Canadians "apparently are unwilling to give 'the green light' for a joint study; all that is being asked, is an investigation to determine the feasibility of such a project."

Why does Canada hold back? Is there some political or obscure reason?

It makes one wonder if Ottawa is giving "tit for tat" in this connection? It seems rather silly but I can recall that Ottawa, in utter desperation, had to finally threaten "to go it alone," on building the St. Lawrence Seaway, before Congress acted.

Is it, per chance a political move to hold a "trading point" in a readjustment of the tolls on the St. Lawrence Seaway?

I could suppose other reasons, but it is all too silly when such a project, when advanced, can have such a great beneficial effect on the economic expansion and financial gains of the eastern part of our two countries. Let's start to face economic facts and bring out the causes of the Canadians delay so that they can be eliminated and then let's get the modernization of this waterway "on-the-road" for the joint benefit of both our countries.

What do you Canadians now say, are you ready to "play ball?"

The U.S. Government has more than done its part and because Ottawa has, through many of its officials, intimated that our State Department's communication of November 1958 was negative and really did not indicate that a reply was in order, Washington has dispatched to our Embassy in Ottawa on April 19, 1961, a second letter of inquiry about the Canadian Government's attitude toward this waterway project.

So now that so-called basic cause of delay on the part of Ottawa has been eliminated.

I have felt, since I attended the joint meeting of the chamber of commerce in Montreal, on December 7, 1960, that the Honorable Leon Beicer, Canadian Minister of Transportation, favored an adequate waterway because after the dinner that evening, at which he had disappointed the members present by not announcing that the Canadian Government was accepting their engineers' report on this whole general project and which report recommended a 12-foot waterway, said that he did not favor a 12-foot waterway but did favor a 27-foot one.

Now that we have reached the present status of this project, when will Ottawa advise Washington as to its attitude or willingness to cooperate in this important joint undertaking?

Prime Minister John G. Diefenbaker of Canada please note.

Very truly yours,

WILLIAM LATHROP RICH,
Chairman, the Committee for the New York-Montreal Seaway.

Vice President Learns Asians Are Not Sure of Our Support

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1961

Mr. ALGER. Mr. Speaker, the account of the trip of the Vice President to Asia as told by the U.S. News & World Report shows clearly that the fine statements of our support of freedom, as made by administration spokesmen over the past 5 months, are falling on deaf ears. These people, looking for leadership, are worried by our inaction in backing up our words. It seems to me it is time for the administration to act decisively in the war against Communist aggression. If the United States cannot assume leadership of the free world, we must be prepared for Communist domination of the whole earth.

The account follows:

WHAT ASIA TOLD JOHNSON

(It was an eye-opening experience—Vice President JOHNSON's mission through the Communist-menaced areas of southeast Asia. Mixed in with smiles and warm greetings: a gnawing worry among Asians that, in a showdown, U.S. assurances of support will melt away. This dispatch is by Robert W. Ruth of U.S. News & World Report, who was with JOHNSON.)

After touring non-Communist Asia with LYNDON B. JOHNSON, U.S. Vice President, you come away with this dominant impression: Either the United States takes a firm stand at some point in Asia—and makes it stick—or this whole, vast area will head into communism.

Time is running out and there is questioning of America's strength and of her willingness to stand by smaller nations in trouble the way Soviet Russia stands by the nations on her side.

WILL TO RESIST

In South Vietnam and Thailand—the two most strategically important points in southeast Asia now that Laos is all but gone—JOHNSON found considerable will to resist communism. But he also learned that this will to resist will not last indefinitely.

Much depends, the Vice President was told, on how the United States lives up to its promises—what actions the United States will take when the chips are down.

PLEDGE TO VIETNAM?

South Veitnam sticks out as the area in Asia where the United States either holds firm or moves fast along the path of humiliating retreat from southeast Asia.

Few Americans realize that Vietnam is a place where more people are being killed by Communists than in any other part of Asia.

LYNDON JOHNSON seemed to sense this fact when he said to President Ngo Dinh Diem:

"America means to stand by Vietnam. You ought to be mighty proud of your men because they are fighting with courage and determination. America has that same courage."

Remarked a high U.S. official:

"After what JOHNSON said in Saigon, there is a moral commitment to use American troops if pressure continues to build up."

SAFETY PRECAUTIONS

Signs of Communist pressure are visible just a few miles outside Saigon.

As JOHNSON'S motorcade churned up the dust of a side road, security guards could be seen in the brush on either side, facing away from the road. Vietnamese officials were worried over the possibility that the Viet Cong—the Communist guerrilla fighters—might toss a grenade at the Vice President.

Bamboo thickets lining the road had been thinned out. Such thickets often provide cover for an ambush.

THE "WAR THAT'S COMING"

At a Vietnamese training school for officers and enlisted men JOHNSON saw fighter-bombers drop napalm bombs and other fighter planes strafe a target area.

An American Army colonel said:

"Commies are probably watching us from the fields and are probably not much fooled by this display. This represents my kind of war—the World War II kind of war. But the war that is coming up is not going to be this kind of war. The next 10 months before I go back home are not going to be dull months."

The colonel looked across the brush and added: "Fighting anybody in that stuff is the damnedest task."

HOW REDS OPERATE

The Vice President was told that no more than 6,000 Communists are actively engaged in the fighting now going on. Why is it so hard to cope with such a small number? The explanation, from a young Vietnamese who has fought against the Communist guerrillas:

Take a village not far from the Cambodian border. Cambodia is "neutral." The Communists strike and then take refuge across the border. There are not enough men in the Vietnamese Army to protect every village.

In a typical nighttime raid, 20 guerrillas armed with revolvers, hand grenades, and submachine guns filter into a village by twos and threes. They meet at a prearranged spot then suddenly strike at the home of a village headman, or priest, or schoolteacher.

A grenade is tossed into a house, or the house is sprayed with machinegun bullets. Or the headman may be hauled out of bed and killed on the scene. His family may be murdered, too.

MINES AND AMBUSH

You find many victims of the Communist guerrillas in Saigon hospitals—soldiers, members of the civil guard, private citizens—wounded in attacks within 10 to 100 miles of the capital. One boy had stepped on a land mine just outside Saigon. A girl tells of the ambush of a bus returning to the city from a holiday celebration. Several girls were killed.

WE ARE TOGETHER

The Vice President repeatedly strove to bolster the Vietnamese will to resist Communist attacks. He quoted from President Kennedy's inaugural address: "We shall pay any price, bear any burden * * * to assure survival and success of liberty." At a palace dinner, he told President Diem: "These are dangerous times for you and for us, and we are all in this thing together." President Diem, in a toast to America, made it clear that he accepted the Vice President's words at face value.

ECHOES OF A MOOD

What kind of mood are the Vietnamese people in today? Here are snatches of conversation picked up during the JOHNSON visit:

A Vietnamese trained as a mining engineer in Montana: "Cuba threw a scare into us. Why could not America get rid of Castro? We need more civil liberties here, more press freedom. But land reform has gone well."

An American official: "People here ask, 'Are you going to do the same thing here that you are doing in Laos, the same thing the French did in North Vietnam—pull back?' That is a hard question to answer."

A Vietnamese father: "All I want is for my children to be free. That depends on the Americans."

FILIPINOS: SKEPTICAL

In the Philippines, JOHNSON found a certain amount of skepticism as to how far the United States would go in supporting the anti-Communist countries of Southeast Asia. One Manila newspaper said: "The proof of the pudding is in the eating." That pretty well sums up the mood of the Philippines, a country that has wanted to come to grips with the problem of Communist aggression in Asia.

THAI: SECOND THOUGHTS

In Thailand, once strongly pro-Western, the Vice President found a tendency toward reexamination of the country's position, in fact, toward neutralism.

There was an air of urgency about the means that must be taken to cope with an aggressor just over the horizon. The Thai are not impressed with fine words alone.

More aid in the fields of education, health and industry will help Thailand, JOHNSON was told, but there, more than any place else, the emphasis was on military aid.

NO PLEAS FOR GI'S

This is not to say southeast Asia is clamoring for the dispatch of U.S. troops. Officials traveling with JOHNSON said that the stage has not been reached when the sending of American soldiers to southeast Asia is even being discussed.

Competent observers in this area believe, however, that JOHNSON has made a moral commitment for the United States to back up its words with manpower should another showdown of the magnitude of Laos arise.

Still, one question keeps popping up in discussions of the problem among Asians and Americans who have spent many years in the Orient. It is: When the chips are down, will President Kennedy come through? In short, can the United States be trusted to back its friends?

The persistency of such questions indicates there is doubt in the minds of many about American intentions to go all the way if need be.

One Westerner with long experience in Asia, commenting on the JOHNSON tour and the United States position there, said:

"The United States has the hard choice of either seeing its position in southeast Asia eroded away bit by bit, or fighting what may be a war of attrition with Red China."

America's Democracy—A Defense of Freedom

EXTENSION OF REMARKS
OF

HON. HENRY C. SCHADEBERG

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1961

Mr. SCHADEBERG. Mr. Speaker, each year the American Legion Auxiliary in Wisconsin sponsors an Americanism essay contest for grades 7, 8, and 9 in group II and for grades 10, 11, and 12 in group I. The winning essay for group II was written by Susan Morphew, grade 9, Whitewater, Wis.

The thinking evident in Susan's defense of freedom is very mature. Susan urges us to wake up and fight diligently to keep our country free. She urges us to do our best and advises her classmates that they must do their best in school, for some day—and that day may not be too far away—the fate of our country and of the free world will be in their hands.

The essay follows:

AMERICA'S DEMOCRACY—A DEFENSE OF FREEDOM

Will my children grow up to a world of international communism? Will my grandchildren be separated from their parents and sent to military school where they will learn to salute the Russian flag, forget God, and work constantly for the benefit of the government? Will all or some of these dreaded fates befall the world within the next 50 years?

Perhaps you think that these are absurd questions and that the answers are definitely no. You certainly would not be alone in your thoughts. There are many like you, thinking, and even knowing the same thing. After all, we are Americans. Nothing can go wrong for us because we live in the United States and everyone knows that the United States is the number one country in the world. But wait a moment—so was Rome in her day.

To me the above conditions would be the ways of a terrifying life. If these conditions were to come about, the wall of America's defense of freedom would tumble. Maybe you wonder why I say the wall of America's defense of freedom. When I think of this phrase, I picture a wall; a wall of freedom shunning the outside world of communism and protecting the fort of freedom. The United States is standing guard at the entrance in this wall. Outsiders will do anything to make their way in past the guard. But watch them, they are sly. You may not realize they are fighting to enter until they are in.

This being the case, the guards had better wake up and fight diligently to keep their fort safe from the clutches of their enemy. I feel that this is the way the United States should face the Soviets today, as enemies reaching into our fort to gain control.

I think the United States is being far too lenient in her guard. If we want to keep our many freedoms, we must stop being softhearted toward our enemies and face up to facts—"every man (country) for himself". We must really try to do our best in school and in everything we do. For some day, not in the far distant future, the fate of the free world will be in the hands of our generation.

We must have scientists, learned people in foreign language, loyal Christians, and Jews, strong armed forces, and capable people in every profession in America; whether

it be teacher, doctor, shoemaker, or druggist, we must support our country and the whole free world from communism. We cannot do this without the help of every individual American. We need not only professional people, but all those willing to give themselves in any service for the safety and welfare of our country and its people.

We, the youth of this country, have to learn to respect and appreciate our American democracy today. If we do not, the defense of international freedom in the world of tomorrow has no chance of survival.

Congressman Thomas B. Curtis Proposes Action To Meet Unemployment Problems

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. GRIFFIN. Mr. Speaker, the need to retrain and relocate workers who for various reasons have lost their jobs is a serious problem facing the Nation. One of our colleagues, the able gentleman from Missouri [Mr. CURTIS], who is the senior House Republican on the Joint Economic Committee and a member of the Ways and Means Committee, has been very active in this field. For many months last year and this year, he has been busy compiling information and interviewing knowledgeable persons in an effort to provide the Congress with constructive suggestions.

Too often, quite, thorough legislative work is seldom given recognition in the hurry-up life we lead. For that reason, I was pleased to read a recent article concerning the gentleman from Missouri [Mr. CURTIS] written by the noted labor editor of the North American Newspaper Alliance, Martin Arundel.

This article appeared on April 27, 1961, in the Louisville (Ky.) Times, the Charleston (W. Va.) Gazette and the New Haven (Conn.) Register, and in other papers throughout the country. I also read with special interest an editorial in the Louisville Times, of May 2, 1961, acknowledging that our colleague from Missouri [Mr. CURTIS] is on the right track, and that his novel approach is worthy of the closest study and consideraiton by the administration and the Congress.

Mr. Speaker, I believe the newspaper items to which I have referred should be called to the attention of the Congress and, accordingly, they are set forth below:

[From the New Haven (Conn.) Register, Apr. 28, 1961]

PROPOSAL WOULD AID JOBLESS IN LEARNING MODERN SKILLS

WASHINGTON.—Representative THOMAS B. CURTIS will soon introduce a bill that would tackle hard-core unemployment by encouraging displaced workers to learn new skills.

Right now, the Missouri Republican charged, 44 States in effect penalize jobless workers who want to learn a new trade.

They are deprived of unemployment benefits as soon as they enroll in a vocational or other kind of school, he said in an interview.

"In an area where no jobs are to be had," CURTIS pointed out, "this means that the unemployed are encouraged by the Government to sit back and do nothing in order to collect their weekly checks."

Representative CURTIS said his bill would do three things:

1. Teach new and needed skills to persons who lost their jobs because of technological advances (automation);

2. Allow them to draw jobless benefits for the duration of their retraining;

FUNDS TO RELOCATE

3. Provide funds for them to relocate in areas where their newly acquired skills are in demand.

The legislation also would enlarge and bring up to date vocational and apprenticeship training programs for young men and women. It would stress the technical skills required in the age of automation.

CURTIS said he would propose that the program be financed by Federal funds and that it be run by the States.

"It will probably cost a lot more than the present program, but exactly how much I would not venture to estimate at the present time," CURTIS said. He added, "But in the long run it will be worth any cost, for it will help get rid of the technological unemployment problem and raise the productivity growth of the Nation's economy to the yearly 4 to 5 percent desired increase."

CURTIS said his proposed legislation would be in the form of an amendment to the unemployment compensation section of the Federal Social Security Act. He said he will introduce it as "soon as the technical legislative language is ironed out."

CURTIS, in his sixth term, is the senior Republican member of the House Ways and Means subcommittee which handles unemployment compensation bills, and is the ranking Republican from the House on the Automation Subcommittee of the Joint Senate-House Economic Committee.

DIFFERENT APPROACH

The Missourian said his approach to the hard-core unemployment problem differed from the conventional one this way:

"The conventional approach assumes that large-scale unemployment is almost entirely due to economic downturns and that the idle will return to their jobs as soon as business picks up.

"My thinking based on an abundance of testimony by experts before congressional committees studying the subject, is that heavy unemployment is due more to technological advances in industrial production methods," he said.

"This is particularly true in the age of automation," CURTIS continued. "A worker loses his job in a recession and when the recession ends the work he formerly did is now being done by fewer men operating new and faster machines. That is unemployment brought about by automation."

PREPARE FOR NEW

Under his proposed plan, the unemployed would take courses that would give them the know-how to perform new jobs, often in the same company and sometimes in other industries, Congressman CURTIS said.

CURTIS explained his program would require detailed planning by Federal and State unemployment agencies, in conjunction with industry and unions. His proposal, for instance, would call for the U.S. Department of Labor to overhaul substantially its present system of cataloging the scores of job skills.

"There are many job skills that the Labor Department has no record of, particularly in automated industries," CURTIS pointed out.

[From the Louisville (Ky.) Times of May 2, 1961]

RECOVERY WON'T MEAN JOBS FOR EVERYBODY

Business, so almost everyone is saying, is picking up. What is more, most of the economic experts believe that the upturn is stronger than the ordinary seasonal rise in business activity. They think that the bottom of the recession has been reached and that a recovery is in progress that will carry the economy to new heights. They differ in their estimates of the strength and speed of the upturn, but they are virtually unanimous in their opinion that it is underway.

Unfortunately, they are virtually unanimous about something else. Almost without exception the economic experts and observers fear that even when business has attained new peaks, a very substantial number of Americans will remain unemployed. A New York Times story early in April reported, "Most of the President's economic advisers are convinced that the country will enter 1962 with no significant drop in the present level of 5.5 million jobless workers."

The tragic center of this problem lies in the amount of chronic unemployment, which continues to rise despite an overall trend of prosperity and increased production. According to the National Planning Association, the number of chronically unemployed rose from about half a million in the third quarter of 1953 to nearly 2 million in the first quarter of 1961.

Early in April, the number of persons who had been out of work for 15 weeks or more was nearly 1.9 million. Eight hundred thousand had been out of work for more than 6 months. Perhaps a third of these men and women are in the 45-to-64 age group, and in the context of our times that means they are older workers. Complicating the problem for these people is that in the decade of the sixties, they will be competing for jobs with millions of new workers, the beginning of the generation born since World War II. And the competition will be taking place in an era of economic change: of new technology and automation, of economic advances abroad, of movement of industry to new locations.

The problem is vast and complex and we don't expect anyone to offer quick, complete solutions. But Representative THOMAS CURTIS, a Missouri Republican, is at least taking a crack at it—and on what seem to be sensible lines. He plans to introduce legislation that would encourage the jobless to learn new skills. The legislation itself has not yet been written, but CURTIS says there are three things he wants his bill to do: first, teach new skills to those who lost their jobs because of automation; second, let them draw unemployment pay while learning (he says 44 States deprive workers of unemployment benefits as soon as they enroll in a school); third, provide funds to let the workers relocate in areas where their new skills are needed.

Many workers, it is likely, would be unwilling or unable to learn new trades. Others would be unwilling to move to greener pastures. But others, the more imaginative, the more intelligent, would be helped. We hope Congress gives CURTIS' proposals sympathetic study.

A New Low for Castro

EXTENSION OF REMARKS
OF
HON. GARNER E. SHRIVER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. SHRIVER. Mr. Speaker, the peoples of the world have been given a vivid example of the gangster tactics being used by the Communist regime of Castro in Cuba. Castro's offer to trade Cuban prisoners for tractors reveals

once again that we are confronted with a tyrant similar to Hitler and not unlike the notorious gangsters who seek ransom for their hostages. Many citizens already have voiced their abhorrence at dealing with this Communist dictator.

On May 20, 1961, the Emporia, Kans., Gazette, well known to many citizens of our Nation for its editorial excellence, characterized the Cuban dictator most appropriately in an editorial which speaks for itself:

A NEW LOW FOR CASTRO

In the latest episode of Mr. Castro's serialized program designed to make enemies and infuriate people, he has surpassed all previous efforts to gain recognition for himself as one of history's most celebrated paranoiacs.

The bearded Prime Minister, currently suffering from delusions of both persecution and grandeur, has offered to exchange the prisoners captured during the recent abortive invasion of Cuba for 500 bulldozers from the United States.

This, indisputably, is a Castro first. Who else but a sick ham with a dirty beard could offer to exchange human beings for earth-moving machines?

The Castro government has claimed that more than 1,000 invaders were captured during the April 17 fighting, although the actual number probably is less. The fate of these captives, judging from past Castro actions, is no less tenuous than that of former Batista officials after the fall of their government.

Today, the captives are goods to be bartered for machinery. Tomorrow, only Castro knows what indignities await them. Still, in the end—and there will be an end for Castro—these prisoners may have accomplished more as pawns in Castro's confused international politics than they could have as revolutionary soldiers.

For even the most complacent free-world citizens cannot help but be shocked by the callous disregard for the dignity of human life. In its own right, Castro's action is even more repulsive than the mass executions he ordered after assuming power. The fact that he could consider trading human beings for machines is this grotesque.

When the curtain falls on the last act of Castro's drawn-out tragicomedy, this recent action, along with the executions, must stand as evidence that his crimes were as inexcusable as any perpetrated by Hitler's lieutenants or Stalin's stooges.—G. L. DeB.

A Deck Stacked Against Kennedy?

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. ALGER. Mr. Speaker, while many of us wait with anxious concern the outcome of the meeting between the President and the Soviet dictator, I recommend careful attention to an analysis of the forthcoming meeting which appeared in the U.S. News & World Report, issue of May 29, 1961:

A DECK STACKED AGAINST KENNEDY?

(The following analysis is by Francis B. Stevens, former Director of the Office of Eastern European Affairs, U.S. State Department, and now on the staff of U.S. News & World Report:)

When President Kennedy meets with Soviet Premier Khrushchev in Europe next month, he will be succumbing to the delusion which has bedazzled all his recent predecessors—that the only way to deal with the Russians is at the top.

And he will be defying the lessons of history, ignoring the insulting treatment given President Eisenhower in Paris just a year ago, and reversing the advice given by the Secretary of State, in a magazine article published before the election.

The President will be facing his formidable adversary in a particularly weak bargaining position. Since his inauguration, U.S. policy has experienced a series of humiliating setbacks—in Cuba, in Laos and in the failure to reach agreement in the Geneva talks on a nuclear-test ban. Even though responsibility for these reversals may lie largely with the previous administration, the Kennedy record is unlikely to impress Khrushchev, to whom only action and results matter.

Moreover, the Soviet position on the eve of a top-level meeting has never been stronger. Khrushchev possesses an absolute nuclear deterrent and massive, well-equipped conventional forces. Gagarin's orbital flight has demonstrated the Soviet lead in space. Laos has fallen into the dictator's lap, and his Cuban puppet has easily repelled a U.S.-supported invasion attempt. Khrushchev and the Soviet press have never sounded more confident.

Official circles in Washington suggest privately that the purpose of the meeting is to permit the President to sound out Khrushchev's intentions and to warn him that U.S. patience is not unlimited. On the first count nothing is apt to be discovered that was not clearly spelled out in the manifesto of the 81 Communist parties which met in Moscow last December: active pursuit of the goal of world domination, avoidance of general war, support of "national liberation movements." It would be unrealistic to expect Khrushchev to tip his hand on tactics or priorities.

As for warnings, Khrushchev might be forgiven if he took them with a grain of salt. He will not have forgotten Kennedy's brave words about Laos. He will have no intention of taking any action which would constitute a pretext for nuclear war. But he will have no intention of failing to exploit any situation which seems to offer a possibility for Communist gains—and the possibilities are many: Vietnam, South Korea, Iran, and the Congo, among others.

A Soviet maneuver at Geneva indicates one line of preparation for the talks with Kennedy. The Soviet delegate threatened that the Soviet Union would resume nuclear testing, alleging that recent French tests in the Sahara were a subterfuge to provide information for Britain and the United States. This is the old Soviet trick of raising the ante before a negotiation in order to prepare for a fallback to an already advanced position. The U.S.S.R. has the basic nuclear weapons and does not have the American passion for refinement; hence it has no need to resume testing. But it will insist on a veto on inspection, hoping to induce the United States to break off the talks and resume testing.

Thus the President would be faced with the unhappy alternatives of continuing the fruitless negotiations with no prospect of agreement in the face of strong internal pressures to terminate them, or of bringing them to an end and being blamed by world opinion for failure to resolve this issue. Collapse of the test-ban talks would make prospects bleak for progress in arms control. Again the United States would be held responsible.

In these circumstances, critics are not wanting in Washington who question the advisability of holding talks at this time. On the demonstrable premise that the only thing Moscow respects is strength, they suggest that the United States should rather be building up its military power and exploring means for exploiting the major crack in the Communist armor—the dissatisfaction and will to freedom of the subject people of the Soviet empire, both in Eastern Europe and in Asia. As East Germany, Poland, and Hungary have already shown, it is here that the most convinced freedom fighters will be found.

The Panama Canal and United States-Panama Relations

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. POWELL. Mr. Speaker, with the countries of Latin America aflame with discontent and unrest it behooves all of us to learn all we can about the living standards of the people south of us, their cultures and their national aspirations. One of these countries should be of particular concern to every American because of its geographic position at the crossroads of the world, and because of the most peculiar manner in which it is linked to our country.

I refer to the Republic of Panama through whose lands we cut an interoceanic canal almost 50 years ago, joining the Pacific and Atlantic Oceans. This engineering feat had defied man for several centuries and while it has brought great prestige to our country in a political, commercial and military sense, it is an accomplishments that established our relationship more securely with Latin America than we would like to admit.

I have always maintained a close interest in the people and political development of that beautiful little country which I visited officially back in 1947 as chairman of a Special Investigating Committee of Education and Labor. At that time I prepared a detailed study for the Congress regarding the deplorable working conditions of the West Indians and other non-United States citizens on the Canal Zone, and the discriminatory policies which our Government practiced against this large body of nonwhite workers.

As many of my constituents in New York are originally from the Republic of Panama I have watched with unabated interest United States-Panama relations. I am pleased to note that certain fundamental changes have taken place on the Canal Zone in socioeconomic matters; but there are still areas of conflict between Panama and the United States. I do not think that these remaining sore spots could be more objectively treated than in the two speeches of Ambassador George W. Westerman, Panama's U.N. delegate to the United Nations.

Dr. Westerman has not only represented his country at the United Nations in a superior way but he has traveled up and down these United States lecturing before some of our most distinguished forums on United States-

Panama relations. In this respect he has performed a distinctive service in furthering better understanding between his country and ours.

One of the speeches to which I refer was made before the Research Institute of America and the other before the faculty and graduate students of Yale Law School. No information as authentic as the statements made by Dr. Westerman should be treated lightly. He comes from a minority group in Panama and has made a positive mark on international affairs with his dedicated spirit and his scholarly approach to problems.

After reading these two historic documents one will certainly grow more reflective about this country's obligations to its partner in the Panama Canal enterprise.

The speeches follow:

ADDRESS DELIVERED BY HIS EXCELLENCY AMBASSADOR G. W. WESTERMAN, U.N. DELEGATE OF PANAMA, AT THE RESEARCH INSTITUTE OF AMERICA, INC., NEW YORK, N.Y., FEBRUARY 7, 1961

PANAMA AT A GLANCE

It is a matter of unusual satisfaction for me to meet and greet members of the top editorial staff of the Research Institute of America, Inc. As I appear before this institute today a statement from one of the famous speeches of President Wilson comes to mind which I quote: "Comprehension must be the soil in which shall grow all the fruits of friendship." I fully realize that your institute seeks to comprehend my views about Panama in particular and Latin America in general, because your distinguished membership is anxious to help cultivate the fruits of Latin American friendship.

It is not my purpose to describe or discuss either the political institutions or the practical policies of Panama. I want to present a glimpse of those physical, economic, and social features of the Republic of Panama which are the basis of its political life, and constitute the conditions under which that life has to be maintained. Then, I wish to make a few observations with regard to Latin America which I think are pertinent to an occasion as significant as the present.

Introduction

The historical background of Panama is different from that of any other state in Central or South America. Panama achieved its independence together with the group of South American peoples who, in the revolutionary period between 1810 and 1824 emancipated themselves from Spanish domination in the Western Hemisphere. Of its own volition Panama united with Nueva Granada, Ecuador, and Venezuela to form Gran Colombia. Until the dawn of this century the Isthmian Republic remained united to the nation built upon the former viceroyalty of Santa Fe. Independence was declared on November 3, 1903. The importance of Panama today in world affairs as a free and independent Republic is principally the result of the strategic significance of its position on one of the world's major routes.

From the time of Christopher Columbus' first visit and the discovery of the Pacific by Vasco Muñez de Balboa in 1513, Panama's unique geographical position astride world trade routes has stimulated the dreams of conquistadores, explorers, engineers, and world traders. Thus the story of man in Panama has been one concerned more with passage than settlement. If Panama has not become the site of a future world capital as once proposed by Simon Bolivar, it has undoubtedly won recognition as being the "Crossroads of the World."

The Republic of Panama is a narrow curving strip of mountainous terrain 480 miles long and varying in width from about 30 miles to about 120 miles. It is a bridge between two great oceans and two important continents. Panama's strategic location between the Atlantic and Pacific, and North and South American has been the most influential factor in the development of her national life.

At one time or another all the great maritime nations of the world have coveted Panama and the forces which have shaped the settlement patterns of the larger communities on either side of the isthmus are international rather than local.

The people

(A) Size of Population

With an area of 28,575 square miles (exclusive of the Canal Zone which covers 522 square miles), Panama has a population of more than 1 million inhabitants, or about 34 persons to the square mile. The population tends to concentrate in and around Colon City and Panama City adjacent to the Panama Canal terminals; as a result the mountains and plains of the interior are sparsely settled.

(B) Racial distribution

Each decennial census prior to 1950 classified the population by race. However, characterization of the population by race was omitted in the census of 1950, reportedly due to the extensive racial mixtures in various proportions and the inadequacy of such classification. The census of 1940 reported 12 percent white, 15 percent Negro, 72 percent mestizo and 1 percent all others. Undoubtedly this ratio has continued with slight variation.

(C) Occupational distribution

Of the total labor force of 290,000 in 1958, 53 percent were engaged in agriculture, forestry, fishing and hunting; 12 percent were in commerce, transportation, and communications, 17 percent in services; 7 percent in manufacturing; and 11 percent in other pursuits. About 16 percent of the workers are covered by social security.

Government

The Constitution of Panama, like the Constitution of the United States, provides for equality of persons. It recognizes no distinctions of race, birth, social position, sex, religion, or political affiliation in the administration of justice, eligibility to hold office and the enjoyment of civil rights.

The Government of Panama is republican, democratic, and centralized in form with the familiar separation into executive, legislative, and judicial branches.

The President, two Vice Presidents, and the members of the legislature are elected by direct popular vote for a 4-year term. The President cannot succeed himself in office. He appoints his own Cabinet which consists of eight members. The nine Provincial Governors and all municipal mayors serve at the pleasure of the executive. Councilmen are elected for terms of 4 years.

Our legislature, or national assembly differs from your Congress in that it is a unicameral body which corresponds to your House of Representatives. The national assembly at present consists of 53 members, each member representing 15,000 inhabitants.

Panama's judiciary resembles very much that of the United States. Municipal courts for minor matters; circuit courts (corresponding to U.S. district courts); superior courts (corresponding to U.S. courts of appeals) and a Supreme Court. In recent years there has been adopted from the French system the administrative courts, the main purpose of which is to check and censure any abuses of power by the executive organ of the Government.

Again, like lovers of freedom and democracy everywhere, Panamanians are faced with the responsibility of maintaining an alert, vigilant watchfulness over the processes of democracy in order to close the gaps between creed and deed.

Economy

As previously stated the strategic geographic position of the Republic of Panama as the connecting link between two oceans and two continents has, to a large degree, predestined its economic activities, with major emphasis on commerce. Until recent years only secondary consideration was given to agriculture and industry.

Balboa's trek across the isthmus in 1513 dramatized the vital importance of Panama. From that time the overland route across the isthmus was used to ship precious treasures to Spain, thereby bringing the isthmus great prosperity. Then the United States built the Panama Railroad in 1855 which greatly aided the development of the west coast while serving the commercial interests of those Central and South American States in the Pacific.

These commercial activities formed the core of Panama's economic life. Afterwards, the Panama Canal was constructed by the United States between 1904 and 1914 at a net cost of $380 million as the world gaped in wonderment at the engineering, mechanical and social genius of this country. With this enterprise a new chapter in the economic history of Panama unfolded.

Back in 1532 Charles V of Spain initiated the first study of the feasibility of joining the Atlantic and Pacific by a man-made strait. The French unsuccessfully undertook the project but it was the United States which accomplished the task under the terms of an Inter-Oceanic Treaty negotiated with the Republic of Panama in 1903.

Although fluctuating from time to time, the principal economic activity of Panama since 1914 has been the sale of services to the Canal Zone and goods to tourists and transients.

Panama is unique among the nations of the Western Hemisphere. The canal is the hub of its economic life, bringing to Panama a certain amount of independence but at the same time a large measure of economic dependence on external forces. For example, Panama has been subjected to wide cycles of prosperity and depression over which it has had no control. Hence, the destiny of this young Republic is closely associated with the economic and political activities of people all over the world.

The Government of Panama plays an important role in the country's economic life by entering some fields itself, by regulating certain operations, by means of its revenue system and expenditures.

The present administration continues pushing vigorously forward a national program stimulating the promotion of many projects in the fields of agriculture and industry for the purpose of diversifying the economy of Panama. This new approach to national affairs has considerably lessened the country's dependence upon the Panama Canal whose economic importance in this regard has been gradually decreasing due to curtailment of the activities of U.S. Government agencies in the Canal Zone.

Meanwhile Panama continues to offer its traditional welcome to foreign merchants, traders, and distributors to take advantage of the country's exceptional geographical location for shipping and airline facilities convenient to consumer markets in Central America, the Caribbean countries, the north and west coasts of South America and some sections of Europe, as well as the Orient. In this respect its laws grant many concessions to foreign investors interested in resource development and who may be seeking industrial possibilities on the isthmus.

Education

Thomas Jefferson once said: "If a nation expects to be ignorant and free, it expects what never was and never will be." Freedom

and democracy include the acceptance of responsibility. Education is the primary duty of freemen. The proper working of democracy is based upon it, entailing as it does cooperative endeavor and sacrifice toward the common betterment.

Education was not one of the major concerns of the provincial government; thus, when the Republic of Panama was established in 1903, there was practically nothing in the way of a school system in the country. Judged against this background, then, Panama since its independence—a brief 57 years—has made remarkable progress in the field of public education.

Recently published UNESCO studies on illiteracy show that Panama has one of the lowest illiteracy rates in Latin America. From an all-time high of 71.7 percent in 1911, Panama's illiteracy rate has declined to less than 29 percent. In the last academic year the following educational institutions were registered in the Republic: Primary, 1,079 official and 80 private with 4,487 and 366 teachers, respectively; secondary, 74 official and 23 private with 874 and 588 professors, respectively. Total pupil enrollment was 178,803; total number of teachers, 6,315. Clearly, then, this constitutes a tremendous increase over 1904 when Panama started practically from zero with its educational system.

Almost one-fourth of the national budget of the country is allocated to education. In 1957, over $12½ million, or 21.6 percent of the total budget and in 1958, over $14½ million, or 23.5 percent went for education. This was over $2 million more than the previous year in promotion of the educational interests of the people. There is no difficulty in appreciating the seriousness of the problems facing this young nation in the matter of adequately meeting its obligations in the area of education. As in most countries, including the United States, Panama does not dispose of sufficient resources to attend the growing demands of education.

Although the percentage of the national budget allocated to education is one of the highest of any country, candor compels the admission that our limited budget falls below those of many North American universities and of many Latin American cities.

As always, money for education is never enough. Many communities still lack schools, and buildings as well as materials are inadequate either in quality or in quantity. Every 25 years our population doubles itself which means that more young children have to be educated. This places an unusually heavy annual burden upon the already severely taxed resources of the nation. Inservice training of teachers is sorely needed to keep up with the demands of the 20th century. In spite of hardships and obstacles, Panamanians in all walks of life believe in the development of education and are willing to make the sacrifices necessary to meet the challenges. This belief makes it possible to raise the cultural standards of the country and mold the civic conscience of the young people.

Beginning in 1904 with the passage of the law of public instruction, Panama made it quite clear what its attitude toward education was going to be. This enactment made available to Panamanians an educational system ranging in scope from kindergarten to university.

The Constitution of Panama makes primary public education compulsory and free for all children between the ages of 7 and 15. Similarly, secondary public education is free, but it is not compulsory.

Panama has long been committed to the ideal of equality of opportunity for all, however imperfectly this ideal may have been realized. No denial of opportunity could be more critical than the one involving education. It is more completely the key to positions of responsibility and leadership in the modern world and if adequate becomes a relatively and progressively greater deprivation with each passing generation.

University of Panama

The University of Panama opened its doors in 1935 as the national university with an enrollment of 127 students and 18 professors. Today there are 3,500 students and 131 professors—124 of whom are Panamanians. More than 2,000 persons have graduated from the faculties of philosophy, letters and education, law and political science, engineering and agriculture, natural sciences and pharmacy, public administration, and commerce and medicine.

As a friendly observer of the American scene, I have become increasingly concerned in recent months with the debate on American education, and I believe the debate is more important than the decisions in Washington that cover the front pages of the newspapers. For the American people are judging their own scale of values, are shaping the signposts to the future, when they bring their system of education under critical public review.

Over a century ago, the eminent Andres Bello advanced the concept that the Latin American University by tradition is keyed to the needs of national development. An echo of this viewpoint is heard from the late Founder-Chancellor Octavio Mendez Pereira who once stated that the mission of the university is to develop a profound sense of nationality. In 1947 at an opening exercise he observed:

"In all of its activities the university must stimulate and develop a profound sense of unity and of community life in our people and of root into this our soil. Panama is a nation with one foot on the ground and the other in the air, as if to begin a journey. And now is the time to realize that our destiny is difficult—it is to have nationality as well as homeland. We must fight against those forces entrenched in power, against the leadership of privileged classes; we must fight for our sovereignty in the spiritual as well as of our rights over our resources, our land, and our collective destiny."

Students of the university are in total accord with this avowed mission and by means of protests, strikes, demonstrations, publications and general agitation, they have made the university one of the country's most potent political forces. This represents a basic difference between the universities of North America and those of Latin America.

This is in no way surprising when we recall that toward the end of the first World War there swept through the Latin American countries currents of thought and action, directed toward the achievement of social freedom and equality of opportunity for the masses who were beginning to feel the need for relief from oppression. This educational movement, dramatized through the vigorous and colorful leadership of José Vasconcelos, was an essential part of the Mexican Revolution, by the Russian Revolution, and by the new ideology of democratic freedom and social equality engendered by World War I.

Since the students of the University of Cordoba in Argentina staged their 1917 revolt against the then current mixture of politics and academic matters, student participation in national politics throughout the continent has gone hand in hand with what has been called university reform. The youth are rebelling against conditions which they see around them. At one time American and French democracy constituted their ideals but their impatience with the slow progress which has been made in attaining these ideals has led them to examine other ideologies. Yet they continue to proclaim democracy as their goal although expressing a natural curiosity about the triumphs of the other ideologies which seemingly offer quick solutions for the social problems plaguing the poorer classes. So long as economic and political instability continue in Latin America, the idealism and rebellious spirit of the youth can be expected to be expressed in action.

As the student reform movement eventually spread to universities throughout the Latin-American continent, it was inconceivable that Panama would not feel its influence. Consequently, our university students, too, have been active in advocating a new nationalistic awareness of cultural aims and objectives for our country.

Outlook

A democratic nation can move forward only through the interest of its leaders and the support of its electorate. The generous investments made in education during recent years are without parallel in the history of Panama. These large-scale expenditures for the advancement of the national education have been undertaken in spite of the limited economic resources of the country, and despite the necessity to meet other social obligations of equal magnitude. But this course has been adopted because of the conviction of our Governments that the prosperity and welfare of the Panamanian people depend upon the level of education attainable.

As was aptly stated by your venerated Abraham Lincoln, "it is only education and what it embodies—self-discipline, austerity, integrity, spirit of enterprise, and civic consciousness—that can lead men to the dignification of life."

Panamanians realize this truth and, like the multitudes of Latin America, Asia, and Africa, are surging like a tide onto the historical scene, determined to occupy their place at the table of life as human dignity dictates.

All of us in Panama share a vital stake in our country's educational program and assume a correspondingly critical obligation to support and promote its expansion, so that more and more Panamanians may participate in the democratic process of government to the enrichment of the nation and to the moral solidarity of mankind.

EXCERPTS FROM ADDRESS DELIVERED BY U.N. AMBASSADOR GEORGE W. WESTERMAN, OF PANAMA, BEFORE THE RESEARCH INSTITUTE OF AMERICA, NEW YORK, FEBRUARY 7

VIEWS ON LATIN AMERICA

With the end of the Spanish Empire in America it was Simon Bolivar who, with creative spirit and extraordinary vision, became the first official advocate of collective security on a continental scale. At the Congress of Panama in 1826 the American nations proclaimed the ideal of a cooperative peace. Writers, poets, and dreamers kept alive this idea of inter-American unity through the imperialist 19th century.

More than six decades passed before the seed of common and mutual protection of the "Confederate States" of America began to grow. Then President Cleveland of the United States approved an act of Congress authorizing him to call a conference of the American countries in order to discuss a plan of peaceful cooperation and reciprocal relations that would benefit all. James G. Blaine opened the conference which brought into being the International Union of the American Republics.

Mutual defense against aggression and the maintenance of peaceful relations have not been the only concerns of the inter-American system. Economic cooperation has also held high priority. This question came forward at the first meeting of the Foreign Ministers of the American Republics held in Panama in 1939. Resolution 3 adopted

by that body called for "cooperation between the American Republics in order that they could protect their economic and financial structure, maintain their fiscal equilibrium, safeguard the stability of their currencies, promote and expand their industries, intensify their agriculture, and develop their commerce."

The subject of economic cooperation among the American Republics has been raised and debated frequently at subsequent inter-American meetings. Then last September the third meeting of the Special Committee of the Council of the Organization of American States to Study the Formulation of New Measures for Economic Cooperation, convened at Bogotá, Colombia. That conference grew out of the lofty objectives of Operation Pan America proposed by President Juscelino Kubitschek of Brazil. His plan envisaged public and private financial assistance for hastening the social, economic, and industrial development of the American Continent.

The economy of Latin America that had been as a whole almost exclusively agricultural was transformed between 1914 and 1959 into one that was both industrial and agricultural. Thought nearly three-fourths of the working population were still employed in the rural sector of the economy, they produced less than those in industry. Under the stimulus of industrialization, urbanization, and immigration, Latin America's population more than doubled—from 80 million in 1914 to 180 million in 1960. No other area in the world today has a population growth faster than that of Latin America with its 2½ percent net gain annually. By the year 2000 its population is expected to exceed half a billion. Meanwhile, its tremendous development potential augurs for it much prominence and importance among the family of nations.

For some time now the entire area has been in the throes of a painful process of social, economic, and political transformation, and this will continue to be so until a new and more broad equilibrium is achieved. Consequently, the role that Latin America will play in world affairs will be determined not only by the dynamic processes of growth and change undertaken by representative Latin American governments, but by the assistance and cooperation received from the United States.

The basic future aim of the United States in the circumstances should be a sound, prosperous, and stable Latin America, one that will contribute to the strength and solidarity of the Western World and will advance the security of the entire hemisphere.

Whether the standpoint be political, economic or military, the unique importance of Latin America to the United States is too obvious for us to attempt to debate. Since the inception of the "good neighbor" policy the United States has come to value ever more highly the political support of the other American Republics.

Politically, because of the concern which the United States has in this hemisphere as expounded since 1823 in its Monroe Doctrine. Between the Organization of American States and the United Nations organization the support of Latin America has helped to bolster the world leadership position of the United States to an appreciable extent. Latterly, the admission of 20 newly emerged African States to United Nations membership, and their alliance with an Asian grouping to present a 46-vote bloc, has served to undercut the strength of the Latin American Republics. In the face of this fact, Latin American collaboration will have even greater significance to the United States in the context of future development.

Economically, Latin America is obviously of the greatest importance to the United States. It accounts for a large portion of the U.S. foreign trade, larger than that of any other major region in the world. This is the main economic interest for both sides, with each providing an indispensable market and a source of needed goods for the other. In addition, U.S. citizens and corporations have invested in the Latin American area nearly $9 billion, also an amount greater than in any other region in the world.

The vested interests of U.S. citizens are inseparably intertwined with the security interests of the United States, for the bulk of the investments are in mining and petroleum enterprises, the products of which are indispensable to the North American economy in peace and war. Of course, it must be admitted that these private investments also serve to help the development of Latin America, thus greatly adding to its economic capacity.

From the military viewpoint, the proximity alone of Latin America to the United States makes it strategically vital. In addition, the value of the area further enhanced by the location there of the monumental Panama Canal, of several military installations which shore up the national security and safeguard hemispherical defenses, and by its store of raw materials which would be urgently needed in the event of another world war.

Strong support for Latin America is essential and consistent with the enlightened self-interest of the United States. From time to time the nations of this hemisphere have come together to plan for mutual protection, economic growth, industrial development and social progress. But as the free world moves through an epoch of great significant economic, social, and political events, there must be a full reappraisal of traditional relations, and new decisions taken to meet the pressing imperative of our time, which calls for speedy resume of underprivileged peoples from misery, ignorance and poverty.

As an area of investment Latin America ranks fairly high outside the United States and Canada. These pioneer countries with untapped resources to exploit, have natives capable of hard work and of being easily adaptable to American industrial skill. Granted that the hemisphere has its share of trouble and unrest, it is certainly not as explosive as the Continent of Africa, or the Middle East or Asia. Europe which is always regarded as a more stable climate already has been subjected in the past half century to two violent political upheavals and, according to military strategists, the Berlin situation could erupt momentarily to inflame the entire world.

Latin Americans will move away from the orbit of neutralism or indifference in the cold war struggle for men's minds if they feel they have something worth fighting for by way of preserving standards of decent health, higher literacy rates, a greater degree of individual independence and personal dignity. Chester Bowles, now Under Secretary of State, underscored this point as far back as 1954 when he wrote in the Atlantic Monthly:

"The political objectives of the U.S. aid program [must be] to develop indigenous political and economic strength among the nations of the free world so they can survive as free people. * * * As they succeed in meeting the needs of their people, their confidence in democratic methods will grow, and with it their determination to defend their achievements against all adversaries, either from within or without. With such nations, the United States can form a free and dynamic partnership which over the years will erase the threat of Communist aggression."

There is need for a new era in American cooperative effort to promote the entire material, social, moral and spiritual affairs of this hemisphere and to erect an edifice of peace and democracy attuned to present century architecture of material well-being, social equality and personal dignity. However, speedy efforts must be made to narrow the gap between your per capita income of $2,000 a year and our average per capita income of merely $285 a year. Social progress must be accelerated among the great masses of the people of Latin America so as to strengthen and preserve free and democratic institutions.

We remember with much fervor President Kennedy's special pledge to Latin America that good words would be converted into good deeds in a new alliance for progress and in an effort to assist free men and free institutions in casting off the chains of poverty. He has further stirred the imagination by his establishment of a special interdepartmental task force under the able leadership of Adolf Berle, well known to Latin America. We, in Panama, share the hope recently expressed by Secretary of State Dean Rusk that this qualified group will give intensive attention to the problems of the area in order that they can be translated into opportunities for constructive action.

There is general expectation in Latin America that under the new administration in Washington, the "good neighbor" policy will be revitalized and a new and more robust partnership will result between the Anglo-Saxon and the Latin worlds.

ADDRESS DELIVERED BY HIS EXCELLENCY AMBASSADOR GEORGE W. WESTERMAN, U.N. DELEGATE OF PANAMA, BEFORE GRADUATE FACULTY AND GRADUATE STUDENTS, YALE LAW SCHOOL, FEBRUARY 17, 1961

THE PANAMA CANAL AND UNITED STATES-PANAMA RELATIONS

Introduction

It is my understanding that a number of you during the winter term at the law school considered international servitudes in your investigation of contemporary international law under Professor McDougal. It would therefore be somewhat presumptuous of me to try to expand on this subject as you have considered it, being neither competent nor ready to follow your distinguished professor in this most specialized field. Instead, I thought it more prudent to advance some comment about Latin American attitudes concerning these servitudes in general, and Panamanian attitudes in respect to the Panama Canal in particular.

I would be gratified if such an attempt, albeit a modest one, might contribute to the clarifying of certain aspects of United States-Latin American relationship for those of you from among whom North American leadership may derive in the ensuing years; and how we, in Latin America, feel about the manner in which these servitudes have operated and continue to operate in the current world climate.

Since the end of World War II deep-seated sociopolitical change has been taking place in Latin America, putting the entire area in the throes of a painful process of profound social, economic, and political transformation. Consequently, the overwhelming problem in all Latin American countries today and for the foreseeable future is that of social revolution.

The Republic of Panama has proved no exception to this trend and for more than a decade this country has been the object of a revolution of rising popular expectation. As new social and institutional forms caused our environment to be reshaped, the Government of Panama became more and more concerned with the emerging problems. Numerous reforms have been instituted and various programs initiated covering every facet of the country's national life, all tending to alleviate the economic hardships suffered by a rapidly growing middle class and the lower socioeconomic group.

Within this period agricultural output has increased and industrial potential more widely exploited. However, fractures in our national system of trade and diplomacy became compounded not only by the country's limited financial resources, but by the heavy retrenchment programs undertaken on the Canal Zone by the Panama Canal Government organization. These steps of retrenchment resulted in the discharge of more than 10,000 employees between the 10-year period 1949–59, with a corresponding curtailment of much-needed revenues for the national treasury.

Panama achieved its independence together with the group of South American peoples who, in the revolutionary period between 1810 and 1824 emancipated themselves from Spanish domination in the Western Hemisphere. Of its own volition Panama united with Nueva Granada, Ecuador, and Venezuela to form Gran Colombia. Until the dawn of this century the Isthmian Republic remained united to the nation built upon the former vice royalty of Santa Fe.

No more unique relationship probably has been established in history than that between the United States and the Republic of Panama by their collaboration in the construction of the Isthmian Canal. The generous contribution by Panama of the very core of its territory for that purpose and the stupendous effort of the North Americans who made the vision of centuries a reality form an enduring bond of common interest.

As part of the national domain of the Republic of Panama, Panama is the landlord, and the United States the tenant of the 10-mile strip of land known as the Canal Zone, where such rights, powers, and authority were granted to the United States for the specific ends of constructing, maintaining, operating, and defending the Panama Canal. The peculiar consideration in this tenancy is that of perpetuity, in that there is no reversionary right provided for in the contract—the original treaty. This constitutes an unusual feature in contracts. It is axiomatic that every landlord should have or should be conceded the right of adjustment of the rent of administered property from time to time, in equity and good conscience.

It should be remembered that at the time of the execution of the original treaty there was no parity between the parties; the contractual relationship lacked many of the features esential to the making of a binding contract; Panama in that period of its history was in no position to demand, dictate, or impose conditions. The United States was, and took the fullest advantage of its preferred position. This is what makes the voice of equity so strong in the resulting situation. This voice has since been insistently appealing to the conscience of the United States for proper and adequate redress.

At this point I wish to raise what I consider a vital question so as to provoke suitable reflections among you scholars of the law. Does this concept of perpetual occupancy of any part of the territory of one sovereign nation by another have validity under the expanding doctrines of contemporary international jurisprudence?

Because of the strategic geographical position of the Isthmus of Panama—for centuries a focal point of international transit and trade—the Panama Canal which bisects this territory has had a decisive influence on the rate and structural characteristics of Panama's economic development. Through the years it has come to mean to Panama what tin is to Bolivia, copper to Chile, coffee to Brazil and Colombia, bananas to Ecuador, wool to Uruguay, and oil to Venezuela. Because then, it has represented to Panamanians the greatest source of national wealth, it is not unnatural that eyes have been usually focused upon it as the source from which Panama should derive greater commercial and economic advantages, as well as more substantial direct benefits.

Both from the commercial and military standpoints the Panama Canal has proved and continues to be of great importance to the United States. About 82 percent of the total commercial cargo which transited the Panama Canal in the fiscal year 1960 originated in or was destined for U.S. ports. In five of the last 6 years new records have been set showing the upward trend of canal activity. Strategically, the Panama Canal has become an invaluable asset to the United States and its allies during periods of emergency.

Well known is its record as a supply line to allied fighting forces in Europe in World War I, and its utility in facilitating the passage of more than 5,300 combat vessels and about 8,500 other craft transporting troops and military cargo during World War II. The incalculable savings to the allied nations in time, money, and human lives from the shortened canal route have been fully realized. Furthermore, during the Korean conflict thousands of U.S. Government vessels transited the canal bearing supplies and war materials to the United Nations forces in the Far East.

Despite modern technological development the isthmian waterway remains a vital element in the national defense of the United States, its strategic significance to the Western Hemisphere is still acknowledged by military experts, and it continues to be a keynote of international commerce.

With all these advantages inherent in its operation why should Panama not receive a greater measure of socioeconomic participation from this strategically important international activity.

On July 26, 1904, U.S. Minister John Barrett telegraphed the State Department that agitation was increasing and that the situation was critical. He was referring to reactions of the Panamanian people supporting President Amador Guerrero's protest to Washington regarding treaty violation. Minister Barrett qualified the dispute at that time as of the highest importance since it involved the whole issue of sovereignty in the Zone. From that day to this succeeding administrations and generations of Panamanian people have continued to find cause for complaint about the quality of the relationship existing between Panama and the United States.

The formal basis of the United States-Panama relationship is the Treaty of 1903 which contained conditions and concessions which Panamanians regarded as unjust, discriminatory, and totally alien to the national rights of a sovereign state. The 1936 treaty aimed at removing some of the more unsatisfactory terms contained in the original convention. For one it abolished the guarantee of the independence of the Republic of Panama—a provision particularly distasteful to a state enjoying full sovereign and independent status. It also elimnated the right of "eminent domain" which the United States had enjoyed in the cities of Panama and Colon.

While this treaty also fulfilled certain Panamanian aspirations with regard to fuller consideration in canal affairs, it failed to satisfy Panama's claims that its nationals working on the Canal Zone were entitled to enjoy equality of opportunity and treatment with U.S. citizens; that its commerce should share more fully in the benefits to be derived from the market in the Canal Zone and from ships transmiting the canal; and also that it should receive a more equitable share of direct benefits from the canal enterprise.

The 1955 Treaty of Mutual Understanding and Cooperation provided the instruments through which these aspiratons could be fulfilled adequately. However, there developed factors which prevented the full implementation of the obligations undertaken by the United States. These factors, such as unilateral interpretations given to treaty provisions by certain U.S. agencies, seriously compromised a relationship which is as important as it is historic. Its special character will always invite the constant watchfulness of the entire Western Hemisphere.

It is evident that the relationship between the United States and Panama should be based upon mutual respect, common understanding, friendly sentiments and a spirit of complete confidence. It is to be regretted that relations between these two countries were permitted to deteriorate as they have, but without doubt there yet exists a strong reservoir of good will in Panama and in Washington that will prevail, in order to find ways of developing United States-Panama relations to a satisfactory level for all concerned.

Developments of the recent past in Panama call for the most serious meditation upon the questions and issues in dispute. We have our respective points of view but the stakes involved are exceedingly high. We need therefore to bring our joint and collective wisdom and understanding to bear in helping to find a reasonable way out of those deplorable impasses which have from time to time threatened to block our countries' normally, friendly relations.

To quote an official of the U.S. State Department, "Strict compliance on the part of the U.S. Government with its treaty obligations with Panama is of the essence of exemplary relations with Panama."

U.S. public policy of equality established

The principle of equality of opportunity and treatment as its public policy toward Panama has been set down by the United States since 1908.

A joint statement issued October 3, 1953, by President Eisenhower of the United States and President Remon of Panama, upon the occasion of a State visit by the latter to the United States, refers to this matter in the following manner:

"We have equally agreed that inasmuch as the two countries have a mutual and vital interest in the work of the Panama Canal, the principle of equality of opportunity and treatment must have full effect in regard to the citizens of Panama and the United States employed in the Canal Zone as set forth in the exchange of notes of March 2, 1936 on this subject."

One of the precepts set forth in item 1 of the 1955 memorandum of understandings to govern the labor practices of all U.S. agencies on the Canal Zone, establishes the principle of equality of opportunity and treatment of Panamanians and U.S. citizens.

Here are some of the areas in which regretfully noncompliance may palpably be noted:

Civil Service

In 1947 Executive Order 9830 made Panamanians eligible for civil service status on the Canal Zone. Over 500 Panamanians immediately availed themselves of the opportunity afforded to sit for these examinations. However, since then there has been a progressive decrease in their participation in civil service appointments. In 1952 there appeared to be another resurgence of interest when 252 Panamanians competed for appointments. This number plummeted to the insignificant total of 44 in 1953. In the following years there was a slight rise to 77 which has since dwindled to 9, 8, 8, and 2 in the last succeeding 4 years.

There was no lack of enthusiasm on the part of Panamanians to try and to qualify for the higher level positions available in the Canal Zone. Between 1947 and 1958 the employment register showed 730 Panamanians as eligibles but only 72 were called to

fill classified positions during this 11-year period.

The trend in Table "A" fully portrays the frustration of Panamanians over their failure to secure civil service appointments despite merit and fitness, the only two basic requirements recognized by the Fair Employment Practices Board of the U.S. Civil Service Commission.

Merit System

Regulations issued by the Secretary of the Army pursuant to Public Law 85–550 and President Eisenhower's Executive Order 10794 establishing a Canal Zone merit system provided that: "Rates of pay at or below grade 3 in the nonmanual category, grade 6 in the service category, and level 10 in the manual category shall be derived initially from existing non-U.S. citizen hourly rates in the Canal Zone. Rates of pay above these grade levels for all security positions shall be established in relation to rates for all security positions shall be established in relation to rates for the same or similar work performed for the U.S. Government in the continental United States, but shall embody a deduction for the factor as defined. These rates shall constitute the base salary or wage rates."

The Army Secretary's regulations further provides that: "For positions for which the basic rate of compensation has been established in reference to rates for the same or similar work in the continental United States, rates of pay shall be adjusted in relation to changes in the corresponding rates in the United States. For positions for which the base rate has been derived initially from non-U.S. citizen hourly rates in the Canal Zone, rates of pay shall be adjusted in relation to changes in wage rates in the Republic of Panama as determined by periodic wage surveys of rates paid for commercial and Government employment in the Republic of Panama."

These provisions have the effect of creating two separate wage scales which are highly inequitable and prejudical to the basic philosophy underlying the 1955 treaty provisions. This is all the more so in the light of Public Law 85–550, section 10(C)(1) which states:

"The Canal Zone merit system shall conform generally to policies, principles, and standards established by or in accordance with the Civil Service Act of January 16, 1883, as amended and supplemented."

Section 6 of the same act further states that:

"The employment standards established under section 4 of this act and the rate of basic compensation established under section 5 of this act shall be applied uniformly, within and among all departments, to the respective positions, employees and individuals under consideration for appointment to positions, irrespective of whether the employee or individual is a citizen of the United States or a citizen of the Republic of Panama."

To match the cities of Panama and Colon against the continental United States for wage-fixing purposes, simply perpetuates the perennial disparity between rates paid to employees in semiskilled and unskilled jobs and those paid for jobs requiring skills, or other technical or professional training.

While the merit system in itself embodies the principle of equality of treatment and opportunity for all the canal working forces regardless of national origin. However the corresponding pay plan obviously was conceived with a view of perpetuating discriminatory practices affecting the rights of Panamanian workers. Such is the viewpoint held by the National Government and supported by the Canal Zone labor unions representing non-United States citizen workers.

Had the actual pay plan embraced civil service rates of pay at the lower level as well as the higher, it would have had the effect of compensating for losses of purchasing power suffered in 1958 by the Canal Zone non-U.S. citizen employees. It would also have had the effect of eliminating this element of economic discrimination.

The Secretary of the Army is empowered by authority delegated to him by the President of the United States, to correct this inequity which is a source of continuing dissatisfaction among the lower graded workers on the Canal Zone. It would be in the greatest interest of the U.S. Government to recognize the peculiar circumstances which place the Canal Zone in an entirely different position from any other oversea operation of that country and thus institute a wage scale for Canal Zone agencies, as well regulated in the lower grades as it is at the higher levels, and in more realistic relation.

It would certainly be more advantageous to devise a formula whereby this may be accomplished according to U.S. standards under which the work is performed, than to attempt the incongruous task of measuring Canal Zone jobs against similar ones in Panama and Colon where the job standards and conditions of employment and basic economic factors are not comparable.

Promotion Policy

The principles as laid down in the existing Canal Zone promotion policy are well founded. However, there is widespread complaint registered by many Panamanian workers who although fully trained and with wide experience have been denied advancement under one pretext or another.

In defending its employment policy the canal administration maintains that properly qualified citizens of the Republic of Panama have been eligible for appointments in executive, supervisory, professional, subprofessional, and clerical positions. How closely is this policy borne out by empirical experience is a matter that is subject to scrutiny.

As of June 1960 there were about 9,000 non-United States workers employed with the Company/Government. Any impartial observer would find among this number a large percentage of Panamanians with special educational training and other qualifications which are requisite for employment in the higher graded positions. What, then, has militated against their promotions, or why have certain job opportunities been denied them, or why has compensation not been awarded them according to their proved abilities and skills?

Compensation

The harsh effect of discrimination in compensation evidences itself in the following details: On June 2[illegible], 1958, Public Law 85–462 granted a 10-per[illegible] increase for Classified Act employees, retroactive to January 12. On May 27, 1958, Public Law 85–526 granted a similar increase for postal employees retroactive to January 11, 1958. Wages of a number of other U.S. rate groups, including craft and supervisory, floating equipment, power branch, railroad, printing plant, and miscellaneous, were adjusted upward during the year 1958. The total annual cost involved was $2,024,392.

No similar cost-of-living increase was granted to non-United States citizen employees; although automatic and administrative pay increases at a total cost of approximately $153,608 per annum were made in their favor.

A proper wage adjustment granted to non-United States citizen workers would have been an approach to the ultimate and gradual realization of uniformity in rates of pay. It would undoubtedly have lessened the demoralizing effect experienced by these workers due to the losses sustained in the purchasing power in the face of a steady rise in the cost of living.

U.S. citizen employees are allowed a 25-percent oversea differential, plus an 18 percent tax grant, in addition to more liberal annual leave benefits, free home travel, repatriation, commissary and free entry privileges, and a number of other miscellaneous fringe benefits not extended to employees in the non-United States roles living outside the Canal Zone.

The wide disparity in earnings of the two groups of canal working forces is reflected in the following table:

PANAMA CANAL COMPANY/GOVERNMENT

Canal Zone wage rate and U.S. wage rate averages for 1950–59

Fiscal year	Canal Zone wage rate		U.S. wage rate	
	Hourly rate	Annual rate	Hourly rate	Annual rate
1950	$0.48	$998	$2.31	$4,805
1951	.53	1,102	2.35	4,888
1952	.58	1,206	2.61	5,429
1953	.61	1,269	2.76	5,749
1954	.63	1,310	2.91	6,053
1955	.64	1,331	3.09	6,429
1956	.69	1,435	3.20	6,658
1957	.76	1,581	3.35	6,972
1958	.76	1,581	3.53	7,342
1959	.83	1,720	3.58	7,443

In many parts of the United States the Federal Government is the only means of employment for the inhabitants of those regions and there is no clear yardstick like private industry or highly unionized industries to dictate the rates of pay which Uncle Sam must pay his workers.

The Federal Government is proud of being a good employee and knows that it has the responsibility to its citizens to see that they are paid a fair wage, in this manner allowing them an opportunity to improve their living standards. In return it expects loyal, honest and efficient work.

However, it is noted that nowhere in the United States is the Federal Government as discriminatory as on the Canal Zone in arriving at a fair wage for its Panamanian employees who are a part of the Federal civil service under the merit system set up over a year ago. Why should the Federal Government have a lesser responsibility in the Canal Zone, particularly when it affects a contractual agreement of the United States.

Single basic wage scale

Unilateral Interpretation

The principle of equal pay for equal work is a cornerstone of the American labor policy, as much as the equalitarian concept constitutes the very essence of North American industrial democracy.

After years of negotiating for freedom from all discriminatory practices which would work against the best interests of Panamanians employed on the Canal Zone, the Republic of Panama achieved one of its genuine aspirations—adoption of a single basic wage scale for all employees regardless of whether the employee is a United States or Panamanian citizen.

This was regarded as a singular achievement: First, it would enable Panamanians to feel that they had more than a token stake in the canal enterprise: second, it would improve the dignity and psychological well-being of the Panamanian employee which should be of the utmost importance to the foreign policy of the United States; third, it would furnish a greater incentive to noncitizen employees on the Canal Zone to develop a higher degree of skill and industry; fourth, it would lift productivity and efficiency accordingly, and would have a beneficial impact on the total national economy.

Unfortunately, as has often been the case in the past, unilateral interpretations were adopted on the Canal Zone, thus negating Panamanian's legitimate rights to equal pay for equal work. The reaction has been to

compromise seriously the relations between the United States and Panama, as, in the circumstances, the National Government has had to register its "deep concerns" with the highest officials of the North American Government.

Violations

In an attempt to justify many of the biased practices carried out against non-U.S. citizens who perform equal work and have the same qualifications as their North American fellow employees, the following violations may be cited affecting teachers and doctors.

Non-U.S. teachers holding bachelor degrees from universities such as Columbia, New York, Nebraska, Ohio State, Michigan, and other highly accredited American institutions, are subject to a 12-month salary scale whose entrance rate is $3,000 per annum; maximum $4,080. U.S. citizens with the same academic qualifications enter the service at $5,625 per annum on a 9-month basis; maximum $8,250.03.

Non-U.S. teachers holding a master's degree earn $3,480 per annum; maximum $4,560; those U.S. citizens with the same degree receive $6,249.96 per annum; maximum $8,874.99.

Contention of the Canal Zone administration that there is not a high enough percentage of non-U.S. teachers possessing degrees to warrant this group being placed under the Washington, D.C., wage schedule for educators, is rejected by both the teachers and their labor representatives. They offer proof that more than 30 schoolteachers and school officers assigned to these schools have the required professional degree qualifications.

The wide difference in the existing salary scales of the Latin American and United States schools is said to be justified by the Canal Zone Division of Schools because they claim that the aims and objectives of the two systems are different. To what extent, if any, do the aims and objectives of any progressive school system differ in a democratic society? Is it not the real purpose of education to train the youth to become useful citizens in any community and develop to the limit of their capacities?

A primary purpose of the educational system in the Canal Zone is to benefit citizens of the United States as well as those of the Republic of Panama residing in the Canal Zone. Any other purpose would be a contravention of the democratic spirit and of the educational ideal.

Consequently, the division of the teachers and the application of two separate and disproportionate salary schedules are unjust and discriminatory. This practice constitutes another significant violation of the concept that all employees working on the Canal Zone are to be paid according to a single basic wage scale without regard to nationality.

Doctors represent another group of Panamanian professionals adversely affected because of their nationality. They are reportedly frozen at their present rate of pay without possibility of further remuneration.

Up to October 1, 1956, firefighters on the Canal Zone were all U.S. citizens paid according to the Washington wage scale. When these jobs became available to non-U.S. citizens the rates of pay were derived from a local schedule. After the conversion took place the requirements for firefighters became more intensified. However, the earnings of a Panamanian firefighter, with premium compensation included, average monthly about $210. This represents a base pay of $100 less than that paid the U.S. citizens when they were in the firefighter category. Furthermore, Panamanians cannot advance beyond the position of driver-operator.

It is clear that there is no single wage scale existing on Canal Zone as such. There are, in fact, two wage systems, one for the U.S. employees and one for the Panamanian. The manner in which the present single wage scale is set up continues to expose Panamanians to the evil implicit in a present-day determination which still bears traces of the philosophy inherent in the gold and silver, U.S. rate and local rate concepts of an outmoded industrial period.

Citizens of Panama and the United States are found doing the same work, are required to apply for the job in the same manner, pass the same qualification requirements, conform to the same performance standards, are subjected to the same discipline, apply the same knowledge and skills, work the same hours. Despite all this, Panamanians are paid on a different and less attractive wage scale to North Americans.

Panamanians treasure freedom, human dignity, equality, and justice to the same degree as any other people in this Western Hemisphere. Likewise they reject second-class treatment from any source on the same basis that any self-respecting people would. They solicit neither handouts nor largess; they want to be able to make a decent living and to be paid a fair wage in territory leased to the United States for the building of a canal which has aided notably in the prosperity and security attained by the North American Republic during the past half century.

The minimum wage in Panama has been set at 40 cents. On the Canal Zone it is 55 cents. Does it salve the consciences of North Americans to know that their government is paying higher wages than the Government of Panama whose annual budget barely exceeds $60 million? Or is paying better salaries than the merchants in Panama City, or that they are affording more pay to their housemaids across the Canal Zone border?

In the more than 240-odd locality wage areas in the United States from which the U.S. Army and Air Force Wage Board collects wage data, no doubt there will be found areas having towns the size of Panama City wherein wages are low and benchmark trades are few. This fact can be borne out by surveying certain parts of Georgia, South Carolina, Alabama, West Virginia, Louisiana, to name but a few States.

In such areas the living cost is commensurately low—even lower than in Panama City. But does the Army or the Air Force pay a journeyman auto mechanic or a combat vehicle mechanic at W–10 or W–11 a $1.13 in these areas, to start with increments of 5 cents per hour per year until he reaches $1.23 per hour in about 2½ years?

According to available figures the journeyman in the above grade or pay level in Washington, D.C. area (which includes low-cost-of-living places like Lorton, Va., Occoquan, Va.) for instance earns at least $2.50 per hour as an entrance rate.

Meanwhile the journeyman mechanic in Greenville, S.C., and other similar low-wage areas makes at least $2 per hour.

The standards of performance and knowledge and skills required by the Army, Air Force, and Navy for their craftsmen or tradesmen are no different in Panama than in the United States. An electrician helper with no trades experience makes $1.96 per hour in Washington, D.C. On the Canal Zone he makes 72 cents if he is fortunate enough to be chosen for the job.

For upwards of half a century the U.S. Government ignored the humanitarian policy it had applied to Europeans and other Caucasian peoples for a higher living standard, as far as concerned the Canal Zone non-United States workers. Roosevelt's good neighbor policy proved a mockery on the Canal Zone where the non-United States employees were reduced to the minimum in privileges and all the advantages professed by a democracy.

Then in 1951 several former Panamanian Presidents and Foreign Ministers publicly denied the intimidation that they or their respective regimes had favored a Caribbean wage scale on the Canal Zone as a yardstick to evaluate the wages of non-United States employees. They all agreed, at that time, together with labor officials and business representatives, that it was of vital importance for the interest of the Republic in general and commerce in particular that the wage structure of the Canal Zone be increased.

The principle of a single wage for each grade level is spelled out in item I of the 1955 memorandum of understandings reached between the Government of the United States and the Republic of Panama.

From the Panamanian viewpoint the spirit and letter of that provision is being circumvented on the Canal Zone as to its application. Both the Government and labor representatives of Panamanians insist that a more equitable and fairer method should be established for arriving at the base rates for both manual and nonmanual category jobs in the Canal Zone.

Training programs

In 1921 Secretary of War Weeks appointed a Special Panama Canal Commission to make a comprehensive investigation of existing conditions and operations of the Panama Canal and Panama Railroad Company. The Commission recommended, among other things, that tropical labor be trained for better job opportunities and to fill certain skilled positions. From that date there has been agitation made to prepare Panamanians and other non-U.S. citizens for employment in craft categories heretofore restricted to them.

Through the years this policy and others tending to effect a change in the employment status quo on the Canal Zone have been vigorously opposed by labor unions representing the U.S. citizen forces. They have regarded any change, however reasonable, as a threat to or infringement of their exclusive domain. They have even gone on record as proposing legislation to give U.S. citizens' preference in Government's skilled, semiskilled, and office positions on the Isthmus of Panama.

In the face of this hostile attitude and to safeguard the rights of Panamanians to full equality with the citizens of the United States, the 1955 memorandum of the understandings contained a clear and specific provision as to rights, privileges, benefits, and job opportunities to which Panamanians will be entitled on the Canal Zone.

The training programs authorized by the 1955 treaty to prepare Panamanians for greater responsibility and job opportunity with the U.S. Government agencies and installations on the Canal Zone have not been implemented to any appreciable extent. The actual practice is apparently designed to qualify employees more effectively for their present jobs.

Since last April the apprenticeship training program has been expanded to include 25 Panamanian aspirants. There also has been an increase in the number of trades and crafts in which training is given.

The purpose of the treaty commitment in this respect is primarily to establish programs that will encourage a consciousness to pursue higher education. This would mean making available to non-U.S. citizen employees on a continuing basis full high school courses, extension courses in the trades and crafts, and the like.

There are indications that this type of encouragement is beginning to assume importance in the thinking of certain management groups. At least in the Comptroller's

Office it is known that text and reference books have been made available to employees so as to encourage them in the practice of better qualifying themselves. This could result in their personal advancement to positions of better pay.

It is important to note that this new departure came about as the result of employees' initiative which, if demonstrated among other employees, could win similar consideration from management representatives.

Sensitive security positions

Throughout the period of canal history the record of loyalty and reliability of the Panamanian and other non-U.S. employees with the U.S. Government on the Canal Zone has remained unquestioned. This tradition of fidelity, competence, and industry has been handed down to the present workers by previous generations and they have sought to preserve it zealously and without blemish.

In spite of this proved record of loyalty the manner of designating sensitive-security positions at this time would seem to imply that non-U.S. workers cannot be depended upon to help assure the continuity of efficient, expeditious, reliable and safe operation of the canal. This practice is most unfortunate and shortsighted since Panamanians have always felt that they have an equal stake in the successful operation and defense of the Panama Canal. It is a matter of public record that they and their government have always cooperated to the fullest measure in safeguarding the waterway in every emergency of the past.

According to the original survey made by the Canal Zone and administration and presented to Congress, only 2,200 jobs of the Company/Government organization should have been classified as "sensitive." The ultimate decision to place 3,500 jobs in this category has further narrowed the job opportunity of Panamanians and represents another instance of unjustifiable discrimination against the nationals of the Republic of Panama. Are the people who fill these sensitive positions required to have security clearances in accordance with Federal laws? How many of the jobs they fill actually involve security risks?

Operation friendship

Shortly after arriving on the Canal Zone in mid-July for his second tour of duty, Maj. Gen. Theodore F. Bogart, commanding general, USARCARIB, officially launched Operation Friendship, to improve relations between the people of Panama and members of the Armed Forces on the Isthmus. In order to complement this gesture former President Ernesto de la Guardia, Jr., issued a public invitation to the North American population of the Canal Zone to visit Panama and become acquainted with our people and property to appreciate our traditions, our sense of values, our cultural heritages and our human aspirations. The new President Roberto F. Chiari has fully endorsed this movement and has offered it the fullest support of his administration.

Operation Friendship as envisaged by General Bogart is a most commendable undertaking to foster better understanding and promote friendlier relations between two peoples of differing heritage, language, and cultural patterns, who have been linked together by the United States building an interoceanic canal through Panamanian territory, the Panama Canal. The high purpose of this imaginative proposal is one which has been spontaneously endorsed. However, the laudable objectives the West Pointer hopes to achieve could no doubt be attained more immediately through Operation Fairness or Operation Fairplay extending down to the common man on the streets of Panama. Operation Fairplay would insure nonviolation of the traditional American labor principle of equal pay for equal work. It would envisage equality in theory in recruitment, promotions, insurance, qualifications, classification standards, performance standards, and equality in pay. Such a practice would contribute toward dissipating discontent still prevailing among the 15,000 non-U.S. employees working on the Canal Zone.

American heritage and labor policy support the principle that all employees equally qualified should receive equal pay for equal work, regardless of citizenship. A basic principle of Operation Fairplay then should be an increase in the hourly pay of the non-U.S. worker to a decent level based on U.S. standards and not influenced by geographic area considerations.

Adopt this principle and watch the extent to which morale will improve and respect for the gringo increase. Dispense with the discriminatory cutoff level for local pay and U.S. pay and watch the accompanying decrease in dissatisfaction on the part of non-U.S. citizens working for the Federal Government.

Base the single wage on a truly fair and equitable single wage minus the differential and tax factors, and thereby eliminate old injustices and discriminatory features. This will not permit of any misinterpretation of the treaty's intent and will forever remove the idea still somewhat prevalent that U.S. fairplay is but a figment of the imagination.

Operation Fairplay would demonstrate that the United States is serious about conditions in which respect for human dignity and human rights can flourish. It would also indicate her willingness to help stimulate economic growth. It is agreed that economic progress and better living standards enable people to develop their own democratic and stable political institutions as well as encourage them to work cooperatively with other nations in the solution of international problems.

Operation Fairplay should mean a good measure of economic stability and growth for Panamanians. Greater purchasing power will stimulate the Panamanian economy. Not to be overlooked, either, would be the larger market for U.S. manufactured goods.

Under Operation Fairplay the United States would reasonably take care of its loyal, industrious and efficient non-United States-Canal Zone workers by giving them a wage that is truly representative of the type and kind of work they are actually performing. The time must come when pay determination should be based realistically on U.S. standards, on high standards of production demanded and not on the unrealistic local standards predicated on a so-called prevailing wage based on lesser demands.

The U.S. worker is being amply rewarded on the Canal Zone for the level of work performed. Why not apply this same yardstick to non-U.S. workers who make their living alongside U.S. citizens working with U.S. tools, on U.S. equipment, under U.S. standards of adequacy. Can it be that they are prescribed a substandard wage based on nonexistent data merely to save money for the U.S. Treasury, or purposely to emphasize the disparity in pay practices between the United States and a less developed Latin American country like Panama?

Adaptability and resourcefulness are qualities which employing agencies have no difficulty finding among Panamanian workers who are intelligent and capable enough to respond to incentive stimuli. In June last year Vice President G. G. Werner in charge of construction for Merrit-Chapman & Scott, Inc., of New York, publicly attested to this fact. On the Panama Canal widening job at Contractors Hill he stated that Panamanian heavy equipment operators were trained and used on all types of trucks and bulldozers, and all types of shovels except the largest for which special topflight North American operators were recruited. The job of moving some 5½ million cubic yards of rock, earth and muck in the canal widening program was carried out by a force of 94 percent local employees. They were paid a $1 an hour minimum under the U.S. Fair Labor Standards act and their performance proved the stimulation that the higher-than-average wages produced.

Despite national holiday celebrations, frontier disorders, rigid border controls and transportation difficulties after that sombre November 3, the Canal Zone Administration publicly acknowledged the fact that absenteeism and tardiness among its non-U.S. workers were down to a minimum.

On the basis of the performances reported by the Merrit-Chapman & Scott Co. and the high sense of responsibility of non-U.S. citizens on their respective jobs as acknowledged by the Canal Administration, should not the U.S. employing agencies in the Canal Zone put into action Operation Fairplay without further equivocation? It is to be admitted that Operation Friendship represents obviously a meaningless slogan except it is to be supported by the specific improved labor practices of Operation Fairplay.

In order to help repair the prestige of the United States in Latin America the Eisenhower administration proposed a Latin American aid program calculated to bring to the masses of this hemisphere a greater share of the good things of life which 20th-century technology has brought within reach of the common man. President Kennedy has already recommended that the U.S. Congress appropriate $500 million under this proposed aid plan. It is only reasonable to suggest that a portion of this $500 million proposal might well be added to the budget for administration of the Canal Zone agencies, for the purpose of paying a fair and equitable wage to the hard-working, deserving non-U.S. employees of Uncle Sam, and thus bring to them also a greater share of the good things of life.

The Honorable L. SULLIVAN, chairman of the Subcommittee on the Panama Canal of the House Committee on Merchant Marine and Fisheries, observed sometime ago that "we [the United States] will never succeed in having really solid relationships with the people of Panama until they, too, are able generally to live on a decent standard."

The Panamanian workers like to think that in the United States there will be less and less reluctance to move forward to provide them with equal opportunity and fair treatment on the Canal Zone. The peoples of Panama expect the Government in Washing to fulfill the promise inherent in the Declaration of Independence as to equal opportunity and treatment for all peoples. According to an American President this concept makes the American social experiment the most rewarding in world history. It is this concept, then, which should bring to Panama the material and spiritual rewards it has the right to expect from its associate in this successful canal enterprise.

The Secretary of the Army should instruct the technicians of the Army Air Force Wage Board in the Pentagon to come up with a more equitable wage scale than that based on the cost of living concept in Panama City where recruiting is being done. This would insure abolishing the discriminatory and unjust cutoff point of M–10 and NM–3, thereby establishing a basic rate of pay for non-U.S. workers on the Canal Zone that would echo Operation Fairplay through the Americas.

And finally, such a plan would defeat those whose essential purpose is to create ill will and to frustrate all efforts of the Governments of the United States and Panama to reach a mutual understanding. It will project new ways of building real friend-

ship among the peoples of these two American States based on mutual respect and confidence.

In this changing international context, answers that were found more than 50 years ago to the Panama Canal problem were bound to become obsolete and the problem itself was bound to reemerge in a new shape. In the reappraisal which President Kennedy's administration contemplates of United States-Latin American affairs, a long-range readjustment plan with Panama must be given top priority.

This, my dear friends of the graduate law faculty and students of Yale, we should like to see done in the lofty and just traditions of William Howard Taft, Elihu Root, and other Yale luminaries who have envisaged United States-Panama relationship as a cornerstone of continental solidarity and international friendship.

George Washington Memorial Parkway to Fort Washington

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, May 25, 1961

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement and a letter written by Van Arsdale Turner, dealing with a problem of concern to the Interior Department in connection with a parkway to Fort Washington.

There being no objection, the letter and the statement were ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C., *May 9, 1961.*

To the Chairman and Members of the Subcommittee of the Senate Appropriations Committee:

I have taken the liberty of casting my statement on the question of the parkway to Fort Washington in the form of a public letter addressed to those intrepid hikers along the C. & O. Canal—the Douglases, Justice William O., of the Supreme Court, and Senator Paul H., of the U.S. Senate; as also to Secretary Stewart L. Udall, of the Department of the Interior, with a nod to some 178 members of their gallant crew.

I crave your indulgence for this somewhat unusual form the statement has taken, and I request your permission to submit it for inclusion in the record of this hearing.

A PUBLIC LETTER ADDRESSED TO THOSE INTREPID HIKERS, THE DOUGLASES: JUSTICE WILLIAM O., OF THE SUPREME COURT, AND SENATOR PAUL H., OF THE U.S. SENATE; AS ALSO TO SECRETARY STEWART L. UDALL, OF THE DEPARTMENT OF INTERIOR, WITH A NOD TO SOME 178 MEMBERS OF THEIR GALLANT CREW

HONORED SIRS: It distressed me that Saturday proved so miserable for hiking and the local tavern so unsatisfactory for dining. Frankly, though, I restrained my sympathy because you gentlemen always hike along the narrow reaches of the river, and it gets a bit monotonous reading about it every year. Can it be that along with thousands of other Washingtonians you believe the Potomac ends at Hains Point, and that all below it is "Ausland"? Actually, the Potomac, for all practical purposes, starts at that point and immediately becomes a broad beautiful, majestic worthwhile river; the kind of river that doesn't need the help of a canal to afford pleasure but starts immediately affording it to hundreds of enthusiastic boaters for every single one of you enthusiastic hikers, and to hundreds of thousands of tourists who, delighted with their trip to Mount Vernon, will return again and again, but who will never see or care a hoot about a place called Seneca, in the State of Maryland. This is the kind of river that has breadth and depth and strength. It doesn't trip over rocks or fall off ledges. It goes steadily on its way to join the sea, and it carries big ships, and also the mind, to all the ports and harbors of the world.

I'd like to show this river to you. The sun usually shines down here and we'll be glad to feed you, or you can bring your lunch in a paper bag if you prefer.

Of course you can hike along the banks of this part too, if you choose, and its beauties and historic interest will reward you richly. You will see the great cannon, largest of the Civil War, lying unmounted at Fort Foote, and the moated bastions and portcullis at Fort Washington where the schoolboy studying his medieval history can get a real idea of what a fortress or castle of the Middle Ages really looked like. This fort, planned and worked on for many years by Pierre L'Enfant, is unique in our entire country. You will see old Notley Hall where lived the man who owned the land whereon the Capitol and Supreme Court and Union Station now stand. He went broke in the tobacco trade as early as 1719, owing the firm of John Hyde in London the sum of 2,325 pounds, 6 shillings, 4 pence, and in order to meet his obligation he held a lottery and disposed of 5,950 acres of land along the Potomac and Anacostia. You will see Harmony Hall, a stately, well-preserved colonial mansion with far the best view of any house in the Washington area which, through the graciousness of its owners could become a precious national asset provided it is linked to the river and the city by a protective parkway.

You will see wild beauty in many spots, but you will also see where the big trees stood, the ones that held the nests of bald-headed eagles until quite recently when the developers moved in. You won't see any eagles now, but there's still beauty; dogwood and laurel and azaleas and sweet-smelling tulip poplars; and the hiking is still good along our river—as good as along the canal—but different. It's more open and spacious so a man can breathe better.

But if you wish to hike it you will have to hurry. Come quick quickly while it's still spring, for the beauties of this area are doomed. The despoilers are poised to move in. The saws are sharpened, the bulldozers are gassed up. All are only awaiting the word that the plan for a parkway has been given the conge. Down will go the trees; the green braes will give way to brown eroded slopes which shortly will be covered with high-rise apartments; row on row close along the river bank, like Riverside Drive without the drive. The Potomac will then be a drab and lopsided eyesore, parkway protected on one side, a brick wall on the other.

Things will be different. The President, ashamed to show this ugliness to distinguished guests, will berth the *Honey Fitz* at Annapolis; the Washington Suburban Sanitary Commission can then proceed to build its disposal plant opposite Mount Vernon as planned, and in general the sewage problem can be easily and cheaply solved—by dumping it all in the river.

And why will these things happen? Because a man named KIRWAN, for his own ends, has decreed it, and because you gentlemen and the many like you in powerful places have never raised your voices in ringing demands that this wide, majestic, beautiful river, beloved by Washington and Wilson and F.D.R. and Truman and Kennedy and millions of ordinary Americans such as I, shall have the protection due it under Capper-Cramton and which now for 30 years has been denied it.

The time is late. Even now the matter is before the subcommittee. Speak out, please, and speak now.

But if you do not choose to speak, and if you are satisfied just to hike along the parched little canal instead of beside a real he-man river, and if again you get caught in the rain and are turned away from the inn; well I'll wager you'll get little sympathy from those of us who like width and depth and plenty of water in our river when we hike along the bank, and who are insisting that the beauties of those beloved banks of our superb Potomac be preserved for the enjoyment of all the people of these United States; to whom by right of heritage this Washington-Mount Vernon range of river, properly, and in perpetuity, belongs.

Respectfully yours,

VAN ARSDALE TURNER.

United States Loses Again at the Conference Table

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. ALGER. Mr. Speaker, perhaps someday, when we have suffered enough defeats, America will learn the bitter lesson that we cannot negotiate with the Communists. There is nothing in the Communist code which enables them to negotiate in good faith, or to honor any commitments. The following account of the Geneva meeting on Laos, as reported in U.S. News & World Report, is another example of how we have been had:

GENEVA: ONE MORE SETBACK FOR UNITED STATES

GENEVA.—A diplomatic defeat for the United States now is shaping up here at the 14-nation conference on Laos in the wake of a political and military defeat in southeast Asia.

That is the conclusion of Western diplomats here after 10 days of behind-the-scenes maneuvers, open meetings, multiple daily news conferences and widespread disarray in the Western camp. As conference participants see it:

Russia's Foreign Minister, Andrei Gromyko, has laid down the Kremlin's terms for a settlement. And the United States is finding itself under concerted pressure from all sides—from Asian neutrals and its own European allies—to yield on point after point.

"We are isolated," said one top American diplomat. "An attitude of appeasement dominates our British and French allies. It has taken me from 1938 to 1961 to really understand the spirit of Munich were Adolf Hitler was appeased."

Behind this bitter remark lies an American policy that failed and now is being liquidated. In Laos, the United States tried to build an anti-Communist bulwark in a tiny, neutral kingdom on Red China's border in the strategic heart of southeast Asia.

BUILDING ON QUICKSAND

This policy, it now turns out, was built on quicksand. It has been opposed from its start in 1957–58 by the British, the French, and by neutralists in Laos and in the rest

of Asia. Chief instrument of this policy was to have been the Royal Laotian Army of 25,000, built at a cost of a quarter billion dollars to the United States. That army, however, has shown little stomach for resisting a Communist guerrilla offensive, supported since last December by a Soviet airlift.

The United States now is offering to withdraw from Laos in return for withdrawal there by Russia and Communist North Vietnam.

Neutralization of Laos between East and West is sought to keep the kingdom out of Communist hands. But hopes of avoiding a Communist takeover are beginning to look slimmer and slimmer.

The developing civil war in Laos found the United States unwilling to commit American troops to a jungle conflict that could turn into another Korea. As a result, American diplomats in Geneva are finding that they have little bargaining power at the conference table. They have lost the ultimate bargaining weapon—the ability to walk away and resume a war.

Russia's Gromyko, on the other hand, was threatening to walk out on the conference before it began and before he had been in Geneva 72 hours. He has been getting things pretty much his own way ever since.

UNITED STATES: BACK TO WALL

What the United States is up against here can be seen from the fact that it can count on total support only from two nations at the conference table—South Vietnam and Thailand. Britain, France, and Canada, as well as neutral India, Burma, and Cambodia, refused to go along with essential elements of U.S. strategy. With four Communist delegations to combat—Russia, Poland, Red China, and North Vietnam—U.S. diplomats feel that their backs are against the wall.

Diplomats admit freely that there is no joint Western strategy for the conference. Months of U.S. talks with the British and French have failed to produce one. On issue after issue, the United States finds its own allies critical of its proposals.

On the surface, the United States seems to be the main negotiator with the Russians. But, in reality, negotiations already have begun to take place over the heads of the American representatives. The British and French, as well as the Indians, have started to work out their own compromises with the Russians. United States is finding that it has little alternative to accepting what others decide.

One British-Russian compromise already has given Gromyko his way in seating the Lao Communists and neutralists as equals of the Royal Lao Government at the conference table.

Future makeup of the coalition government in Laos, it is admitted here, will be prejudiced by this decision on whom to seat. The Royal Lao Government so far has refused to attend the conference as a result. But the United States was forced to agree or be blamed for breaking up the conference before it began.

FROM CANADA: A SURPRISE

Canada is surprising many delegates by taking a neutral attitude both in Geneva and on the three-power International Control Commission in Laos and Vietnam. In Geneva, Canadian delegates have refused even to visit the U.S. headquarters.

In Laos and Vietnam, Canada sits on the control commission with neutral India and Communist Poland. But Canadian representatives refuse to consider themselves spokesmen for the Western viewpoint. As a result, U.S. efforts to get an effective cease-fire in Laos are being weakened.

Commission members recently were barred from Hanoi Airport, the chief staging base in Communist North Vietnam for the Soviet airlift into Laos. But the Canadians refused to protest publicly. Nor would they issue a statement criticizing Soviet intervention.

"How do we know that the Soviet planes flying overhead are carrying arms to Laos?" asked one Canadian delegate here.

Commented a U.S. diplomat angrily: "Instead of one westerner, one Communist, and one neutral, we are confronted with a control commission of two neutrals and a Communist."

The Geneva conference, in fact, began so badly from the U.S. viewpoint that top American officials issued warnings that the United States might refuse to sign whatever agreements were reached by the other delegations. This could be little more than a moral protest, but it would also leave the United States more freedom of action elsewhere in southeast Asia. A sharp turn to neutralism in Thailand is feared if the United States does participate in a deal that delivers all Laos to the Communists.

BACKGROUND OF TALKS

The situation in Geneva reflects the balance of power inside Laos itself.

A coup d'etat in Vientiane, capital of Laos, by a single paratroop battalion of the royal army last year split the non-Communist elements of the country into neutralist and U.S.-supported groups. Driven out of Vientiane by a royal army offensive, the neutralists joined forces with the Communists.

Political confusion opened the way for a Communist military offensive. The Communist-led battalions of the Pathet Lao now control about half of the country. Bulwarked by 3,000 North Vietnamese technicians and Communist political commissars as well as by Communist arms, the Pathet Lao forces now dominate the heights above the six major cities of the kingdom along the Mekong River valley border with Thailand.

If a cease-fire should break down, it is doubted that the Royal Lao Army could hold the rest of the country more than a few days or weeks without substantial help from U.S. forces.

Out of this situation stems the basic dispute over Western strategy which divides the United States from its allies.

WHAT UNITED STATES HOPED

The United States came to Geneva in the hope that a cease-fire could be frozen long enough to make the partition of Laos, thus accomplished in fact, an alternative in the event that the conference could not agree on a united but truly neutral Laos. The longer the cease-fire continued, U.S. officials argued, the more difficult it would be for Russia to defy neutral opinion by urging the Communists to take all of Laos.

At the outset of the conference, however, the French and the British rejected the idea of partition of Laos even as a bargaining instrument to get a united but neutral Laos. They believe that such a partition could be made to stick only by the intervention of U.S. troops with the risk of intervention by Red Chinese forces and a Korean-type—if not a nuclear—war.

U.S. Allies in Europe thus are pressing for a neutral Government for all of Laos and are even urging the United States to accept as the head of such a Government a man who has Soviet support too—the neutralist ex-Premier, Prince Souvanna Phouma, now cooperating with the Communists.

It was Souvanna Phouma who was ousted from office last year by the U.S.-supported Royal Laotian Army. U.S. officials believe him to be bitterly anti-American and ardently pro-Communist.

Large-scale U.S. aid to bulwark a neutral Laos, if Souvanna Phouma headed the Government, would be difficult since the ex-Premier has already made a deal for aid from Russia and Red China.

In spite of all these considerations, however, the United States is being forced to withdraw its objections to a Souvanna Phouma government. Pressure on the United States is coming not just from Communists, but from U.S. Allies.

The fact is that Britain and France have virtually written off Laos as not worth the risk of war required to keep it out of Communists hands. And there is growing pessimism here in Geneva about the fate of all of southeast Asia, a growing bitterness among U.S. officials who feel that, in a pinch, the United States can no longer count on its major Allies.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Authorizing Appropriations to the National Aeronautics and Space Administration

SPEECH
OF
HON. DAVID S. KING
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 6874) to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research, and development, construction of facilities, and for other purposes.

Mr. KING of Utah. Mr. Chairman, as I urge my colleagues to enact this authorization, I want to stress that I am not satisfied that the program goes far enough.

As I have said many times in committee, I am not satisfied that the program projected by this legislation will actually keep us in the space race.

True, this bill has gone beyond the President's original requests and stepped up the program in several areas. Yet, if the American people are truly serious in their hope and desire to overtake the Russians and recapture the lead in space exploration, or if they simply expect the American effort to fall no further behind the Soviet program, our program should go still further than this legislation takes it.

It is generally understood that the President will present new requests on the space program to the Congress tomorrow, and these requests have been scaled upward by more than $500 million.

Soon after this Congress convened, I became firmly convinced that the current program and the program as projected in the original NASA requests for fiscal 1962 offered no hope of overtaking the Russians, and very probably would let this country slip even further behind in the space race.

I saw then, too, that the current program almost totally neglected the one best hope of making early gains in the space race. That hope was research and development of solid-fuel boosters, for which NASA requested only $3.1 million.

I wrote the President to plead for an expanded space effort that gave greater emphasis to solid-fuel propulsion, which had been successfully demonstrated in the Minuteman tests and in other solid-fuel military missiles. That letter follows:

DEAR MR. PRESIDENT: The American people are being misled by official talk about the space race. They have the feeling this country is in a race with the Russians to reach the moon. The race is a fiction—because we are not in it.

Given all the facts, our people would, I believe, strongly desire that we match or out-distance the Russians in space. The prospect that the Russians will dominate space and control the moon represents the greatest potential threat to sovereignty which this country has ever faced.

Our people, however, are not looking at all of the facts. We have fired dozens of space probes with the obvious hope that our numerical showing would partially offset the impact on global opinion of the spectacular Russian achievements. But it has also given our people a sense of false security, the feeling that this country is keeping pace. We are not now keeping pace.

I strongly and respectfully urge that you ask the Budget Director to compile immediately budget estimates on space exploration which will actually put this country in the race and keep it there.

You have already made some impressive strides in streamlining the Federal program. The costs of a realistic, accelerated space program could very well be covered by economies in the total defense picture. The 43-plus billion dollars we are spending annually for current security will not ensure long-range security, unless our basic space effort thwarts the threat of space dominance by the Communist foe.

Armed with realistic budget estimates, you would be wise, I feel, to take the case to the people. This could be the most historic move of your administration.

Sincerely,

DAVID S. KING,
Member of Congress.

I was grateful to be granted a personal conference on my request by the NASA Administrator, James E. Webb. The President manifested his own interest and concern through participation in the aforesaid conference by Director of the Budget David Elliot Bell and the President's scientific adviser, Dr. Jerome Weisner.

I also stressed the need for the increased effort in solid fuels in personal conferences with Secretary of the Air Force Eugene M. Zuckert, Secretary of Navy John B. Connally, and the Director of NASA's launch vehicle program, Maj. Gen. Don R. Ostrander.

To stress my concern to the Congress, I introduced a bill to increase the authorization for research and development of solid-fuel boosters to $30 million.

As the committee was marking up the authorization bill, I formally offered an amendment to increase the item for solid fuels to $50 million. In the action that followed, the committee agreed to increase the item by $15 million.

Although a step in the right direction, the $15 million increase is not an adequate figure. I remain convinced that my $50 million request is realistic.

I am confident that my position will be more than vindicated by the President's message tomorrow. I believe he will stress an accelerated effort on solid fuels, and I look forward to his message with great anticipation.

The Castro Blackmail Proposal

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, May 26, 1961

Mr. THURMOND. Mr. President, the May 23, 1961, issue of the Augusta Chronicle, Augusta, Ga., contains an excellent editorial which expresses exactly my feelings and those of many persons who have written me about the Castro blackmail proposal. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIMES HAVE CHANGED

On May 18, 1904, Ion Perdicaris, presumably a naturalized American citizen, was kidnaped and held for ransom by a Moroccan tribal chief named Raisuli.

All efforts to gain his release having failed, President Theodore Roosevelt sent a squadron of U.S. naval warships to Tangier, and on June 22, 1904, cabled the following message to the U.S. consul there for relay to Moroccan officials:

"Perdicaris alive or Raisuli dead."

In due time Perdicaris had been returned safe and sound.

But time has changed, and today American citizens, not even naturalized, but native-born citizens, are held in Communist prisons around the world, languishing there because this Government no longer has the will, nor does it command the respect, necessary to effect their release.

Now, however, we are offered a way to bring about the freedom of captives without subjecting ourselves to the possibility of physical exertion, inconvenience, or hurt. So, even though there are no American citizens involved—or, at least, we do not think there are—we are moving heaven and earth to collect funds with which to pay off some $15 to $20 million in blackmail which Fidel Castro is demanding. It is not for the lives of Americans, but for Castro's own subjects.

Certainly it is impossible to measure the value of a human life in dollars and cents. Not for a moment would we even suggest that each "invader" Castro is willing to release is not "worth" far more than the cost of a tractor or bulldozer, which he demands in exchange.

But when folks like Eleanor Roosevelt, Walter Reuther, Milton Eisenhower, and William Pawley and others permit their love of humanity to becloud their judgment—as they so frequently do and as they have in this instance—they are encouraging blackmail on an international scale. They are taking the exact opposite position from that of the Federal Bureau of Investigation or any other competent law enforcement body, which advises individuals never to meet demands of extortionists.

Insofar as Castro's demand for 500 tractors or bulldozers is concerned, we have a case, wherein, on the one hand, the U.S. Government has placed an embargo on shipments

to Cuba so as to cripple Castro's economy, on the other, citizens of the United States are now busy trying to frustrate that embargo by supplying machinery the bearded leader so badly needs.

A few years ago it would have been considered completely incredible that tiny Cuba could ever be in a position to thumb its nose at the powerful United States of America.

But then, a relatively few years ago the United States would not have permitted its citizens to meet the blackmail demands of a foreign government, much less encourage it by permitting an embargo, once ordered, to be lifted by the State Department so that the ransom, if collected, might be paid.

Instead, we like to think that a relatively few years ago Washington might have sent a message to this effect:

"Invaders alive or Castro dead."

True, the invaders are not American citizens. Nonetheless, we encouraged them to seek the overthrow of Castro, so there should be a principle involved.

But today is not a relatively few years ago and principle, like national character, seems to have gone with the wind.

Remarks by Secretary of the Navy John B. Connally at Dedication of Long Beach Naval Landing

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. HOSMER. Mr. Speaker, in the fine tradition of its helpfulness to and regard for the personnel of the U.S. Navy, the city of Long Beach, Calif., has invested over $1 million to build what undoubtedly is the finest naval landing anywhere in the world. Not only does it incorporate merely small boat docks, but as well many facilities of service to naval personnel and their families: Waiting rooms, shops, restaurants, locker facilities, and the like.

On May 18 the landing was dedicated and the city was honored by the presence of the Secretary of the Navy who made the following pertinent remarks as speaker of the day:

SPEECH BY THE SECRETARY OF THE NAVY ON OCCASION OF THE DEDICATION OF THE NAVY LANDING, LONG BEACH, CALIF., MAY 18, 1961

Mayor Wade, honored guests, ladies, and gentlemen, it is indeed a pleasure to have the opportunity to come to Long Beach to participate in the dedication of this magnificent new Navy landing. I greatly appreciate the invitation extended to me by Mayor Wade to visit your beautiful city with its wonderful climate and friendly people. Your people and naval personnel have shared an extremely cordial and valuable association over the years. This friendship has its roots in the early days of California history when brave men sailed ships around the Horn on the hazardous journey to the Pacific coast.

Long Beach and its surrounding areas have been home for many years to the officers and men of the fleet and their families. Almost inevitably, Long Beach becomes a part of most sailors. It holds pleasant memories for all who have had the privilege of making this friendly city a port of call.

Prior to World War II, the Pacific Fleet had a major anchorage here and needed adjacent shore space for fleet support activities. In order to establish the local naval base, it was necessary to acquire from the city a certain area of land which was to be part of the base. The city of Long Beach generously offered approximately 103 acres to the Navy Department for a sum of $1. Since the day the Navy gratefully accepted this parcel of land, it has been improved and extended.

The growth of the Navy in Long Beach has been tremendous as is indicated by the number of ships home-ported here. In 1950 there were only 23 Navy ships based in Long Beach. Today we have well over 100.

To properly accommodate the increase in Long Beach home-ported ships, additional pier space was needed for large ships. The city of Long Beach came through again and provided berthing space at pier E at a very reasonable rate. Additionally, the Long Beach Harbor Department, undertook the development of the west side of pier E to provide three berths for lease to the Navy. It is anticipated that these berths will be available in July of this year. These efforts on the part of Long Beach are greatly appreciated by the Navy.

In addition to berthing and other facilities needed for our increased number of ships of the fleet, an improved small boat landing area and a more conveniently located YMCA were needed to better accommodate personnel from these ships. The city fathers and Long Beach's Navy-minded citizens were again equal to the challenge and constructed this fine new Navy landing, the dedication of which we are celebrating today, and the adjacent new armed services YMCA. The good people of Long Beach voted overwhelmingly in support of this project which insured its becoming a reality.

It is gratifying to know that the people of Long Beach recognize the job the Navy is doing in the defense of our country and have shown their appreciation in such a generous manner. I know that you who are close friends and a part of the Navy family share with me the certain belief that our Navy today is strong and competent. It is sound and true and sails the seas with confidence and pride. It has absorbed enormous changes and will continue to adapt itself to the times. Today as in the past and for many years to come—the naval life will not be an easy one. It will not be a life of security or convenience. Naval personnel lead a life of constant adjustment, constant challenge and constant stimulus in new tasks, new responsibilities and new opportunities. Our military personnel—and each of us—must be ever vigilant and ready to defend the principles of human freedom. We never know where trouble will raise its ugly head. Therefore, it is essential that we have the forces capable to move at a moment's notice to meet trouble and counter aggression wherever they may arise.

The armed services of the United States stand today strong and ready against any aggressor. The external pressures being exerted on free men everywhere, to limit or encroach upon their freedom, is the concern of all of us. Every citizen in the United States is involved in the struggle for freedom—and we are not alone. For freedom concerns all our friends and allies with whom we have treaty agreements, as well as the uncommitted peoples of the world who cherish freedom.

The deployed fleets of the Navy, together with their embarked ready marine landing forces, are one of the Nation's most evident, effective, and immediate means of dealing with threats against freedom-loving people throughout the world. The primary purpose of naval forces is to be ready to fight. However, they are also effective and useful in furthering American interests abroad in positive and peaceful ways. The mere presence of powerful naval forces in an area is often enough to maintain tranquility. In their day-to-day operations, our deployed fleets are constantly on the move, calling at various ports throughout their area of responsibility—visiting the ports of many different countries and helping to create better understanding between Americans and the people of other nations.

Naval power is silent power, restrained and controlled. It is friendly but strong, pleasant but firm. It is a reminder to our friends that we are near at hand, and ready to help them. It is a warning to would-be aggressors, quiet but effective. In order to handle its commitments throughout the world, the Navy keeps much of its fleet deployed. Often our men come home for only a few months before they deploy again. Understanding this, you good people of Long Beach have done an outstanding job in providing for the needs of the sailor when he is here at home. It is much easier for a man to undergo the hardship of separation from his loved ones when he realizes that his sacrifices are appreciated.

The Navy greatly appreciates its civilian support and tries to reciprocate whenever possible. Many of you here remember the Navy's assistance during the 1933 earthquake. Navy men from Long Beach have provided assistance in fighting forest fires. The local naval base has a trained emergency force to assist the local populace in time of disaster. During the tidal swells last May, 10 auxiliary craft from the local naval base and 6 minesweepers from the Pacific Fleet Mine Force assisted in rounding up drifting boats and wreckage. One of the most colorful pages in the history of the U.S. Navy is its record of immediate and effective aid to people in distress.

In recognition of what Long Beach has meant to the Navy, the world's first atomic powered guided missile cruiser has been named after this great city. The U.S.S. *Long Beach* will command attention wherever she goes. She will be news to the reading public throughout the world. The city of Long Beach will be well represented by one of the most versatile and powerful ships of all time. Long Beach, the international city, will be internationally represented by the formidable ship which bears her name.

Long Beach has allowed the Navy to use this landing and all the wonderful facilities you see here today for the leased rate of $1 per year. The landing itself, protected by a still water basin, provides an all-weather haven for ships' boats bringing in sailors from the fleet. This is indeed a modern landing for a modern navy. I don't believe you will find a more pleasant or beautiful sight greeting Navy men when they first come ashore anywhere in the world.

The friendliness of Long Beach extends out to the fleet through the arms that shelter the landing and beckon the sailor home.

In closing may I again express my appreciation for having the opportunity to come to Long Beach to participate in this memorable occasion. I would like to invite all of you to visit your Navy this weekend during Armed Forces Day open house. The local naval base and many ships are open for your personal inspection. The Navy wants you to see how it operates for yourself. Naval personnel are just as anxious to meet you and tell you about your Navy as you are to learn more about it.

Causes of Crime

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Friday, May 26, 1961

Mr. HUMPHREY. Mr. President, I ask consent that Drew Pearson's column of today, which took the form of a let-

ter to his grandsons, relating a meeting which he had with President Kennedy to invite him to the Big Brothers dinner on June 7 in honor of a pioneer of Big Brothers, Ed Foley, be inserted in the Appendix of the RECORD. Also attending this meeting with the President was one of Minnesota's illustrious sons, district judge and former Governor of Minnesota, Luther Youngdahl. Judge Youngdahl's humanitarian spirit is illustrated in this touching letter.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Washintgon Post, May 26, 1961]

YOUNGDAHL TELLS CAUSES OF CRIME

(By Drew Pearson)

(Drew Pearson's column today takes the form of a letter on juvenile delinquency to his three eldest grandsons, Drew, George Jr., and Joseph Patterson Arnold.)

DEAR BOYS: Yesterday I wrote you about calling on President Kennedy. I forgot to tell you that as we started into his office, I got lost and strayed into his secretaries' office by mistake. He was standing at his desk when we finally entered, and after shaking hands we sat on two sofas on each side of the fireplace, while he sat in his rocking chair in between.

I opened the conversation by saying: "Mr. President, I've just finished writing a story about you—that you prefer peanut butter sandwiches at your desk to official dinners.

"Despite that," I said, "we want to invite you to a dinner."

The President smiled and said that it was true that when presidents and prime ministers came to see him he gave a dinner for them, then they in turn gave a dinner for him, and it meant quite an array of dinners.

I explained that our Big Brothers dinner was in honor of Ed Foley, a pioneer of Big Brothers, who had done such a good job as chairman of Inauguration Week, and was also for the purpose of emphasizing the preventing of juvenile delinquency in the District of Columbia.

"The judges have been holding our feet to the fire urging us to do something about juvenile delinquency before it gets started," I explained. "We haven't done enough, but we've been trying. Judge Youngdahl told us this morning how he had been up until midnight reading seven presentencing reports regarding criminals he has to sentence when he leaves here this morning. I think it would be interesting for him to tell you about it."

A SAD JUDGE

Judge Luther Youngdahl was a fine Governor of Minnesota who came to Washington to be an equally fine judge. He told the President how sad it was as a judge to have to send men to jail, especially men who never had a chance when they were boys.

Before he sends a man to jail, the judge explained, he gets a report on the man's entire life—whether he went to school, whether he had a mother or father, whether he has been in jail before. He takes all this into consideration before he decides how long a prison term he should give this man.

"It tears your heart out," Judge Youngdahl told the President, "to read these presentencing reports and see these fellows who never had a chance. And there's almost nothing I can do about it as a judge. It has to be done by others before it gets to me.

"These seven cases I read last night were all about the same—broken homes, no parents, illegitimacy, no education, no chance in life. If they had been helped early in life, none of these men would have landed in jail. Now they're repeaters and hopeless. They'll be in and out of jail the rest of their lives.

"It makes you sick when you come up against this hopelessness," Judge Youngdahl told the President.

"It makes my blood boil when they accuse the Negro population of running up the crime rate," the judge continued. "Of course, it's true that 53 percent of the District's population is Negro and a much larger percentage of the criminals are Negroes. But when they haven't been to school, have no mother or father, what can you expect? We have the highest rate of illegitimacy in Washington of any city in the United States."

MR. KENNEDY LISTENS

Judge Youngdahl spoke so eloquently that it didn't leave much for Judge David Bazelon of the U.S. Court of Appeals to say, though he is an expert on the causes of crime. He is also a director of Big Brothers, as are former Commissioner F. Joseph Donohue and Arthur Clarendon Smith and your grandfather, all of whom called on the President.

President Kennedy then asked some questions. As I wrote you yesterday, he listens carefully and asks very pointed, intelligent questions. We explained that Big Brothers is a national organization which helps boys by having one man serve as big brother and adviser to a boy who has no father or who needs guidance.

Our chief problem, we had to confess, is in getting men willing to devote their time to serving as Big Brothers. We have a waiting list of little brothers wanting companionship and guidance, but people are so busy here in the Nation's Capital—or think they are—that we are short of Big Brothers.

President Kennedy was very sympathetic. He knows a lot about this problem of helping boys keep out of trouble, and his brother, who is Attorney General, is trying to do something about it. Getting more Big Brothers to help boys might be one of the things which people could do for their country instead of asking their country what it can do for them.

So, as I wrote you yesterday, the President accepted the invitation to the Edward H. Foley Dinner, and fixed the day at June 7.

Lots of love,

YOUR GRANDFATHER.

Out of Whose Pocket?

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1961

Mr. ROBISON. Mr. Speaker, as a postscript to our recent consideration of the Federal Aid Highway Act of 1961, I include the following editorial from Better Roads, of May, 1961:

OUT OF WHOSE POCKET?

Whatever Congress finally comes up with as a financing plan for the interstate and other Federal-aid highway programs, it is abundantly clear that the men who enact our laws are loath to come to grips with the problem in an attempt to solve it once and for all. They are even reluctant to set forthright precedents for future Congresses to follow.

The finance measure that seems most likely to pass at this writing raises some fees that are the least likely to arouse the lobbying groups. To help overcome the deficit that these raises will leave, the measure provides the full 10-percent excise tax on trucks and buses for the highway trust fund, which now gets only half of it. The 1-cent gasoline tax, scheduled to expire June 30, will be continued. The anguished cries about its continuation will probably fall on deaf ears. People have become accustomed to that extra penny.

Congress is taking the easy way out by tapping the general fund for approximately $150 million a year by way of the excise tax. The money won't come from highway users specifically. It will be taken from all taxpayers. Schools and welfare programs may suffer, but maybe the Government can tax something else a bit more to make up the deficit. Perhaps the liquor tax could be raised (and can't you hear the howls on that one?). Or income-tax rates could be raised a little—just a little. Or a Federal sales tax could be established. Or Congress could slap af tax on diapers.

One thing is sure. Something will have to be done. If the U.S. Treasury tosses $150 million into the highway trust fund, it is going to have to get that additional money from somewhere. Wherever it comes from, its source will be pocket of the taxpayer, and he is in most instances a highway user. So what will hurt him most? The gasoline tax or a tax on some other commodity?

The problem is not that simple, of course. Raising taxes is difficult for any Congress. It is well-nigh impossible to find a way to gain additional revenue without seriously affecting any one section of an industry. But it would seem to make sense that the industry that does business on the public highways—whose trucks need the heavier bases and surfaces that are being designed and built—should pay its fair share of the cost of building them.

The Ways and Means Committee of the House of Representatives that devised this inadequate financing plan has listened attentively to the plaintive cry of the truckers: "We'll go broke if we have to pay any more taxes." And they have not missed the complaints from the teamsters' union about the monopolistic power of the railroads.

It seems incredible that perceptive men would take these anguished cries seriously. Truckers need highways in order to make money. The better the highways, the faster the haul time, the more hauls that can be made. Minutes and hours saved can mean money in the bank for a trucking company. And to save minutes and hours and wear and tear, they must have good highways.

There are times these days when we feel a little sorry for Congressmen. Lobbies present their cases in such stark terms of black and white that the unhappy lawmaker can scarce arrive at any unbiased understanding of the problem. He can't even get a clear answer from the people who elected him. For the farmers, gasoline dealers, automobile dealers, manufacturers, bankers, and so on all belong to organizations that will, at the drop of a hint, get their members to send telegrams and letters by the thousands to their representatives in Congress.

It sometimes seems that rampant and unenlightened self-interest has developed into a cult in the United States. Too many people too often blandly and smugly mouth yesterday's old cliches as answers for the problems of this vastly different and difficult age.

Nowhere is this self-interest so apparent as in testimony before congressional committees. And so, instead of trying to finance the highway program directly and adequately, Congress will, no doubt, timidly tap the general fund.

The doubletalk has been incredible. Here's just one example: The Empire Trust Letter, published by the Empire Trust Co., of New York, N.Y., pontificates:

"There are strong indications the 50 percent tax on gasoline has reached a point of diminishing returns. With this in mind America should seriously consider the potential consequences before nullifying the provisions of the 1959 Highway Act which allow the temporary fourth cent of the Fed-

eral gasoline tax to expire as scheduled on June 30.

"And, in light of the acknowledged benefits that accrue to the military and the economy generally from better roads, careful consideration should be given to providing an equitable level of general funds support for the highway program in the important years ahead."

Whatever the man said, he certainly used a lot of words. Just one question: Who supports the general fund?

Bewildering Assortment of Spending Schemes

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, May 26, 1961

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Grab Bag," published in the Chicago Daily Tribune of today, May 26, 1961. The editorial relates to the state of the Union message delivered by President Kennedy yesterday.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE GRAB BAG

President Kennedy represented his long speech to Congress yesterday as another installment of a continuing report on the state of the Union. More accurately, the address was a reflection of the state of Mr. Kennedy's mind, and, on the evidence of the speech, that is a mind as cluttered as an attic crammed full of oddments and remainders.

From amidst this junk Mr. Kennedy snatched up a bewildering assortment of spending schemes to stuff a legislative grab bag. These ranged from more foreign aid to putting a man on the moon; from more Voice of America propaganda to more nuclear fallout shelters; from reorganizing the Central Intelligence Agency to reorganizing the structure of Army divisions; from putting mobility into the Army Reserve to retraining workers who have lost their jobs through automation.

THE FINANCIAL IMPLICATIONS

The price tag estimated for the lot is $1½ billion at once and billions more in the years to come. Costs of space projects, by Mr. Kennedy's account, would increase between $7 and $9 billion in the next 5 years, if Congress adopts his proposals, and this is but one item. Mr. Kennedy conceded that there was already a deficit in the budget for the coming fiscal year, and that that deficit was now increased by his proposals to an extent where the question was whether it could be held within manageable proportions.

So, though the extravagance of mind reflected in the program was matched by the extravagance of its fiscal implications, yet this did not deter Mr. Kennedy from talking about fiscal integrity, prudent fiscal standards, and the necessity of maintaining confidence in the dollar. Nor did it deter him from cautioning Congress, after the new strains he himself sought to impose upon the fiscal structure, to refrain from adding funds to existing programs.

Mr. Kennedy said he was not requesting additional taxes, but he did call for closing tax loopholes he had already cited. Among these would be withdrawing the credit on stock dividends now allowed and subjecting such dividends to withholding. Mr. Kennedy was able to reconcile these methods of discouraging investment with a call for increases in investment to stimualte the economic growth which he fancied would produce additional revenue to finance his extravagance without new tax increases—at least, for the moment.

While arguing that his spending package would give priority to our most urgent national needs, his message disclosed an utter lack of interest in priorities. All the new spending would be pyramided on top of the existing crazy structure of farm subsidies, wasted foreign aid, welfare state devices, and the rest, which already account for spending next year of $85 billion or more. Nothing was to be cut or eliminated; the new ideas, with their attendant costs, would be superimposed on the old.

With this philosophy, we may soon find the Nation is receivership.

THE SUPPOSED OBJECTIVES

Mr. Kennedy represented almost everything he proposed to undertake as a necessary part of the process of defending freedom from the voracity of communism. Thus we must pump more aid into the backward nations, and we should do so regardless of which political or economic route they choose to freedom. If that means anything, it means they are free to choose socialism or communism at the expense of the American taxpayer, and Castro is just as eligible for handouts as Tito or Gomulka or Mr. Toure of Guinea.

Thus, also, we must place a man on the moon and bring him back before the decade is out, for this will impress those people who are on the sidelines and who have not been brought to love us by $90 billion in foreign aid to date.

Thus, again, we must reequip the Army for conventional war, warm the cockles of the Pentagon's heart by readying 10 divisions of the Reserve so that they can leap into action within 8 weeks, and jump the Marine Corps to 190,000 men.

But, because all of these measures may fail, we must build a great system of civil defense shelters to put the population underground, so that the Kennedy provisions take us from the extreme of an American shot to the moon to the opposite range where everybody is burrowing in the bowels of the earth.

THE SALES PITCH

Mr. Kennedy sought to sell all this and much more to the citizens by laving them with flattery. The people, said he, are our greatest asset. Well, we should say, at the very least, that they are indispensable to Mr. Kennedy's hopes and purposes, for, without them, he wouldn't have a tax dime to turn around on.

So he credited them with a hearty response to his sacrificial appeal to meet the tax levels and close the tax loopholes I have requested, to refrain from piling up agricultural surpluses [what's that again?], to plump for Federal aid to education, to pay higher social security taxes, and to exercise self-restraint instead of pushing up wages or prices. Perhaps the people are so virtuous, but we have not heard of a single pressure group going out of business, and, while some lobbies have been clamoring for some of the bigger government Mr. Kennedy wants to dispense, we have heard no public outcry for his legislative prospectus.

THE REAL PURPOSE

We should say that most of Mr. Kennedy's new proposals are irrelevant to the problem of stopping Communist imperialism and subversion, which is the basic menace confronting this country. That can only be done when the Kennedy leadership is sufficiently tough and resilient to stop communism in its tracks at some point of conflict and challenge and to force it into retreat.

So far Mr. Kennedy's essays in this direction have been humiliating failures, as witness Cuba and Laos. His prestige abroad is diminished and his standing at home is uncertain. People are perplexed about what direction he proposes to take them. Spending seems to be the answer to everything. Its utility and effects are unconsidered.

Mr. Kennedy, on a record of failure, is shortly to go abroad to meet with President de Gaulle of France and with his adversary, Premier Khrushchev of the Soviet Union. In these circumstances, he needed a sympathetic claque before which he could make a forceful presentation to cover up his weaknesses. The Democratic majorities in both House and Senate assured him the reception, and he will go to the summit fortified by a demonstration that he is supported by party applause if not by the approval of world opinion.

One of the oldest maxims in statesmanship is that when the prince is in trouble, he can divert the populace by seeking out a war. When Prince Jack is in difficulty, he unfolds the prospect of rocketing a countryman to the moon. The effect is diversionary, and the intention of the whole speech may have been no more than that.

Conversations Between Two Cultures

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MAILLIARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. MAILLIARD. Mr. Speaker, the current issue of the Saturday Review—March 20—contains an editorial by the associate publisher, William D. Patterson, which, it seems to me, is food for thought. Certainly no stone should be left unturned that might strengthen our Latin American relations. The editorial follows:

CONVERSATIONS BETWEEN TWO CULTURES

(By William D. Patterson)

A harsh fact that Washington must face sooner rather than later is that this hemisphere houses two cultures that really do not understand each other: the Hispanic culture of Latin America and the essentially Anglo-Saxon culture of the United States. The $500 million Kennedy social-development fund for Latin America, although a major material force, is no answer to the urgent need for a spiritual and intellectual discourse among the Americas.

It is as difficult for the north and south within the hemisphere to meet as it is for Kipling's famous twain, the east and west, to mingle in the vast Pacific. It is as difficult, and as crucial. East, west, north, and south, we must talk with each other and listen.

The fiasco in Cuba and the relentless pressure of Castro and communism on our Latin neighbors demand some fresh communion of purpose among the Americas, not just more military or economic hardware.

What is needed is an agora, a public square in the classic Athenian mold, where leading citizens, teachers, and students from all corners of the hemisphere can gather and get to know each other in an environment free of all prejudice of class, creed, color, or culture.

This forum could best be realized by the establishment of a North-South Center at the University of Puerto Rico in San Juan, along the lines of the East-West Center now

taking shape at the University of Hawaii in Honolulu, the new meeting place of Asia and America (Saturday Review, Nov. 12, 1960).

Puerto Rico would be the ideal setting in this hemisphere for such an inter-American community of students and scholars. The island's culture is not only Hispanic in origin and contemporary tone, but is itself engaged in a ferment of social change more constructive than anything underway in Cuba or any other American republic.

Under the imaginative leadership of Gov. Luis Muñoz-Marín, the bootstrap revolution of Puerto Rico has commanded respect throughout the Americas. It has been a fundamental social upheavel which through wise statesmanship has enjoyed a peaceful history and the friendly collaboration of the United States.

In Puerto Rico the yearnings of the peasants of Cuba, the aspirations of the hemisphere's intellectuals, the struggles of popular leaders of Latin America are all instinctively understood. At the same time there is no dark gulf of misunderstanding between the United States and Puerto Rico. The national cultures of north and south mingle easily in Puerto Rico in a creative partnership.

This could be the meeting place, the agora where an invaluable dialogue of two cultures could take place for the enrichment of the entire hemisphere.

To the North-South Center would come Latin American students taking courses in North American civilization, history, politics, economics, literature, sociology, or public health, while United States (and Canadian) students would take similar courses in the geography, and culture. The only two required subjects would be English for the Latin Americans and Spanish or Portuguese for the North Americans.

The ideal student from north or south would be one planning a career in the service of his country somewhere in the hemisphere. The Latin American student, especially, would be the potential leader, the educator, the public-service-oriented personality who will be exercising power somewhere in his country within the next decade.

In Puerto Rico the Hispanic and Yanqui cultures have already achieved a happy harmony. The vital intellectual and political atmosphere of the island, as well as its shining climate, friendly people, and diversified cultural and recreational resources, would provide an ideal setting for the center and its work. Modern industry, a changing agronomy and peasantry, a sense of historical purpose and cultural evolution are all there for the students from the Americas, north and south, to observe at first hand within the context and scale of reference of their own countries, cultures, and economies.

By living together in dormitories, studying and playing together through the facilities of the university and the center, an exciting, viable contribution could be made to the internal tranquility and progress of this hemisphere which neither Communist penetration nor outmoded Yanqui imperialism could ever aspire to.

Students from all the Americas chosen not politically but by the universities of the hemisphere—would forge a bond of learning and common goals that would eventually be a solvent for the rivalries, suspicions, and misunderstandings that now alienate the intellectual and political leaders of north and south from each other to the detriment of the entire free world, at a time when peace and trust are more urgent in our own American family of nations than ever before.

Perhaps the University of Puerto Rico, the administration of Governor Muñoz-Marín, the State Department in Washington, one of our great foundations or universities, or a responsive voice in one of the Americas to the south or Canada to the north could say this idea is worth exploring, that it holds sufficien promise for a better and saner life in this embattled hemisphere to deserve serious consideration.

Saturday Review hopes so, and hopes to hear some echo, to see some sign of support. We also intend to pursue this idea ourselves, for we believe it is just as important for the twain of north and south to meet as it is for east and west. The prize is not only survival but a world worth surviving in.

Birmingham News Asks Bus Riders Be Held in Check

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, May 26, 1961

Mr. THURMOND. Mr. President, in a front page editorial on May 22, 1961, the Birmingham News made a very eloquent plea to Attorney General Robert Kennedy to take appropriate action to stop the racial agitators who provoked the recent violence in Alabama. This is very similar to a statement I made on the Senate floor on May 23, asking the Attorney General to get the agitators and marshals out of Alabama so the racial difficulties could be abated. Since that time the Attorney General has made a half-hearted suggestion to the agitators and other publicity seekers, but this suggestion has failed in part because of its half-hearted nature.

I ask unanimous consent, Mr. President, to have this excellent editorial entitled "The Birmingham News Asks Bus Riders Be Held in Check" printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BIRMINGHAM NEWS ASKS BUS RIDERS BE HELD IN CHECK—A FRONT-PAGE EDITORIAL BIDS ROBERT KENNEDY TAKE ACTION TO STOP THOSE WHO PROVOKE VIOLENCE

BIRMINGHAM, ALA., May 22.—Following is the text of a front-page editorial that appeared in the Birmingham News today under the headline "Mr. Kennedy: Why Aren't King Riders Held in Check?"

"Mr. Robert Kennedy: The people of Alabama and the people of the South want to know why it isn't just as important to stop those who provoke violence as it is to stop those who commit violence. This, Mr. Kennedy, is a direct question. We are sure you will want to answer.

"Martin Luther King flew into Montgomery. For what, Mr. Kennedy? Are you pressing him for an answer? Why don't you put him under some control?

"The News understands that attempts were made to dissuade King from going to Montgomery. He refused to heed them.

"Instead, he came into a city on the knife's edge of tension and went through the heart of Montgomery in a motorcade which was described by one observer as 'just like the President coming to town.' If this was not intended to attract attention to him, to further increase tension, what was it?

"Once in Montgomery, King was the featured attraction at a Negro rally honoring the 'Freedom riders.' The rally itself was designed, inevitably, to cause more strife.

"Before it began, you, Mr. Kennedy, asked for a 'return to reason' in Alabama. You asked this State's citizens and travelers here to weigh their actions carefully and avoid doing anything which might make matters worse. King went on with his rally.

"Later, after the violence which he certainly expected and obviously wanted did indeed erupt and the National Guard was called out, King reportedly told the Negroes inside the church where the rally was being held that the lawmen would be coming into the church soon to harass and arrest the 'Freedom riders.'

"WORDS CALLED INFLAMMATORY

"The law was coming to harass. Mr. Kennedy, are these the words of a man attempting to restore calm? Are they the words of a man who is attempting to help restore order?

"The people of Alabama can believe that the Office of the President of the United States, and the Office of the Attorney General of the United States, have sought to show the agents of turmoil that their highly publicized freedom rides, their highly emotional mass meetings only serve to injure their cause, not improve it.

"The Federal courts have already ruled on segregation. The weight of the executive branch of the Federal Government already has been put behind the rulings of the courts.

"The people of Alabama, our people of goodwill, of good intent know that law and order must prevail no matter what the provocation. Those who congregate are a threat to law and order.

"Alabamians want those who set up these charged meetings, who deliberately began actions that they cannot doubt will create violence, to be put under the same weight of executive pressure that is being applied to white troublemakers.

"NO PATIENCE WITH PATTERSON

"The Birmingham News has no patience with many of the actions and utterings of John Patterson, the Governor of Alabama.

"The News is not satisfied that Commissioner of Public Safety Sullivan of Montgomery met the situation there Saturday with the speed and vigor that the Montgomery police should have shown when they well knew that the freedom riders, the provokers, were nearing Montgomery's city limits. If he didn't have access to Highway Patrol Director Floyd Mann's surveillance of the bus they were riding, he could have had access to that information. Floyd Mann had it and he was making it available to any proper law enforcement agencies that desired it.

"The people of Alabama don't want Federal marshals or steel-helmeted troops with bayonets roaming their streets. But those who stop to think will have to admit, as the Birmingham News admits, that we brought much of this upon ourselves. This newspaper—and we trust the good people of all over the State of Alabama—is demanding of all law enforcement agencies that the job be done.

"Law and order—through the cooperation of Maj. Gen. Henry V. Graham, State Safety Director Floyd Mann, the police of Montgomery and your Federal marshals—are in charge in Montgomery. These representatives of municipal, State and Federal law are working together as people should work together.

"We don't know the letter of the Federal law. But we do know and we do respect the spirit of the law in this Western World of freedom.

"The right of peaceful assembly has its limitations, just as has the right of freedom of speech. The performances of Fred Shuttlesworth in Birmingham have long deliberately abused these guarantees of the Constitution. The News believes the deliberate

rushing to Montgomery by Martin Luther King and his retinue could be construed as nothing but further agitation of an already tense community.

"The News has urged municipal and State law enforcement agencies of Alabama to stop those who encourage violence by their presence and attitudes in already charged situations. The News believes that this applies to freedom riders, Martin Luther King, and Fred Shuttlesworth, as well as the men Governor Patterson called interested citizens who have shown they were ready to take the law in their own hands.

"The people of Alabama, Mr. Kennedy, would feel more secure in the efforts to guarantee the rights of all citizens if you found a way to stop those who came here and foment trouble by their actions in the midst of already highly charged situations."

Wise Words on Summitry and Valid Reason for Increasing Tensions

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. HOSMER. Mr. Speaker, under the above title I have asked unanimous consent for the following editorial appearing in the Indianapolis News on May 22 to be spread upon this record:

SUICIDE AT THE SUMMIT

The United States, we are informed, is about to retrace a well-worn path of futility and dishonor. President Kennedy will go to Austria next month for a "summit" conference with Soviet Dictator Nikita Khrushchev.

That disclosure pretty well completes the portrait this administration has been painting of itself in its foreign dealings: Ringing words of defiance, followed by weak-kneed performance.

We have heard considerable from the President about firmness, moral rigor, and meeting the call of duty. But even as these mighty exhortations are uttered, we find ourselves once more launched into the most debased variety of appeasement: Yet another summit meeting with the butcher of Budapest.

What do the President and his advisers think will come of this new venture in summitry? In the battle of East and West, few instruments of diplomacy have been so thoroughly discredited. Whether it has been Roosevelt at Yalta, Truman at Potsdam, or Eisenhower at Geneva, such negotiations have invariably ended in disaster. Indeed, the world would not be so gravely threatened by communism now, if Roosevelt and Truman had not yielded Eastern Europe and China to bolshevism in the summit conclaves of World War II.

The White House says no matters of substance will be negotiated at the meeting in Vienna. We hope this is the case. But, as President Eisenhower's calamity at Geneva demonstrated, such parleys are infinitely harmful even if no specific extortions take place. With world attention focused on them, they become sounding boards for the Soviets—in which their propaganda, thanks to our part in supplying it with a respected forum, is given sober consideration.

At a deeper level, every summit meeting is, in itself and in what it represents, a crushing moral defeatt for the West, an exhilarating triumph for the despotism of the East.

Nikita Khrushchev ranks with the most ruthless tyrants of history. It was Khrushchev who exterminated the farmers fo the Ukraine. It was Khrushchev who crushed the freedom fighters of Budapest. It was Khrushchev who had American aviators murdered in cold blood. It is Khrushchev who at this instant holds countless Americans in grim captivity. It is Khrushchev who presides over a slave empire of almost a billion people.

Is it fitting that Mr. Kennedy journey across the world, hat in hand, to confer with this degenerate as though he were the moral equal of any decent human being—much less the President of the United States? We think not. For by that action, our President signifies that we accept an international criminal, a predator against races and nations, as a legitimate sovereign, that we anoint his crimes against humanity with the cachet of our own prestige.

The summit gesture is indefensible strategically, as well as morally. It proclaims once more that our ambitions, such as they are, are purely defensive, and that we have no notion of winning the struggle Moscow has imposed upon us. By meeting in conviviality with Khrushchev, we tell his tormented slaves that we accept their captor, and put the seal of finality upon their enslavement. We thus alienate a vast reservoir of potential support. And we assure Khrushchev that, while he constantly seeks to destroy the free world, we shall never try to unlock his global prison house.

Against all this, what is the summit conference supposed to achieve? The usual argument is that such face-to-face encounters are necessary to define areas of understanding and thus to ease tensions. But does anyone really believe there are areas of understanding common to Moscow and the West? The record shows that communism has one objective, and one only—the destruction of freedom everywhere. With such an adversary, in such a struggle, there can be no understanding. There can be only victory—or defeat.

The goal of easing tensions thus becomes not merely meaningless, but harmful. The only way in which tensions can be diminished is by relenting in the struggle; and, in the futile effort to show our good intentions by conceding points to Moscow, that is precisely what we have been doing.

If this Nation is to be jolted off its compass course to disaster, the tone and emphasis of our policy must be drastically reversed. Our goal must be, not to ease tensions, but to increase them—to heighten the pressures of the cold war, and to focus their compacted power against the brutal regime in Moscow. Our objective must be, not understanding with the Communist enemy, but victory over it. And in the pursuit of such a victory, there is no place for journeys to the summit.

Future Dependence—American Military Tradition

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, May 26, 1961

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD an editorial from the May 21, 1961, issue of the State of Columbia, S.C., entitled "Future Dependence—American Military Tradition."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FUTURE DEPENDENCE—AMERICAN MILITARY TRADITION

Even though the nature of the United States is strictly nonmilitaristic, we have not been able to avoid wars and necessarily have established a military tradition. Cherishing this tradition isn't exalting war; it is properly recognizing and evaluating what Americans have done in war for the cause of freedom.

Adm. Cato D. Glover Jr., retired, in an address in Columbia, said the Battle of Leyte Gulf in World War II should have a high place in our tradition, since, he said, "it was the greatest naval battle ever fought."

And, in suggesting the rightful place in history for this battle, Admiral Glover mentioned that we might revere it in the manner of the British, who assiduously keep enshrined the great conflicts in which they have had a part and which have affected the Empire.

II

The people of the United States have not, of course, been neglectful of our achievements in war, or of our great military leaders and their memories. But it is possible that in a country such as ours—and it is natural—there has not been developed the depth of commemoration one finds in Great Britain.

For one thing, most Americans sway away from anything that tends to glorify war. And in doing this they may escape the full meaning of our military record. War was required to establish us as a country and subsequent conflicts were necessary to protect our integrity and freedom as a Nation. That has been the meaning of our victories and the significance of the sacrifice of the thousands who gave their lives in the conflicts. Without an understanding of this, without accurate appraisals of the effect of such events as victory in the Battle of Leyte Gulf, an American lacks a true concept of his country's background.

Hearing Admiral Glover, even in the unimpassioned terms characteristic of the military man, one was inclined to a feeling of guilt that there is a rather general failure to give true and lasting weight to such decisive events as the battle he described in his address.

III

The Battle of Leyte permitted the reentry of our forces into the Philippines. It was a terrible blow to the Japanese. It was a mighty demonstration of our sea and air capability at that time.

This engagement was made even greater by the fact that it was won despite a mistake. The American naval forces went for a section of the Japanese fleet which had been deployed as a decoy, but despite this won the battle. Yet how many really remember this great battle and its contribution to victory in the Pacific?

It would be good if more Americans could have the advantage of recollections of great military feats by the men of our country such as Admiral Glover so admirably and forcefully gave of the great Battle of Leyte Gulf. In it he commanded the aircraft carrier *Enterprise*. He spoke with authority, and with pride in American military capability.

It is a pride all should have and nourish, since it is pride in American courage as well as capability. Here we do not forget the men of battles lost, either. Victory has no monopoly on heroism.

IV

The American military tradition is not one of the militaristic spirit, but one established

in conflicts against tyranny. It could be our dependence in a most uncertain future. We should rate it high. And today, it happens, is Armed Forces Day.

Continued Nuclear Test Ban Talks Dangerous and Futile

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1961

Mr. HOSMER. Mr. Speaker, on May 22 the Los Angeles Times carried the following lead editorial, which I commend to the consideration of every Member of the Congress and every member of the administration:

UNTYING OUR NUCLEAR BONDS

A great many people worry over our Government's laggardliness in rocket power and in blasting off on a space adventure that will put the Russians in the shade. But not nearly so many people—certainly not enough—worry because we are defaulting in the field of power where we were indisputably first, namely, in the development of nuclear weapons.

WE WERE AHEAD

The United States was not only first in this field, but for a number of years it maintained a technological lead in nuclear weapons. For example, our scientists and engineers produced a light, easily projected hydrogen bomb while the Russians were experimenting with a clumsy package so heavy that it required enormous rocket power for the launch. This is why our early rockets were so much lighter than the Russians.

Then, while we were competing with the Russians in building bigger rockets for space shows, we deliberately suspended nuclear testing. We have not fired a nuclear shot in the ground or over the ground for 2½ years. Our Government stopped nuclear testing to show good faith in the endless negotiations with Russia in search of a treaty to end nuclear weapon manufacture everywhere—with proper controls.

One of the arguments for our unilateral inspection was that we had detection equipment which could give notice of any sizable underground nuclear explosion anywhere. The country was told that if an explosion was detected in Russia we would resume our testing. Moscow had said that Russian tests were suspended. Later it was shown that the detection system was not as sensitive as it was represented—but we continued our ban of tests even though our Government could not be sure that the Communists were not firing underground shots at will.

WE TOOK A CHANCE

Meanwhile, negotiations with the Russians dragged on with no approach to agreement on controls. The Soviet representatives at Geneva stalled with impossible proposals.

In this country a slight but growing restiveness could be noted. Here was an area in which we were falling behind because we refused to do anything to maintain our lead, and continued in this suspension long after its usefulness as a good faith symbol seemed to have evaporated.

Now the American dissenters from the outworn suspension policy have found very respectable advocates. They are the members of the National Strategy Committee of the American Security Council, which is a nonprofit association of 2,500 member organizations in business, journalism, the universities and other institutions throughout the country.

The committee has recommended to President Kennedy that test ban negotiations at Geneva be discontinued and that underground and outer space nuclear tests be resumed immediately. It gave reasons:

1. Progress in the development of U.S. nuclear weapons technology, defensive as well as offensive, has been brought to a virtual halt.

2. It would be dangerous for the United States to assume that the Soviet Union may not have made important advances in nuclear technology during this (suspension) period. These advances could have a crucial effect on the relative power position of the United States and the U.S.S.R.

PREJUDICIAL TO THE UNITED STATES

3. The U.S. offer to refrain voluntarily from any underground tests for another 3 years from the date of signature of the test ban treaty (while the powers implemented it) would only perpetuate the current situation which is clearly prejudicial to the security of the United States.

4. The present prohibition on all U.S. nuclear weapons tests amounts to a unilateral, unpoliced moratorium which is not in the national interest.

President Loyd Wright, of the council, listed the following members of the committee:

Lt. Gen. Edward M. Almond, former chief of staff of the 6th Army Corps and former commandant of the Army War College.

Adm. Ben Moreell, former chairman of the board, Jones & Laughlin Steel Corp., and now chairman, Americans for Constitutional Action.

Adm. Arthur W. Radford, former Chief of Naval Operations, and Chairman, Joint Chiefs of Staff (1953–57).

Adm. Felix B. Stump, former commander in chief, Pacific, and now vice chairman, Freedoms Foundation.

Rear Adm. Chester W. Ward, former Judge Advocate General of the Navy, and former professor of international law at George Washington University.

Gen. A. C. Wedemeyer, former Deputy Chief of Staff, U.S. Army, and former commanding general, 6th Army.

Perhaps these gentlemen have the prestige to persuade the President of the United States to untie our hands so that we can restore our former ascendancy in nuclear matters.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

Dynamic June Dairy-Month Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 29, 1961

Mr. WILEY. Mr. President, the Nation—if it is to sustain an economy strong enough to meet the needs of the people and the requirements of national defense—must attempt to assure that all segments share proportionately in our national wealth.

This is true in agriculture, industry, business, the professions and all other fields.

Over the years we have had particularly difficult problems in agriculture. Fortunately, there have been some promising signs of a moderate upturn on the horizon. However, real progress will still require a concentrated effort by the Government and the people.

In a weekend broadcast over Wisconsin radio stations, I was privileged to discuss problems—and ways to improve the outlook in one important segment of farming—that is, dairying.

I ask unanimous consent to have excerpts from the address printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

Today, our State ranks as the No. 1 milk producer in the country—with an output of nearly 18 billion pounds annually. This great river of milk flowing to consumers in Wisconsin and elsewhere in the country. represents a great resource of physical health for the American people.

In addition, dairying also is an important industry economically. Our thousands of dairy farmers in Wisconsin and elsewhere are an important market for equipment and services; they create jobs; and otherwise stimulate new economic health. The processing and delivery of about 25 billion quarts of fresh milk annually requires an army of 200,000 milk-plant workers. In addition, 100,000 people are engaged in the manufacture of butter, cheese, dry milk and other dairy products. The total annual payroll for dairy processing plants comes to about $1.4 billion. About 380,000 motor vehicles are used in milk transport from farms to plants and from plants to milk consumers.

In summary, the dairy industry is extremely important not only to Wisconsin but to the Nation. Consequently, an improved outlook is important for all of us.

Now what can be done?

The best way, in my judgment, to serve the public and the dairy industry is to increase the consumption of milk and other dairy foods.

Across the Nation promotional activities will put the dairy industry in the spotlight during June, Dairy Month. Some of the objectives of the program will be:

1. Sell the dairy food message to consumers, stressing that: Dairy products are a best buy for the family budget, providing about one-third of our total food needs for less than one-fourth of the total food budget;

The wide variety of dairy products, milk, butter, cheese, ice cream, and other items, add zest, color, and myriad flavors to making more exciting menus for daily meals.

2. Scuttle the outmoded idea that there is an age limit on milk consumption. The fact is that milk is a good, healthful food for all age brackets; babies, teenagers, adults, and folks in their "golden years."

3. Refute unfounded attacks on milk or the component parts of milk that may give a false impression of possible detrimental effects on human health.

4. Encourage the dairy industry in its splendid efforts at stepping up sales and promotion, as well as its outstanding attempts to bring to the public greater variety and better quality in dairy foods.

5. Encourage expansion of a program to have milk accessible in more places, including opportunity for refreshing milk breaks during working hours, so that the public has ample opportunity to drink more milk.

6. Pay tribute to the American dairy farmer for his outstanding contribution to the economy and the health of our people.

7. Better educate homemakers to the vast variety of ways in which milk and dairy products can further enrich the daily meals.

NEEDED DAIRY RESEARCH CENTER

I shall soon reintroduce my bill for establishing a dairy research center at Madison, Wis., the heart of the dairy land. What would be the goals of such a research project? To mention a few, these would include efforts to:

1. Establish an improved, better-correlated program of dairy research.

2. Improve processing, packaging, refrigeration, powdering, condensing, and merchandising, to better serve and meet the modern needs of the consuming public.

3. Find new ways to utilize the components of milk for industrial purposes.

4. Combat livestock diseases.

5. Lower costs of production on dairy farms.

6. Adapt more dairy products to better meet human nutritional needs.

7. Improve markets at home and abroad.

8. Protect the dairy industry from some of the allegations now threatening it as to alleged ill effects of milk and other dairy products on human health.

9. Safeguarding the public through careful handling of antibiotics used in care of dairy herds.

10. Develop new and better ways of processing milk and other dairy products for shipping over long distances. For example, with the opening of the St. Lawrence Seaway, the development of more new dairy products would help to meet the particular needs of people in other areas of the world, who badly need the nutritional benefits of milk and other dairy products for their daily diets.

Now, what are some of the additional steps which may be taken to improve the dairy outlook?

1. Maintain a strong dairy cooperative program.

2. Eliminate barriers to the flow of milk in interstate commerce.

3. Prevent oleo and other substitutes from usurping dairy markets.

4. Expand the use of milk-vending machines and other devices and special techniques for distributing milk products to the American people.

5. Establish realistic policies by the Food and Drug Administration to avoid public scares; but at the same time, assuring a healthful flow of dairy foods to the American public.

6. Improve educational opportunities including better libraries, extension services from local universities, and availability of publications from State and Federal departments of agriculture.

7. And, finally, I believe we must create greater opportunity in dairying to encourage young, dynamic, imaginative youth to enter the field vocationally, to further strengthen our dairy economy and provide a reservoir of rich, healthful, tasty dairy foods for the future.

John Temple Graves, Birmingham Newspaperman and Defender of the Southern Point of View, Dies Fighting

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. HUDDLESTON. Mr. Speaker, on May 19, 1961, Mr. John Temple Graves, columnist for the Birmingham Post-Herald and widely known spokesman for the southern point of view, died. He died while delivering a speech at Mobile, Ala. He was active until the end of his life in debating the stirring and vital issues of our time. His view of national and world affairs was not always the popular view but it was a carefully reasoned and sensible view of things. The author of a book entitled "The Fighting South," it will be long remembered that Mr. Graves died fighting.

A dedicated man whose fine prose style gave vigor to his arguments, Mr. Graves had few peers as a phrasemaker and analyst of the southern scene. Over the years he had traveled in all sections of the country whenever anyone wanted a man who could speak with force and authority for the South. His many books about the South enjoyed national attention.

The daily comments in his column, "This Morning," which appeared in papers all over the South, were full of keen and justifiable criticisms of national and regional problems. I should like to have inserted in the RECORD the last column written by Mr. Graves:

DISTORTED PICTURE OF CITY GIVEN ON TV PROGRAM

(By John Temple Graves)

(This is Mr. Graves' final column, written only a few hours before his death yesterday.)

"As on a darkling plain,
Swept with confused alarms of struggle and flight,
Where ignorant armies clash by night. * * *"

Birmingham must have sounded like that to the Nation Thursday night on the "CBS Reports" program.

The Negro presentation far excelled the white in coherence, feeling, representative nature and best foot foremost—except that it didn't represent the huge number of responsible colored people who know the South was advancing tremendously in race relations under its own steam before the Supreme Court decision and who are certain that this other type of advancement under outside pressure does not accelerate but stops the real advances.

You had a sense of great cause championed by devoted, passionate and patient people all literate, all enlightened.

The white presentation, covering mostly the first half, sounded like a lot of nice people making random observations, some of them the sentimental, paternalistic, outworn or purely incidental kind the country laughs at in this modern day, others taking an inbetween position despised by both white and colored, and none of them—as cut and edited—making the powerful case to which the South is entitled, none of them sounding "the voice that rang through Shiloh's woods and Chicamauga's solitudes."

The dire and tragic plight of the South with the most delicate and difficult race problem with which any people anywhere ever had to deal was not even hinted.

Whether my own case is typical I don't know, but CBS had taken 40 minutes of film which I understood would have to be cut to about 3, but I was heartbroken to have the real points I tried to make overlooked and to be left merely calling Harrison Salisbury a liar.

The hero of the piece was permitted to be agitator Shuttlesworth.

There was inexcusable failure to make it clear that all of the statements, many pointing truly to a comparative lack of violence here rather than any reign of terror, were made before the recent bus station clash.

And that in those affairs, both parties were mainly outsiders, equally unknown to Birmingham. Those of us who have damned the Salisbury lie about a "climate of fear" here were made to seem liars ourselves, even though during and after the bus rioting there wa s no "climate of fear" among the ordinary people of this city.

There was none Sunday and Wednesday, there was no "climate of fear" among the any, in spite of the Negro girl from parts unknown who was permitted to utter with such sinister implications the one sentence "Don't live here."

This column has pointed out many times that the situation is too complicated and subtle for television to cover it fairly. I think David Lowe did try and I know he was handicapped by the unwillingness of some of our white people who could have made a truly modern and comprehensive case for us to take part because they feared foul play. But I think his editing and cutting make the white side poorer than it was.

Howard K. Smith didn't even try to be fair, it seems to me. His sympathies were so totally with the invaders who were taking advantage of a believed whole Federal Government behind them to come here and be abused while national thousands wept and cheered that he gave all his attention to the fools who were beating them, none to the anguish of a southern people misrepresented and debased by the fools.

We made a mistake in cooperating. For my part I am deeply ashamed.

Ralph McGill, addressing Birmingham's Rotary Club Wednesday, used the party line that "social reform is the strongest anti-Communist weapon we have."

Perpetual social reform, achieved through Government and creating a welfare state dictatorship, is no anti-Communist weapon. It is a Communist threat. It is a more to be feared approach to communism than either cold war or domestic infiltration because it is not outlawed and its significance is not noted.

It is the broad highway to communism.

Everybody is or ought to be for social welfare and the reforms it occasionally requires. But the present administration wants a welfare state. It wants right things in wrong ways.

People who are sick of some aspects of television forget this sickness for a worse one when they hear the New Frontier Federal Communications Chairman, Newton N. Minow, lecturing the broadcasters' association on its sins and telling them how the Government is going to supervise their programs by way of its control over licenses.

Here is a perfect example of social reform which is not an anti-Communist weapon but communism itself. You agree so with Mr. Minow's criticisms of television that you are all more shocked that he proposes to be a Fascist-Communist about them.

Crime in the Nation's Capital

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. BROYHILL. Mr. Speaker, at this very moment, citizens throughout this great Nation are watching with grave concern the terrible wave of crime that has been sweeping over the Nation's Capital. Tourists who ordinarily would be trouping gaily through our wide avenues and public parks, and reverently visiting our historic shrines, now look fearfully over their shoulders lest they be robbed, or slugged, or worse. Parents in the cities and towns in every one of our congressional districts may be wondering whether their children should be permitted to make a pilgrimage to Washington. Our friends abroad deplore, and our enemies take great delight in the daily reports of vicious crimes committed on the very doorstep of this beautiful building in which this House meets.

The concern of our Nation's citizens is fully shared by us, as the representatives of the people of the United States; but we also have the responsibility for doing something about it. This is the solemn duty imposed upon the Congress by the Constitution of the United States. I am confident that we will discharge this obligation, and make the streets of Washington safe once again.

Before a subcommittee of the House Committee for the District of Columbia which is studying the problem, I recently made the suggestion that consideration should be given by that committee to establish a mandatory life sentence for fourth convictions for major crimes. This suggestion received considerable notice in the press, and as a result I have received a number of comments and suggestions by mail and telephone. In addition, as I also mentioned before the subcommittee, I have been conducting research into the problem in an attempt to better understand it and to arrive at a mature solution.

From research in recent writings on the subject, and conservations with people directly involved in our penal system, it is apparent that the trend has been away from high mandatory sentences in favor of indeterminate sentences with a relatively low minimum and a relatively high maximum sentence. The theory appears to be that a low minimum sentence encourages an inmate to comply with regulations and to cooperate in rehabilitation programs in the hope that early release may be obtained, and this is reinforced by the knowledge that failure to comply will mean long incarceration. Too high a minimum, it is argued, discourages the prisoner from trying, and prison authorities are handicapped in their rehabilitation efforts. As a corollary, a high maximum sentence gives the authorities the power to hold the obviously unreformed criminal rather than to turn him loose prematurely upon society.

Judges, too, seem to prefer a wide latitude in the range within which they may operate, and where heavy mandatory sentences are directed, as they were by the so-called Baume law in New York before it was amended, tendencies have developed to permit filing of lesser pleas as a means of avoiding the mandatory sentence. It also has been claimed that juries sometimes have failed to convict when they viewed the mandatory sentence as unjustifiably high for the specific case under consideration.

Obviously, granting this wide latitude to jurists and penologists imposes a heavy responsibility upon them to act justly to the individuals concerned and at the same time to protect society from premature release of those who are unready or unwilling to live useful crime-free lives.

The comments I have received and the research I have done to date has led me to the conclusion that I, and I believe this Congress, need to know more about how the statutes now on the books are being enforced before we attempt to add to them. It may well be that the present laws have enough teeth in them already, and that the real problem lies in the way they are administered. After making an analysis of the District criminal code. I am inclined to think that this may inded be true. Here is a brief summary of some of the important features of the District Code.

The following are sentences which shall be imposed for specific crimes:

Arson: Not less than 1 or more than 10 years. Assault with intent to kill, rob, rape, and so forth: Not more than 15 years. Assault with intent to commit mayhem, or with deadly weapon: Not more than 10 years. Housebreaking:

Not more than 15 years. Grand larceny: Not less than 1 nor more than 10 years. Auto theft: Not more than $1,000 fine and/or 5 years. Rape: Not more than 30 years, unless the jury directs a death penalty. Robbery: Not less than 6 months nor more than 15 years.

Over and above these penalties, section 22–104 of the code provides that an additional 50 percent may be added to any fine or prison sentence for a second conviction. I am informed that this provision is seldom used in the types of cases listed above. Also, section 22–3202 provides that for any offense committed when armed with a firearm, additional sentences may be imposed as follows: For first offense, 5 years; for second offense, 10 years; for third offense, 15 years; for fourth offense, up to 30 years.

Section 24–203 of the code provides that for any felony the judge shall impose maximum sentence not to exceed that authorized for the specific offense, that the minimum shall not exceed one-third the maximum, and in the case of a life sentence the minimum shall not exceed 15 years. This section further provides that for assault with intent to rape or for armed robbery, the minimum sentence shall be not less than 2 years, and if convicted of rape, not less than 7 years if the person has previously been convicted of a crime of violence. In each case, the maximum under this section would not be less than three times the minimum imposed. Note, however, that a judge is not restricted to the 2- or 7-year minimum, but simply cannot impose a lesser sentence.

All in all, there is considerable latitude in the law for a judge to impose heavy sentences for repeat offenders, particularly for those crimes with which we are so very much concerned at this time. But over and above the question of the sentences imposed is the question as to how the Department of Corrections and the Parole Board are administering the parole laws. The Parole Board, at its discretion, can release a prisoner once he has served the minimum to which he is sentenced, but also under section 24–201c the Board can apply to the court which passed a sentence to have the minimum reduced at any time. It would be most interesting to know how much this clause is used.

I find that the chief barrier to my forming a judgment as to whether additional legislation is needed, and if so, what legislation is needed, is lack of knowledge as to how the present statutes are being carried out. I believe most, if not all of you, will agree with me that there is no point in piling law upon law, if the present laws are not being carried out.

With these thoughts in mind, I have today sent a letter to the chairman of the Subcommitee of the House District Committee which is studying the problem of the crime wave. This letter makes three requests:

First. That a staff study be made of the application of the current criminal statutes for the District of Columbia which will show: (a) the actual sentences imposed during the past year compared to what the statutes allow; and (b) the sentences imposed on offenders during the past year who previously have been convicted of one or more crimes, the sentences previously imposed and the actual time served on these previous sentences.

Second. That consideration be given to establishing a system whereby the above reports are made on a regular basis, perhaps quarterly, for at least the next 2 years, or until the Congress determines that less frequent reports are necessary.

Third. That public hearings be scheduled at which members of the legal profession, those engaged in various phases of penal and parole work, and others, be heard and recommendations received for resolving the problem.

It is not my intention to lay charges against any individuals nor against any group among those responsible for the administration of our criminal justice system. But it is certainly obvious that something is radically wrong somewhere, and from the above analysis of the laws, it does not seem at all certain that the fault lies entirely in them.

If the trouble lies with the administration of the present statutes, the problem will not be cleared up until the full glare of publicity permits the trouble spots to be pinpointed. While I take such reports of laxity and corruption as were made in "Washington Confidential" with a healthy grain of salt, where there is smoke there probably also is fire. If, interspersed throughout the law enforcement system, there are those who out of misguided humanitarianism, or for more culpable reasons, are contributing to the premature release of dangerous criminals to prey upon society, we must find them and stop them.

Hiring the Handicapped: A Community Challenge

EXTENSION OF REMARKS

OF

HON. J. J. HICKEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, May 29, 1961

Mr. HICKEY. Mr. President, recently I had as a guest at the Capitol a young lady from Johnson County High School in Wyoming whose essay, entitled "Hiring the Handicapped: A Community Challenge," had placed first in the Wyoming contest sponsored by the Governor's Committee on Employing the Handicapped. This young lady, Miss Sharon Suchta, was awarded a trip to Washington and while here, with other State winners, attended a meeting of the President's Committee on Employing the Handicapped. I have just received a copy of the excellent essay which won Miss Suchta first place in the State competition, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

HIRING THE HANDICAPPED: A COMMUNITY CHALLENGE

(By Sharon Suchta)

He sat in a wheeled chair, waiting for dark,
And shivered in his ghastly suit of gray,
Legless, sewn short at elbow.
Now he will spend a few sick years in institutes,
And do what things the rules consider wise,
And take whatever pity they may dole.
Tonight he noticed how the women's eyes
Passed from him to the strong men that were whole.
How cold and late it is. Why don't they come
And put him into bed? Why don't they come?

Wilfred Owen's purpose in writing this poem was to let everyone know about the unpleasantness and the brutalities of war. Yet in a sense, this same poem may be used to exemplify the inner feelings of a good many disabled and handicapped people in our modern society. It is true, a majority of the handicapped persons do not live in institutions, nor do they feel such a sense of insecurity and hopelessness as does the war-battered soldier in Owen's poem.

However, some of the handicapped have given up hope and have resigned themselves to complete dependence on others. Many have done this because mankind in general has not encouraged them to try.

It should be remembered here that in the development of the normal person's ability to do things, today's failure becomes tomorrow's success. A handicapped person's first failures are usually taken as final. Needless to say, we must give the handicapped opportunities for trying again—it is better for a crippled person to have tried and failed than never to have tried at all. Although we must realize that he will often fail, we must also see that he does not become discouraged by attempting too many undertakings which he cannot carry through.

In our modern world of science, the handicapped can receive better care and treatment than ever before in our history; but medical care is only part of the story. Over and beyond this, the handicapped must be helped to compensate for his handicap. He should have education, and this means education with at least two objectives. First, he should receive special education for his particular handicap. Second, and most important, he should have access to the education which normal persons receive. This means, in most instances, an opportunity to find a place for himself in society, whether it be through public schools and churches, or through working to earn his living.

The handicapped person should be made to feel independent and given the chance to be helpful to himself and to others. Hope, however, needs self-assurance and faith. One of the best examples of a handicapped person who does everything for himself and tries not to rely on the help of others, is Roy Campanella. Roy, a famous baseball player, was critically injured in a car accident several years ago—an accident that left him completely paralyzed. Roy's self-assurance and faith is clearly shown by his following words: "If only I'm able to lift one leg up and take a stride someday, it will be the happiest day of my life. I've tried in vain so far, but I haven't given up. I'll never give up. The day will come when I'll be able to walk again, I know that, as sure as there's a God in Heaven."

If only every handicapped person could possess Roy's hope, faith, and perseverance. Unfortunately, however, too many are leading useless and hopeless lives. Given an opportunity to prove their worth, through local organizations and employment, they, too, may emerge as worthy individuals.

Many people, however, have some aversion to having handicapped people around. "No help wanted" will face them wherever they go. Why must we be so prejudiced toward our fellow men? Undoubtedly, every boss will have some good reason for turning away prospective employees. In most cases, he may not need help, or he may have too much help on hand at the time. However, these are merely excuses. The employer really objects to having a handicapped person around for the reasons that he may be too slow, or that he cannot do the work, or even, perhaps, that a handicapped person in the office will cause his firm to lose business. This thinking is ridiculous.

Handicapped people are not new to society. Nor are they different from the rest of us. Handicapped people are real individuals with the same type of hopes, fears, and aspirations that we all possess. Some people are under the false impression that handicapped people are helpless and must be helped all the time. Of course, some of the handicapped have to be helped once in awhile, and there are a few who are almost completely helpless; but it may be considered safe to say that at least 80 percent of the handicapped are very helpful, not only to themselves, but to others as well. (Sheridan Press.) They may have a hard time, now and then, performing their tasks; but if they are given the time and chance they will usually get the job done just as well as any able-bodied person.

It is hard to realize how many Americans are suffering today from crippling diseases. Cerebral palsy, epilepsy, muscular dystrophy, rheumatic fever, and congenital malformations account for the partial or complete disability of over 3 million Americans (physically handicapped children). This does not include war injuries or other handicapping agents that have taken the toll of hundreds of thousands of other Americans. And, you will note, this includes Americans alone.

As noted above, physical handicaps cover a wide territory; but even worse than this physical trouble imposed by any crippling condition may be the emotional difficulties that frequently accompany it or follow in its train. Studies show, however, a handicapped person is at least as well-adjusted as the average non-disabled person (ibid).

Despite ourselves, most of us avoid looking at handicapped people. When we walk down the street, we tend to turn our eyes away, partly not to offend the other person, but partly because handicaps are distasteful to us. Only by living and working with the handicapped people can we learn to understand and accept them.

One of our major downfalls, however, is that we seem to judge by external appearances. Statistics have often shown that handicapped people make the most reliable employees with less absenteeism than others. Since it is difficult for us to judge the working potential of a handicapped person, we often jump to negative conclusions.

We must not jump to conclusions about the handicapped. We must give him every opportunity to prove himself.

The problem of finding work for the handicapped is rapidly rising day by day. It must not continue to rise, and you can help to keep the problem at a minimum. Changing your individual viewpoint is the only way we can change community viewpoint. How can you help in this program?

Support services for the handicapped in your own community, but above all, encourage the hiring of the handicapped. Remember, after all, they are only human.

New Electoral College System

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 29, 1961

Mr. MUNDT. Mr. President. this morning's edition of the Washington Post has an interesting and informative editorial on the legislation proposing electoral college reform which is being considered presently by the Senate Committee on the Judiciary.

It continues to be my conviction, and this is a conviction which I know is shared by many others, that the basic weakness in our great system of government by self-determination is the fact that we utterly fail to provide an equality of voting opportunity and authority in this country. This is solely due to the perversions of original purpose which have occurred under our electoral college system through use of the so-called general-ticket, winner-take-all, block voting formula of counting votes for President and Vice President. By giving individual voters in New York State, for example, 45 votes for President while voters with the identical qualifications and abilities voting in Delaware or any of our other States having only one Member of Congress cast only three votes for President. Does any fairminded American anywhere contend that it is either fair, right, proper or wise to continue such a thoroughly un-American disparity in the vote-power which individual Americans have in electing the President of the United States?

In 1960, in the Kennedy-Nixon contest, New York State voters cast over 325 million votes in that Presidential election. The fact that they were cast by only about 7 million voters serves simply to dramatize and illustrate the unjust electoral system now prevailing in the United States. It is not only unjust but it places a vast premium on corruption at the polls in our larger States and cities and it provides a perfect formula for pressure groups desiring to control or influence public policy by marshalling their forces to create top-heavy majorities in the urban communities existing in the States which actually elect our presidents. It is an effective device, moreover, for preventing the Southern States and the rural States west of Chicago from having any significant influence in presidential elections—and likewise in presidential nominating conventions—and from ever electing one of their own favorite sons to the White House, except thru elevation by accident of death through the Vice Presidency. It is unusual when these areas provide our country with a Vice President.

For the foregoing and other reasons, I hope this Congress approves our proposed constitutional amendment, as provided in Senate Joint Resolution 12. This so-called Mundt amendment will correct all of the existing evils in our electoral college system without creating any new evils to replace them. It maintains the existing voting strength of every State, but it equalizes the voting strength of every citizen. While it does not deal directly with the one criticism made by the Post editorial—the possibility that an occasional elector might not follow the mandate of those who elected him, a very minor addition to our amendment which I certainly would not oppose if it is felt necessary, could cover that point by binding every elector to vote in conformity with the mandate prescribed by the electoral college district which elected him. Senate Joint Resolution 12 already protects against gerrymandering by setting up new electoral college voting districts rather than using existing congressional districts which in some instances are gerrymandered.

I ask that the Post editorial and that my statement in support of Senate Joint Resolution 12, as made before the Senate Judiciary Committee on May 23 also be printed in the Appendix of the RECORD.

There being no objection, the editorial and statement were ordered to be printed in the RECORD, as follows:

NEW ELECTORAL SYSTEM

Interest in the presidential electoral system is at a low ebb because the next election is 3½ years away, but this does not minimize the importance of the hearings launched by the Senate Constitutional Amendments Subcommittee. The 1960 election gave the country a pointed demonstration of some of the weaknesses of the present system for choosing the President and Vice President. Of the Democratic electors chosen at the polls, 14 in Mississippi and Alabama refused to cast their votes for the Democratic candidate, President Kennedy, and cast them instead for Senator BYRD. Many voters went to the polls not knowing whether their votes would be counted for the candidates of their party.

President Kennedy has indicated that he would like to see electors bound to vote for the candidates of the party which they represent. But the basic difficulty is the retention of electors at all in a system which is now designed to make the President, as nearly as possible, the popular choice of the people. Senator KEFAUVER is sponsoring an amendment that would abolish electors and divide the electoral vote of each State between the candidates in the same proportion as the popular vote is divided. One version of this plan was approved by the Senate in 1950. It has many virtues but has also encountered opposition on the ground that it would encourage splinter parties.

Senator MUNDT and five of his colleagues have offered a plan under which electors would continue to be chosen but largely on the basis of congressional districts. At present the winning candidate in each State claims all of that State's electoral votes. Under the Mundt plan only two electors from each State would be chosen in this way—one for each Senator. All the other electors would be winners of the popular contest in congressional districts—one for each Congressman. In other words, the so-

called electoral college would reflect about the same trend as the composite vote for Members of Congress.

The weakness of this proposal is that it keeps in the system dummy electors who might be able to thwart the will of the people. It would be possible, of course, for the subcommittee to combine the best features of the Mundt resolution with the best of the Kefauver plan. Votes could be cast directly for presidential candidates. The winner in each State could take two electoral votes and in addition one electoral vote for each congressional district that he carried. But this would necessitate a better system of redistricting than most of the States now have.

There is obviously no easy answer, but there is hope that the subcommittee can work out a satisfactory electoral revision that will eliminate the existing grave defects and at the same time remain consistent with the Federal system.

STATEMENT BY SENATOR KARL E. MUNDT, OF SOUTH DAKOTA, IN SUPPORT OF SENATE JOINT RESOLUTION 12

Every voter in this country, whether he lives in California, Delaware, New York, or South Dakota, ought to have equal voting power when it comes to electing the President of the United States.

This is the only important respect in which our electoral college system, so called, has failed to function with fairness. With only minor changes (important though they are in effect) it has stood the practical test of time since our country was established. It has carried us through 44 Presidential elections, through peace and war, from George Washington to John F. Kennedy. It was after the fourth presidential election that the 12th amendment was added to the Constitution to require Presidential electors to vote specifically for President and Vice President, rather than, as the original provision provided, for two persons for President. Since then 40 Presidential elections have been held. It is obvious, therefore, that any system that has functioned so well for so long should not be changed lightly. Changes proposed or made should be the absolute minimum required to bring about the desired and necessary results.

Such minimum and wholly practical changes are proposed in Senate Joint Resolution 12 which I am sponsoring together with Senators THURMOND, MCCLELLAN, HRUSKA, MORTON, and BLAKLEY. This is the old Mundt-Coudert amendment, with which most of us are familiar, with an important change, an antigerrymandering provision which corrects a wholly valid criticism of the amendment as written in 1955.

Our Founding Fathers, in the Constitutional Convention of 1787, gave long and careful consideration to the method of electing the President. At first it decided he should be elected by the Congress. Then it changed its collective mind and transferred the power of choice to an electoral college that was to be an exact counterpart of Congress with the representation of the States as units (corresponding to the Senators) as well as population of the States (corresponding to Representatives) and which should meet at the seat of Government.

Upon further consideration this plan was dropped because of the fear that the electors wouldn't travel so far for a single purpose. It took days in those times to cover distances that we span in a few hours. The convention went back to its original idea that a President should be elected by a joint session of Congress. They did this with reluctance because it ran counter to their strong beliefs in the principle of separation of powers of the executive and legislative branches of the new government.

At this point the idea developed that the electors could meet and cast their votes in their own States, and transmit the certificates of their ballots to the seat of Government.

Accordingly, the work of electing the President was divided. The convention transferred the act of voting from a joint session of Congress to electoral colleges in the several States, to results to be transmitted to the President of the Senate. It left with Congress in joint session the function of counting the certified results from the States, as would have been the case had Congress done the voting.

This plan appears in article II, section 1, of the Constitution—a part of which has been superseded by the 12th amendment:

"Each State shall appoint, in such manner as the legislature thereof may direct, a number of electors equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative or person holding an office of trust or profit under the United States shall be appointed an elector."

The exclusion of Member of Congress and Federal officeholders is required by the cardinal principle of separation of powers.

In Senate Joint Resolution 12, the clause "in such manner as the legislature thereof may direct" is eliminated. In its stead, Senate Joint Resolution 12 requires:

"The electors to which a State is entitled by virtue of its Senators shall be elected by the people thereof, and the electors to which it is entitled by virtue of its Representatives shall be elected by the people within single elector districts established by the legislature thereof; such districts to be composed of compact and contiguous territory containing as nearly as practicable the number of persons which entitled the State to one Representative in the Congress; and such districts when formed shall not be altered until another census has been taken."

It is the clause "In such manner as the legislature thereof may direct" that is the root of the present problem. Only 10 States participated in the election of our first President, George Washington. North Carolina and Rhode Island had not yet ratified the Constitution; and New York's two houses of the Legislature could not agree on who the electors should be.

No uniform method of choosing electors was followed. Electors were chosen in a variety of ways, election by legislatures, election by the people in districts and election by the people on a general ticket, which means that each voter in the State could vote for everyone of the State's electors. In Massachusetts each of the eight districts chose two electors from which the Legislature elected one per district and added two electors at large.

In the succeeding presidential elections, through 1832, the various methods were used with States changing from one to the other. In 1836, the general ticket system was used in every State but South Carolina, which continued to elect by the legislature through 1860.

After Washington's two elections, the Presidency was contested every 4 years on a party basis as it is today. The majority party in each State was quick to see the advantage of consolidating its electoral strength either through legislature selection or through use of the general ticket system so as to exert maximum influence in electing a President. Federalists did this where they were in control, in the New England States, for example, and the anti-Federalists, later Jefferson's Republicans, did the same thing in their States.

Since 1836, with the exception of South Carolina, there have been only three instances of departures from the general ticket system. They were Florida in 1868 and Colorado in 1876 in which the elections were by the legislature, and Michigan in 1892, when the district system with two electors at large was used.

It is extremely doubtful if any voter living today has used anything but a general ticket system in presidential elections. This use of the general ticket system in every State is largely responsible for many of the misunderstandings of the electoral college system which exist today and for much of the notion that the electors are archaic and unnecessary.

When we regard the electoral college as the exact numerical counterpart of Congress we can see readily that it combines the two principles of respresentation in our Federal Union of States. We have the Federal principle of equal representation of the States in the Senate regardless of population and, then we have the national principle of unequal representation of the States in the House of Representatives based on their unequal populations. State representation in the House in the present Congress ranges from 1 to 43.

Each citizen of each State is represented in the Senate by two Senators and in the House by one Represenative, with a few exceptions. His representation in Congress, therefore, is two parts Federal and one part national. In the electoral college, with the general ticket system in force in every State, there is no equality of citizen representation. It ranges from a high of 45 members of the electoral college for a citizen of New York to 3 for a citizen of each of the 6 States that sent only 1 Representative to the present Congress.

Conversely, each citizen has as many votes in presidential elections as his State has members in the electoral college, because they are elected on a general ticket. In other words, when a New York voter pulls a voting machine level for a presidential ticket he is actually casting 45 votes, one for each of 45 electors on a party slate. It may be hard to believe but there were actually more than 325 million votes cast in New York in the last presidential election by something over 7 million voters.

On the other hand the citizens of the six States which have only one Member of the House of Representatives had only three votes each in the presidential election. In my own State of South Dakota each citizen had four votes.

This tremendous disparity in voting weight between the citizens of the large States and the small States is the true source of all the valid complaints which have been made against the electoral college system. The real culprit is the use of the general ticket by every State. Of course, each State legislature could abandon the general ticket but none will without certain knowledge that all other States will abandon it as the same time. This is why a constitutional amendment is necessary to bring about a change.

There is no more justification for choosing electors on a general ticket than there is for electing a State's delegation to the House of Representatives, counterparts of electors, on a Statewide, bloc basis, which is what the general ticket does. Imagine the howls of rage that would arise all over the country if a district's Representative was to be taken from it, and given to the entire State. And yet it would be just as fair to use the general ticket for Representatives as it is for their counterparts in the electoral college.

I submit that the number of persons which entitles a State to one Representative in the Congress should entitle the same group of people to one member of the electoral college.

What have been the effects of the general ticket system of choosing electors? I suggest these:

1. It excludes from the office of President of the United States all men, no matter how able and outstanding they may be, unless they come from a State with a large bloc of electoral votes.

2. By the same token the dominant forces in the large, pivotal States which are responsible for the nomination and election of our Presidents have inordinate influences at the White House and in the executive branch of our Government. A cursory reading of the major party platforms and the speeches of their presidential candidates gives proof that they are directed almost entirely at the dominant elements in these large States.

3. It invites fraud in the large States that are crucial and where the vote is expected to be close. The results in Illinois, Texas, and Missouri in the last election brought forth charges of vote frauds. The effect of such vote fraud is statewide under the general ticket. A fraudulent vote, undetected, counts just as much as a valid vote in the statewide total.

4. Although the Constitution gives each State the same numerical representation in the electoral college that it has in the whole Congress, by using the general ticket for electors, we have formed a constituency for the President which is altogether different from that which elects the Congress. The great difference between these two constituencies is that almost all Representatives are elected in single member districts while their counterparts in the electoral college are elected in multimember districts consisting of entire States. This situation permits voters of a State, voting straight party tickets, to produce one result in the electoral college and an altogether different result in the House of Representatives at the same election. The effect of all this is that we have what I have called a presidential United States of America, and a congressional United States of America that are, politically speaking, two different countries within one national boundary.

5. Many critics of the present system contend that the electoral college is an archaic institution, outmoded by our tremendous improvements in transportation and communications, and that it is incompatible with modern democratic principles. In the main, these charges are based on either a misunderstanding of the nature of the electoral college, or on deliberate intentions to change the structure of our constitutional system and change our Republic into something radically different.

6. Another criticism of the electoral college is in the contention that presidential electors are in no way bound to vote for the presidential candidate of the party on whose slate they were elected. This is coupled with the contention that the Founding Fathers intended the electors to be free agents. Both these contentions are without basis in fact. On the contrary, there is overwhelming evidence that from the very first it was clearly understood that the elector's function was to express the view of those who had chosen him.

Since 1820, a total of 14,018 presidential electors have been chosen. Of these only eight are alleged to have voted contrary to the views of those who named them. In no case did any of these votes affect the outcome of a presidential election. In 1820, one elector did not vote for James Monroe. In 1948, a Tennessee elector voted for THURMOND, the States rights candidate, instead of for President Truman, but he had announced before the election that he would do this. The last case was in the 1960 election when a Republican elector in Oklahoma voted for Senator HARRY F. BYRD instead of Richard M. Nixon.

It is said, too, that the Founding Fathers had no notion of political parties. But, in, the very first election, Alexander Hamilton, leader of the Federalists, saw to it that John Adams would not run equally with Washington, as both men were being voted for as President. In fact, Washington received 69 votes and Adams only 34.

An outstanding authority on the Constitution, the late Chief Justice Charles C. Nott of the Court of Claims, has stated flatly that the notion that the framers of the Constitution had no plan in mind for electing a President different from that which is in force is completely in error. In the Encyclopedia Americana Judge Nott wrote:

"It is said by some of the commentators, and indeed it is now generally believed, that the electoral colleges were intended to be 'deliberative bodies.' In one sense this is true—in the legal sense. The electors are not ministerial or administrative officers; they do not perform a specific work in a way determined by higher official authority; in legal contemplation the responsibility of their action rests upon themselves. But the framers of the Constitution never supposed that the electors would disregard the political pledges upon which they were chosen, or that the American people, either directly or through their State legislatures, would blindly choose electors to evolve a President out of their inner consciousness. On the contrary, they contemplated the successful candidates receiving the votes of 'a majority of the whole number of electors,' and they required the electors to vote 'in their respective States,' and to vote on the same day. If they had framed a provision requiring all of the electors to convene at the seat of government in one body, and there in their own way and time proceed to choose a President, there would be good reason for saying that actual deliberation was intended; but they did not give to the electors one single power of attribute by virtue of which they could deliberate.

"The idea that it was ever intended that the electors should nominate the candidate for whom they themselves should vote is a myth which has been unthinkingly reiterated by most eminent writers, but which does not rest upon a single fact. * * * He who supposes that the framers (of the Constitution) intended that 13 different bodies should convene in 13 different places at one time for one object and for 1 day, and that object the selection of the executive of a nation, confesses a most superficial knowledge of the greatest constructive statesmen of their century and of the great work which they deliberately planned and built."

As originally introduced several years ago, the Mundt-Coudert amendment provided that a State's electors corresponding to its Representatives in Congress should be elected from congressional districts and the two corresponding to its Senators should be elected statewide, as Senators are elected. Critics, most of them supporters of the status quo, objected strongly and with justice that the use of congressional districts was open to criticism since in some States district lines had been unfairly drawn by whatever political party controlled the State legislature, a practice long known as gerrymandering.

To meet this criticism the amendment, as now proposed, provides for the setting up, as I have previously stated, of electoral districts to be composed of compact and contiguous territory, containing as nearly as practicable the number of persons which entitled the State to one Representative in the Congress.

Our amendment, if adopted, would require State legislatures to follow this constitutional directive. If they failed to do so Congress would have the power to step in and see to it that fair and equitable districts for electors are established.

It is altogether likely that these nongerrymandered electoral districts would at least sharply curtail the practice of setting up unfair congressional districts since it would be extremely difficult for a State legislature to justify one set of districts for electors and another for Representatives.

There is another often raised objection to the present system of electing a President. It is the provision that if no candidate receives a majority of the electoral votes when they are counted in Congress that the House of Representatives shall choose immediately a President from among the candidates with the three highest numbers of electoral votes. The vote in such a case—the last time it occurred was in 1824—is by State; each State delegation having one vote. In the event a State's House delegation is evenly divided its vote is not recorded. A majority of the States is required for election.

The objection to this system is that it is grossly unfair to the larger States, giving New York, California, and Pennsylvania no greater voice than Alaska, Delaware, and Nevada despite the great population disparities.

Senate Joint Resolution 12 cures this situation. It provides that in the event no presidential candidate has a majority of the electoral vote that "then from the persons having the three highest numbers on the list of persons voted for as President, the Senate and the House of Representatives, assembled and voting as individual Members of one body, shall choose immediately, by ballot, the President; a quorum for such purpose shall be three-fourths of the whole number of Senators and Representatives, and a majority of the whole number shall be necessary for a choice; if additional ballots be necessary, the choice on the fifth ballot shall be between the two persons having the highest number of votes on the fourth ballot."

The Constitution also provides that if no candidate for Vice President has a majority that the Senate shall choose him from among the two candidates with the highest electoral vote total. Senate Joint Resolution 12 provides that both Houses in joint session and voting by the head, as for President, shall select the Vice President from among the candidates with the three highest numbers of electoral votes.

Our system of electing a President has, generally speaking, served us well during the 172 years since our Republic was established. It has never failed to give us a President.

Through no fault of the Founding Fathers, it has, however, become distorted through the use of the general ticket system. Most of the framers of the Constitution, it should be pointed out, went on record favoring a district system for choosing electors, as the fairest method of expressing the popular will.

Senate Joint Resolution 12 is, in my opinion and the opinion of the many who support it, the only simple method by which each voter in every State will have the same voting weight in electing a President. It is the only one among the various electoral reform proposals which have been offered which will bring about a needed reform without a basic change in our constitutional system. It alone leaves control of the election machinery in the States, where it belongs.

It is the office and person of the elector, and nothing else, that maintains the intrastate character of presidential elections. Interstate candidacies are legally unknown and unprecedented under Constitution, and would remain so under Senate Joint Resolution 12. Now, party nominees for President and Vice President are extra-legal, outside the law. They achieve constitutional status only when votes are cast for them in the electoral college. If we abandon the office and person of elector we will of necessity establish interstate candidacies which, in turn, will open the door for ultimate Federal control of elections, including the qualifications of voters. Few Americans will favor such a change.

William Bryan Hamel

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1961

Mr. SPRINGER. Mr. Speaker, William Bryan Hamel, the editor and publisher of the Mattoon Journal-Gazette, at Mattoon, Ill., died suddenly on May 23 at Oklahoma City, Okla. Mr. Hamel had worked on the Journal-Gazette from 1926 to 1939, when he purchased the newspaper.

Bill Hamel was known throughout the Middle West as one of the outstanding men in the newspaper business. A large part of this was due to the fact that he integrated into his newspaper much civic work on his own part. He was a member and a past president of the Rotary Club, a member of Sigma Delta Chi, Tau Kappa Epsilon, the Chicago Press Club, and the Illinois Press Association.

He was also a member of the Inland Daily Press Association, American Newspaper Publishers' Association, the legislative committee and the Federal-State relations committee of the Illinois State Chamber of Commerce, and a member and former director of the Mattoon Association of Commerce.

He was for a number of years one of the outstanding civic workers in central Illinois. His energy knew almost no bounds, and in many cases it went beyond the limits of his own community.

I have known Bill Hamel since 1946. He was extremely active in matters connected with the University of Illinois, in Champaign-Urbana, Ill. In 1953 he was appointed to the citizens' committee of the University of Illinois and also became a member of the nine-man executive committee of the larger committee. In Illinois the trustees of the University of Illinois are elected at large. Bill Hamel was in the forefront of every fight to see that we had only the best and the most dedicated people serving on the board of trustees. He was never afraid to take a stand when he believed the public interest was affected, and his influence was widespread.

Bill Hamel was one of the last of the "intimate editors." Anyone in town who had a point could always see Mr. Hamel and talk over his problem. Nothing was too small for him to take up, even though he might not even know the person personally.

Not only the people of Mattoon, but his many friends in the newspaper business will miss him greatly. Both Mrs. Springer and I extend to Mrs. Hamel, his son and his daughter, along with his many other friends, our deepest sympathy on Bill's passing.

Mr. Speaker, I append herewith an editorial of May 27 from the Mattoon Journal-Gazette, written by his good friend Dave McDonald, and also a guest editorial by James W. Wells, Jr., editor and publisher of the Newton Press-Mentor, of the same date:

[From the Mattoon Journal-Gazette, May 27, 1961]

WILLIAM B. HAMEL

During the 37-year span of Bill Hamel's residence in Mattoon, the improvements in the community have been literally countless.

Despite the fact that Bill didn't want, and wouldn't claim credit, the truth is that as publisher of this newspaper since 1939, his was a position of great influence.

A publisher with less love for his adopted home could have, either by a negative attitude or by refusal to accept counsel, impeded progress.

But Bill did love Mattoon. And he was fair. He wanted to hear all sides of any proposal. His attitude is well summed up in this statement, repeated many, many times to those who came to him for help in promoting city projects: "Let's get the facts; then if it looks good for Mattoon, let's go to work."

Although Bill went to work for the Journal-Gazette as advertising manager, his heart was in the newsroom. He insisted that there be no relaxation of alert, fair reporting of the news.

It made no difference to Bill whether that news was, by its mere publication, critical or laudatory, or whether it reflected happy or unhappy conditions.

If it were news of the nature which was the people's right to know, he was sure it belonged in the columns of the Journal-Gazette, and he saw to it that it got there.

Many times he read proofs of police court stories and handed them back to his editors with this comment, "I wish we didn't have to use this, but don't ever forget that we are running a newspaper."

What he really liked was an excuse to pat someone on the back. He wrote hundreds of editorials praising organizations and individuals he thought deserved recognition. Nothing pleased him more than the opportunity to help those who needed a boost.

Bill never saw a stranger. His warm greeting and friendly smile were his trademarks. We of the Journal-Gazette hope that some of Bill Hamel has rubbed off on us.

As we bid him goodbye this afternoon we do so with a fond memory of a pleasant association and a pledge to continue to serve Mattoon with his high standards and ideals.

WILLIAM B. HAMEL

(By James W. Wells, Jr., editor and publisher of the Newton Press-Mentor)

This is a personal note to the family and beloved friends, associates, and employees of William B. Hamel, editor and publisher of the daily Journal-Gazette, at Mattoon. Others may read it if they wish.

It is being written on our famous $5 Underwood, which must have been installed in the Journal-Gazette newsroom early in this century. It was assigned to us when we joined that paper's staff in the 1930's, and we got title to it for the grand sum of $5 about 21 years ago when the company traded in a flock of typewriters.

It has been used almost daily ever since to write literally uncountable millions and millions of words. Never before in all those years has it failed to produce the words needed for the news of the day.

But today, with all the words which must be stored in the vocabulary of its battered old keys, we find none to bring you immediate comfort in the loss of your and our Bill Hamel. But maybe we and old No. 5 together can tell you of some of his good works which should add to your treasure of memories of Bill. Pleasant memories as you know, are among the most valuable possessions anyone can accumulate on earth.

Our very first memory of a community work done by Bill goes back to the earliest days of the oil industry in Mattoon. It so happened that we had previously worked on newspapers in oil towns and knew that there were many fine people in the oil indsutry.

Some elements in Mattoon were a bit slow to accept oil people, so Bill asked for our opinion. We told him of some of the oilmen and families we had known and he, working through the late Harry F. Kendall, then publisher of the Journal-Gazette, and H. G. (Seldy) Seldomridge, secretary of the Association of Commerce, changed the community attitude to one of sincere welcome.

Less than a month ago one of the most prominent lawyers in downstate Illinois asked us how in the world Mattoon derived so many benefits from the oil industry. We told him the story and added that the oil people never let Mr. Kendall, Bill, Seldy, or us down, blending perfectly in the life of the community with their many, many talents.

Another early memory of Bill's unselfish service goes back to 1939, a few months after he became publisher following the death of Mr. Kendall. Mrs. Wells and I went to the Coles County Fair at Charleston one afternoon and found it to be a great fair.

But there was one thing seriously wrong—only a handful of paying patrons attended. We dug into the problem and learned that the west side of the county did little to help the fair, even the east side was losing some of its interest and the association was so heavily in debt that it would not be able to stage a fair in 1940.

The worried banker assured us that he would go along for another year at least if the Journal-Gazette would get westsiders interested in the fair and participate in a reorganization and rejuvenation. We presented the proposition to Bill and he readily consented to personally help and authorized the full use of his newspaper toward saving the oldest county fair west of the Alleghenies.

The remainder of this story is public history—people all over the county took an interest in the fair, tremendous crowds turned out—and in 3 years the $17,000 debt had been retired with interest. The life of county fairs still is far from easy, however, and we hope that in memory of Bill the Journal-Gazette always will take a personal interest in the Coles County Fair.

Bill's thinking about the future of the community was usually several years ahead of the community itself. That's the way newspapers and newspapermen are supposed to think, plan, and act.

As a result, he was always looking for a new industry for Mattoon, and he made and kept widespread contacts for this purpose. The editorial columns of the Journal-Gazette were used to get many of the citizens in the same frame of mind.

The very first tip that led to getting the General Electric plant for Mattoon came from our late associate, Tim Klapp of Chicago, in a call to Bill.

The tip that brought Gar Wood Industries to Mattoon came from one of our own subscribers who learned of the possibility while visiting in Detroit and told Bill and the Journal-Gazette about it as soon as she returned home.

Much of the postwar growth of Mattoon can in effect be traced to the thinking of Bill and the work of the Journal-Gazette during World War II. Jobs were plentiful then, but Bill and the staff felt that the city should line up industries to provide employment when the war ended and the men came home.

Civic leaders agreed, work was started and the results are now apparent to all—hundreds of new jobs, hundreds of new homes, hundreds of new and happy families. All the wonderful civic leaders who worked so hard to get these results will tell you that Bill and his Journal-Gazette first put the

"burr under the community's tail" and spurred people into action.

Every worthwhile community group or movement, everything for the public good, received the full support of Bill and the Journal-Gazette. Remember when Red Graham, now State Senator Paul Graham, devised the Dollar Club to bolster a lagging March of Dimes? Asked how far the paper should go in promoting the new phase of the drive, Bill's reply was "Shoot the works."

That's the way he always reacted to good causes in the days when we were successively a reporter, city editor and managing editor for the Journal-Gazette. There were no exceptions in all those years.

His willingness to help often came down to the personal level, bringing valuable assistance to businessmen, professional men and others. We recall the case of one professional man who had struggled to establish a successful practice before World War II. Because of his talents, he was needed early in the war effort and he was gone from Mattoon for several years.

But Bill and his Journal-Gazette in ways known only to newspapermen, kept that man's status virtually intact in the community and when he finally got back home he resumed his work without facing the uphill battle of starting all over again. This man and many others have justified Bill's confidence in them by their subsequent contributions of service to the community, and they'll always remember the service he extended to them without even being asked to do so.

So whether we think of your and our Bill from the standpoint of the community or as a man and publisher helping other men, we may always cherish the memory of his many kind deeds.

Please be assured that the loss of Bill brought a distinct personal shock to us, but we have our memories—plus the knowledge that he took an outstanding newspaper and made it a dynamic force for good in its community.

You and we must also find comfort in the realization that despite the fact that Bill left us suddenly he left his newspaper in a position to carry on without faltering toward ever greater attainments in the future.

Tax Claim of E. S. Dillard

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Monday, May 29, 1961

Mr. METCALF. Mr. President, on May 27, 1959, when I was a Member of the House of Representatives, I inserted in the CONGRESSIONAL RECORD a newspaper article telling of a tax dispute between the Internal Revenue Service and Mr. E. S. Dillard, of Charlotte, N.C., and Lynchburg, Va., a leader of the national right to work committee.

The case involved $85,000 in bonds which Mr. Dillard had received from a money-losing venture. He donated $40,000 worth of these bonds to the Dillard Foundation and Trinity Presbyterian Church, claiming charitable deductions for the full amount.

The Government claimed the bonds were not really worth anything and that Mr. Dillard owed $6,186 in extra taxes.

The U.S. Tax Court has now ruled that the bonds were actually worth 43 cents on the dollar and disallowed the rest of Mr. Dillard's deductions for charity. Therefore, I was 43 percent wrong.

Mr. Dillard has now learned that I am a Member of the Senate and asked me to put in the CONGRESSIONAL RECORD a newspaper article reporting the outcome of this tax case. I am pleased to do this and ask unanimous consent to have printed in the Appendix of the RECORD the article which appeared in the February 7, 1961, issue of the Charlotte Observer, my previous insertion in the CONGRESSIONAL RECORD of May 27, 1959, and Mr. Dillard's three most recent letters.

There being no objection, the various items were ordered to be printed in the RECORD, as follows:

[From the CONGRESSIONAL RECORD, May 27, 1959]

RIGHT-TO-WORK LAWS

(Extension of remarks of Hon. LEE METCALF, of Montana, in the House of Representatives, Wednesday, May 27, 1959)

Mr. METCALF. Mr. Speaker, twice in the past 5 years Montanans have rejected the union busting so-called right-to-work law.

Those who would weaken unions and reduce the effectiveness of collective bargaining are regrouping, apparently for another try next year.

I have a copy of a letter dated January 7, from an outfit called the National Right To Work Committee. It is an appeal for donations of $50 or more to help supply students "with factual documented informational material" to offset the "propaganda, distorting the issue," being circulated by opponents of this proposal.

The letterhead of the committee includes: E. S. Dillard, president, Old Dominion Box Co., Charlotte, N.C., past chairman of the board.

In this connection, I call to the attention of my colleagues the following article concerning Mr. Dillard in the April 19, 1959, issue of the Charlotte, N.C., Observer.

"CHARLOTTEAN IS FIGHTING BIG TAX ASSESSMENT

"(By Don Oberdorfer)

"WASHINGTON.—Charlotte businessman E. S. Dillard is fighting a Federal tax bite of $92,506 in back taxes, according to records filed in U.S. tax court here.

"Dillard, president of Old Dominion Box Co., announced the sale of two of his three Charlotte divisions to Weyerhauser Timber Co. last week.

"Records filed by Dillard, plus Internal Revenue Service judgments attached, show the big tax dispute arose after Dillard's 1954 purchase of Brown Dynalube Co., Inc., of Charlotte. The company makes lubricating equipment and planned to expand into sales to the Armed Forces.

"Dillard bought the outstanding common stock and accounts payable of the firm for $1. He advanced $1,824 to the company and accepted from the company $85,000 in face value of debenture bonds due in 20 years.

"The Government said these bonds were worth their face value and should have been reported as income. Dillard says they weren't worth anything.

"Later, E. H. Newcombe, president of the lubricating firm, asked to buy some of the bonds of the company from Dillard.

"Dillard agreed to donate $10,000 face value of the bonds to Trinity Presbyterian Church, deducting the gift from his taxes as a $10,000 contribution.

"Newcombe bought the bonds from the church for their face value, $10,000 in cash.

"The same day Dillard donated another $20,000 in bonds to Dillard Foundation, Inc., a tax-exempt charitable foundation which he incorporated. This was deducted from his taxes as a $20,000 contribution.

"About 10 months later, in the fall of 1955, Dillard donated $10,000 more in bonds to Trinity Presbyterian Church, making the usual deduction. A total of $4,500 worth of these bonds were bought for $4,500 from the church by Minor Foundation, Inc.

"This foundation was incorporated by W. T. Minor, Jr., of Charlotte, who is Dillard's tax lawyer. Minor prepared the papers which were filed here on the tax case.

"Dillard says the bonds were worth their full value when he contributed them, and deducted them as contributions, though they were worth nothing when he acquired them.

"The Government takes the opposite view. It says they were worthless when contributed (and so the tax credit for contribution has been voided) but it claims the bonds were worth full face value when acquired and should have been reported as ordinary income.

"The Tax Court judges will have to decide who was right about the value of the bonds at each point in the transaction."

[From the Charlotte Observer, Feb. 7, 1961]

DEBT REDUCED—EX-CHARLOTTEAN WINS TAX RULING

WASHINGTON.—The U.S. Tax Court has ruled that E. S. Dillard, formerly of Charlotte, owes only a small part of the $92,400 claim made against him by the Internal Revenue Service.

The Dillard tax case involved $85,000 in debentures he received from Brown Dynalube Co., Inc., a money-losing venture in which Dillard was interested.

The Government claimed the bonds were worth full value and were income that should have been reported on his tax return. The Tax Court agreed with Dillard that this wasn't so.

Dillard later contributed Brown Dynalube bonds with a face value of $40,000 to Trinity Presbyterian Church and Dillard Foundation, Inc., claiming charitable deductions of this full amount.

The Government claimed Dillard owed $6,168 extra taxes on these deals because the bonds really weren't worth anything.

The Tax Court found that they were actually worth about 43 percent of their face value. It disallowed the rest of Dillard's deductions for charity. This means he will owe several thousand in extra taxes to the Internal Revenue Service unless there is further court review of the case.

MARCH 10, 1961.

The Honorable LEE METCALF,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR SIR: On May 27, 1959, you caused to be inserted in the CONGRESSIONAL RECORD a newspaper account of litigation in which I was involved with the Internal Revenue Service.

Your opening statements, followed by this insertion, clearly indicated that your purpose was an obvious attempt to discredit the National Right To Work Committee and me.

In view of your zeal to "call this matter to the attention of your colleagues" in the House of Representatives, I presume you want to inform them of the current status of the matter.

Accordingly, I request that you cause to be inserted in the CONGRESSIONAL RECORD the attached newspaper article from the same newspaper dated February 7, 1961.

I shall appreciate your advice as to your decision with respect to this request.

Very truly yours,

E. S. DILLARD,
President.

APRIL 19, 1961.

The Honorable LEE METCALF,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR SIR: In the event you failed to receive my letter and the enclosure of March 10, 1961, I am attaching duplicates.

I will appreciate an acknowledgment of your receipt of this material, or the courtesy of a reply in some form.

Very truly yours,

E. S. DILLARD,
President.

OLD DOMINION BOX CO., INC.,
Lynchburg, Va., May 9, 1961.

The Honorable LEE METCALF,
U.S. Senate Office Building,
Washington, D.C.

DEAR SENATOR METCALF: In view of the fact you have failed to reply to my letters of March 10 and April 19, I am sending you copies of these letters and attachments with this letter, registered, return receipt requested.

Once again, I ask you to advise me whether or not you will cause to be inserted in the CONGRESSIONAL RECORD the attached newspaper article reporting the outcome of the tax case in question.

Very truly yours,

E. S. DILLARD,
President.

Address by Hon. W. J. Bryan Dorn, of South Carolina, at Rededication of the Confederate Monument, Alexandria, Va.

EXTENSION OF REMARKS
OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1961

Mr. GATHINGS. Mr. Speaker, it was a genuine pleasure to be in attendance on the occasion of the rededication of the Confederate Monument in Alexandria, Va., by Hon. WILLIAM JENNINGS BRYAN DORN, on May 24, 1961.

While in the Democratic cloakroom on the afternoon of the day the commemorative rededication ceremony was to be held, I was asked why did I have on a blue suit. I replied that I planned to hear my colleague, BRYAN DORN rededicate the Confederate Monument in Alexandria, Va., that evening. Quietude fell over the cloakroom when I announced that he was to deliver the principal speech. Then someone spoke up and said, "I don't know who dedicated the Alexandria Confederate Monument originally but it will get a good rededication tonight."

The prediction of the member in the cloakroom was fulfilled in its truest sense—BRYAN DORN delivered a masterful, a superb address. He was appropriately introduced by Hon. JOEL BROYHILL, Representative of the 10th Virginia District.

Comdr. S. Cooper Dawson of the Robert E. Lee Chapter, Sons of Confederate Veterans was chairman, who introduced Representative BROYHILL. Hon. HOWARD W. SMITH, who represented the Alexandria District with distinction for many years received a warm ovation from the large crowd in attendance. Hon. FRED SCHWENGEL, of Iowa a member of the National Civil War Centennial Commission and Hon. ROBERT G. STEPHENS, JR., of Georga were also on the platform.

BRYAN DORN delivered his forceful speech with fervor and devotion. He was, no doubt, accustomed to speaking in the out-of-doors as his remarks were so well received by the audience. There are few, if any, orators of the persent day who can equal or excel BRYAN DORN.

His address follows:

ADDRESS OF REPRESENTATIVE WILLIAM JENNINGS BRYAN DORN, OF SOUTH CAROLINA, MAY 24, 1961, 6:30 P.M., IN OBSERVANCE OF CONFEDERATE MEMORIAL DAY; OPENING OF NORTHERN VIRGINIA CIVIL WAR CENTENNIAL COMMEMORATION AND THE REDEDICATION OF THE CONFEDERATE MONUMENT AT PRINCE AND WASHINGTON STREETS IN ALEXANDRIA, VA.

(One hundred years ago, May 24, 1861, the 17th Virginia Regiment formed at site of monument and marched out to join army of Northern Virginia. Federal troops occupied Alexandria on same day. Seventy-two years ago, May 24, 1889, Governor Fitzhugh Lee, nephew of Robert E. Lee, made dedicatory address unveiling monument.)

Commander Dawson, distinguished guests, ladies and gentlemen, it is a great honor to be presented to you by one of the ablest, most distinguished, and dedicated Members of the Congress, your own Hon. JOEL T. BROYHILL. I congratulate the citizens of northern Virginia on having the good judgment to send JOE BROYHILL repeatedly to the Congress.

It is an honor to share this platform with your own beloved Judge HOWARD W. SMITH who has served our entire Nation with loyalty, faithfulness and devotion. Judge SMITH has stood like a "Stonewall" for States rights, individual liberty and the principles and ideals of our Founding Fathers. On Virginia soil, I pledge him my continuing allegiance to the great cause for which he stands—constitutional government.

We are all honored with the presence of Congressman FRED SCHWENGEL, an able and distinguished member of the National Civil War Centennial Commission, from the great State of Iowa; Congressman E. C. GATHINGS, of Arkansas, a true southerner and a member of the powerful Agriculture Committee; and my young colleague, Congressman ROBERT G. STEPHENS, JR., of Georgia, a great-great nephew of the immortal Alexander H. Stephens, vice president of the Confederacy.

Commander Dawson, you and the members of the Robert E. Lee Chapter, Sons of Confederate Veterans, are to be commended for your untiring efforts to make this occasion a great success. You have been ably assisted by the charming and gracious ladies of Mary Custis Lee-17th Virginia Regiment Chapter of the United Daughters of the Confederacy.

I am glad that the Congress created the Civil War Centennial Commission to commemorate the heroic men and women who fought for the Union on one side and for the South on the other. To head this Commission no better selection could have been made than Gen. Ulysses S. Grant III, the grandson of that magnanimous and able leader to whom Lee surrendered at Appomattox. Your own distinguished former Governor and Congressman, William M. Tuck, is the Vice Chairman of the Commission. These men will lead us in the next 4 years to remember the deeds and heroism of the gallant men, both North and South. They will help us to have a better understanding of that struggle. Today, we should take these lessons of the past, learn them well, and guard our country's future.

I am proud to be a fellow Alexandrian. You are justly proud of the history, architecture, culture, and patriotism of your beautiful city. You have every right to be proud that Alexandria was the hometown of two of the greatest men ever to speak the English language, George Washington and Robert E. Lee.

One hundred years ago today the flower of the young manhood of Alexandria marched off to the west to cast its fortunes with one of the most famous armies in all of the history of the world—the Army of Northern Virginia.

This spot will always be sacred to the people of Alexandria. This ground is hallowed ground. It is historic ground. The men of the 17th Regiment marched away in the full knowledge that their homes, their firesides, their businesses, their cultured and lovely city would be in the hands of an enemy occupying force. They left in the firm conviction that they were fighting for what they believed to be right and just—States' rights, local government, and individual liberty. They marched away in the belief they were fighting for the principles enunciated in the Constitution of the United States and its Bill of Rights. They were loyal, patriotic, and devoted to duty.

The men of the 17th Regiment were familiar with the heritage of Alexandria—the cradle of American liberty. They had been reared in the traditions, principles, and ideals of George Washington, the Father of our Republic. They had been as loyal to the Stars and Stripes of the United States as Washington had been to the crown and flag of England. In casting their lot with their relatives, loved ones, and local principles of government, they felt they were doing no more than the Father of our Country when he joined the cause of the Revolution. Many of these men felt that their cause was a renewal of the revolutionary struggle against autocracy and supreme governmental power. They placed upon the altar of State sovereignty "their lives, their fortunes, and sacred honor."

The men of the 17th Regiment grew up with the full understanding of the principles of Thomas Jefferson; George Mason and his incomparable Bill of Rights; James Madison, the father of the Constitution; James Monroe, author of the Monroe Doctrine; Patrick Henry; Chief Justice John Marshall; John Randolph and countless others. They enjoyed a maximum of freedom, personal liberty, and the free enterprise opportunity system they had helped to create. This heritage, these traditions, this love of liberty was the foundation stone upon which the army of northern Virginia emblazoned its fame upon the pages of history. The leaders of this incomparable army were no less dedicated to the cause than the civilian soldier whom they commanded. Robert E. Lee, a native of Alexandria, as commander of that army gained immortal fame as a military leader and as a kindly, considerate, Christian gentleman. As a reminder of his military genius, his courage, and audacity, turn with me to the early morning of June 26, 1862. At that moment the young Confederate government was threatened with collapse. Its largest city and principal port, New Orleans, had been captured and occupied. Confederate lines of defense in the West had collapsed. The western armies retreated in confusion from Kentucky, from Tennessee, and from Shiloh deep into Mississippi. The Confederate coast was blockaded from Hampton Roads to the Mexican border. A huge, well-disciplined, highly-organized, and mighty Federal Army under George B. McClellan was 7 miles from downtown Richmond where they could hear the

church bells on Sunday morning. Powerful Union reinforcements were poised throughout northern Virginia to strike the rear and cut off retreat from Richmond. Despair, gloom, and hopelessness gripped the Confederate government and Confederate people.

You Sons of the Confederate Veterans here in Alexandria have rightly and proudly named your camp after the intrepid leader—Robert E. Lee. This new commander refused to retreat. He seized the initiative and launched a counterblow north of Richmond on the morning of June 26. With inferior numbers, with inferior supplies, with second-rate military hardware, in approximately 2 short months from that hour of attack on June 26, his footsore and ill-clad army was crossing the Potomac while his bands played "Maryland, My Maryalnd." Behind him lay the victories of the Seven Days, the Relief of Richmond, Cedar Mountain, and Second Bull Run. The wreckage of Federal armies littered the Virginia countryside. He now threatened the Federal Capital. Gloom, consternation, and despair gripped the North. The South breathed a sigh of relief and the world stood in amazement, awe, and wonder. The valor and gallantry of the civilian soldier under Lee and Jackson had turned the tide of defeat and easy Federal victory into a gigantic struggle to continue for years.

The men of the 17th Regiment who formed here on that May morning 100 years ago were part of the glory, the achievement, and lasting fame of that army. The Army or Northern Virginia was never, as a unit, driven from any single battlefield in defeat. It was simply worn away by hardship, disease, and attrition until it finally surrendered at Appomattox Court House. Its accomplishments and valor became legend. Military experts from foreign nations studied its every move. Patton, MacArthur, and even Rommel of Germany became familiar with the details of its campaigns—a tribute to Lee, his gallant officers, and the civilian soldiers who followed him for 4 years.

It was my privilege 4 years ago in May to attend the unveiling of the bust of Stonewall Jackson in the Hall of Fame for great Americans at New York University. I was thrilled to see the bust of Jackson added to that of Robert E. Lee. These incomparable leaders of the Army of Northern Virginia proudly stand with the 89 greatest men in American history—an honor bestowed by the entire Nation, a tribute to their genius and the soldiers of the Confederate Army. It has been truly said they no longer belong to the people of Virginia or the people of the South, but to all of America and to the English-speaking world. Could they speak today in the Hall of Fame, they would give credit to Southern manhood as exemplified in the 17th Virginia Regiment.

There has always existed a strong bond of friendship and mutual admiration between the people of Virginia and the people of South Carolina. I am proud to represent the old congressional district in this Congress once represented so ably and so well by the "father of States rights," John C. Calhoun. I am proud to represent the soil where the remains of Barnard E. Bee now rest—who gave "Stonewall" Jackson his immortal name and thrilled the South by his courage and supreme sacrifice at the First Battle of Manassas. When this handsome likeness of the Confederate soldier was dedicated to the memory of the men of the 17th Regiment on May 24, 1889, Gen. M. C. Butler of my South Carolina district sat on this platform with Gen. Joseph E. Johnston, Gov. Fitzhugh Lee, and the other distinguished guests. Gen. M. C. Butler was the youngest major general of the Confederate Army and at the time of the dedication was U.S. Senator from my native State. Senator Butler and Governor Lee did not know on that day 72 years ago that they would subsequently become major generals of volunteers in the Army of the United States during the Spanish War. In all the history of the world the story of man cannot point to a nation where men could attain high military rank in a cause against the government and yet reach the same rank in the defense of that government. Such was the spirit, devotion, and honor of Governor Lee and Senator Butler and the men whom they led.

This gives us another insight into the true character of the Confederate soldier. When the sun set on his ambitions and his hopes at Appomattox, he returned home and renewed his allegiance to the United States. His difficulties seemed insurmountable—homes destroyed, economic system wrecked, money worthless, and citizenship denied. Without aid, he tackled the task before him as resolutely as he had charged the Federal guns at Gettysburg. He succeeded in building a new South. He simply went to work and through patient, thrift, and frugality, wrote another chapter in the progress of our common Republic. He taught his children that we are one Nation, united forever.

In 1876 when the dark clouds of Reconstruction hung over the South, a disputed national election divided the American people. Revolution, war, bloodshed, and internal strife threatened our Nation. It was the loyalty, devotion, and coolness of men like Wade Hampton, M. C. Butler, and their Confederate followers who prevented further bloodshed and truly reunited our Republic. Someday historians will more fully cover this glorious chapter of American history. In 1876 the Confederate soldier fought for peace, understanding, and a united nation. In those trying days he contributed greatly to the preservation, unity, and growth of the United States.

It is fitting that we rededicate this monument today to the memory of our grandfathers, the Confederate civilian soldiers. It is proper that we rededicate it particularly to the men of the 17th Virginia Regiment, who volunteered from our historic city. We rededicate this monument today to the 97 men of Alexandria who paid the supreme sacrifice in defense of their native State. We rededicate it to those who were wounded and maimed for life. We rededicate it to those who returned and labored for peace, for the Union, and the restoration of our beautiful city. The men whom this monument honors were men who believed that each individual owes something of himself and his talents to his country, to his community, and to local and State government. In rededicating this monument, we would do well to send our children and our grandchildren here that they may emulate their gallantry, sacrifice, and devotion. Only by a study and understanding of the past can we preserve a measure of freedom and justice for the future. Yes, we rededicate this monument and ourselves to the future. May we absorb some of the devotion of these heroes and rededicate our lives to the preservation of our Nation. May we keep it strong militarily, educationally, morally, and spiritually.

Just as on May 24, 1861, our Nation today faces a great crisis. We are threatened as never before in our history since the time of Valley Forge. We are a united people today, but we face a ruthless, determined, and united enemy. These enemies, like Genghis Khan of old, are sweeping without conscience out of the Eurasian Continent aiming a death blow at our freedoms. This bloody enemy has gained at every turn. By open conquest, by subversion, and by infiltration he marches on to victory after victory. This enemy has won at every summit conference meeting. He enters a conference with a deliberate, calculated intention to lie and deceive. This atheist enemy has made fantastic and unbelievable gains in Asia, the Middle East, the Near East, Central Europe, Africa, Cuba, and Latin America. The United States is literally under the Communist gun today. Our only foreign policy has been the spending of money, appeasement, compromise, and retreat. We are today in a position where we can retreat no further without surrendering our sovereignty and liquidating the hard-won freedoms of our people. We can no longer trust the American dollar to purchase and preserve our American freedom. We can no longer depend on summit conferences, broken promises, and compromise of principle. We must, as a nation, now face reality. We should declare a national emergency, mobilize our total resources, and assume the offensive. The threat of Communist aggression in Cuba can no longer be tolerated. This threat must be eliminated by the Armed Forces of the United States if necessary. The hour is late, the situation critical. We must, enforce the Monroe Doctrine now or we will lose all of South and Central America. With the loss of South and Central America, the Communist pincer movement aimed at the heart of the United States will be complete.

Already Communist missiles and bombers are poised in Siberia ready to strike over the North Pole. With our southern flank exposed and under Communist domination, we could no longer maintain our position as a world power. Our Government must take the lead in fanning the fires of patriotism. We must rekindle the spirit of liberty. The valor and patriotism displayed by both sides in the 1860's are needed in the 1960's. Our freedom depends on the united effort of every American citizen. It will take courage, self-sacrifice, loyalty, and devotion to duty.

Around this monument which stands between the North and the South, we might direct our attention to the great domestic problem which threatens to divide our Nation as we face the common enemy. We cannot defeat communism and totalitarianism by adopting totalitarianism. In the name of fighting communism, the Federal Government is using some of its techniques and some of its arbitrary, blatant powers. Our Nation today is still a union of states, a union of communities, a union of local governments, and a unit of individuals—each State and individual maintaining independent characteristics while bearing allegiance and loyalty to the whole. If we are to survive as a nation, the Federal Government today must respect individual rights, States' rights, and long-established community customs and traditions.

The South of today is tolerant. The South of today is making fantastic progress in the field of equal rights and human understanding. The South is not making any effort to impose its traditions and customs and local statutes on other sections of the United States. The South is sponsoring no invasion of other areas of our land. The South respects the right of every community to govern at the local level. The grandsons and granddaughters of the men who wore the blue and grey in the 1860's are not engaged in agitation and destruction of our country today. Their love for this Nation, its Constitution, our individual privileges, and obligations were cemented in that fiery crucible a hundred years ago. This is the time for tolerance, unity, love, and understanding while we face the greatest danger in the history of Western civilization. Those who would invade the privacy of our time-honored, sacred institutions and travel many miles to disobey local and State laws are aiding the enemies of our great country. The agitators who leave their local duties to embark on a program of nationwide unrest and discord are compounding our problems during these critical days. Those who seek to make the United States conform to one pattern of pseudoliberal fascism are paving the way for a dictatorship and totalitarianism. Our Republic is a young Repub-

lic. It is still on trial before the eyes of the world. We must not turn our destiny over to the bigots, agitators, and pressure groups boring from within to advance their own selfish ends. Now is the time for all Americans—East, South, North, and West—to place the welfare of our country ahead of personal consideration. Now is the time for all organizations, races, and creeds to rededicate themselves first to the preservation of our Nation. Individual freedom, free local government, and the rights of our States can survive in the space age through a rededication of our allegiance to the faith of the Founding Fathers.

On this sacred ground as we commemorate the glorious deeds of our past may we rededicate and consecrate our lives forever to the freedom and independence of our beloved country. May we say with the late Senator Benjamin Hill of Georgia when he said: "He who saves his country saves all things, and all things saved will bless him. He who lets his country die lets all things die, and all things dying curse him."

American Women Render Valiant Service Abroad

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 29, 1961

Mr. MUNDT. Mr. President, a stirring and informative article reciting from firsthand observations the good work done by American women abroad has been written by Mrs. Bruce Lee Kennedy, wife of John A. Kennedy, publisher of the Daily Argus-Leader of Sioux Falls, S. Dak.

Mr. and Mrs. Kennedy are presently on an extensive oversea trip. I have previously called attention to some of the articles written by Mr. Kennedy for the Argus-Leader. I now ask that there be printed in the Appendix of today's RECORD an article from the talented pen of Mrs. John A. Kennedy entitled "American Women Brace Hardships of the Congo." It is a well-merited tribute to a wonderful group of Americans who are serving the cause of peace and freedom all over the world. This article appeared in a recent edition of the Daily Argus-Leader.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Sioux Falls Argus-Leader, Apr. 30, 1961]

AMERICAN WOMEN BRAVE HARDSHIPS OF THE CONGO

(By Bruce Lee Kennedy, president of the Sioux Falls Argus-Leader)

LEOPOLDVILLE.—My hat is off to that little band of American women keeping house for their foreign service husbands here in the Congo—and to the other European (all nonnatives are so designated) wives of U.N., Embassy, and commercial whites who live here.

Shortage of food, decent housing, inflated prices, and the general chaos makes housekeeping very, very difficult.

Eggs, when you can get them fresh, are $1.40 per dozen, staples are high in price and short in supply; meat and fowl tough and few vegetables available at any price.

It is so different than 2 years ago. Then there was plenty of everything, even though most was imported, and prices which always have been high had not reached the astronomical plateau now existing.

INSECTS CAUSE LAUNDRY PROBLEM

Mrs. Norman E. Warner, daughter of the D. W. Loucks of 2221 South Western Avenue, Sioux Falls, wife of the first secretary, told me of a laundry problem. She has three children. When the clothes dry outside, insects sometimes lay eggs on them. When this happens on underwear, body heat hatches the eggs and tiny worms imbed themselves in the skin of the wearer. If the clothes are pressed with a hot iron, the heat kills the eggs, but it is very hard on nylons and other synthetic materials.

Ernest H. Wiener, Jr., press officer, has a 1-year-old baby. His wife thought it would be grand to have houseboys to do the work. They are paid $50 a month, plus a family allowance dependent on the number of children the houseboy has. A bachelor, therefore, is preferred, but if you get one it won't be long before he saves enough to buy a wife. In the current market, the young man pays $100 to $200 for her. If the marriage is not a success and she returns to her family, the bride's price is refunded.

There were many complaints about the houseboy's inefficiency—they could not remember; they would not clean thoroughly; they could not answer the phone. They would boil the drinking water, but it was difficult to have this done for the ice cubes.

In addition to doing housework, the boys also act as nursemaids for the children. Since independence, they don't want to work after 3 o'clock in the afternoon, so preparing the evening dinner and obtaining baby sitters becomes difficult.

POWDERED MILK IMPORTED

Since there are few tuberculin-tested cows in the Congo, all milk is imported in powdered form. Older children who have been brought up on whole homogenized milk don't like it any more than our soldiers and sailors do. The Wiener's year-old baby doesn't know the difference, of course. Mixing milk into cocoa, making cream soups and stirring chocolate into it helps disguise and solves the problem for the older youngsters.

If the children know French, it is easy for them at school but one boy of 11 with whom we talked was having a most difficult time as classes are in French. He just was beginning to catch on to part of his lessons after several months of school.

All Europeans take vitamins daily and a weekly antimalaria tablet. Pan American Airways gave all Léopoldville-bound passengers malaria pills.

The Belgians sprayed for mosquitoes with helicopters twice weekly before independence as well as spraying in the city streets by truck. This service has vanished.

Of course, everyone is inoculated against typhoid, polio, and all of the tropical diseases before they arrive.

FOOD IN SHORT SUPPLY

Food stocks right now are dreadfully low. There are practically no fresh-frozen foods. Every Thursday, fresh fish is flown in. By 9 a.m., the supply in exhausted.

I went to three shops to get two 8-ounce cans of tomato juice for 40 cents each.

Canned fruits, soups, and vegetables, mostly American, cost two and one-half times as much as at home. There were a few carrots and some tired cabbage.

For fresh vegetables, you go to the native market which seems safe now but many Europeans are reluctant about buying there. Fruit and vegetables have to be well cooked and medicated to kill microbes.

Good Friday evening we paid 50 cents each for oysters at Sabena Guest House. Half a lobster, either broiled or thermador, was $11 a portion. We watched for an hour and a half but saw no one ordering this delicacy. It was out of sight for our budget.

Most people were eating steamed mussels, with broth served in a casserole at $1.50 per portion.

Five of us lunched one day at our hotel. We had broiled trout, potatoes, canned asparagus and string beans, beer and cheese and crackers for dessert. The bill was $40—typical for all meals in hotels considered safe.

U.N. soldiers equipped with Sten guns paraded before the entrance and exits of our hotel.

EFFECTS OF INFLATION FELT

Inflation is taking its toll. The black market rate of exchange is 80 francs for $1, although embassy, press and commercial people exchange their paychecks at the official rate of 50 francs to the dollar. This makes for very expensive living because actual prices are tied to the black market rate.

My hairdresser was almost out of supplies but hoped for a suitcase full which her daughter was bringing from Belgium. If she can't get more through normal channels, she will have to close up shop.

The Warners told me they had been waiting more than 6 months for their furniture. It was in the pile of undelivered goods at Port Matambi, where U.N. and Congolese are still struggling for control.

Neighbors had just received their household goods. Practically all of it was water-soaked. Mattresses and upholstered pieces of course were ruined. The Warners and others in similar situations hope theirs will arrive in good condition.

Supreme Court Orders Pay for Traitors

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. HOSMER. Mr. Speaker, when legal precedents and reasoning will support a judgment either way, good judges have traditionally rendered that judgment which most accords with the interests of society. In short, commonsense has had a part in the development and strength of our legal system and the respect for law which characterizes our society. When this tradition is disregarded it can only result in weakening the legal system and diminishing respect for it.

Apparently the U.S. Court of Claims determined there was adequate precedent and legal reasoning to support a judgment denying Army pay to certain Korean POW's who defected to the Communists. Yet the Supreme Court of the United States has overturned that decision and ordered payments by the U.S. Government to the very persons who dishonorably turned against it. I share with the writer of the following editorial appearing in the Los Angeles Herald Express on May 25 his difficulty in understanding why the Supreme Court should render such a decision.

REWARD FOR DISHONOR

Another U.S. Supreme Court decision which will astonish many Americans has just been handed down in the case of three U.S. soldiers who were alleged to have aided the Communist side when they were captured during the Korean war.

After the war, the trio refused repatriation, preferring to remain in Red China. But after 19 months under the Red Chinese, they changed their minds and returned to the United States in 1955.

Now the U.S. Supreme Court has ruled that the three soldiers, former corporals who were dishonorably discharged from the Army, are entitled to their pay during the time they were prisoners of war.

The Supreme Court decision came on appeal from the U.S. Court of Claims, which had declared in its opposite decision that to grant their POW pay "would be to put a premium on dishonor and a penalty on courageous loyalty."

Arguing before the Supreme Court, George S. Leonard, attorney for the Justice Department, said that the actions of the three soldiers "appear to have amounted to the military equivalent of treason."

It often is difficult to understand the reasoning behind the High Court's decisions.

The defectors involved and the amount of American taxpayers money they will receive under this decision are as follows: Otho G. Bell, Hillsboro, Miss., $1,455; William A. Cowart, Monticello, Ark., $4,991; Lewie W. Griggs, Jacksonville, Tex., $2,810.

Birthday Greetings to President Kennedy

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. ANFUSO. Mr. Speaker, on the occasion of President Kennedy's 44th birthday, I am happy to join with millions of well-wishers in this country and abroad to extend felicitations and warmest greetings to our Chief Executive. With it go my sincerest wishes that the year ahead may prove to be a year of great achievement for him and for our Nation.

It is said that every period of crisis in the Nation's history brings forth its men of great vision and ability. We are fortunate indeed to have a man of the vision and stature of President Kennedy to lead our people at this crucial period in human affairs. I feel certain that under his leadership and guidance we can look forward to the future with courage and determination that our national goals will be achieved.

On the eve of his departure for Europe, where he is to meet with the great French statesman General de Gaulle, with Soviet Premier Khrushchev and others, we wish him godspeed and success in his endeavors in behalf of world peace. Together with these wishes, go our assurances that the American people are united behind him and fully support him in these efforts. Millions in this country will be praying for his success.

It is perhaps coincidental, but nevertheless momentous, that this mission to Europe should begin on his 44th birthday. Not many men in all of history, in all nations, have reached the pinnacle of leadership of a great nation at the age of 44. President Kennedy has emerged on the world scene as the leader of the greatest and the most powerful nation of all times at this relatively young age, and that is due to his great leadership, his ability, his understanding of world problems, and his unceasing desire to make this world a safer and a happier place for all mankind.

May the good Lord bless him and his family with many years of good health. May we be privileged to benefit of his able leadership and wise counsel in the years ahead, and may he succeed in leading our Nation from strength to strength. Let us hope that America, under President Kennedy, and the whole world, will truly enjoy genuine peace and cooperation for the welfare of all of humanity.

Pro-Red China Move Called Peril to United States

EXTENSION OF REMARKS
OF
HON. DONALD C. BRUCE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. BRUCE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to insert an article from the Indianapolis Star, written by Preston G. Woolf, an Indianapolis businessman and president of the Indianapolis Council on World Affairs.

Mr. Woolf has written a most perceptive article on the drive to admit Red China into the United Nations. I would recommend that all of my colleagues read Mr. Woolf's article for a precise analysis of the dangers involved in such a move by this country.

[From the Indianapolis Star, Apr. 28, 1961]

PRO-RED CHINA MOVE CALLED PERIL TO UNITED STATES

(Preston G. Woolf, Indianapolis businessman and president of the Indianapolis Council on World Affairs, knows the Orient and its people firsthand. His world travels have taken him there many times. Here are his observations on the vital issue of Red China and the United Nations.)

(By Preston G. Woolf)

During the coming months it is expected that the pressure will increase for the admittance of Red China into the United Nations. The principal line of the arguments may be expected to be that "we cannot continue to ignore 700 million people" and that "it is easier to get them around a conference table where we can negotiate with them."

Then we can expect the "soft-sell," which takes the line that "Peiping is not trying to get into the U.N. nearly as hard as Washington is trying to keep it out."

The facts are that the Red Chinese would like to be in the world organization, for the U.N. is a wonderful sounding board for propaganda, as the Russians have demonstrated again and again. But the Chinese Communists act as if they can take the U.N. membership or leave it.

We also can expect to receive pressure from some of our allies who are now trading with the Red Chinese and would like to do them a favor by "getting them into the club," provided they will not meet with too violent opposition from the United States.

To get American reasoning on the question of Red China and the U.N. down to rock-bottom logic is perhaps easier today. This is because we are now thoroughly awake to the vicious Communist regime which has been planted in Cuba while we were still living in naive hope.

Every American should firmly realize that the Red Chinese regard the United States as their No. 1 enemy and have as their major objective to drive the United States out of the Orient. They are now trying to weaken the United States by attacking its allies, using the so-called strategy of attacking the weak in order to weaken the strong.

One need only to look at our current losing position in Laos and to study seriously the threat that exists against Vietnam, Thailand, and Burma to see the encroachment of Red China on all of Southeast Asia.

Around the immense southern rim of Red China, from Afghanistan at the western end to Vietnam on the Pacific, the growing propaganda against us in Japan and military preparedness in North Korea, we find the Red Chinese at work against us. Most of the bordering nations either show a friendly face or a neutral face toward their huge neighbor. Only two or three venture to be openly hostile and defiant. All share a common feeling toward Red China—namely, fear.

From earliest times, the Chinese have been pressing southward from the days of Han until the hordes of Kublai Khan.

All Asians know that Red China is not the agrarian reformer as originally portrayed, but is a dedicated and aggressive Communist power enjoying the full support and cooperation of Soviet Russia and openly, daily and loudly broadcasting its hate for the United States.

It would be unbelievable that America, in a moment of naive weakness or charity, would invite this nation, under its present regime and following its present practices, to sit at the United Nations.

Were we to do so, many of our friends, both individual leaders and nations, in the Orient would crumble like a house of cards. Resistance to the Red Chinese in the Orient is encouraged principally because the United States is the great power and has the courage to speak against Peiping.

Even neutral India, which seemed to go out of her way to be conciliatory toward China, has been less charitable since the days of the slaughter of the people of Tibet and the Chinese military claims to parts of Kashmir.

One of the strongest and most intelligent allies in the Orient, namely the Republic of Free China on Formosa, would be the first to be hurt by any change in United States policy. Formosa has the best army and air force in Asia on the side of the West and maintains an irrevocable attitude against communism.

This policy of President Chiang Kai-shek presents an iron fist against communism first, because the Chinese Nationalists have personally seen communism on the mainland and secondly, because they know that their republic has built its strength through its development as a showcase for free enterprise as compared with the regimentation on the mainland less than 100 miles away.

Recognition of Red China would weaken the military position of Formosa which is one of the great ramparts in the West Pacific. The humility of any loss of power or prestige of Formosa would cause desertion of 12 million oversea Chinese living in southeast Asia from the cause of freedom and force them to pay homage to the ambitious Red Chinese.

Just as our position in Cuba has deteriorated through lack of proper perception and alertness to the danger of giving the Communists a foothold, we could, in like manner, awake to find that we have lost the Orient if we were to recognize Red China. Then Pearl Harbor would again become our frontline of defense.

Ethics and Politics

EXTENSION OF REMARKS
OF
HON. DONALD C. BRUCE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. BRUCE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an editorial from the Wall Street Journal, May 8, 1961, entitled "Ethics and Politics."

This editorial points up the political hypocricy and cynicism which has governed the passage of various of the laws passed by this Congress in the past few months. It is clear to me that unless this unrestricted spending with no possibility of balancing the budget is halted immediately, future generations will be burdened with a debt so staggering that they may never recover.

Ethics in politics is a subject about which all of us ought to be concerned. Many of us could not face our constituents in next year's elections with the knowledge that we had jeopardized their children's futures by voting for certain measures for purely political reasons.

The editorial follows:

ETHICS AND POLITICS

With so much high-sounding talk about conflict of interest and the presumed need for higher ethical standards in Government and business, maybe it's time for some down-to-earth thinking about the state of political morality in Washington, D.C.

We have in mind, among other things, a brace of brandnew laws Congress has obligingly presented the President very much as he asked for them. Both the minimum wage and the depressed areas laws are marvels of political hypocrisy. We don't say they are the worst in the long history of politicking, but they are bad enough.

The basic concept of the minimum wage bill has been described this way: Extend coverage to as many workers as possible while incurring as few enemies as possible. By noting that the law covers 3.6 million workers not previously included, the politicians can trumpet their compassion for the poor little people.

That is a sham. The law excludes many workers—certain hospital workers, agricultural laborers, laundry workers, for example—who actually make less than $1 an hour. Such exclusions are not difficult to fathom; to take just one, the powerful congressional farm bloc wouldn't hear of bringing in agricultural laborers. Indeed a small group of workers in the South that were previously covered are kicked out under the new law, in order to make it more palatable to southern politicians.

At the same time the measure extends coverage to many whose wages are far above present or prospective minimums. A choice instance is the inclusion of 1 million construction workers. The average hourly pay of construction workers in this country is $3.32. The reason for dragging them in is purely and simply to pad the apparent coverage and so make it appear that the Government is doing a lot for a whole lot of people.

This fraudulent law has good company in the depressed-area measure. The definition of such an area is one where unemployment is above an arbitrary percentage. First of all, the Government makes only the most superficial attempt to discover how many people in this country are genuinely unemployed, in the sense that they are able and willing to work and actually looking for any work that will keep them off the governmental doles. Thus the very premise of the depressed-area legislation is faulty.

Beyond that, it is designed to attract industry to areas whose problem of the moment is an excess of industrial capacity for immediate needs, while providing no assurance of attracting industry to economically unappealing areas. Some of the law's more candid supporters admit their doubts that it will do anything to relieve unemployment. The all-important political point is that it is a means of channeling nearly half a billion dollars to politically appealing areas.

More generally, it is becoming clear that this administration and this Congress propose to pursue their political spending plans with little regard to the Government's financial condition. Unless they change quickly and abruptly, they are setting the country on an inflationary course. That means shirking one of the Government's most basic moral responsibilities: the preservation of honest money.

We would want it well understood that we are not against politicians or politicking. In our Government a President is perforce a politician. In the nature and diversity of our political society, compromises in Congress—logrolling if you wish—are necessary and frequently desirable. In this way it is possible to reach something like a consensus of the country; it is frequently possible to defeat or modify dangerously extreme legislation.

But what is striking about many in this administration and this Congress so far is the high degree of political cynicism they have brought to Washington; the virtues of politics, after all, can turn into vices, as when they produce legislation and actions in clear conflict with the public interest.

So it is perhaps not out of place to suggest some examination of consciences in Washington. If that is asking too much, the public should at least take a good look at what is going on in its name.

No Government Aid, Please

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial appearing in the May 20 issue of the Southern Textile News, of Charlotte, N.C. This editorial points up an observation I made in a speech on the floor on May 22, 1961, in which it was stated that I do not believe the textile industry is seeking Government handouts or that it wishes to be placed on a dole. What it does seek is a fair opportunity to compete in the domestic market with foreign manufacturers of textile products. The editorial follows:

NO GOVERNMENT AID, PLEASE

The latest suggestion from Washington is that the U.S. Government allocate $80 million to the textile industries to promote the basic research. According to the plan the money would be raised by customs receipts from textile imports.

We feel that such a step is not necessary and would not be to the best interests of the textile industry.

In the first place, we are sure the industry is not looking for any kind of grant or handout from the Federal Government; in the second place, we feel the industry would not want a vital program such as research tied to foreign imports; and in the third place, we believe the textile industry is carrying on as vigorous and profitable a program of research as is any other industry.

To have the Government interfere in the research work would only weaken the efforts now being put forth by private enterprise.

Since so much is being done in this field by the textile industry we hesitate to cite examples. However, in glancing over the last issue of our publication, a number of examples can be seen. One of them is the automatic doffing system developed by the Deering Milliken Research Corp., Spartanburg, S.C.; another is the progress toward permanent creased trousers as reported by the wool bureau in New York.

Along with this there is a report on the Draper shuttleless loom and the striking statement by an official of the firm revealing that for the past 5 years the Draper Corp. has used the equivalent of 50 percent of the company's net profit after taxes for the purpose of product research and development. It would be easy to go on and on with such examples. We are confident that any interested observer could compile an impressive catalog of such accomplishments by reading our publication for a couple of months.

We are convinced it would be a mistake for the Government to get involved in a field which is being adequately served by individual companies as well as by many trade organizations. With Government aid there inevitably comes Government control and interference. This, we are sure, is something the textile industry would want to avoid.

For many years spokesmen for the textile plants have emphasized that the main thing they want from the Government is to be let alone to run their businesses. They would, of course, like to be freed from some artificial difficulties such as abnormal imports and two-price cotton which Government policies have produced. But there is every reason to believe that it would only compound these problems to get involved in a Government aid program of any kind.

We are living in an age of Federal aid to education, Federal medical care for the aged, aid for depressed areas, and so on, endlessly. One look at what Federal aid has done for our agriculture, however, is enough to scare any thinking person away from Government subsidies.

We are glad our officials in Washington are thinking about the welfare of the Nation's vital textile industry. Nevertheless, there are many things they could do which would be far more useful than an outright grant of money.

For many years leaders of the industry have been making some very logical suggestions. It is our sincere hope that the Government people will take some of the steps which have already been recommended instead of embarking on some wildcat program of their own.

Iconoclast

EXTENSION OF REMARKS
OF
HON. JOHN H. ROUSSELOT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. ROUSSELOT. Mr. Speaker, under unanimous consent I include Senator

BARRY GOLDWATER's letter to the Washington Post—Sunday May 28, 1961—included in the RECORD. Senator GOLDWATER answers in a clear and concise manner charges made against him by the same publication.

The article follows:

ICONOCLAST

Speaking of "sleazy smears as silly as they are unfair," reference is made herewith to your editorial of May 20.

Your writer objected to my statement that "it is long past time that we satisfy the American mind about the State Department in view of the number of recent fiascoes." And, of course, in doing so he conveniently neglected the preface I made to that statement wherein I specifically said that "I am not implying that there are Communists in the State Department."

It might have helped if the Washington Post had had a reporter present when I made my remarks to the Arlington Young Republicans—a reporter competent enough to take down an entire statement rather than lifting a quote out of context—but I doubt it. Had my entire statement been reported, you would not have been able to infer that I was attacking the patriotism of State Department personnel, which I certainly was not.

I was intrigued with the Post's reference to "The misjudgments in the executive agencies which have resulted in such serious reverses in the United States of late." What are we supposed to do about these "misjudgments?" Do we ignore them merely because a Senator named McCarthy once attacked the State Department in a manner which the Post will never forgive?

I am interested in knowing just what it would take for the Post to editorially sanction an investigation into how we have been mishandling our international affairs? Do we have to wait until Khrushchev takes over all of Latin America, all of southeast Asia, all of the Middle East? Or do we have to wait until international communism engulfs the United States and the Washington Post is reduced to the last editorial it will ever guaranteed to the American press?
write under the constitutional freedom

Does the Post mean to infer that because the State Department is patriotic, it is also infallible; that because it is not ruled by Communist influences, that it should not be investigated?

For some reason which I am at a loss to fathem, the Post is unduly sensitive on the subject of possible investigation of the State Department. I haven't found it equally as touchy about other departments that have come under attach, such as the CIA or the Joint Chiefs of Staff. Why?

It is academic to point out that you are out of step with the American people, who are demanding in a loud voice that our disastrous foreign policy be investigated from top to bottom. If your editorial writers would step out of their ivory white towers and get out of Washington for a time, I suggest they would find out that the people are sick to death of a steady diet of fiascoes which began at Yalta and paced the loss of Poland, China, and other important areas of the world—fiascoes which reduced victory to defeat in Korea, allowed Nasser to rise in the Middle East, made a mess of things in Laos, excused the rise of Castro's Communist regime on our doorstep and botched the Cuban invasion attempt.

No amount of Post editorializing to the effect that the State Department's role in these disasters was patriotically motivated will wipe them out or excuse them in the minds of the American people. The role of the State Department has been, at the very best, sophomoric and naive at the most critical time in our history. It deserves to be looked into thoroughly and competently.

BARRY GOLDWATER,
Senator from Arizona.

WASHINGTON.

Where Has Prestige of United States Gone?

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1961

Mr. BROWN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Joseph (Mo.) News-Press entitled, "Where Has Prestige of United States Gone?"

WHERE HAS PRESTIGE OF UNITED STATES GONE?

Bandit Castro, Red dictator of Cuba, has the effrontery to offer to free 1,200 captives taken in the ill-fated invasion of Cuba early in April. He has all the gall of Mediterranean bandit Raisuli who in 1904 captured an American citizen and held him for ransom.

This dirty, miserable, jackal Castro offers to sell his human captives for 500 bulldozers from the United States.

As if this were not bad enough, worse, Americans of high standing actually have taken steps to meet the ransom. It is astounding that Eleanor Roosevelt, Milton Eisenhower, and Walter Reuther, have started a movement to raise the ransom money.

How low can the prestige of the United States fall?

What will the Old World, yes, even the Communist-ruled world, think of an American that in the face of the April debacle—that abortive invasion—now buys the freedom of captives in this manner?

Either we did or did not engineer that futile invasion. If we did, then we should go ahead with the job, invade the place, annihilate Castro, and take the consequences with his sponsor Khrushchev. If we did not have anything to do with that invasion—except guilty knowledge that would perhaps make us an accessory before the fact—then we should keep hands off. A revolt failed; the rebels must take the consequences. That is the history of revolution from the time of all recorded history.

We are disappointed, terribly disappointed in President John F. Kennedy. Where is the man of noble words at his Inaugural? Great heavens, President Kennedy surely must have known of this bandit offer for ransom. All he had to do was denounce it in strongest terms of his careful use of the English language. Then not even the names of Franklin Roosevelt's widow or President Eisenhower's brother would have availed.

Did America fall on its face in electing this man Kennedy? Maybe the fates have been unkind to him. If they have they certainly have with a vengeance. Is the man as former President Harry S. Truman once said immature, not ready for the presidency or the presidency not ready for him?

Getting back to that Berber bandit Raisuli of more than 50 years ago: The captive was a native Greek, but then an American citizen, Ion Perdicaris. When the ransom demand came to the White House in 1904 grim, fighting Theodore Roosevelt shot back one sentence to the Mediterranean authorities who dared act as middleman between a bandit and a President. Theodore Roosevelt demanded the safe return of the American or the extinction of the bandit. His cable adorns history's bright page: "Perdicaris alive or Raisuli dead."

O for another Grover Cleveland or Theodore in the White House.

Indeed, indeed we fear we have fallen on evil days.

Law and the Free Citizen

EXTENSION OF REMARKS
OF
HON. ODIN LANGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1961

Mr. LANGEN. Mr. Speaker, I wish to call the attention of the House to the following prizewinning essay by Miss Mary Ann Novacek, daughter of Mr. and Mrs. Louis Novacek, and a student at Mount St. Benedict Academy in Crookston, Minn.

Miss Novacek's essay, which won first place in the ninth district VFW Auxiliary contest in Minnesota, is a further example of the outstanding work being done by today's young people.

The essay, entitled "Law and the Free Citizen," follows:

Law, freedom, and citizenship may be compared to three beautifully carved chests preserved and cherished in the living treasury of history. These chests have been carefully guarded through the centuries against the onslaughts of tyranny and oppression. They have stood the wear well.

Upon closer examination of the first chest, law, one sees handsomely carved on the shining cover of the chest the 10 commandments, the first and basic law governing all men. Contained in this chest are the codes of Hammurabi and Justinian. The Magna Carta, the Declaration of Independence, and the Constitution of the United States of America. Law, centuries of law, which shows the evolution of law from the embyro of God's commandments to the most intricately developed definitions of these simple precepts, is the precious contents of this chest.

The second chest, freedom, is as large as its predecessor and shines with equal brilliance, although the surface is scratched and stained. Yet noble stains are these. They are the reminders of the cost of freedom: the blood of the Israelites stung by the Egyptian lash; the tears of Cornelia, the mother of the Grachii; the blood of colonial Americans at Bunker Hill; the blood of the French nobility shed, because of oppression; and more American blood shed at Harpers Ferry and Gettysburg. Yes, noble stains they are and they reflect the sun's rays and light the way for man's search for true freedom.

The third chest, citizenship, is large enough to contain the other two. The cover of this chest has a relief of a Roman gowned in a toga. The toga was the mark of citizenship in Rome. No slave or foreigner could wear a toga. When a Roman citizen was to be banished he symbolically set aside his rights of citizenship by casting off his toga. Virgil said of the toga: "Romanos rerum dominos, genetumque togatum" * * * "Romans, lords of the world, the race that wears the toga."

Citizenship has always been coveted. A citizen is a sharer in his home, his church, and his nation. From each of these institutions the citizen derives rights, benefits, and duties. The French rebels desired citizenship so ardently that they willingly faced armed guards with no more powerful weapon than a pitchfork or a hoe. After their republic was set up the Frenchmen addressed each other as "citizenne."

In America an immigrant first dons a "toga" when he has been naturalized. From that time on he enjoys the rights of an American citizen and is obliged to carry out the duties of his new state.

Freedom is defined as the absence of external coercion or restraint. Man is intrinsically free because of his free will. The will is free when it is trained to seek what is good. The good, in this instance, is the law.

Freedom and law are inseparate of one another. Freedom without law becomes license and brings chaos. Law without freedom becomes force and brings tyranny. Tyranny occurs when the law in a dictatorship or an obsolute monarchy is the will of the ruler. In the early belief of the divine right of kings the monarch was responsible to God for his actions. The dictator of today no longer feels responsible to any higher power. He governs as he sees fit and the people are at his mercy. Might and force set aside right.

Law is an indispensable partner of freedom. It is a guide for reason and a protector of human rights. The good citizen realizes this, and safeguards the law by, first of all, obeying it; secondly, by electing good legislators and law enforcement officers.

It is important to remember that those three chests have been entrusted to the care of the present generation and must be preserved intact for future generations. We must be dedicated to the great tasks remaining before us, the tasks of firmly establishing the ideals of freedom and law; of safeguarding our national heritage of freedom and law; and of aiding other nations in their struggle to secure freedom and law. Most of all, America, you must fulfill the command "Confirm thy soul in self control, thy liberty in law."

An Address by W. W. McEachern, President of the South Carolina National Bank, Before the Lions Club of Columbia, S.C.

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1961

Mr. McMILLAN. Mr. Speaker, under unanimous consent, I insert in the Appendix of the CONGRESSIONAL RECORD a copy of a speech delivered by Mr. W. W. McEachern, president of the South Carolina National Bank.

I hope every Member of the House will have an opportunity to read this excellent speech delivered by one of our most outstanding citizens in South Carolina:

There is a difference in talking about the state of our economy and in making predictions about it. If you want to speculate on the future of the economy based on anything I say, you must do so at your own risk. There are too many variable factors and the variations sometimes occur so suddenly that I would want to know the situation on a given day to forecast the economic climate for only a very short period of time.

Perhaps this comment is somewhat of an exaggeration, but the extent to which world events affect the general domestic economy—in fact, the local economy in many areas—makes it important for us to remember how easily chain reactions take place in response to events thousands of miles away. Day to day changes in foreign relations and in scientific achievements—such as our man in space—may create economic reactions of varying degrees.

At this particular time, the man in Cuba concerns me more than the man in space. We have to face the fact that in some phases of current history our own Federal Government cannot control the economy because it cannot regulate the unpredictable dictators.

Always remember that we must expect and try to be prepared for the unpredictable.

A banker has no crystal ball or any other sources than you have to provide him with information on economic conditions. We have to use the same available data to arrive at our conclusions. Our advantage is that we daily draw upon the sources of information available because accurate and timely information determines a bank's progress or lack of progress perhaps more than in other businesses or industries. Banks have to assess the reports on many endeavors to operate successfully, while specific data in only one or a few related fields are required of most businesses or industries.

If a banker does not find out a good deal of what each of you have to know about your own business, plus some additional information about banking, he cannot serve you as you deserve and need to be served.

So, instead of gazing into a crystal ball, we have to dig into your business as well as our own. My comments here are based on digging for a long time and having tried to apply what I have been able to uncover through the years.

To obtain a cross section of the general state of our economy, we might apply eight tests, although there are many other indicators too:

1. What is the condition of consumer credit? Is the individual borrowing to buy new cars, home appliances, and other personal items, or is he indicating doubt about the future by exercising more than ordinary restraint about incurring additional personal obligations?

Usually retail sales and expanding installment credit will go hand in hand and show employment at a good level. Reduced retail sales, reduced installment borrowing, and a general reluctance on the part of individual buyers should give warning that the consumer is motivated by basic causes such as reduced income or loss of employment. Sometimes the pinch of increased prices and living costs enter the picture, but usually good merchandising overcomes such resistance unless there is a lack of money or an inability to repay for credit.

The condition of consumer credit is one of the best indicators as to the direction of the economy.

2. Commercial borrowers at a bank also provide an excellent standard to measure the economy. Confidence is shown or a lack of confidence by whether the borrower continues his usual demands, seeks more credit, decreases his requests, or sells off inventories instead of borrowing.

Prompt payment of interest and principal indicate business as expected. On the other hand, the commercial borrower who seeks an extension of credit beyond the maturity of his note and without a substantial reduction in the principal may be a man in trouble—unless he has a special reason for doing so.

When an increasing percentage of commercial borrowers find it necessary to retrench or to request extensions of loans, it is clear that a decline in the economy is taking place. When South Carolina had a predominantly agricultural economy and almost a single crop, there was no doubt about the status of the economy when the cotton crop failed or when demand for it was weak.

With our present diversification, of both agriculture and industry, the economy of the State is much less susceptible to fluctuations due to a single crop or a single industry, although we still do feel the effects of good and bad conditions as reflected from one major farm or manufacturing activity.

3. A third indicator by which the economy can be measured is the extent of capital investment in constructing new plants and in home construction. Obviously, there must be a good demand for the products of any manufacturer if he is to build new plants or to expand his old ones. Here in South Carolina, since World War II, we have witnessed a tremendous expansion of capital investment in new plants and plant expansions. Fortunately, we have had a state in which our laws relating to management and labor have helped to attract new industries. The result has been a period of unprecedented capital investment which has provided the diversification which I mentioned earlier, thousands of new jobs, and, generally, steady employment.

4. Such successful growth on the part of industry spreads from the commercial field into the area of home construction. Home construction is one of the best indicators of the status of the economy, because an increase in the construction of private homes means that business and industry are doing well, and the success of business and industry is carried over into the expenditures or investments of the salary and wage earners who are dependent upon business and industry for their livelihood.

Thus, there is a hand in hand situation between the worker and management which is reflected in the general economy. If you find an area in which new homes are being constructed at an increasing rate, you can depend upon it that business and industry of the area is also on an expanding scale.

5. Another indicator which must be watched closely is the condition of the stock market. The averages of selected stocks provide a clue from day to day on whether our national economy is stable, unstable, or uncertain. Here again national and international conditions greatly affect the increase or decrease in value of certain stocks, according to whether these stocks are brought into particular focus by national or international events.

Generally, a steadily growing economy should mean that selected stocks reflect a gradual growth. If the economy is declining, those same stocks, normally, would reflect a decrease in growth.

However, in the event of a national emergency, it is obvious that stocks such as electronics, missiles, and others in similar categories would be expected to boom. On the reverse side of the picture, certain stocks which normally reflect high consumer demand in peacetime might be adversely affected by a national emergency, because it would be known that materials would not be available for production of such items.

The stock market also tends to reflect a deflation or inflation. Apparently the market in recent months has been reflecting some inflation, even while a somewhat depressed situation existed, and certainly since the economy has started upward again.

The buying of stocks has generally been considered one of the best hedges against inflation, because of the fact that the stock market generally reflects growth or decline

in the general economy. However, it should be kept in mind that the standard of measure is the average of a number of stocks rather than any particular stock. Therefore, the individual purchaser has to exercise care in his selection of stocks to purchase as a hedge against inflation.

6. Another vital indicator which must be taken into account these days is the operation of the Federal Government through the Treasury Department and the Federal Reserve Bank System.

Doubtless, you know that banks purchase for investment a large volume of Government securities issued through the Treasury Department. Also, I am sure you know that the Federal Reserve banks lend money to national banks and other member banks of the Federal Reserve System, at what is known as the rediscount rate—a rate somewhat lower than banks lend to individuals.

By the fixing of interest rates on securities issued by the Government, and the timing of these issues, the administration can attempt to stimulate or to deflate the economy. At the same time, through the Federal Reserve System, the administration can work on that side of the ledger in attempts to stimulate or deflate the economy in two ways—(1) by raising or lowering the rediscount rate at which banks can borrow from the Federal Reserve, and (2) by instructing the Federal Reserve to go into the market and buy securities issued by the Treasury Department to hold until such time as they might be sold with the desired result, or, else, held to maturity to prevent their becoming an influence on the economy.

Until recently, it had for many years been the policy of the Federal Seserve System to enter the market only for the purchase of short term bills. However, under the present administration, a new policy has been adopted under which the Federal Reserve is now purchasing Government securities with maturities as great as 5 years or longer.

How long this policy will continue, how strongly it will be used, and what its effect will be is uncertain. The adoption of such a policy has caused great concern among bankers and I share that concern.

Bankers now watch very closely the efforts of the Federal Government to influence the economy through manipulation of its financing of current Federal expenditures and the national debt.

Under our present Constitution, the Government cannot completely control the economy, and efforts to do so are more likely to create new economic crises than to solve existing ones.

7. In such a large country, conditions vary from area to area, from State to State, and from one section to another within a State. Therefore, a seventh indicator of the status of the economy on the local level is the condition of the major industry, business or agricultural crop in any specific area. In addiiton to industry, business and agriculture, we must also take one additional factor into account—the status of any military installation upon which an area might be largely dependent for good economic conditions.

Regardless of all the other general indicators, if in a specific city or community the major industry, business, farm crop or Government installation is at a low level, it is bound to have a strong influence on the general economy of that area.

Climate, geographic location and the availability of natural resources control to a large degree what a community can do about a one-crop or a one-industry area. Any community in that situation must exercise its initiative and energy to broaden its economic base. If it fails to do so, it is almost inevitable that the time will come when the single base will not support the economy of the community.

South Carolina is filled with communities which, during the past 15 years, have taken advantage of their opportunities and aggressively developed new business, new industry, and new agricultural endeavors. By so doing, they have insured against the failure of one upon which they were solely dependent or the removal of Government installations upon which they were previously dependent. Communities which have not taken these steps should do so. Communities which do not have planning commissions, or development boards, or local chambers of commerce, with such organizations as a part of the chamber's operation, should now take such steps to insure their economic future.

They should do so without looking to Government for assistance. Government assistance should be sought only when a community or an individual cannot provide for themselves.

8. Finally, an excellent indicator is that savings deposits of banks increase in a declining economy and decrease during inflation. This factor, of course, is closely related to all those mentioned earlier.

Having discussed some of the main indicators as to the status of the economy, I would now like to talk briefly about some of the factors in the general economy which concern me and tell you frankly what I think about them.

In the past few months, we have heard a great deal about price fixing and monopoly in the electrical industry. This is to be condemned absolutely. The persons who participate in such practices should be prosecuted and punished, according to the laws they have violated.

Such practices are certain to damage the particular industry, and industry and business generally. No good can come out of efforts to circumvent or to violate the laws applying to monopolistic practices.

The same standards and legal regulation applied to industry and business should not stop there, however; the same restrictions should be applied to the labor unions for the public good.

Although it is illegal for industry or business to engage in efforts to fix prices throughout the industry, it is entirely legal for labor unions to negotiate contracts to fix wages on an industrywide basis. I cannot distinguish between price fixing and wage fixing on the same tremendous scale. The effect of either is the same.

That effect is at the expense of the consumer. When you remove the competitive situation, either in business or labor, the consumer is the eventual sufferer.

What we need is not stronger legislation in favor of labor, or stronger legislation in favor of industry. We need stronger legislation in favor of the American public—the people who pay the bills.

Until we face up to the fact and until a majority of the Congress accept the fact that union contracts are stifling the industry of this country and eventually the individual worker himself, we are going to be faced with a declining market for the products of American labor.

Tied directly to this problem of union contracts is the problem of goods imported from foreign countries. Japanese textile workers are paid only about one-tenth what the average American textile employee makes, and German steelworkers earn only about one-third the average salary of an American steelworker. Whether it is Japanese cloth or a German printing press, the fact is it can be purchased in this country for less than our own plants can produce it.

At the end of World War II, we helped our former enemies get back on their feet and reestablish their industries. Then we lowered our tariff barriers to help provide them a market in this country. In addition to this, we have purchased large volumes of their goods for the use of our servicemen overseas.

Our purpose was good. We wanted to establish good relations and try to prevent friendly countries from trading with Communist countries.

The present situation is complicated and involves many factors. I would not attempt to say what should be done about it. I do hope that the Congress will devote its attention to this problem and not leave it in the hands of ambitious bureaucrats to establish the policies which they also administer. One thing is certain, however: The labor unions eventually must face up to the fact that the workers are a part of the American industry which now is in hard competition with Europe and Asia and that the workers prosper and their jobs survive only if American industry prospers and survives.

A third adverse factor on the general economy is undue Federal regulation. Many unnecessary and unwise proposals have been made in the present Congress. Included among these are efforts to destroy State right-to-work laws, to wipe out the Landrum-Griffin bill, and others of similar nature.

Already passed are the aid to so-called depressed areas and the new minimum wage act with its extended coverage.

The workman is worthy of his hire, and I believe that every employee of every business and industry should be paid what he earns. I do not believe, however, that the Federal Government should have any voice in determining what an employee is worth and what his employer shall pay him.

Neither do I believe that the Federal Government should take work away from an employee in an efficiently operated plant and send it to another plant in a so-called depressed area which has not been able to complete on an efficient basis in free enterprise. The Federal Government cannot hope to revitalize every area which fails because of its own shortcomings.

Many of the proposals pending in Congress which stand any chance of passage require additional spending. Of course, additional spending eventually means additional taxation.

Our present tax structure has become so burdensome that it is difficult for the individual or corporation who wants to reinvest his profits to do so. Capital investment and reinvestment are essential ingredients of building and expanding business and industry. It is necessary to the creating of jobs. It is necessary to industrial growth and production. It is necessary to plant modernization and it is essential to defense preparedness. The Federal Government cannot go on spending and taxing and taxing and spending to the detriment of these principles. The investors of this country must be able to help accomplish the growth which is desired.

While the tightening of some tax loopholes may be needed and desirable, much more important is the need for tax revision to provide increased incentives for investors. Without some changes in the present tax structure, there is little hope that we can continue to compete effectively with the industries of Europe and Asia in contries where, although taxes may be high, production costs are extremely low compared with ours.

During the past year, we have heard a great deal about the balance of trade and the flow of gold out of this country. This outward flow of gold and serious balance of payments problem is interwoven with the problems we are considering. Since 1950, U.S. payments abroad have been $20 billion more than the payments received from overseas. At the present time, we have a stock of about $16 billion in gold against short-term liabilities to foreigners of about $21 billion. Thus, it is obvious that we could

not pay on demand all of our obligations in gold. To prevent a run on our gold, the Federal Government must conduct our affairs so as to maintain confidence and to do this, we have to avoid a spending spree and increased inflation.

During the 10 years we incurred the deficit of $20 billion in our balance of payments, it was not because of any inability to sell goods overseas. Actually, U.S. exports have exceeded imports by $22 billion during that same time. The deficit in our international balance of payments comes as a result of three things during this 10-year period—$27 billion spent in foreign aid, another $27 billion in military expenditures overseas, and $22 billion in the private export of capital, $12 billion of this $22 billion being direct investment in foreign enterprises.

So, what is much more important than some of the things the Federal Government is trying to do is to find ways to reduce our foreign aid program, to reduce our military expenditures overseas and to stop the outflow of private capital into foreign investments. These things can be done only by taking a realistic approach to operating the Federal Government on a sound basis and on a balanced budget.

That brings me to the last point I want to discuss for just a minute—the Federal budget. At the present time, we have a national debt of about $285 billion. That has come as a result of spending by the Federal Government in excess of its revenues in 24 out of the last 30 years.

The anticipated deficits on June 30 of this year and June 30, 1962, will increase the deficit by more than $5 billion—to about $290 billion.

At the present rate, the public debt will never be paid off, because we keep on increasing it instead of reducing it. It takes 11 cents out of every dollar collected from the taxpayer to pay the interest on the Federal Government's obligations.

Budget receipts for 1962 are estimated at $82 billion, $332 million, and expenditures at $84 billion, $200 million. Let's bring the Federal budget down to simple terms. Here's what it means: A family starts out a year with a debt 3½ times its annual income, and further obligates itself to spend 2½ percent more than its income anticipated for that year. In other words, the family has to get 2½ cents from somewhere to add to every dollar it earns during the year, without even attempting to reduce its debt.

You and I know what kind of credit rating that family would have and the situation our Government faces is little different. The only difference is that the Government can reach into your pocket and take out the money it wants—whether it really needs it or not.

My purpose is not to lay the blame for our economic situation at the door of either political party or of any administration. My purpose is to bring it to your attention as citizens who should let their voices be heard.

Congress and Congress alone has the power to control the expenditures of the Federal Government. Neither the President nor any official of the Government can spend one cent of money which is not approved by Congress. The citizens of this Nation must let Congress know what they want and what they don't want. Fortunately, in South Carolina, most of our Representatives and Senators have been conservative on spending. Unfortunately, they have been outnumbered by spenders in the Congress.

The citizens of this country can get what they want when they earn it. This was proved by the enactment of the Landrum-Griffin bill. It has been proved on other occasions, and it can be done again and again until the Federal Government is put on a sound basis. Communicate with your associates and urge them to communicate with their associates; and, your Congressman with their colleagues in the Congress. Groups such as this can and do, when they become aroused, create grassroots movements which result in action by the Congress. I urge you to do so.

Time is slipping away all too quickly for those who strive to create and produce. While there is yet time, we must safeguard the principle of being our own master so that we can make our own judgments. It is not the job of Government to do this for us. Each of us must face up to the responsibility which is ours individually.

U.N. Special Fund and Tractor Deal Both Help Communist Cuba

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. HOSMER. Mr. Speaker, the Communist government of Cuba is about to receive substantial assistance from the U.N. special fund, 40 percent of which is made up from U.S. contributions to the U.N. President Kennedy has just urged American citizens to contribute their money to buy the 500 tractors Castro wants as ransom for 1,214 prisoners. Humanitarian as is the appeal to the mind of the plight of these prisoners, the particular incident is but a dramatic part of a greater issue. It is estimated that the total number of people in Castro's political prisons amount to a ransom of $1.6 billion at the tractor rate of exchange. This amount would help Castro run his Communist state for a considerable period. Is it next on the list of Castro demands? The following editorial appearing in the Long Beach Independent-Press-Telegram on May 23 is pertinent to this question:

HELPING THE ENEMY

One reason the Communists do well in the cold war is that they get regular help, both intentional and unintentional, from their opposition.

Although the United States is locked in fierce combat with the Russians for supremacy in space, the Pentagon last week put its stamp of approval on the shipment to Russia of precision machinery for making ball bearings used in missiles and space craft guidance systems.

Although the United States has cut off diplomatic relations with Cuba, has labeled Cuba a Communist state, and recognizes the threat of Communist Cuba to the security of this hemisphere, a commitment has been made under which the taxpayers of the United States may support a big part of a special aid program for Cuba.

This incongruity results from the fact that the United States contributes 40 percent of the support to a special fund which, under an agreement between Castro and the United Nations, may be used to improve the economic position of Castro's Cuba.

The staff of the United Nations special fund is working on a project to help Castro diversify his agriculture and reduce his dependence on sugar production.

Thus, while Uncle Sam enforces a sugar quota policy designed to put an economic squeeze on Cuba, the U.N. ponders using his money to help Cuba remedy the condition which makes that squeeze effective.

There are times when one does seem to be meeting oneself coming through the revolving door.

The Kingdom of Quiet

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. ALBERT. Mr. Speaker, Oklahoma's Third Congressional District proudly claims some of the most beautiful territory in the southwestern part of the United States. Not only are the rolling hills of southeastern Oklahoma filled with scenic beauty, but they offer a tranquillity seldom found in our busy modern lives. Jenkin Lloyd Jones, editor of the Tulsa Tribune, has captured the spirit of this wonderful area in an editorial entitled "The Kingdom of Quiet." Under unanimous consent, I wish to insert his article in the RECORD:

[From the Tulsa Tribune, May 6, 1961]

THE KINGDOM OF QUIET

(By Jenkin Lloyd Jones)

The world grows tighter. It is losing elbowroom. The crowds thicken in the streets. The highways choke. Suburbia crawls across the green land, gobbling fields and pushing down forests. In much of the world the farms have grown smaller as the villages bloated into towns, and the grandchildren of those who had a surplus of rice or manioc now scramble for food.

But, worst of all, the noise—the babble and bang, the screech of unwanted music, the roar of pets, the honk of horns, and blat of exhausts—all these press upon us more and more. And increasingly, we search for the shrinking oases of solitude and peace.

Well, come along to some of the grandest solitude this side of the Arctic tundra. We're in Poteau, Okla., the little capital of LeFlore County up against the western border of Arkansas. The morning sun is beginning to poke thin yellow fingers through the shade trees. It's time to get on the road.

The road is blacktopped U.S. 59 heading south. Cavanal Mountain, the great round mound that rises 1,500 feet above the town to the west, glows in the slanted sunlight. The air is crisp and clear with mist in the bottoms. And in the pastures south of town some of Senator BOB KERR's prize-winning Black Angus cattle graze smugly, having proved that in an area of Oklahoma innocent of blue-stemmed grass and once considered hopeless as range country, some of the best steaks and cutlets in America are produced.

Ahead, rising in blue benches toward the sky, are the Ouachita ridges.

Now, all the high land in southern Missouri, northern and western Arkansas, and southeast Oklahoma is properly the Ozark uplift. But we speak of the Ozarks as the hills lying north of the Arkansas River. The Arkansawyers describe the mountains south of the river as the Ouachitas and these run unbroken into four Oklahoma counties—LeFlore, Latimer, McCurtain, and Pushmataha. But in Oklahoma we call these mountains the Kiamichis, although properly the word belongs to a single 45-mile-long ridge lying south of Talihina.

Of all parts of the Ozark ranges the Kiamichis are the wildest, the ruggedest, the most unspoiled. They represent, in fact, the emptiest quarter between the Gulf of Mexico and the upper Minnesota woods. They contained no gold, no oil, no precious minerals. Pioneers, prospectors, cattlemen and homesteaders flowed around them. The narrow valleys drew only a few small farmers and, of course, the Choctaws, who were given this sterile confusion of coulees and crags in exchange for their ancient hunting grounds in southern Mississippi which the white man wanted for cotton.

So today in all the Kiamichi country from Talihina on the north to Broken Bow on the south, and from Antlers on the west to Mena, Ark. on the east there are no towns. There is no industry save a few country sawmills. There is no smoke, no clatter, no pollution, no ugliness and squalor. The streams run clear. The air is filled with the wine of spring.

Twenty-four miles south of Poteau Highway 59 begins to bend eastward toward Arkansas in a narrow valley between Black Fork Mountain and Rich Mountain. But just beyond the settlement of Stapp we turn sharp right on Highway 103, head back west, climb an escarpment and in 2 or 3 miles there's a sign indicating a narrow, gravel road leading up a mountainside in a tunnel of trees.

"Winding Stair Tower," it says.

Now, Winding Stair Mountain is another ridge and the forest ranger road swerves and twists along its crooked spine for nearly 25 miles. But at the east end is the high point—2,880 feet above sea level. This is the highest point in eastern Oklahoma and it is 80 feet higher than Magazine and Blue Mountains that tie for the honor of the highest points in Arkansas.

A characteristic of southeast Oklahoma is cruel winter sleet. For while the annual rainfall of the far Panhandle is only 10 inches it increases about an inch every 20 miles as you move east-southeast until by the time you get to the Kiamichis you've got more than 40 inches. The tops of these ridges are often scourged by driving winter ice storms and we notice as we climb the steep road toward the ranger's tower that the trees gradually grow stunted, gnarled, and blasted.

But when we clamber up the steel ladder to Winding Stair Tower there is nothing chilly about the reception offered by Ranger H. J. Hickman. The men who man the mountaintops and watch for the telltale smoke wisps that might grow into a holocaust are a friendly breed.

He tells us that his chief worry these days are the spring thunderstorms.

"We're more afraid of them than careless campers," he says. "For a bolt of lightning may char the inside of a tree and the wood may smolder for days before the fire breaks out and gets away. We always keep an eye on the springs and campgrounds where people might gather. But Old Man Lightning uses a scattergun."

West from the Winding Stair Tower the road rides the ridge beneath banks of dogwood, skirting vertical strata and dipping now and then into heavily forested glens. Occasionally the ridge becomes a knife edge and we look down upon valleys on both sides. Then is the time to stop the car, switch off the engine, and listen.

There is nothing to hear. No clash, no discord, no voice, no roar. And there is everything to hear—fresh wind rustling the leaves, a lark's call, the muffled staccato of a woodpecker, the drone of a bumblebee. You look across the valleys. As far as you can see there is nothing but blue hills across which pools of shadow float in stately fashion under the scattered clouds.

At Sycamore Tower on the far west end of Winding Stair Mountain, Ranger H. B. Blankenship, 23 years in the Forest Service, chews a mouthful of cut plug and tells us of the wildlife.

"If you like animals," he says, "these hills are getting better. We've always had wolves, foxes, and bobcats, but when I first came up here you'd rarely see a deer. Now I rarely go a day without seeing one beneath the tower. One side of this ridge is a game preserve, and on the other side the hunters can't get the deer fast enough. We've got a wildlife paradise building here."

At the far west end of the mountain there is a little clearing and a plaque. Here the old military road from Fort Smith to Fort Towson crossed the ridge. It was laid out in 1832 by Jesse Chisholm who later gave the name to the Chisholm Trail, and over the old road a century ago rattled the Butterfield stagecoaches on their perilous way to the Apache country and California. You look into the thick woods on either side, and, sure enough, there is a ghostly lane in which the oaks are younger and mossy furrows mark the ruts over which prairie schooners once rolled.

Who traveled this trail? Who were the cutthroats, the fugitives, the remittance men? What families made their painful, hopeful way to Texas to die in waterhole feuds or in the horrors of Comanche torture? What young feet marched over this mountain and later back and forth behind a cotton plow and finally to a dead end at the Alamo or Gettysburg?

The old campground is empty and silent. Man has left it almost without a souvenir of his passing. Almost. There is a silver can lying in the grass. "Coors," it says.

Then the mountain ends. We are back on Highway 271, 9 miles east of Talihina. There are billboards, snorting transport trucks, and here, at last, is a garish country honkytonk. We turn on the radio and a nasal idiot is braying a "rock-a-billy" ballad.

We have left the kingdom of quiet.

Hello, civilization.

Kennedy's Cuban Tactics Disturbing to Country

EXTENSION OF REMARKS
OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. CHAMBERLAIN. Mr. Speaker, Castro's tractors-for-freedom proposal has aroused a growing volume of mail from Michigan's Sixth District. It is apparent there is a deep feeling of indignation over the Castro proposal.

This proposition is aptly described by the Flint Journal, in an editorial of May 25, as a "cat-and-mouse game," in which Castro is playing the cat and has relegated the United States to the role of mouse. Under permission to extend my remarks, the editorial is reprinted below.

KENNEDY'S CUBAN TACTICS DISTURBING TO COUNTRY

No one can quarrel with the humanitarian instinct which prompted many Americans to accept Fidel Castro's offer to release 1,200 invasion prisoners for 500 American tractors.

However, there can be, and there is, a wide difference of opinion as to the wisdom of doing so.

Bargaining on his own terms with the blood-stained Cuban dictator cannot help but lower American prestige in many parts of the world.

And with typical Communist arrogance, Castro fumes over the fact that Americans refer to the deal as an "exchange" of tractors for prisoners of war. Castro demands that it be called "indemnity" which we are to pay for the ill-fated invasion of Cuba by Cuban patriots. And he threatens to call the deal off if we don't mend our speech.

Developments in this project also serve again to underline the uncertain behavior of the Kennedy administration. During the Cuban invasion, conflicting reports on U.S. policy poured from top Government officials.

In the tractor project, no less a person than Speaker SAM RAYBURN said Tuesday that "the Government is out of this and is going to stay out."

The next day, however, President Kennedy revealed that he is the one who appointed the committee of three to coordinate efforts in the project.

A presidential press aide then announced that the President's role was strictly that of a private citizen.

But no matter how you slice it, that amounts to formal U.S. approval of the project, and it is in that light that it will be viewed in many parts of the world.

The President reavealed he went first to Mrs. Eleanor Roosevelt to head the committee, then to Walter P. Reuther because of what was termed Reuther's tractor know-how. Finally the President added Dr. Milton Eisenhower to make the board "bipartisan;" and that in itself is an odd afterthought.

So Reuther, who has done his best to steer the Nation's economy down some questionable roads, now takes a hand in American foreign policy. No stage, naturally, is too large for Reuther.

Latin American countries must be watching the deal with the greatest interest. And many in those nations are bound to feel that we are bowing to blackmail, even though it is cloaked in humanitarianism.

An interesting aspect of the deal is that Castro already has specified the type of machine he wants. The New York Times reported the dictator wants a D–8 Super, the second-largest earthmoving machine manufactured by one American company. He will take its equivalent from other companies.

The cost of this machine is $40,000, which brings the whole deal to a total of $20 million.

The Times quoted Reuther as saying he was "certainly surprised, to put it mildly," at the insistence on this type of tractor because it is designed for major construction projects, not for farming.

We have entered into a cat-and-mouse game with the Cuban dictator, giving him the role of the cat. And already he is playing his role to the hilt. Monday on the Havana radio Castro suddenly demanded return to Cuba of 1,200 political prisoners from various countries rather than the 500 tractors in exchange for the invasion prisoners.

As another example of Castro's arrogance, he specified in the broadcast that Pedro Albizu Campos and Francisco "The Hook" Molina must head the list of political prisoners handed over in exchange for the rebels.

Molina awaits sentence for the fatal shooting of a Venezuelan girl in a New York restaurant last fall in a fight between pro-Castro and anti-Castro Cubans. Albizu Campos is serving time for an armed attack on Blair House in Washington during the Truman administration.

Did the Cuban dictator mean what he said, or was he just indulging in a little sport?

Senator J. W. FULBRIGHT, of Arkansas, chairman of the Senate Foreign Relations Committee, has said of the deal that he does not believe the Government should lend itself to that kind of blackmail operation.

Senator STYLES BRIDGES, of New Hampshire, asks: "How much more humiliation

and contempt must we suffer from the Communist dactator?"

Representative AUGUST E. JOHANSEN, of Michigan, is appalled at the apparent eagerness of many Americans "to comply with the ransom terms laid down by Communist stooge Fidel Castro."

The issue is a highly emotional one, but countless Americans surely will echo the sentiments voiced by these Congressmen.

Justice Above Spoils

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. AVERY. Mr. Speaker, recently in my newsletter to my constituency, I observed that the recent successful action of the House and Senate on controversial legislation requested by the Kennedy administration would indicate the number of newly authorized Federal judges has been carefully estimated and skillfully distributed throughout the country. It could be a mere coincidence, of course, that the necessary 10 or more votes to insure safe passage of the costly Kennedy bills are now available whenever the trumpet sounds. Only a few days ago it took telephone calls to Congressmen from Cabinet members, and even from the White House itself, to pass a Kennedy measure. The feeling prevailing among the conservatives is that the judgeship bill was carefully programed after the first Kennedy legislative defeat in the House. With the pending appointment of 70 new Federal judges to use as pawns in this great game called politics, the Kennedy team can now maneuver for the votes necessary to pass almost any legislation it wants.

Therefore, I was most interested to note the following editorial which appeared in the May 11, 1961, issue of the Christian Science Monitor newspaper, entitled "Justice Above Spoils." The editorial covers another important aspect of the hurried enactment of the judgeship bill, which has been pending even before I came to Congress in 1954. the editorial follows:

JUSTICE ABOVE SPOILS

Last year Congress did not feel that any new Federal judgeships were needed. Now it has voted for 73.

The key to this sudden reversal? Partisan politics. For several years the courts have been disgracefully clogged. Last year the Judicial Conference urged 59 new judgeships to take care of increased business. But the Democrats controlling Congress didn't want President Eisenhower to have the appointments—even though he offered to name Democrats to half the new posts.

That looked like a very good opportunity to get justice out of the Federal spoils system—where both parties had too largely kept it for many years. It was lost. But President Kennedy has a chance to repair the position. In his campaign he said qualifications should be the first test for judicial appointments. Undoubtedly party leaders will put forward many deserving Democrats who also possess some qualifications for the bench. But undoubtedly also in a good percentage of districts the best qualified man will not be a Democrat.

The partisan pressures, which caused Congress so long to neglect the needs of the courts and then to add extra judges to satisfy demands for patronage plums, will now focus on the Attorney General's office where nominations will originate.

The Attorney General happens to be both the President's brother and his campaign manager. He does not appear to be in the happiest position to satisfy at the same time political creditors and the President's qualifications-first criterion.

This is unfortunate. It underscores the need for both parties to drop the practice of placing campaign managers in the Cabinet.

But even now the final responsibility—and opportunity—rests with the White House. Congress has given John Kennedy an unprecedented opportunity to influence the Federal judiciary for good or ill. Appointments made now can decisively affect national affairs for many decades.

The President faces a major test. How he meets it can be estimated by the caliber, character—and party affiliations—of the judges he selects.

A Dangerous Business

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. DEROUNIAN. Mr. Roscoe Drummond, in his article as it appeared in the New York Herald Tribune on May 26, gives an account of the current Cuban "deal":

A DANGEROUS BUSINESS—GOVERNMENT SEEN INVOLVED IF TRACTOR DEAL IS MADE

(By Roscoe Drummond)

WASHINGTON, May 25.—Fidel Castro estimates that the lives of two and two-tenths Cuban prisoners ought to be worth one bulldozer or one truck with spare parts. He gives the United States 10 days to come through—or else.

The fact that such Americans as Mrs. Eleanor Roosevelt, Dr. Milton Eisenhower, Walter Reuther, Joseph Dodge, and others, volunteer to help raise money to buy the freedom of the 1,200 Cubans who were captured during the invasion shows that the plight of the freedom fighters instinctively touches the heart and conscience of this Nation. The money is already coming in.

I am not sure this is the way to help Cuba or the United States or enslaved people anywhere. But if we are going through with it—let us recognize what we are doing, name this Castro thing for what it is and not pretend that the U.S. Government somehow has nothing to do with it.

CRUDE BLACKMAIL

This is crude, brazen, highhanded international blackmail perpetrated by a political dictator who is proposing to trade human beings for metal in order to make himself stronger.

This is a dangerous business. Once a nation yields to blackmail, where does it stop? What next? If we yield 500 trucks and bulldozers to Castro, aren't we inviting some other country to throw a few Americans in prison to trade for a dozen airplanes, a steel mill, or a low-interest loan?

There is no way whatsoever to make this Castro thing a little detached, personal deal between a few private American citizens and somebody or other in Havana—with the Government of the United States uninvolved.

Administration officials would like to keep the Government out of it. It seems to me impossible.

After a conference at the White House Speaker SAM RAYBURN reported: "The President said the Federal Government is out of it and going to stay out of it."

Mrs. Roosevelt said: "We have the agreement of the Government. We got permission beforehand."

A CONTROVERSY?

The hard fact is that the deal cannot be brought off without some Government participation. The Logan Act makes it unlawful for private citizens to negotiate with a foreign government "with intent to influence its conduct in any disputes or controversies with the United States." President Kennedy says he is advised that the Logan Act is not involved because the people-for-tractors deal is not a controversy. But since Castro has stated that he views the tractor gift as indemnity or reparations for the invasion, there seems to me a very real controversy here.

I cannot see how the Americans can go to Havana to negotiate the prisoner-tractor arrangement without breaking the law unless they have the authority of the Government. If they have this authority, then the United States makes itself a partner to the deal.

If this deal is to be realized, as its sponsors have described it, then the United States will have to participate at four points: The Government will have to issue export licenses for the machinery, issue visas for the negotiators, authorize them to negotiate so as not to violate the Logan Act, and make contributions tax-deductible. The latter action means that the United States would be paying for part of the cost.

FULBRIGHT'S VIEWS

All this is why Senator WILLIAM J. FULBRIGHT, chairman of the Foreign Relations Committee, has said: "I agree that our Government should not in any way lend itself to this kind of blackmailing operation."

Senator STYLES BRIDGES, of New Hampshire, put it this way on the floor of the Senate: "Not since the days of Hitler, when the infamous Eichmann offered to trade one Jew for one truck, has the civilized world been confronted with such a heinous barter. Would it not be far more humanitarian to exchange food and medical supplies?"

The point is that all the Cuban people, not just the captured invasion fighters, are Castro's prisoners. It seems to me that our objective and the objective of the Organization of American States should be to free the Cuban nation, not just a few of its people.

The Depth of Communist Penetration in Cuba

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I call your attention to an article which appeared in one of Florida's leading newspapers, the Palm Beach Post-Times. It was written by Jeanne Perry, and appears as one of her regular columns.

Mrs. Perry is a thorough student of Latin American affairs. She has many friends in South America, and has

traveled extensively in that region. Consequently, this article is written with authority, and is typical of her good work. I ask that it be inserted at this point.

The article follows:

LATIN AMERICAN NEWS NOTES

(By Jeanne S. Perry)

May Day in Havana was celebrated with a tremendous military parade. Tanks, submachine guns, and recoilless cannon were among the arms displayed. Militia units marched by. Banners with the slogans "Workers of the world unite." "Viva socialism which ends all exploitation" and "Long live communism" floated about. In the Placa Civica Castro Red demonstrations burned President Kennedy in effigy. The latest winner of the Lenin Peace Prize delivered another marathon speech in which he promised, among other things, that all outstanding Soviet works of "literature" will be translated into Spanish for publication in Cuba.

Conditions in Havana last week were thus depicted by travelers returning from the once gay capital where 6,000 people under arrest jammed into the Blanquita (Havana's largest theater) are living in utter filth.

Official execution figures say that 7,000 persons have been killed while "unofficial" informants estimate that Ramino Valdez and Raul Castro have ordered from 3,000 to 5,000 executed.

Streets in Havana are deserted after dark except for patrols. Now arrests are being made by 14-year-olds armed with machineguns.

The 50,000 people arrested by Castro at the start of the invasion are still in their hastily improvised jails living in indescribable conditions. Among them are many priests who were observed by the truckload going through the streets of Havana on their way to prison.

At least 50 well-known doctors have been purged from the Cuban Medical Association for counterrevolutionary activities.

The Cuban couple who gave refuge to the wife of William Morgan have been sentenced to 5 years in jail. Morgan was the ex-Castro commander who was executed in Havana last month.

Does anyone but Editorialist and Columnist Herbert Matthews of the New York Times doubt that communism is 90 miles from our shore?

President Roberto Chiari of Panama has stated that the Castro government "is totally Communist" and many Central and South American countries have severed relations with Cuba for that reason. But did you realize that it was only last week that the United States officially declared Cuba has become a member of the Communist bloc?

Even now, millions of dollars in shipments of lard continue to leave the port of Palm Beach for Cuba. Lard is the most important staple in the diet of the Cuban lower classes. Interested Members of the Senate and House were advised last fall that an embargo on lard from the United States to Cuba would render a big blow to Castro. Unfortunately, the pleas by the handful of enlightened Senators and Congressmen fell on deaf ears. A much finer example was set by the stevedores in Houston, Tex., who refused to load Russian tanks en route to Cuba very recently.

The United States is still paying $70 million to the Communist Castro government for tobacco which is processed in Tampa, Fla.; and $70 million buys a lot of arms and propaganda for the Fidelistas. Would it not be possible to use this sum to help the workers until Castro is toppled, or even to set up a new industry to take up the slack?

There are many ways in which the United States is helping Castro financially. To this columnist, the most shocking item comes from a recent story in the New York Daily News. It states that Paul G. Hoffman, as head of the United Nations Special Fund, has signed an agreement whereby the Special Fund is to help Cuba get away from heavy dependence on sugar by diversifying its farm production. The United States pays about 40 percent of the Special Fund's annual budget, which stands this year at about $47 million.

As an American who cherishes her freedom, and as a taxpayer helping to bankroll this U.N. agency, I find the signing of this agreement to give more money to Castro not only shocking but deplorable. I have expressed my sentiments in telegrams to President Kennedy, Senators SMATHERS and HOLLAND, Congressman ROGERS and others in the Senate and House of Representatives. If you agree with me please let them know your feelings also.

Americans Are Basically Conservative

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. ALGER. Mr. Speaker, we in Congress could well give some serious thought to the advice of our distinguished colleague, Senator BARRY GOLDWATER, in the article from Human Events, which I herewith include as part of my remarks:

AMERICANS ARE BASICALLY CONSERVATIVE

(By Senator BARRY GOLDWATER, of Arizona)

On my way to work one morning recently the radio blared forth with a commercial for one of the Nation's largest banks. The announcer proclaimed that "this financial institution is proud of its long record of conservative management."

The same day I noticed a full-page ad of one of the Nation's largest insurance companies advising all readers that the "management of this institution is conservative and responsible."

It occurred to me to wonder how fast an insurance company would grow if it advertised its management as being "liberal." How many people would have confidence in a bank which a nounced that above all else it was liberal?

I would suggest that all Americans are basically conservative. We adopt a conservative philosophy in our attitude toward our children and their education. We follow conservative policies in the investment and administration of our earnings. And when we spend our money we reveal ourselves as clearly conservative by attempting to secure the greatest possible value for each dollar spent.

Most of the copybook maxims we remember are illustrations of conservative belief. We don't encourage our children to engage in wild experimentation, either in their education or their personal relationships with their fellow students. When our youngsters are old enough to drive the car, we rarely let them depart from our homes without a shouted admonition to "drive carefully." When they marry and begin building a life of their own, we encourage them to approach the purchase of such things as a home or a car cautiously, giving careful consideration to all elements involved.

It is only in the conduct of our Government that some of us espouse a liberal viewpoint. This, I suggest, is because Government money somehow or other is now regarded as free money.

In my home State of Arizona the State building and planning commission has just received something like $100,000 in Federal funds. This money is to be used for the planning of new public buildings and public facilities. It won't purchase the actual architectural drawings, it won't be used to buy a single brick or a single yard of concrete. It will be used instead to finance the deliberations of various committees and agencies who will explore the situation and then come up with a suggested solution.

I wonder how many people of Arizona would urge the expenditure of $100,000 for this purpose if they were compelled to make a direct contribution on some preestablished formula to that fund.

We want our insurance companies to operate on conservative principles in order protect the value of our own insurance policy. Yet we encourage the Government in such undertakings as social security to operate in a fashion which would bring bankruptcy to any private operator who did not have full access to the Federal Treasury.

Conservatives know the value of sound instruction in our public schools in courses devoted to what we old-fashioned folk call the solids. The liberals have just discovered that there is some value in teaching mathematics and science and history. Until the advent of the first Russian sputnik their attention was centered on the happy-life-adjustment courses, good manners, and easier methods of learning.

Isn't it time for a nation, which by instinct and by experience reaches out for conservative principles, to demand the application of this same conservative policy in the conduct of its Government? How do you stand, sir?

No Federal Aid to Education and Balancing the Budget by Curtailing New Government Programs Favored in Poll of 10th District of Illinois

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. COLLIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I take pleasure in pointing out that the constituents of my District—10th, Illinois—have answered the public opinion poll I sent them and left no doubt that they overwhelmingly favor a balanced budget, preferring this to any expansion of new Federal programs. Seventy-three percent of those who answered the poll favor balancing the budget by cutting down on new Federal activities. I submit that this is a sizable percentage.

Those polled also definitely oppose measures aimed at granting Federal-aid-to-education activities. Forty-eight percent favor loans only for school districts that are unable to provide adequate standards of education.

I am convinced that complete results of the poll, which follow, provide interesting reading:

[Figures are percentages of questionnaires returned]

	Yes	No	No opinion
I. Federal aid to education: Do you favor—			
Federal funds for teachers' salaries	20	69	11
Federal funds for school construction	31	61	8
Federal loans for private and parochial schools	17	77	6
Leaving the full responsibility to State and local communities	67	23	10
Federal loans to only those school districts unable to meet the required standards	48	42	10
II. Foreign trade policies and tariffs. Do you favor—			
Setting restrictive limits or quotas on the volume of imported competitive goods?	55	33	12
Increasing tariffs and duties on competitive foreign-manufactured goods and products?	53	36	11
Maintaining present tariff rates and policies but removing Executive authority to provide any further reductions until 1962?	44	31	25
III. How would you solve Post Office deficit of $900,000,000 annually?			
Increase 1st-class postage from 4 to 5 cents, airmail from 7 to 8 cents?	22	53	25
Increase 2d- and 3d-class mail rates?	67	16	17
Increase rates of all types of mail service across the board?	41	44	15
IV. Budget and debt policies: Do you favor—			
Balancing the current budget by curtailing new Federal programs?	73	18	9
Increasing the national debt ceiling to meet cost of new programs over and above anticipated revenues?	22	75	3
Cutting all wartime excise taxes and cutting Federal spending accordingly?	70	19	11
Increasing taxes to meet the cost of any new programs?	17	70	13
V. Federal medical care legislation: Do you favor—			
Assistance limited to social security recipients by increasing social security tax rates?	30	59	11
Assistance to all citizens over 65 based upon criteria of need with Federal Government and States sharing the cost?	55	35	10
VI. To halt shrinking of U.S. gold reserves, do you favor—			
Putting limits on U.S. industry investments abroad through more restricted taxation?	63	24	13
Adopting more restrictive trade policies in basic commodities?	50	29	21
Reducing number of military and Government personnel abroad?	63	25	12
Lowering limit on duty-free goods brought back into the United States by American tourists?	60	29	11
VII. Foreign aid appropriation legislation: Do you favor—			
Providing 3 separate bills for the military, economic, and technical assistance phases of the mutual security fund?	48	19	33
Providing more assistance in the Western Hemisphere nations and cutting elsewhere?	49	28	23
Reducing direct grants of assistance and increasing foreign loan programs accordingly?	65	14	21
Cutting all phases of foreign aid?	45	40	15
Insisting that other free nations capable of helping distressed countries share the burden?	92	2	6
VIII. Presidential election system: Do you favor—			
Continuing with the present electoral college system?	14	69	17
Direct election of President by candidate receiving greatest number of popular votes?	63	23	14
Adopting proportional plan wherein each elector would cast presidential vote in keeping with the popular vote total in his district rather than the present winner-take-all plan?	45	31	24

Flint Physician Hits Nail on Head About SS "Hope"

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. CHAMBERLAIN. Mr. Speaker, I am happy to bring to the attention of my colleagues the following editorial from the May 27 edition of the Flint Journal, which discusses a letter received from a distinguished Flint physician, Dr. Edwin M. Knights, Jr., who has been serving aboard the SS *Hope*.

Dr. Knights' observation, that he is convinced the doctors, nurses, and other medical personnel have already accomplished more for America in Indonesia than all of the official statements, gifts of money and equipment, and other governmental efforts, coincides with other reports that have come to my attention. The full editorial follows:

FLINT PHYSICIAN HITS NAIL ON HEAD ABOUT SS "HOPE"

From a Flint physician serving aboard the good will medical ship, SS *Hope*, comes fresh testimony to the fine work being accomplished by the project.

The physician is Edwin M. Knights, Jr., director of the department of pathology at Hurley Hospital. He was granted a leave of absence by the Hurley Board of Managers so that he could accept a rotating position aboard the ship. A letter he wrote from Semarang, Indonesia, was read at a Hurley board meeting this week.

The SS *Hope* is financed by contributions to the People-to-People Health Foundation. It brings latest medical techniques to underdeveloped countries, thus enabling physicians in those lands to do a better job.

There is a plan afoot to try to raise enough funds for a second such floating medical school, and if ever a project deserved public support, this one does.

We have spent great sums in many parts of the world in foreign aid, but it is doubtful if any of that money was better spent than the private contributions for SS *Hope*, a former U.S. Navy hospital ship.

Whereas a great deal of our foreign-aid funds have been, in effect, squandered, the SS *Hope* has served to present to the world the brightest possible U.S. image.

Dr. Knights expressed it very well in his letter:

"This has been a very rewarding medical experience, and I am convinced the doctors, nurses, and other medical personnel have already accomplished more for America in Indonesia than all of the official statements, gifts of money and equipment, and other governmental efforts."

The Alabama Incidents

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. GIAIMO. Mr. Speaker, the incidents which recently took place in the State of Alabama painfully reminded all of us of the vast distance we have yet to travel in quest of our goal of freedom under law. The howl of the mob in Montgomery has echoed in the homes and schools and workplaces of millions who hold liberty and justice dear. And the sound came as a strange, alien noise to minds who have long believed that we, in America, had achieved our lofty goal. I hope the millions who heard will never again drug themselves into complacency with the comforting but wholly wrong thought that "it can't happen here." It has happened here. It matters little if it was only for 1 hour, 2 hours, a day, or a night; terror walked a section of our country with the arrogance of a booted S.S. trooper. Innocent people—citizens of the United States—were beaten, punished almost to their deaths while local authority stood by and did nothing. They were not even offered the protection given a criminal when he is arrested.

I speak not as a Representative from Connecticut, but as an American. I love this land and I love its people—North and South. But I am aware that, in the past, Americans who express concern with events in the South are attacked as interlopers lacking in understanding—as if they were not Americans but alien subverters of our Republic. Therefore, let the people of Alabama describe what happened. The following words are from an editorial of the Birmingham News as reprinted in the Washington Post of May 20:

The city of Birmingham is normally a peaceful, orderly place in which people are safe. Harrison Salisbury of the New York Times last year came to Birmingham and wrote two articles about us which said, in substance, that fear and hatred stalked our streets.

The Birmingham News and others promptly challenged this assertion. The News knows Birmingham people, as others know them, and they didn't fit this definition. But yesterday, Sunday, May 14, was a day which ought to be burned into Birmingham's conscience.

Fear and hatred did stalk Birmingham's streets yesterday.

Fear and hatred stalked the sidewalks around the Greyhound bus terminal directly across the street from Birmingham's city hall. Fear and hatred rode around in a dozen or more automobiles loaded with men, some of whom may have been from

Birmingham, others of whom positively were from other counties. License plates gave them away.

In the whole general area of the city hall and the Greyhound bus terminal especially, police cars roved, in some numbers. Uniformed men were visible. Something was up. What was up was the advance on Birmingham of a group of Negroes and some whites who gave themselves the title "freedom riders."

But yesterday hoodlums took over a section of Birmingham. They clustered in small groups, they drove around in cars, they all but swaggered. They were not afraid, they were sure of themselves, they knew about the freedom riders and the buses they were supposed to come in on, and they had the place staked out—both the Greyhound bus terminal and, a bit more than two blocks away, the Trailways bus terminal.

Others knew this situation existed. Commissioner Eugene Connor apparently knew it. He was on duty at city hall. There were squad cars operating in the area—an area of several square blocks embracing the city hall, the Greyhound and Trailways terminals.

At the Trailways terminal yesterday afternoon, with the condition above prevailing, a bus pulled in and all but in an instant a Negro was being beaten, his trousers almost torn off, a white man being beaten by a hoodlum who repeatedly smashed his face with his fist, and a Birmingham Post-Herald photographer was being pummeled by a group of white men, one of whom had a heavy instrument in a brown paper bag.

But this wasn't all. The police were not visibly on hand when the Trailways terminal beatings took place. The police were not on hand when the radio-TV man was attacked. And the city hall, with police presumably on the alert, was some two blocks away.

The Birmingham police department under Mr. Connor did not do what could have been done Sunday. The Birmingham News charges that the very men who did these beatings, who smashed to the concrete and kicked and battered a Post-Herald photographer, who ripped film from two cameras of the News, who in broad daylight bashed in two windows of a radio-TV news station wagon, up to an hour or more later were plainly visible, still carrying on their vicious patrol in the whole area and particularly in the Greyhound bus terminal area.

Yesterday afternoon fear and hatred were on Birmingham streets. The precise location of such condition was on 19th Street between the Trailways terminal at Fourth Avenue and the Greyhound terminal at Seventh Avenue. The people, and their police, permitted that fear and hate to ride our streets.

It was a rotten day for Birmingham and Alabama.

The News' condemnation of police inaction in Birmingham had little effect against the organized indifference of the Alabama government officials. The hoodlums struck again in Montgomery, the capital of the State, and law and order was again prostituted. A nation was shocked; national prestige was shamed; and the President was forced to do what Alabama authority would not do—restore peace, order, and justice under our laws. It is ironic that the very people who speak the strongest for the States' right to govern are the first to shun the responsibilities that go with the right.

The Birmingham Post-Herald commented:

The police in both cities (Birmingham and Montgomery) could have prevented the rioting or quelled it before it got out of hand. Their failure to be on the job, in uniform and in force, gave open invitation to the mob to take over. * * * Such failure (at Montgomery) left the President no choice but to dispatch Federal marshals to prevent further violence. * * * Let us not yield to the temptation to say "they got what was coming to them" and then minimize in our own minds the seriousness of the situation.

And the Birmingham News, the Cassandra who had warned of the coming storm, said:

We, the people, asked for it. * * * As we wail in our anguish let us not forget it. We, the people, let the Governor of the great State of Alabama, John Patterson, talk for months in a manner that could easily say to the violent, the intemperate * * * that they were free to do as they pleased when it came to the hatred integrationists. We, the people, have let gangs of vicious men ride this State now for months. They (the marshals) are coming because we did not do our duty to ourselves and our proud State.

I am from the State of Connecticut, and I am also an American; and, though the News speaks of events in Alabama, I believe the term "we, the people" can also refer to "we, the people of America." For we, of the North and West, shared the slumber of the Alabama citizens. For too long we have, all of us, laid aside our efforts to "form a more perfect union, establish justice."

A year ago, Walter Lippmann wrote:

The critical weakness of our society is that for the time being our people do not have great purposes which they are united in wanting to achieve. The public mood of the country is defensive, to hold on and to conserve, not to push forward and to create. We talk about ourselves as if we were a completed society, one which has achieved its purposes and has no further great business to transact.

I hope the alarm sounded by the riots in Alabama has aroused the entire Nation to resume the unfinished task of perfecting our democracy. We have great things yet to do. We have schools to build, slums to clear, diseases to conquer, an enemy to resist, a universe to explore, and we cannot do these things working apart. These are giant and noble tasks and to accomplish them requires the strength of body and mind of all our people. And the talents and abilities of no one should be refused because of the color of his skin or the credo of his choice. We must, again, set out to prove to the world that brotherhood is not so wild a dream as those who profit by postponing it would have us believe.

We of the North and West do not judge the South. We need the help of the South to pursue our national goals. Therefore, we offer our arm to law-abiding citizens in the South who wish to join us in this great adventure, and we do fervently pray that such an offer will be accepted soon and by a multitude.

The voice of reason in the South is a quiet voice and perhaps we in other areas find it difficult to hear over the din of the mobs. But, the supporters of law and order and decency in the South should take note of the thunder out of Birmingham and speak up with a louder voice if they want us to hear and understand.

Ralph McGill, former editor of the Atlanta Constitution, when analyzing the school desegregation problem, found that a very large part of the current difficulty is due to the failure of southern political leadership to prepare its constituency for the changes that were coming. Former Governor McKeldin, of Maryland, noted Mr. McGill's remarks and commented that:

Political leadership includes more than men in office and candidates for office, avowed and unavowed. Political leadership includes all persons with an appreciable influence on public opinion. Many of the most effective are not party leaders at all, but commercial and industrial leaders, educators, and professional men, especially the clergy.

We in the North are concerned; we are worried for the welfare of our Nation and all of its people. We strain our hearing for the voice of reason in the South. We look for the men of whom Governor McKeldin and Mr. McGill speak to exercise leadership, to help the southern people meet their future; we look for the men who will answer the racists, the terrorists, and the political know-nothings who lend legitimacy to violence and defenses for the mob.

We of the North are waiting for the words of responsible commercial and industrial leaders, the trade-union officials, the educators, the clergy in Alabama. The voice of responsibility, of progress must be louder in the future than it was in the past if it is to be heard above the raucous din encouraged by men like Governor Patterson.

The southern people are being cheated of their right to join with the rest of this Nation and progress. Why are so many spokesmen for the South allowed to deceive the southern people; why do they tell them that the law can be evaded, that the Constitution is a nullity; why do they tell them the will of the majority of the American people, as expressed through their National Government, can be ignored when it cannot be? Why do they preach respect for their own personal views of the law rather than for the established law itself? And when will new leaders arise to tell the southern people the truth and prepare them for the changes that are coming?

Just last year one of our distinguished former colleagues, a man whose friendship I value, Representative Erwin Mitchell, of Georgia, addressed the Seventh District Democratic Executive Committee in Rome, Ga., and he called upon the committee to join with other sections of our Nation in progressing toward greater material and spiritual wealth.

I am afraid—

The Congressman said—

that by and large our leadership has been guilty of too much tradition and not enough vision. This is the age of rockets and nuclear power. * * * We must come of age politically. We must elect men to office who have a full consciousness of America's great reservoir of progress that is waiting to be tapped. While we should continue to treasure the past and gain experience from it, we should no longer live in it. We must have leaders that are living in the present and looking to the tomorrow.

Last year, too, Mayor William B. Hartsfield, of Atlanta, Ga., speaking at Notre Dame about the problems of school desegregation, said:

Our chief trouble is that the best element of our State, and, indeed, of the South, has been largely silent, while the demagogs have been making political hay for many years. Therefore, we have thousands of our people who have been impressed by these demagogic arguments and their thinking must be changed. * * * They think that if they will just hold out and continue fighting, that in some way they are going to be successful in defying the highest Court in the land.

These times are crucial times for our Republic. Our way of government is being put to the extreme test by totalitarian governments throughout the world. We cannot tolerate the luxury of demagogs preaching nullification in our midst. We in the North and West, are concerned and we search, with anxiety, for the men of the South who will lead her people back into the mainstream of American life.

The words of a great Representative from the South, spoken in this very Chamber in 1874, should echo here again today.

It is time—

Said Lucius Lamar, of Mississippi—

for a public man to try to serve the South, and not to subserve her irritated feelings.

When such a public man stands up and urges the southern people to rise out of their enslavement to blind prejudice and progress together with us toward the bright tomorrows charted by the forefathers of our Nation; when southern men of vision work to break the chains that hold the South in bondage to the past, they will have the sympathetic ear of all the good people of Connecticut and the gratitude of a nation.

Are You a Parent to Your Children?

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Monday, May 29, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article "Are You a Parent to Your Children?" written by Rabbi Tzvi H. Porath, which appeared in the February 1959 issue of the Jewish Digest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARE YOU A PARENT TO YOUR CHILDREN?

(By Tzvi H. Porath)

One of the most common questions that comes to a rabbi is: "Have I been a good parent?" or, "Where have I failed in rearing my child?" The parent then unburdens his heart with a long list of grievances, misunderstandings, and anxieties about his child or children.

The concern of parents for their children is, of course, understandable. And there is reason to be concerned. You need but look at the newspaper headlines to see the extremes that maladjusted, unstable, and immature parent-child relationship can cause.

But not all problems make the headlines. I met with the principal of one of the high schools to discuss a serious problem of the young people at the school—without any regard for school regulations or State laws. Sometime ago I served on a panel of three clergymen to help young people who had overstepped the boundary line of socially acceptable behavior. Later, I was called by the school about a young person who had an unhappy homelife.

So the question, "Are you a parent to your children?" is a direct and pointed one. Each of us, as parents and as members of the community, can ask that question. Each one can recognize certain limitations in the upbringing of our children, and each one is struggling with the problem of how best to meet it.

There was a time, not too long ago, when the proverbial approach was used: "Spare the rod and spoil the child." This was the "children should be seen, not heard" school. In fact, some of us may be the result of such direct, swift, and uncompromising discipline, and can recall our resistance and rebellion. It was this school that produced many children, who turned against their parents' tradition.

There was a time, too, when parents became modern and used the progressive method—their children should express themselves. They should be unfettered by restrictions. "Let him work off his excess energy, let him set his own pace in school, and let him do as he wishes." Many of these young people are still having a difficult time adjusting to the norms of a society which demands a certain amount of conformity—and I should add—consideration and cooperation.

Today we are experimenting with another method. The solution tried in many a home is that the parents become pals to their children. Go to ball games, take them to the movies, be interested in their social life; that is the advice. "Be a pal" is the refrain, "and you will be able to reach your child. You must establish a rapport with him. What better way is there to establish that relationship than getting on his own level?"

This advice sounds good, convincing, and, most of all, modern and progressive. And thus we find many parents going out of their way to become pals with their children. They become den parents, football coaches, dance chaperones, car-pool drivers. They take seriously this relationship. As pals they will do anything for their child. They relate so closely to their children that no sacrifice is too great. Their children have the best—the best opportunities, best schools, best friends, and so on.

It all sounds good. What, then, is the weakness? The one limitation is that the children have pals—but no parents. They have no one to guide them.

In Judaism the parent-child relationship is a very clear and important one. The parents' responsibility is to teach, to educate. The Hebrew word for parents is "horim," and it comes from the same root as "moreh," teacher. That this is not accidental is demonstrated by the role that parents have on the earth.

Our rabbis say that our parents represent God on earth to the children. This concept was of great moment when first projected by the phychiatrists, yet Judaism has recognized that principle for thousands of years. And teachers, continue our rabbis, are in lieu of parents, and should be given the same honor and respect accorded to parents.

Becoming a pal is good and has an important place in parent-child relationship. I often prescribe such advice for those coming to me for help. There are times that I regret that I cannot have that kind of relationship with my own son. But that is not, and should not be, the full relationship; that should not be the extent of the rapport between the parents and the child; that should not be the sole role of the parents.

The parent must teach, must lead, must set an example. No one grows in a relationship where the more mature one tries to bring himself down to the level of the less mature one. Standards must be raised, ideals must be set.

In so doing, children will be trained so that they can make choices for themselves, proper decisions when moral factors are involved. These can be built up throughout the entire lifetime by proper example.

The trouble with the pal business is that parents pal with children at parties, movies, dances, trips, golf—everywhere except religious services, then wonder why their children won't go to synagogue, won't join a junior congregation or become part of Jewish youth groups. Why? The answer is obvious. No proper example has been set.

Parents will set limits in many areas of life. They will insist on certain health rules, be adamant in food and diet matters, encourage dance and music and art lessons—yet in the area of morals and the spirit they hesitate to set limits and make the child accept certain moral standards for fear of upsetting the child.

Parents hesitate to set time limits when their children should be home; they are afraid to ask where they are going, nor will they control with whom they go. A pal has full faith—or if not full faith, at least does not restrict the fun—particularly if the child explains: "All the other kids are doing it." Well, if all the kids are doing it, then the parent runs the risk of being an old-fashioned killjoy.

Parents should realize their prime responsibility is to prepare their children for life. In the long run, such preparation leads toward the path of happiness and security, and emotional balance. Life is not all play—all joy. Life is filled with responsibilities and sadness. Dancing and socials and recreational outlets are important, very important, but there must be a balance.

Parents love their children, and will prepare them for everything, except that which makes for a full, enriched and secure living. They fail to realize that in doing everything for their children, they have failed to do anything to them.

The Ten Commandments give the clue to the kind of relationship there should exist between parent and child (Kabaid es ovicho v'es imecho) "honor thy father and thy mother." You want to have joy from your children? You want to know how best to succeed as a parent? Heed this advice—have your child honor and respect you.

Long ago Judaism recognized the fine balance that exists between love and hate. The two are so close—they are nearly one. In every relationship there is love and there is hate. This is natural, this is normal. These feelings of hostility, if recognized when they express themselves by your children, indicate that you have insight and understanding. Judaism does not demand love of parent—it does demand honor. And respect cannot be obtained unless there is proper example and proper training.

A long time ago, someone gave very sound advice: "Train your children in their youth, and they will not train you in your old age." A child who has respect and honor

for his parents never loses his sense of moral value, his sense of responsibility.

No one has yet developed the perfect formula for parent-child relationships, but you can test yourself and find how close you come to the answer to the question, "Are you a parent to your child?"

The aggravations, the immaturity, the headaches and worries that young people invariably bring into any household are not the true indication of your failure or success. The criteria also are not good social graces, knowing all dance steps, having many dates, and such.

The real test is, Does he have a sense of responsibility, can you trust him in moral judgment? Does he honor and respect you? Have you prepared him for his role in life? Does he reflect the spirit of God that is within him?

Sometime ago I was given a poem. It was written by Mamie Gene Cole. It is called, "The Child's Appeal." I should like to share it with you:

"I am the Child
All the world waits for my coming.
All the earth watches with interest to see what I shall become.
Civilization hangs in the balance,
For what I am, the world of tomorrow will be.

I am the Child
I have come into your world, about which I know nothing.
Why I came I know not;
How I came I know not.
I am curious; I am interested.

I am the Child.
You determine, largely, whether
You hold in your hand my destiny.
I shall succeed or fail.
Give me, I pray you, those things that make for happiness.
Train me, I beg you, that I may be a blessing to the world."

The Young Men's Business Club of New Orleans Passes a Resolution Reflecting the Sentiments of the Vast Majority of People in New Orleans on the Latest Invasion of the South by Outside Troublemakers

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. HÉBERT. Mr. Speaker, I herewith present to this body a resolution passed by the Young Men's Business Club of New Orleans.

The Young Men's Business Club of New Orleans is one of the most respected and highly honored civic groups in the city of New Orleans. It numbers among its members leaders in all walks of life and usually expresses opinions which are shared by a majority of the people of New Orleans.

This resolution is no exception.

I am proud to have been the 25th president of the Young Men's Business Club in 1932 when it was not necessary to pass such resolutions as this. At that time there were no racial prejudices and hatreds and unwelcomed demonstrations. Times have changed since then. The Supreme Court in its Black Friday, May 17, 1954, decision has rekindled the flames of passion between the races and has caused a setback for the fine colored people of the South who until then lived in peace and harmony with their white neighbors.

The resolution follows:

The Young Men's Business Club of Greater New Orleans a 42-year-old civic organization composed of over 3,300 business and professional leaders of our city in general meeting held on May 24, 1961 unanimously adopted the following resolution:

"Whereas at a time in history when there is every need for national unity in the United States to repel the threat to our survival of the forces of communism; and

"Whereas there are presently groups of agitators traveling through the South whose purpose and motivation are to incite riots, disorder, disunity, and breaches of the peace and which activity does constitute a menace to life, property and the maintenance of public peace and law and order wherever such groups appear; and

"Whereas the effect of the activity of these groups is to give to the Federal Government an excuse which it is using to move in and take over the rights of the States and that of local communities to govern themselves and thus to further weaken the ever-diminishing area of States rights; and, further, these activities put our Nation in a bad light before the world in a measure bearing no relation to their real significance and importance; and, finally these activities promote tension, misunderstanding and ill-will with regard to problems which can only be solved through patience, good will and mutual understanding and cooperation: Now, therefore, be it

"*Resolved*, That while reaffirming the rights of peaceful assembly and free speech, the Young Men's Business Club of Greater New Orleans does hereby go on record as deploring the activities of the so-called Nazi and freedom rider groups and any others where the purpose and motivation are to incite riots, disorder, lawlessness, and breaches of the public peace; and be it further

"*Resolved*, That the Federal Government be requested to cease and desist from encouraging and supporting such activities; and that the Congress of the United States enact appropriate laws to safeguard local communities and individual sovereign States against such activities all in the interest of local home rule, States rights and the prestige, welfare and security of the people of the United States of America; and be it further

"*Resolved*, That copies of this resolution be provided to the President and Attorney General of the United States, to all members of the Louisiana Congressional delegation, the Speaker of the House of Representatives and the Vice President of the United States, the Governors of all the Southern States as well as the local press and other news media."

A Well-Deserved Tribute to Sam Nocella

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. GARMATZ. Mr. Speaker, it is always a pleasure to be able to rejoice with those persons who are successful in life and attain a high goal in their chosen fields. It is a greater pleasure, however, to be able to pay tribute to those who started at the lowest rung of the ladder and have succeeded in reaching the top. This is the case of Sam Nocella, a Baltimorean, who has been elected to the general executive board, the highest council of the Amalgamated Clothing Workers of America.

On May 20 it was my privilege to attend a testimonial dinner in his honor sponsored by the Baltimore regional joint board of that organization. On that occasion, many prominent civic and labor leaders were present. Among them were Tommy D'Alesandro, former mayor of Baltimore and now a member of the Federal Renegotiation Board; Rev. C. Lewis Robson, pastor of St. John's Methodist Church, Jacob Potofsky, and Hyman Blumberg, general president and executive vice president, respectively, of the Amalgamated Clothing Workers of America; and Miss Angela Bambace and Miss Sarah Barron, two Baltimoreans who have done an exceptionally fine job in their respective organizations.

Under permission to extend my remarks, I would like to insert excerpts from the address made on that occasion by Mr. Potofsky:

I am glad to be here tonight and to see so many employers join us in paying tribute to Sam Nocella on the occasion of his election to the general executive board. It speaks well for our labor-management relations.

On behalf of the general officers and members of the general executive board I am happy to congratulate and to welcome Sam Nocella to the highest council of the Amalgamated—the general executive board.

Sam served a long apprenticeship in our organization, beginning with Philadelphia where he hails from; then Easton, Pa., Red Bank, N.J., and finally Maryland, Virginia, and Pennsylvania joint board—now merging with the Baltimore joint board.

This merger is a natural one. Baltimore has an honored place in the history of the Amalgamated, not only because it produced Dorothy Bellanca and Hymie Blumberg, who have done so much to advance the growth and prestige of our union, but principally because of the historic battles that took place in this city in the beginning of our history.

One of the most historic of these strikes took place at the very birth of the Amalgamated in December 1914. A later struggle took place with the IWW which had joined hands with the old UGW. Those were bitter and bloody battles where the destiny of the Amalgamated was shaped.

So the merger of the 46-year-old history-laden joint board of Baltimore with the comparatively young joint board comprising the Greif and Schoeneman workers not only is natural but is most desirable.

In Sam Nocella, who will now head the combined joint board, we have an able, dynamic leader, experienced, dedicated to the cause of the Amalgamated and the labor movement.

Sam represents the younger generation that is steeped in the tradition and ideals of our organization but young enough to fight vigorously for the translation of our ideals and dreams into reality. He is community minded. He is industry minded. He has learned to have a sense of responsibility and dedicated service to our membership.

Sam knows the trade. Under the tutelage of Hymie Blumberg these past few years Sam was an apt pupil. He is now well trained and able to assume the leadership of our vast membership in this area.

I am glad to note that since the merger we have organized the workers of H. L. Hartz—a good beginning. I am confident that before long there will be a 100-percent unionization in this area of all who come under our jurisdiction.

On this happy occasion I should like to take a few minutes to discuss with you not the past but the future, the challenge our Nation and the labor movement and the world is facing in the forthcoming sixties—automation, unemployment, a troubled world in a space age. Will we have the courage, the inner strength to face these challenges to our system, our way of life, and our security?

To be able to face our problems abroad we must first make sure that our problems at home are handled properly. If we have unemployment and distressed areas at home, if we have discrimination and riots in Alabama, our world has so shrunk that there are immediate repercussions abroad.

To do the job will require a strong government with a heart. Fortunately, we now have positive national leadership. In President Kennedy, whom our union helped to elect, we have a strong man at the helm of the ship of state. He has moved vigorously with Executive orders and congressional recommendations in his first few months in office to reverse the trend of recession. He moved on civil rights and equality of opportunity in hiring by establishing a special committee presided over by the Vice President.

Nothing rights itself by itself. Something needs to be done. The Government is the only agency which can do things in a big way. In these first few months the new administration has been moving in the right direction.

One of our most serious problems is that of unemployment—chronic unemployment that comes from automation. The administration recommended and Congress adopted a law to extend unemployment benefits beyond 26 weeks. The President recommended and Congress passed distressed area legislation providing $395 million for this purpose. The $1.25 minimum wage and extended coverage was passed. (We in the Amalgamated have a special interest in minimum wage legislation because it will bring greater stability to our industries.)

Still pending is legislation on aid to education, housing, and medical care for the aged through social security.

We have to do something to provide jobs for the young people who will be joining the labor movement. This amounts to 13 million jobs in the next 10 years. To provide jobs we must accelerate growth through public works, housing, school construction, new hospitals, roadbuilding. Growth is the only tangible answer. I have faith in the administration of President Kennedy and the men around him. I have faith in the future of our country and our system of government.

We must be strong militarily, ready for any emergency that may come. But that is not all. We must not throw our weight around but rather our abundance, not as charity but as self-help. It is the minds and hearts of the men and women we must reach both at home and abroad.

We can reach them by being good neighbors, by understanding their problems and being as helpful and friendly as we can. That is the meaning and purpose of the Peace Corps the President has proposed. It is the 1961 point 4.

In conclusion, once again congratulations to Sam Nocella. Best wishes for the success of the new merged joint board. In unity there is strength.

Let us harmoniously work together for the good of our union, the progress of our country, and the peace of the world.

Mr. Speaker, I was also privileged to say a few words on this auspicious occasion, which I am inserting:

Mr. Chairman; Reverend Robson; Tommy D'Alesandro; President Potofsky; Executive Vice President Blumberg; our esteemed guest of honor, Sam Nocella; officials of the Amalgamated Clothing Workers of America, regional and local; other distinguished guests, ladies and gentlemen, when President Kennedy spoke before the Canadian Parliament several days ago, he began his address with these words: "I feel that I am truly among friends."

Because of my long and close association with the Amalgamated Clothing Workers, I respectfully borrow the President's text and paraphrase just a bit and say: "I know that I am truly among friends."

Tonight, all of us associated with the great cause of labor, rejoice that one who has devoted practically his entire life's work to the industry, and in the service of the union is being accorded this deserved recognition on the occasion of his election to the general executive board of the Amalgamated Clothing Workers of America.

Most of you are already familiar with Sam Nocella's outstanding record of success, and noteworthy achievements, since his first association with the men's apparel industry at the age of 9, when he served as an apprentice to a tailor. In 1919, and during the succeeding years, Sam demonstrated that he had the ability, the character, the warmth, and the know-how that enabled him to climb the ladder of responsibility that brought him to higher offices, and to membership on the general executive board for which we salute him tonight.

Sam, as a Member of Congress, and personally, I extend heartiest congratulations, and warmest greetings on this important occasion in your life. May God bless you and wife and guide you in the performance of the duties and responsibilities which are yours, for your actions will directly and indirectly, affect the welfare and well-being of thousands of your coworkers, and their families, and the economy of our city, State, and Nation.

To the members of the labor family present here tonight, I would like to report that I have given my wholehearted support to the President's program which represents commendable, positive acts, on behalf of human and public needs. Those of us identified with the Democratic Party, have always fought for the protection of workers, and the improvement of their working and living conditions. The present administration is not unmindful of this responsibility.

All that we ask, is that we continue to be entrusted to recognize the human rights of the worker, his essential economic value and his struggle to share in the prosperity which could not exist without him. We solemnly pledge our efforts toward the fulfillment of this obligation.

On the subject of world affairs, all of us are aware that we are living during times when there is international tension challenging us at every front. Great decisions must be made, and we must keep ever alert to the dangers which would destroy our way of life.

As each day seems to bring crisis upon crisis, let us keep united, and strong in support of our President, and those charged with the responsibility of guiding the affairs and destiny of our Nation.

If sacrifices are required, and they will be required, let us make them willingly. I am sure labor will not be found wanting in this regard.

We must translate to reality, the precepts President Kennedy included in his inaugural address when he said:

"And so, my fellow Americans, ask not what your country can do for you—ask what you can do for your country" and "Let us go forth to lead the land we love, asking His blessing, and His help, but knowing that here on earth, God's work must truly be our own."

Our country's cause is labor's cause; and we tell the world that we are dedicated to the cause of seeing that the dignity of man and his basic rights are inviolable.

In conclusion, I thank you for affording me the opportunity and pleasure of joining with you in this tribute to Sam Nocella, and I express the hope that the Amalgamated Clothing Workers of America will enjoy many more years of continued success.

Streamlined Wheat Appeals

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1961

Mr. ELLSWORTH. Mr. Speaker, one of the big problems facing this Nation is the wheat surplus. And, as I have pointed out before, one of the best ways of coping with that surplus is to find more uses for wheat. Out in Kansas, in Lawrence and other cities, we have been buying and eating a new wheat food—Redi-Wheat. I want to invite my colleagues' attention to an article about Redi-Wheat in the Christian Science Monitor of Thursday, May 25, 1961. Redi-Wheat will be on grocery store shelves all over the Nation before long, and its general acceptance by our consumers will go a long way toward helping solve the wheat surplus problem, and will add a delicious and nutritive element to our meals. I have sampled Redi-Wheat and it is indeed delicious.

STREAMLINED WHEAT APPEALS

(By Gordon B. West)

TOPEKA, KANS.—Kansans are celebrating their State centennial during 1961, and they have an exciting, versatile new wheat product they're calling their Centennial Food. It's Redi-Wheat.

This is a whole-kernel processed wheat food. It's sold in cans, ready to heat and eat. It's good for lunch and/or dinner. Home economics researchers at the USDA Western Regional Laboratory at Albany, Calif., developed the new food—all part of a program to help use up the wheat surplus.

Here is farm research in action. Redi-Wheat first was introduced in Wichita, this spring, in an official consumer acceptance test conducted by the USDA Agricultural Marketing Service. Several supermarkets were chosen to display the new product. Hutchinson, Lawrence, Topeka, Manhattan, Junction City and many other cities have it on grocers' shelves. Soon it will be distributed nationally.

VERSATILE FOODSTUFF

Redi-Wheat comes in two forms—seasoned (flavored with chicken broth and seasoning) and unseasoned. Until production is built up, 10-ounce cans sell for 19 cents or two for 37 cents.

Promotion is a part of the domestic marketing program of Great Plains Wheat, Inc., Garden City Kans.—regional development and marketing organization of important wheat-growing States. The Kansas Wheat Commission and the Kansas Association of Wheat Growers are taking the leadership.

The new product can be used in combination with every other type of food—with fruit, vegetables, meat, and fish. An entire meal can be prepared, from soup to dessert. It's best for lunch and/or dinner.

Kansans have tried Redi-Wheat in these and other ways: meatballs, meatloaf, Spanish Redi-Wheat, Creole jambolaya, Redi-Wheat au gratin, baked with cheese, pecan whip dessert, in lamb or chicken pilaf, scalloped with wieners, Scotch broth, Boston baked Redi-Wheat, in cabbage rolls, bread, salad, Indian pudding, stuffing for peppers, sandwiches, in poultry or game stuffing.

Now, what's the journey that Redi-Wheat takes to arrive on the grocery shelf? Wheat is taken from storage and washed thoroughly, put in a mixer with water to add moisture, run through a rice huller to debran the kernels (about one-half of the bran is removed) and is rewashed before loading in a truck to be taken to Trenton, Mo. There it is processed under an extremely high vacuum. The firm at Trenton is the only one with the necessary equipment between the Mississippi and the Rockies. From Trenton, trucks take the cans of Redi-Wheat to the various stores.

The Winchester Packing Co., Hutchinson, Kans., is developing frozen Redi-Wheat meatballs and frozen meatloaf, ready to heat and serve. A Topeka packing firm is working on Redi-Wheat luncheon meats. Kansas farm women and other housewives are using their Yankee ingenuity to whip up their own Redi-Wheat recipes. Mrs. C. F. King, Hutchinson, invented a new bread. Mrs. Shelby Whitehead, Wichita, thought up Redi-Wheat fish croquettes and fish casserole.

COMMENTS ON TASTE TESTS

What are some Kansans saying about Redi-Wheat after taste trials?

Mrs. Betty Denton, foods editor, Topeka State Journal, Topeka: "Redi-Wheat passed its test at our family dinner table. My husband liked it. One evening when I served various samples of Redi-Wheat dishes, the children helped themselves—and to seconds."

John Newlin, Edwards County wheat farmer who lives near Lewis: "The enthusiasm of the Kansas wheat growers is terrific because they see the potential of increased domestic consumption of wheat."

W. W. Graber, administrator of the Kansas Wheat Commission, Hutchinson: "The commission is very optimistic about the results of the promotion of Redi-Wheat in Kansas towns and cities. The acceptance is far beyond our expectations."

Dan Coffey, Wichita broker for Redi-Wheat in the western half of Kansas: "Repeats orders by retail stores are the best barometer of the acceptance of a product. Repeat sales have been excellent. Supply lines of the product to stores have been kept very busy."

Betty Stevens, Hutchinson, a demonstrator who served Redi-Wheat meatballs in Wichita and Hutchinson grocery stores, has this to tell about customer reception to the product: "People seemed to be looking forward to testing and tasting Redi-Wheat." She says, "'I want to try this' was a statement heard many times during a day. Everyone seemed to be thoroughly enjoying the taste of the meatballs." (Members of home demonstration units made 80,000 meatballs containing Redi-Wheat for the Wichita displays alone.)

Daye Jaye, manager of one of the J. S. Dillion & Sons stores (located in several Kansas cities): "Redi-Wheat has been very favorably accepted, and repeat sales are good."

Patricia Beezley, Topeka, owner and manager of cafeterias at Topeka and Wichita, and 1960 president of the Kansas Restaurant Association: "I have introduced Redi-Wheat and acceptance by the public was good. Redi-Wheat is a very tasty product and in the food business it is good as an extender. Redi-Wheat has excellent potential as a new, versatile food product."

As an introduction, the Kansas Wheat Commission served a colorful buffet dinner in Topeka, with dishes from salad to dessert. Guests were restaurant and institutional personnel, home economists, homemakers, the farm press, farm leaders, gourmets. Most of the guests helped themselves to seconds.

Redi-Wheat has been tested in the school lunch program in Kansas and passed with flying colors. Four test meals were served at Whiting Public School, Whiting, Kans., a small rural town in Jackson County. The lunch program there serves 80 grade school and 55 high school pupils, most of whom are from nearby farms. Ken Boughten, of the marketing division of the State board of agriculture, Topeka, says general reaction by students was favorable.

President's Address

EXTENSION OF REMARKS
OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1961

Mr. DEROUNIAN. Mr. Speaker, immediately following the President's address to the Congress, on May 25, I had issued this statement:

The speech was disappointing to me as an American. The President said, "We do not intend to leave an open road to despotism," (with which I agree) but just so long as the President's deeds do not match his words, freedom is in for trouble. I am sorry the President was not more forceful. For a physically vigorous young man, the determination to stand up to despotism was missing. The American people would like to hear for once that we are sick and tired of being pushed around by Khrushchev or any of his puppets. I am concerned with our fiscal condition. The President has advocated spending on all fronts. I am willing to keep our defenses the strongest in the world but cut down on nondefense items; otherwise bankruptcy is certain and Russia will already have won its war against us without firing a shot.

Apparently the President "revised and extended" his remarks in his state of the Union address, last Thursday. David Lawrence in his article of May 26, which appeared in the New York Herald Tribune, gives an excellent analysis of the speech:

TODAY IN NATIONAL AFFAIRS—KENNEDY BEFORE CONGRESS TRIED TO COVER TOO MUCH

(By David Lawrence)

WASHINGTON, May 25.—There was an impression of confusion and disorder in the way President Kennedy's address to Congress was prepared for delivery and in the actual delivery.

The joint session of the Senate and House didn't hear verbatim the speech which was distributed by the White House to the press about 3 hours earlier.

Whole sections—approximately 1,500 words—were deleted or changed as the President spoke. The reason given is that this was necessary so as not to use up too much television time. Mr. Kennedy spoke for 44 minutes.

FULL TEXT IN RECORD

After it was over, the announcement was made by the White House that the CONGRESSIONAL RECORD would publish the full text of the speech, including not only the brief passages which the President added extemporaneously but also the sections which were eliminated as he spoke.

What then becomes the official text of the President's speech? What was transmitted to the Congress of the United States as the official recommendation of the Chief Executive? Does the interpolated version constitute an official expression?

Often in the past a President has made slight changes as he spoke or has added a sentence or two here and there, but the CONGRESSIONAL RECORD would usually print the stenographic report of what was actually said.

PUZZLING ITEM DROPPED

Perhaps it was a good thing Mr. Kennedy did some editing. For in the prepared copy given to the press there occurs this puzzling statement:

"Too often we have accepted a merely defensive role. Too often we have let ourselves appear as friends of the status quo—and the status quo may be $50 a year. Meanwhile the pressures of the totalitarian conspiracy mount higher every day, as one nation after another, by internal more often than external means, finds its freedom under attack."

What does the $50 a year have to do with it?

COOLLY RECEIVED

As delivered, the address was more than 6,000 words in length. Anything that runs 44 minutes tends to tire the audience, and it was apparent that many Members of Congress received the speech in a rather indifferent mood—judging by the relatively few manifestations of applause in comparison with the numerous outbursts when Mr. Kennedy appeared last time before a joint session.

It was most unfortunate that the President decided to cover so much ground in a single message. For it would have been far more effective if he had devoted a separate message or communication on different days to each of the important topics that he discussed. Thus, the problem of outer space and the importance of research, including the prospective trip to the moon by some American astronaut, would have made more of an impression on Congress if it had been the subject of a single message.

BEFORE GOING AWAY

As it was, Mr. Kennedy tried to cover too much ground, and perhaps the reason was that he is going to Europe soon and sought to get off his mind and into the minds of Members of Congress the point of view of the administration on many things. Or perhaps it was the desire for publicity through television that caused the President's advisers to persuade him to deliver an omnibus message. The orderly conduct of the Government's business and the need for a thorough presentation of current issues to the Congress should, it would seem, outweigh the passion for television exposures.

There is really little new in the President's address. He asks for more Federal appropriations. He hopes that the budget will not be too far out of balance. He is pleased that economic recovery is on the way. He is right, also, in asking for the small amount of money needed for the U.S. Information Agency broadcasts to other countries.

GENERAL TERMS

As for the major recommendations about military reorganization and defense programs, these were presented by Mr. Kennedy in very general terms. The program he recommends for manpower development and training, to give several hundred thousands of workers new occupational skills, is a step in the right direction.

With respect to the coming meetings with Premier Khrushchev, Mr. Kennedy insisted

in his message that "no formal agenda is planned and no negotiations will be undertaken" but that there is to be a "personal exchange of views." He added:

"Yet it is important to know that our patience at the bargaining table is nearly inexhaustible, though our credulity is limited—that our hopes for peace are unfailing, while our determination to protect our security is resolute."

These are generalities—more words added to the thousands that have been uttered in recent weeks in the hope of impressing Khrushchev.

This Is the Way

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. ULLMAN. Mr. Speaker, I call to the attention of my colleagues the following editorial from the East Oregonian of May 17. It strongly endorses the administration-backed farm bill H.R. 6400, as a self-help program and a "way for the farmer to build for himself the secure place that other segments of the Nation's economy have":

THIS IS THE WAY

The new program for agriculture, proposed by the Kennedy administration through Secretary of Agriculture Orville Freeman, has some strong friends and some strong enemies. Its supporters include the Grange and the Farmers Union and organizations representing several of the larger commodities. Its opponents include the Farm Bureau Federation and several commodity organizations, including the Cattlemen's Association.

What is this program? We pose that question because you can get several different interpretations of it, according to whether the speaker is in favor or against. Seems to us it is best, in the beginning to go to the source of the program. What does Secretary Freeman say about it? In an address to the National Press Club in Washington, D.C., last month Mr. Freeman said this, in part, about the program:

"We need to recognize that all the farmer is asking for is equality of economic opportunity.

"The farmer is the only basic producer in our economy who has available to him no means by which he can adjust his production to demand—and who therefore has no effective means by which he can influence the economic rewards of his enterprise.

"It is absurd, in any consideration of a farm program, to compare the farmer with the small corner merchant.

"Perhaps there should be Government action for small business, but of a different nature for a different reason. But the farmer, as a basic producer and not a retailer, can be more accurately compared with other basic producers—such as, for example, the producers of steel. Government has given to such producers the instrument of incorporation, by which they can become large enough to effectively adjust their production to quantities that can be sold profitably.

"Government has likewise given to labor the instrument of collective bargaining whereby millions of individual workers—who, as individuals, would be even more helpless than the farmers—can work together to achieve a fair return for their productive activity.

"To achieve economic equality, therefore, we propose programs to provide farmers with the institutional machinery for coming together and developing supply adjustment programs, and with democratic methods for approving or rejecting such programs. We would specifically provide safeguards for consumers' interests in this process.

"By enacting the proposed legislation the Congress would establish the ground rules and guidelines under which supply adjustment programs would be developed and placed into operation. Then, whenever action is needed with regard to any commodity or group of related commodities, a committee of producers—including one consumer representative—would be selected to consult with the Secretary of Agriculture to develop and recommend a program of supply adjustment for that commodity. The Secretary would recommend a program based on these consultations. Only after such a program had been approved by the President, sanctioned by the Congress, and approved by a two-thirds vote of the producers themselves, would it become binding upon all farmers who choose to produce that commodity. The farmers who serve on these commodity advisory committees would be chosen from nominees designated by farmer-elected county committees and by farm organizations.

"Thus, in return for the limitations to which farmers would conform only after they, themselves, had reached decisions by the accepted democratic method of voting on proposed programs—in return for these limitations the farmers would gain more real influence over the economic consequences of their farming enterprise, more real influence over their opportunity to earn fair incomes, than they have ever had, or can have, without such programs."

Inability to adjust supply to demand has been the root of the farmer's economic troubles for a long time. It isn't going to be alleviated as our population grows, and there are more mouths to feed. It isn't because the farmer's ability to produce will be far ahead of the demand for his products far into the future.

People who have experience in Oregon agriculture should be able to understand very well the program Mr. Freeman is proposing. It is almost exactly this procedure that Oregon State College and its extension service undertook not so many years ago to bolster an ailing Oregon agricultural economy. In this State it was determined what should and should not be grown in direct relation to the markets available to products that could be grown here.

Until farmers, the Nation over, gear their production to the demands in the marketplace they will be in trouble. And it is something they must do themselves. Secretary Freeman is suggesting only that they be assisted by the Government in developing programs, commodity by commodity. The programs would be theirs. This is the way, we have long been convinced, and the only way for the farmer to build for himself the secure place that other segments of the Nation's economy have.

Difficult Questions

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. CHAMBERLAIN. Mr. Speaker, many citizens in the Sixth District of Michigan have expressed their concern and indignation to me over the proposed tractors-for-prisoners exchange. The following editorial from the May 24 issue of the State Journal of Lansing spells out in succinct form many of the questions which this proposal leaves unanswered.

I am particularly concerned about the long-range effect of any acquiesence, either by the U.S. Government or a private group, to the blackmail by Castro. As a State Journal editorial says:

There is, however, another serious question—that of the possible effect of paying Dictator Castro the price he has demanded for the liberation of the invaders.

If a dictator as ruthless as Castro has shown himself to be finds he can acquire urgently needed tractors by freeing some prisoners he now has in custody, there would be danger that it would not be his last act of blackmail.

While I recognize the President, as Chief Executive, is charged with the responsibility for the conduct of our Nation's foreign affairs, I nonetheless want to register my protest. The complete editorial follows:

DIFFICULT QUESTIONS

The humanitarian motives of the private American citizens who are trying to raise funds for the rescue of 1,214 prisoners who were taken in last month's invasion of Cuba are praiseworthy.

It is a case of the Americans placing a far high value on the freedom of the men who tried to overthrow Cuban Dictator Fidel Castro than they place on the money needed to buy the tractors which Castro has asked as ransom.

But even though the fundraisers have the best of intentions their efforts pose questions it may not be easy to answer.

One of the questions has to do with the propriety and legality of negotiations between private citizens and a foreign government, especially a foreign government with which the U.S. Government has severed diplomatic relations.

One Senator has cited the Logan Act which bars such negotiations.

Presumably the private citizens have no thought of engaging in any dealings with Castro without the full approval of the American Government and it is possible that once the money for the tractors has been raised further arrangements could be handled by the Government.

There is, however, another serious question—that of the possible effect of paying Dictator Castro the price he has demanded for the liberation of the invaders.

If a dictator as ruthless as Castro has shown himself to be finds he can acquire urgently needed tractors by freeing some prisoners he now has in custody there would be danger that it would not be his last act of blackmail.

His desire for other equipment or commodities from the United States might cause him to continue to use his prisoners and threats of executions as a means of obtaining supplies which he cannot acquire through normal trade channels.

There were indications Monday, however, that Castro himself might make it unnecessary to answer the questions raised by the proposed exchange of tractors for the prisoners now held in Cuba.

Castro threatened in a Havana broadcast to cancel the deal if the United States persists in treating the trade as an exchange rather than an indemnification for war damage.

Future events may show that Castro's desire to humiliate the United States rather than his desire for tractors was the real basis of his offer to trade human lives for machines.

Unity Among Postal Clerk Unions

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. CUNNINGHAM. Mr. Speaker, the problems of public employees have commanded very special attention from me ever since my tenure of office as mayor of my home city in Omaha. Just as now in my assignment to the House Committee on Post Office and Civil Service, I have a constant and primary concern for the problems of Federal employees, so too during my terms as mayor of Omaha I was deeply interested in the problems of the employees of the city of Omaha. As a result of long associations and strong friendships, I am delighted by a movement which must result in greater amity and concord among organizations speaking for post office clerks.

The National Federation of Post Office Clerks, the United National Association of Post Office Craftsmen, and the United Postal Workers have already combined to form the United Federation of Post Office Clerks. The National Postal Transport Association is ready to join the combined movement and will do so provided that the membership of the National Postal Transport Association gives its consent in a referendum ballot which is to be counted on June 30, 1961.

When the National Postal Transport Association joins the combined group, the name will become the United Federation of Postal Clerks and the change will commemorate the marriage of two great organizations both of which hold charters in the American Federation of Labor and Congress of Industrial Organizations.

The benefits of the amalgamation will be apparent immediately to all postal clerks and in a little while other postal and Federal employees and even Members of Congress will see the improvements resulting from the change.

The amalgamation in no way constitutes an infringement upon or a hazard to congressional relations. All of us here in the Congress of the United States have had very wholesome relations with President E. C. Hallbeck of the National Federation of Post Office Clerks who will head the combined union. We remember him best as legislative director of his union in the days before he rose to the presidency. Now we are familiar with John O'Connor who has succeeded Mr. Hallbeck as legislative director of the combined organization. Mr. Hallbeck and I have had especially warm relations in view of the fact that a brother of Mr. Hallbeck is a resident of the city of Omaha. Similarly, we are familiar with Mr. Joseph Thomas who was president of the United National Association of Post Office Craftsmen and who now assumes the position of director of organization in the combined organization.

I personally am most intimately familiar with Paul A. Nagle, who is president of the National Postal Transport Association and who is slated to become the administrative vice president of the combined union.

I got to know Paul Nagle before I became a member of the House Committee on Post Office and Civil Service. In fact, even before having left Omaha to come to Washington to take my congressional seat, I talked with Mr. Adolph Dudycha who was then president of the Omaha branch of the National Postal Transport Association and Mr. Clinton Gross who is the associate national vice president of the National Postal Transport Association for the area which includes Omaha. These gentlemen have been truly gentlemenly all the time under every circumstance.

There have been times when I found it necessary to challenge the postal administration of my own Republican Party during the Eisenhower administration. On July 2, 1960, the House of Representatives passed H.R. 12595, a bill bearing my name, which directed the Postmaster General to cease and desist from his experiment in transporting ordinary first-class mail by air. The membership of the National Postal Transport Association comprises the group of postal employees which would be most adversely affected by any expansion of the so-called airlift. The present administration has said that no expansion is planned and that there may be a regrouping of segments currently in operation. My own position has remained the same. I can still see no congressional authorization for the operation, and I feel that the atmosphere should be cleared by congressional action of one type or another.

In my considered judgment the amalgamation of the postal employee organizations into one group will insure far greater job protection than would otherwise be available to the postal employees who perform service in the railway post office trains and in highway post office vehicles.

There have been other situations in which I have found it necessary to support the policy of the previous administration and to differ with Mr. Nagle and his group. Whether in difference or in agreement, we have always had the most wholesome relations and I know that postal employees everywhere will prosper if as a result of the amalgamation, this man is given a deeper and broader voice with which to plead for the welfare of the people for whom he is spokesman.

Another group of people will benefit by the combination of the postal clerks' organizations, even though they are no longer in Federal service. I am referring to the great body of retired civil servants. Mr. Nagle's group includes a substantial percentage of retired people and no one works more ardently on legislation affecting retirees than does Mr. Nagle. Consequently it can be said very directly that retirees that are not directly involved by the merger will nevertheless reap a harvest of benefits enabling their leaders to speak with more resonant voices.

We are on the threshold of a new and exciting chapter of postal employee relations. I am grateful for the opportunity to be so close an observer of the changes which are underway and which constitute a definite force for good.

Letter to Asahi Evening News, Japan, by Russian Doctor of Laws, Criticizing Los Angeles County American Lawyer, Danny R. Jones, Author of Article "Justice in Russia as Seen by U.S. Lawyer"

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present to the reading pleasure of your distinguished self and that of all my colleagues the following text. The Danny R. Jones mentioned in paragraph two of the article is personally known to me in the great 23d Congressional District for several years as an exceptionally able, forthright and successful practitioner at the California bar with his offices in the important city of Compton, Los Angeles County, Calif.

A few months ago he favored me by personally telling me of his experiences occurring during both of his two visits to Soviet Russia in connection with his study of "Justice in Russia."

As you conclude reading this criticism by the Russian doctor of laws, I call your attention to the first sentence of the last paragraph thereof which reads as follows:

> This is, however, impossible for the time being, and we shall be satisfied.

The foregoing quote clearly refers to the "Comrades' Court in the U.S.S.R." mentioned in the preceding paragraph above this quoted portion. That fact, together with the wording, "impossible for the time being" is to me most significant and further cause of concern about the intentions of the leaders of Soviet Russia.

[From the Asahi Evening News, Apr. 19, 1961]

JUSTICE IN RUSSIA

To the EDITOR:

In the February 6 issue of your paper was published an article by W. B. Swim entitled "Justice in Russia as Seen by U.S. Lawyer." The article cites some statements made by an American attorney, Danny R. Jones, who happened to be in Tokyo on his way home from the U.S.S.R. to the United States.

Jones and his colleague, Melvin M. Belli, coauthors of a book under contemplation under the title of "Life and Law in Russia," had lately finished an extensive tourist journey of the Soviet Union.

We can only welcome supplying Japanese readers with wide information on the life, laws, and justice in the U.S.S.R., since we know well that the Japanese people who are disposed to be friendly toward the peoples of the Soviet Union take a lively interest in everything that is going on in our country.

It is, however, to be much regretted that the American lawyer, whose impressions were published in your paper, proved to be an observer passing tendentious judgments on the facts he was speaking of.

Judge for yourselves. Mr. Jones could not but mention that everywhere the Soviet people received and accompanied the Americans gladly, showed interest in their life, made them presents, and so forth. Nevertheless, in face of these obvious facts, which, by the way, are noticed by every unprejudiced foreigner who visits our country, Jones maintains that in the U.S.S.R., all Americans, Britishers, and others are considered bad guys, that all Americans are called imperialists, warmongers, enemies of communism, and the like, whereas not a Soviet citizen will ever mix up the American people with the American imperialists. In the U.S.S.R. even schoolboys are aware of the fact that the American people, just like the Soviet, British, Japanese, and other peoples, hate war, desire lasting peace. In the Soviet Union it is the American and other imperialists who are regarded as warmongers, and it is just against them that the entire hatred of the Soviet people is directed.

Mr. Jones admits that this time he "saw a lot of material progress" in Russia in comparison with the first tour undertaken by him 2 years before. He recognizes a number of successes attained by the Soviet people, speaks of the shortening of the working day as "a wonderful move" on the part of the Government, mentions the prospective total abolition of the income tax on the population and some more facts in the life of the peoples of the U.S.S.R. Nevertheless, he seeks everywhere dark, negative aspects and, failing to discover such, fabricates them and depicts facts in the desired black colors.

For instance, out of the sole fact that in the city of Omsk the tourists met a certain "well-dressed Russian Jew" who spoke English better than interpreters in Moscow, Jones "concluded that despite Russian propaganda denying it there is some amount of discrimination in the Soviet Union." What a frivolous way this is to cast doubts on a whole nation without producing a proof, and that on such an important question as racial discrimination.

Further, Jones admits that he does not think the Soviet people are about to overthrow their government. It would seem that from such an admission he could have drawn the conclusion that the people are satisfied with their government. But the wise researcher of the life and usages in the U.S.S.R. draws from it another entirely unexpected conclusion: "I don't think there is a choice. The people do not know of any other system."

If the researcher had been objective, he would have noticed easily how much the Soviet people know of other systems, particularly of the systems obtaining in the imperialist states. To speak concretely of the American system, we do not need at all information as may be furnished by such specialists as Jones. It is quite enough that the people in the Soviet Union know well what the American workers themselves and even such a trade union leader as G. Meany write of the American system.

Now what did Jones inform the readers of the paper concerning justice in Russia? First of all, it turns out that the most heinous crime in the U.S.S.R. is to make a profit. Jones maintained that "such crimes are tried by popular courts." Furthermore, he stated that "in popular courts the accused is charged by committees or groups of his fellow workers or neighbors. Verdicts are by a show of hands. Such courts can sentence people to labor camps," and so forth, and so on.

Such assertions concerning Soviet justice have nothing in common with reality and pursue only one aim—to discredit the legal order and justice in the Soviet Union.

As for the truth about the Soviet justice, it is by no means difficult to establish it. The true story is this: justice in the Soviet Union sees its task in insuring the strict observance of the laws by all officials and citizens; its aim is to guard the interests of society as well as the rights and legitimate interests of every citizen. If the talk is about "the most heinous crime" in the U.S.S.R., it is of course not profitmaking, but the crime against social order or personal welfare of the people, murder and similar grave infringements of the law that is regarded as such.

In the U.S.S.R. there are neither exploiters nor private owners of factories, plants, railways, commercial enterprises, and so on. It is already a long time since the capitalists disappeared from our country together with their profits derived through exploitation of the working people. It is therefore strange that anyone should yet talk of this sort of activity being in Russia "the most heinous crime." If what Jones has in mind here is speculation, then it really constitutes a crime in the U.S.S.R. for speculation comes under the provision of the law: "cornering and reselling commodities or other objects with a view to making profits" (art. 154 of the criminal code of the Russian Soviet Federal Socialist Republic). Such an activity is carried out by persons of the parasitic type to the detriment of the interests of the broad masses of the working people, who are not in the least in need of middlemen and merchants, since their need is served as a rule by state and cooperative trade.

Nevertheless, speculation is not so heinous a crime, all the less so if we consider that cases of speculation occur only sporadically and that it is dying out as production grows and the Soviet trade gets improved. Furthermore, drawing of incomes by kolkhozes and kolkhoze peasants through the sale of the products of their own labor on markets is not a crime at all.

Moreover, petty speculation committed for the first time is not regarded as a crime punishable according to criminal procedure. In these days it incurs merely an administrative penalty.

According to the draft law on participation of the public in the fight against infringements of the law, it is envisaged to transfer the jurisdiction over these minor infringements of the law as well as over a number of analogous minor breaches of the law to comrades' courts, popular courts, whose task does not consist in dealing out punishments (they are not empowered to pass sentence on anyone, nor to apply such measures as mentioned by Jones in an entirely unwarranted manner), but in comradely education of infringers of the law.

Obviously, it is of this institution that Mr. Jones has happened to overhear, and he prefers to make fun of it, instead of trying to grasp the significance of this new measure designed to draw wide circles of citizens into management of public affairs. Yet he would have done well to ponder seriously over it, since in the Soviet Union crimes are decreasing steadily thanks to the new social order, to the care expended by the state on the working people.

It seemed to Jones that "courts are still drab," that the number of lawyers in the U.S.S.R. is very small in comparison with the United States. He could have added that the number of judges, public prosecutors, militiamen is decreasing more and more in the Soviet state. Why is this? It is because infringements of the law are decreasing more and more and because the general Soviet public is carrying on a successful struggle with them. Hence follows that we are building in the U.S.S.R. not "palaces of justice," but palaces of culture, and that the number of lawyers is decreasing more and more in the Socialist society. What in the world is there to be wondered? Is there anything to be regretted for a cultured man?

As for other inventions of the "enlightened" American lawyer, we cannot but regret that there exists no possibility to request their colleagues in the United States to examine at a popular court his behavior and condemn him for spreading false information.

In truth, will it be a bad thing at all if at an American comrades' court Jones is reminded of the incorrectness of the false information disseminated by him concerning the comrades' court in the U.S.S.R.? It would be both just and instructive for others.

This is, however, impossible for the time being, and we shall be satisfied, if you, dear editor, would bring the present letter of mine to the notice of the readers of your paper. In hope that the letter will help disperse to a certain degree the fog and shadow which Mr. Jones cast on the life and justice in the Soviet state.

V. S. TADEVOSYAN,
Doctor of Laws, Deputy Director of the Institute of State and Law of the Academy of Sciences, U.S.S.R., President of the Soviet Association of Political Sciences.

Washington Report

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following newsletter of May 27, 1961:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

MAY 27, 1961.

The Cuban situation is getting worse by the hour. We now know the invasion attempt we denied planning was U.S. directed and failed because of our last minute withdrawal of promised air support. "At least five departments or agencies of the U.S. Government were in on the venture into Cuba, including the White House. Stories deliberately fed out to center blame on the U.S. Joint Chiefs of Staff were an effort to clear skirts in other directions. Military chiefs then were ordered not to talk".—U.S. News & World Report, May 29.

Earlier the President, and Adlai Stevenson in the United Nations, had denied U.S. participation in Cuban invasion plans. Then the President assured the world that we would free Cuba from communism. Although he is being counseled simultaneously to appease the Communists and to get tough, the President thus far has gone no further than to talk tough. Many in Washington, including me, still shocked at the thought of even contemplating acquiescence to Castro's blackmail effort to trade human beings for freedom, were appalled to learn that the Reuther-Roosevelt-Eisenhower committee was originated by President Kennedy. This clearly violates the law, the Logan Act, even as it violates basic morality. Further, our own partial trade embargo prohibits our shipping tractors or bulldozers. The implied admission of weakness on our part by such action will multiply the danger far beyond the lives of these prisoners. Indeed, the cost

in lives later to free Cuba from communism may outnumber many times the number of prisoners now involved.

With world crises erupting so rapidly, our lack of clear foreign policy is bewildering and presents contradictions. The Vice President learned on his trip that Asian nations are unsure of the United States. Either the United States must take a firm stand or these nations will head toward communism. Even as President Kennedy says, "The United States is prepared to make any sacrifice or risk any danger necessary to block the spread of communism," we failed to support those fighting to free Cuba and indicated that we are not willing to make any sacrifice or risk any danger to block the spread of communism only 90 miles from our coast. At the same time we take a licking at Geneva when our allies won't support us. Then President Kennedy, contrary to all statements during the campaign and up to the present, indicates he will meet with Khrushchev, regardless of any precedent or development to cause reason for hope. On the contrary, every development shows that Khrushchev is formenting trouble throughout the world. The deck is stacked against the President. Talk and debate doesn't work with Khrushchev who uses dishonesty and lies as his tools to beguile and fool. We desperately need some firm action—a blockade of Cuba would be a good start. Then we should draw a line with Russia and move in our Navy and military weapons ready to back up the tough talk. Firm action alone now can save us from world war III. Our present policy of drift and indecision is toward national suicide.

The freedom riders and the resulting riots should teach us some lessons: (1) When local law enforcement fails the Federal Government moves in; (2) Federal Government can always unilaterally take the law into its own hands; (3) those looking for trouble will find it. Intemperate do-gooders can hurt the cause of integration.

Walter Heller, President Kennedy's top economic adviser, may be pushing us backward to the inflationary practices of Federal intervention in our economy as practiced by the Truman administration. According to Heller, because of the allegedly slow rate of economic growth from 1953 through 1960, the United States faces a persistent economic slack. It follows that Government spending and other measures must take up that slack for the Nation to realize its potential growth. Taking a closer look at the statistical underpinnings of this theory, we find the Government's part of the gross national product from 1947–53 (which included the Korean war) went from $54.6 billion to $102 billion. Interestingly enough, the gross private domestic investment category of the gross national product went up from $50 billion in 1947 to over $70 billion in 1959. As for personal consumption expenditures, they rose more in the 1953–59 period than in the 1947–53 era. We had at least three times as much inflation from 1947 to 1953, so that actual growth was that much larger in the 1953–59 period. A return to the Truman inflationary period is what we are being offered. This same formula was offered Germany by some of these same economists, but the advice was spurned and West Germany has prospered beyond all expectations. Our real choice is between sound economic growth based on private enterprise and risk capital or vast, inflationary Government expansion with no firm foundation.

In the tax hearings before my Ways and Means Committee, I was able to strike a blow for the elimination of double taxation of corporations by suggesting that now is the time to stop taxing corporate income that is distributed to stockholders. The stockholders can be taxed upon their receipts. Retained earnings of both corporations and cooperatives could be taxed should distribution not be made to the stockholders or shareholders.

Needed: Greater U.S. Voluntary Mobilization Against Communism

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, May 29, 1961

Mr. WILEY. Mr. President, the free world, if it is to defeat communism's efforts to conquer the world, needs to more effectively mobilize its manpower and resources.

As a leader of the free world, we have a special responsibility and challenge. Uncle Sam, of course, plays the major role in designing and executing policies to meet the Red threat to security and progress.

However, I believe that a large majority of our citizens stand ready and willing to extend more time, energy, and resources to supporting the efforts of our Nation.

Yesterday, I was privileged to make some suggestions as to how this can be done more effectively in a radio address over radio station WGN, Chicago. I ask unanimous consent to have the excerpts from this address printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

Day by day, history is being written. The tireless hand will record how well—or how poorly—we shape the events of our time and meet the challenges.

The times require that we mobilize adequately and swiftly the resources of the free world.

In this space-missile-jet-nuclear age, however, we need a Paul Revere: to gallop through the towns and countrysides of the free world; to awaken the people with the warning cry: "The Reds are Coming." How? By land and sea and air. By day and by night. Through every inroad and opening in the frontier outposts of the free world.

Despite long years of threats—and vast expansion of the Communist empire—are we really yet awake to the challenge? No. For too many Americans, communism is a thing to fight from the armchair, hurling epithets from the launching pad of the lower jaw.

Look around us. Who do we—you and I—know that is really doing anything about the threat of communism. Who is tightening his belt; working on ideas to combat this evil; dedicating more of his resources to the perpetuating of freedom and the spread of its ideas and ideals.

How many can you find? Yes, a few—but far too few.

How, then, can we—we, as patriotic Americans—do something about this grave threat to our security and progress?

By the following ways:

First, we must discard the idea that Uncle Sam, alone, can carry the fight against the Reds.

Then, we must mobilize our resources—individually and collectively—to throw the necessary brainpower, manpower, and resources into the battle against the Communists. Historically, one of the great strengths of America is the voluntary will to fight, sacrifice, and work to build a good life under a free flag, and to protect our country from its enemies.

Second, our civic, veteran, social, cultural, and, yes, religious and other organizations can—and should—reexamine the potential ways in which they might serve our national cause more effectively.

Third, we need to more greatly utilize the know-how and technology of free enterprise—for selling the ideas and ideals of freedom. This includes more effective utilization of U.S. firms operating overseas as built-in Voices of America.

Fourth, labor, also—sharing a common bond with workers around the globe—possesses an unparalleled opportunity to demonstrate how workers benefit under a free system; and how free collective bargaining can serve not only the worker but strengthen a nation.

Fifth, the creative minds—artists, writers, poets, musicians, dramatists—have a great opportunity to portray the spirit of a free people in their dedicated relentless effort to create a better life for themselves and humanity.

In addition to encouraging greater voluntary effort by our people, I believe we must also examine national policies to provide opportunity for the willing to more effectively serve their country.

This, then, is a fight for all of us. As a people, we must pool our resources, reinvigorate our patriotic spirit; and weld together our efforts and purposes in a common cause; that of survival of ourselves, of our ideals, and of freedom.

It is a time for greatness, for bravery, and for alertness.

Too Much Power

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1961

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appears in the June 1961 edition of Farm Journal.

TOO MUCH POWER

Farmers in general approve of Secretary Freeman's desire to "do something" to improve farm income, and so do we. Certainly it needs improving. But we don't believe they will approve giving the Secretary anywhere near the power the Kennedy omnibus bill would hand him, once they really see what's proposed.

Maybe this Secretary wouldn't abuse the power. He might or he mightn't. But he could. The temptation would be great. And we don't believe it is either sound or safe to pass a law that depends on any one man's personal inclinations.

The issue is whether farmers of this country are ready to put their future largely in the hands of the Secretary of Agriculture as this bill certainly would.

"But look," says the administration, "(a) farmers would write their own programs, (b) Congress could veto anything undesirable, (c) and farmers would have to OK any plan in a referendum." Well, let's take a closer look.

(a) "Farmers would write their own programs."

They might initiate them or they might not. Usually they probably would. But the Secretary could start things, if he decided to, for any segment of agriculture—beef, hogs, eggs, apples, potatoes, or any other. He could bring whole new sectors of farming under the Government tent, one at a time, until he had most of it depending on him for decisions.

He would start by appointing an "Advisory Committee" for any commodity, and he could get any kind of "Advisory Committee," hence any kind of advice, he wanted. (He admits this but says he wouldn't abuse the privilege.) County ASC committees would be asked to name three times as many nominees as would be needed. From among these the Secretary would appoint two-thirds of his committee. He would get the other third from lists suggested by "appropriate" farm organizations, with him deciding which were appropriate. There would be one consumer representative.

Not only would the Secretary handpick the committee—he wouldn't even have to follow its advice. He could change, reject, substitute.

Which doesn't leave much of the first claim.

(b) "Congress could veto."

So it could if it had a chance. But the bill says one House would have to disapprove within 60 days. It would be no trick to hold up a vote on any controversial farm plan 60 days—it's been done many a time. It could be done by the Speaker, the Agriculture Committees, the Rules Committees, or by filibuster. At least it could be delayed until the last hectic days of a session when no proper debate would be possible. If Congress failed to disapprove, and a farmer referendum carried, the Secretary would have written the law. Congress couldn't even amend it.

"As I understand the Constitution," says Representative E. C. GATHINGS, Democrat, of Arkansas, "Congress is given the authority to write the law, not take it from the USDA downtown." It may be a quaint idea but that's the way we understand it, too.

(c) "Farmers have to OK any proposal."

But the Secretary decides who votes. This Secretary might rule fairly (no easy job). This one or another one might not. It would be entirely possible to arrange so that voters who produce 15 percent of a product could outvote those who raise 50 percent, if it would help carry a referendum.

However, the biggest joker lies in the choice farmers would have. If they voted down a program their supports would be cut to 50 percent of parity. That would make their approval mean litle but avoiding punishment.

Let's strip the high-sounding claims from this bill and show how phony they are. Then if farmers decide this is what they want they will at least know what they're getting. If either farmers, or Congress, do hand over such unprecedented power to the Secretary of Agriculture—any Secretary—we are a lot farther down the road than we thought.

Kansas, When the West Was Young

EXTENSION OF REMARKS

OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Star of Sunday, May 28, 1961. The title gives a clue to the content, and I believe that it will be of interest to my colleagues.

KANSAS, WHEN THE WEST WAS YOUNG

Another spring has come—and almost gone—in Kansas. The late William Allen White has left us a classic description of that season, as it manifests itself year after year along the pleasant, shaded streets of Emporia.

"The coming of spring in this latitude," he wrote, "is one of the most beautiful things in nature. Today the redbirds are singing in the lilac bushes, and the robins have come back to the elm trees. All over town people are spading in the garden and raking the leaves and the mulching off the lawn. The air is full of an 'ethereal softness,' and the limbs of the trees are getting black. Around the marble counters in the stores the boys are crowding in their winter clothes, with patches in conspicuous places."

In the midst of our tumultuous contemporary world we tend to think back, nostalgically, on such scenes from an earlier America. But, to a degree, we deceive ourselves. Life has rarely been so innocently carefree and peaceful as it often looks in retrospect. Kansas, as the current centennial of her statehood should remind us, provides no exception.

It was the same Mr. White, you may remember, who once defined Kansas for an English visitor as the "Mother Shipton, the Madame Thebes, the Witch of Endor and the low barometer of the Nation." When anything was about to happen in this country, he told Margot Asquith, it was almost certain to happen first in his home State. Then he proceeded to enumerate some of the social and political explosions that had occurred under what might seem (in 1922) like the placid surface of a Kansas existence.

"Abolition, prohibition, populism, the bull moose, the exit of the roller towel, the appearance of the bank guarantee, the blue sky law, the adjudication of industrial disputes as distinguished from the arbitration of industrial differences—these things came popping out of Kansas like bats out of hell. Why, no one seems to know."

Now, nearly 40 years later, historians of the West are fairly well agreed on an overall explanation for the phenomenon. Indeed, the editor of the Emporia Gazette, himself, was to suggest its main outline in a little book entitled "The Changing West." He wrote it just before the Second World War. The theory in question embraces much more than Kansas. For the kind of behavior that originally puzzled Mr. White had been more or less prevalent throughout the West during that period. But it was perhaps most highly concentrated in the Sunflower State.

According to this view, there were several factors involved. Chief among these, however, were the character of the people who settled western America, the nature of the physical setting in which they found themselves—and the challenge to action, implicit in both the tremendous difficulties they encountered and the glittering opportunities placed at their disposal.

Much of the chronicle is familiar, at least in segments. What has recently been added is a systematic interpretation. Essentially, what the investigators started out to do was to resolve an apparent paradox. Why did a region, possessing such economic potentialities and settled by a people so accustomed to rely upon their own efforts, turn into a laboratory for social reform and political experimentation? Why, for example, did Kansas in the three-quarters of a century between 1850 and 1925 become the breeding ground of such radical innovations as Mr. White mentioned in his famous reply to Margot Asquith?

Here, to be sure, was a State founded in an era of nationwide upheaval over slavery. Abolition, therefore, cannot be counted a native product. But the rest of Mr. White's list of popular movements that ran counter to existing American practices, by and large, were authentically homegrown. They were "as corny as Kansas in August." Yet most Kansans came of inherently conservative stock. Theirs was the outlook of New England and Ohio's Western Reserve, areas which, aside from the abolition issue, were hardly hotbeds of rebellion against the status quo.

What led such a people, for example, to espouse the populist cause, with its eccentric demand for a graduated income tax, Government ownership of railroads, shorter working hours for labor, the direct election of U.S. Senators and other still more harebrained schemes? What made them suppose they could save men from themselves by enacting a prohibition law or improve public health by legally banning the roller towel?

Where did they get the preposterous idea of guaranteeing bank deposits and protecting unwary investors against fraudulent stock manipulations? How did so many of them happen to back those two wild-eyed reformers of different political faith, Theodore Roosevelt and Woodrow Wilson? What made them think they could force labor and management to submit disputes to a court, which was charged with safeguarding—of all things—the public interest?

Our more perceptive historians, headed by Frederick Jackson Turner, some time ago commenced to take another look at the conventional image of the West and what had happened there, since the explorers, trappers and gold-seekers gave way to permanent settlers. And they discovered that the rampant individualism of the westerner, like the assumption that only the most fearless, self-reliant and high-principled part of the American population participated in the westward migration, had been considerably overdone. The latter myth subsequently came in for a debunking that, in its turn, probably went much to far.

The pioneers who settled the West were certainly not all admirable specimens of the human race. Among them were chronic failures, mere adventurers and outright criminals. The brutality on this last American frontier, particularly toward the Indians, frequently reached revolting proportions. Nevertheless, on the whole, these were a remarkable people. In the depth of their attachment to freedom, in their industry, vision and capacity to endure hardship and in their respect for one another as individuals, they have had few equals.

It must always be borne in mind that, shortly after they entered Kansas (or Nebraska), these migrants from the Eastern United States met an utterly new world. Nothing they had previously seen could prepare them for the physical diversity and sheer scale of the West. Iowa had not been very different from Ohio or the more fertile sections of New England. Missouri closely resembled Kentucky and Virginia. Now gone forever was the gently rolling land, well watered, naturally wooded and dotted with small farms and towns.

Ahead of the travelers lay towering mountain peaks, spectacular canyons, vast stretches of desert and, finally, the lush semitropical Pacific coast. Their foretaste of all this immensity was to be the seemingly limitless high, treeless plain that began virtually at the start of their journey. Later, it was here that many of them resolved to stay.

That quality of magnitude was to condition their lives. It required a totally different type of pioneering techniques than had been employed in the prior 300 years, as the frontier crept slowly over to the far side of the Mississippi River. At first, unquestionably, western pioneering placed a premium on individual initiative and self-reliance. As

the real development approached, however, the emphasis progressively shifted. In the face of such enormous problems, the demand grew for stability, order and cooperation.

Even the early caravans on the overland trails had to have their wagon masters and maintain strict discipline. Later, the rowdiest cattle and railroad towns had to establish a rule of law, backed, if necessary, by vigilante procedures. The freewheeler became a liability. Gradually there arose a heavy dependence on government, for the protection of property rights, the furtherance of public education and the administration of justice.

At first, the settlers were all roughly equal, in a society that knew neither caste nor privilege. But although the country was incredibly rich, it was subject to droughts, grasshopper plagues, and similar vicissitudes. Its mineral, timber and other wealth yielded to monopolistic practices. The vital facility of transportation fell prey to exploiters. The inhabitants say their heritage slipping away from them. While some of them resorted to violence, the great majority fought back with the instruments of democracy—social and political reform.

Almost inevitably, certain of these Western remedies were ill-conceived. A few were simply ridiculous. Others were premature. It is no accident, however, that Kansas and the West made several major contributions to the creation of our present democratic system. It was here, for example, that the battle was first joined on the issue of human-versus-property rights, against the abuses of big business, for the preservation of our natural resources and toward advancing the legal status of women.

The last-named achievement carries a story of its own. That story tells how women won a new position of respect and freedom for themselves by their performance on the frontier. It was the territorial legislature of Wyoming, in 1869, which granted them their first equal suffrage with men. (Kansas had missed the honor, by turning down a constitutional amendment 2 years earlier.) But this belated recognition was to spread practically throughout the West, before more than one Eastern State had accorded it.

So spring has returned to Kansas, in an America infinitely troubled about the future. As Mr. White wrote so long ago, now is the time when men and women everywhere intensify their planning for a better life. Today, he might expand that thesis. Is this not a season for the American people to take heart, after a winter of mounting disappointment, and plan a better world, in the spirit that did so much to shape our own younger West?

Youth need not mean mere reckless adventure. There is no reason why maturity must lose its vision.

Racist Demagoguery Versus the Status Quo

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. ALGER. Mr. Speaker, under leave to extend my remarks I would like to include the following article from the May 26, 1961, issue of Human Events:

RACIST DEMAGOGUERY VERSUS THE STATUS QUO

Unless the lessons of all these ubiquitous international crises are completely lost on our national leadership, we ought to be hearing less and less about the United States being "a revolutionary country and a revolutionary people" (President Kennedy); and about how we must avoid being "linked with the forces of reaction and stagnation" (Chester Bowles); and that "unless we march with this revolution, unless indeed we share in leading it, the future it will one day shape may have no place for us" (Adlai Stevenson).

Such talk hasn't made any sense for a long time, but at long last events must have forced even the three individuals quoted supra to understand, however reluctantly, that their assignment is to do what Dean Rusk declared as recently as last February we would never, never do—"undertake an active defense of the status quo." Survival demands recognition of a truth which theorists sneer at—that the United States is not a revolutionary country at all, but is what has been called a satisfied power, whose interest is to maintain things as they are. This assumes, of course, concern for orderly progress and promotion of economic growth and workable political systems, but calls for a rollback of the revolutionary forces that our liberals have had so much fun playing with.

Even Junior Schlesinger is not likely to want replays of that line about how Castro "betrayed the revolution" in Cuba, because from now on the Kennedy administration will be compelled to act on the plain evidence, rejected by Eisenhower's State Department, that the Castro revolution was a Communist putsch from the beginning, conceived in Moscow, nourished in Mexico, and delivered in the U.S.A., with the New York Times, Herbert Matthews as midwife. Our interest in Cuba was the maintenance of orderly government, with respect for U.S. property interests in the island, under a regime tolerant of our security requirements in the Caribbean. According to the testimony of two of our Ambassadors to Cuba, we could have helped the Cubans inaugurate such a regime minus Batista, but this "join the revolution" nonsense had the State Department so hypnotized that nothing but Castro would do.

The propaganda designed to equate Communist-fomented upheavals among the "lesser breeds without the law" with the American Revolution was idiotic in the first place. As Prof. Arnold Whitridge, formerly of Yale, put it, "Our Revolution was a family quarrel fought between white men for the benefit of white men." One would think from much current babble on the subject that the Revolution was fought for the benefit of the Indians. In his "In Defense of Colonies," Sir Alan Burns points out that "at the time of the American Revolution few people seriously considered that the aboriginal red Indians (or the African slaves) had any political rights, or that the red Indians had any inherent right to the lands which the white colonists coveted."

The American Revolution was a taxpayer's revolt against the British Government's fatheaded effort to force the Colonies to help Britain balance her budget. As the late Professor Charles M. Andrews noted years ago in "The Colonial Background of the American Revolution" the leaders of the colonial cause, even including Franklin, attempted to steer these justifiable complaints toward some compromise. "Manufacture as much as possible and say nothing," was Ben's advice. However, the British Cabinet managed to parlay the tax battle into a war—for the benefit of a rising imperialism and against the interests of British traders, whom Pitt described as "little, paltry, peddling fellows, vendors of twopenny wares and falsehoods, who under the idea of trade sell everything in their power—honor, truth, conscience."

These "little, paltry, peddling fellows" would probably have been willing to settle for almost anything in order to build up customers in the American Colonies. Indeed, the Revolution had an astonishing amount of support in England. John Fiske in "The Critical Period of American History," which ought to be read more than it is these days, states that "the Whigs did all in their power to discourage enlistments and in various ways so thwarted and vexed the Government that the success of the Americans was by many people ascribed to their assistance." Indeed, the matter could doubtless have been settled with a reasonable amount of good will had reasonable men in both countries found a way to settle anything.

Anyhow there is no historical justification for identifying the leaders of 1776 with the Sukarnos, Nkrumahs, Mao Tse-tungs, Castros, and other contemporary revolutionaries. The intense nationalism of Sam Adams and the Sons of Liberty, which often embarrassed the more cautious leaders of the colonial cause, had little in common with the kind of revolution going on today or even with the kind of revolution that convulsed France a few years after our own fracas. Not even the postwar bitterness toward England enlisted much important American support for the violent revolutionaries of the continent. Not even Jefferson—a more persuasive advocate than Chester Bowles—could sell us on the virtues of the sans culottes.

But the best indication of what the men who fought the British from 1775 to 1783 thought they were doing is not so much what was said during the war or in the period of tension preceding it, or even in the stirring words of the Declaration of Independence itself. Those who look upon the revolution as a sort of prelude to the liberation of Angola should put in some time reading the story of the making of the Constitution. This document, hammered out undemocratically behind closed doors, set up a system of government about as nearly revolution proof as a group of mostly conservative and conspicuously able English gentlemen could make it.

James Madison, in his notes on the proceedings of the Convention of 1787 in Independence Hall, Philadelphia, records himself as saying this:

"In all cases where a majority are united by a common interest or passion, the rights of the minority are in danger. What motives are to restrain them? * * * The only remedy is to enlarge the sphere, and thereby divide the community into so great a number of interests and parties, that in the first place, a majority will not be likely, at the same moment to have a common interest separate from that of the whole, or of the minority; and in the second place, that in case they should have such an interest, they may not be apt to unite in the pursuit of it. It was incumbent on us, then, to try this remedy and with that view to frame a republican system on such a scale, and in such a form, as will control all the evils which have been experienced."

Hence "checks and balances." Far from supporting revolution, the Founding Fathers, who had seen anarchy and collapse at close range, had little use for pure democracy. Madison regarded democracies as incompatible with personal security or the rights of property. He believed that democracies have in general been as short in their lives as they have been violent in their deaths. John Adams, who as a young lawyer had defended the British soldiers involved in the Boston Massacre, said as President: "There never was a democracy that did not commit suicide."

When the more recent revolutionary forces which deserved American support, if only on the low level of self-interest, arose, our kibitzers of revolution were silent. The Hungarians who rose against Communist tyranny in 1956 might have fared better had the United States been as quick to recognize

Nagy, the head of the revolutionary regime, as the State Department was to recognize Castro 3 years later. Conceivably such a gesture from Washington might have kept Soviet tanks at home. A direct challenge to this country was probably more than Khrushchev cared to undertake. Promising revolts against Red dictatorship in Poland and East Germany got only editorial support over here. Indonesia's suppression of the Moluccas is ignored, and the peripatetic Sukarno, who quotes Jefferson when in Washington but speaks his own principles when in Moscow, is greeted by President Kennedy as the "father of his country." There have been some curious omissions in the list of revolutionaries considered worthy of our big hello.

We have bawled out Portugal, Belgium, France, and the Netherlands; indeed, taken an active part in support of revolutions in their areas. The supposition, largely based on the mistaken theory that we are a revolutionary country, has been that world opinion required this meddling. But are we happier with Sukarno in Indonesia than we were with the Dutch? Is it likely that our interests, or those of the Congo, will be furthered if all Belgians are compelled to leave the area? The more responsible Congolese do not think so. Some of them doubtless agree with Charles T. O. King of Liberia who, as Liberia's representative at the United Nations, said that his country had not grown as rapidly as Ghana because Liberia had always been free and had never reaped the advantages of colonialism.

Even an unsatisfied country ought to hesitate before supporting United Nations interference in such matters. Are we prepared for a U.N. resolution expressing disapproval of what amounts to segregated housing on Long Island, followed perhaps by a demand that we do something about it? If an Indian neutralist can use force against anti-Communist leaders in the Congro, why not a Czech task force to round up John Birch Society?

Of course changes are being made and not even a satisfied country can ignore them. But the effort to fool ourselves and others into believing that the United States should be out in front of the world revolution, even at the cost of breaking our ties with the civilized countries of Europe in order to make time with primitive tribesmen, has been a strategic and moral mistake. During the 1960 campaign William S. White cut loose in his column with words which now seem prophetic. White detailed the various areas in which the "bad old colonials" had been put to flight, and envisioned these withdrawals as leaving "large sections of the world either in chaos—a chaos for which the word 'democracy' is a sentimental fraud—or ready to fall into the Soviet sphere. Moreover, they have broken the western alliance, in truth, if not in formality. For all this we may thank a professional-liberal passion for a politics which assumes not that the races are of equal value before God and the law—as indeed they should and must be—but rather that all wisdom and all virtue rests within the colored peoples alone."

Mr. White attributed the adoption of this nonsense, which nobody really believes, to "racist demagogery that has already all but paralyzed our politics abroad."

The poor critters we have been trying to shill with this silly propaganda don't fall for it anyway. They take our dough and our flattery and still call us "imperialists." Our allies are naturally disturbed, and angry men stone our Embassy in Lisbon for supposedly backing the Communists, while in Moscow they stone our Embassy for backing Batista, as if Rubottom and Herbert Matthews had never existed.

So now poor Mr. Kennedy has to say "To hell with Harvard, Adlai, and Bowles" and get on with the job, carrying out policies dictated by events, whatever his liberal advisers say about it. He isn't likely to find much in common ground between U.S. interests and those revolutionary forces now sweeping over the world. His job is to defend the status quo.

It's all very tough on the President, because it isn't all his fault. Nevertheless, he must have nightmares now and then when living over some of those campaign speeches.

When Government Becomes Labor's Boss

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks, I should like to submit for the RECORD a very pertinent article by the Honorable Robert A. Perry, Democrat, of the House of Representatives of the State of Washington. The article is pertinent not only to union members but also to all those who believe in a true democratic form of government.

The article follows:

WHEN GOVERNMENT BECOMES LABOR'S BOSS

(By the Honorable Robert A. Perry)[1]

Electric utility workers of public power agencies have learned from bitter experience that the same immunities of Government that operate so unfairly in competition with private ownership, can also prove a harsh and ruthless weapon against union labor. I shall show that at the hands of a bureaucracy that prefers cheaper electric power at the sacrifice of the workers' share, labor is forced to submit to cheapened wages and lowered standards.

On occasion union-busting public power, backed by the immunities of the sovereign, has blacked out organized labor on a statewide basis. Restoration of long-established union recognition was bluntly denied with an unprecedented threat of the use of troops. As a result wages, working conditions, and safety provisions in that area are now sharply below union levels. Moreover, even when bureaucracy has seen fit to grant token recognition, the cards are still stacked against the union in bargaining with an employer legally immune from all the restrictions and penalties that protect the worker in his private job.

As an almost universal rule, wages and working conditions of public power agencies are shaded in varying depths below the standards set by contracts of organized labor in negotiation with private management. And even the private contract provisions could be more favorable but for the depressing effect of Government price competition.

These are only some of the reasons which demonstrate that the exercise of the powers of sovereignty—delegated solely for the conduct of governing functions—in Government operation of a proprietary business competing with a private enterprise of the same kind, is not only bad public policy but also a breach of the basic social contract on which our system of government is founded.

Simple fair play should require that when Government invades the marketplace it should observe the rules of the marketplace. But if it should observe the same rules, what would be the point of supplanting the flexible, highly skilled, adequately compensated, and fiercely competitive business executive system with time-serving, brass-bound bureaucracy? What would be the advantage to Government if it had to submit to taxes and regulation by local government agencies, and to its own ironclad tax, labor, and regulatory laws? And who would watch the watchman?

From behind this wall the State can and does do business in tax-free competition with the very source of its support—the taxpayer. From behind its legal shield it can and frequently does refuse to recognize or to bargain collectively with its organized employees. It cannot sign a valid labor contract and its labor agreements are, in the final analysis, only unilaterally binding on labor. Labor's fundamental last resort, the right to strike, is denied and, at the Federal level, is a crime legally linked with treason.

BUREAUCRACY BECOMES LABOR'S BOSS

The doctrine of sovereignty as applied to employment in occupations identical to those available in similar free enterprise operations provides the basis on which organized labor should part company with Government ownership of commercial and industrial undertakings. The sorry history encompassing the past 20 years of labor relations with the very non-Federal public power agencies which have been created, subsidized, or fostered by Federal power policies, fully justifies such conclusion.

Generation and sale of electric power, created by harnessing the falling waters of flood-control and reclamation dams, are obviously prudent and necessary incidents to Federal development of natural resources. The same prudence, however, should require that Government protect the taxpayer by obtaining the highest price return, exactly as in the sale of any other surplus Government property.

This principle is violated when conditions of the sale of Federal power are imposed which result in favoritism and price subsidy to certain classes of purchasers selected because of their status as tax-exempt Government or cooperative agencies. When the Federal Goverment further proceeds to assume total utility responsibility for all additional power requirements of such favored classes by constructing steam generators in plants as in TVA, and proposed elsewhere, then the sovereign has clearly embarked on a program of commercial enterprise that could put the total energy resources of the Nation in the hands of government bureaucracy, Federal and local. The record shows that to the extent that bureaucracy becomes labor's boss, all electrical workers, union or nonunion, will suffer.

GOVERNMENT OWNERSHIP HURTS MANY

When Government invades the boundaries of private enterprise the first to protest are the first hurt: investors and management of injured private competitors. Next are the taxpayers on whom must fall the added burden caused by tax-exempt commerce, and then the business community generally. After 25 years these factors should be fairly well known, even though the seeming public apathy to the growth of state ownership raises the question as to whether the public yet fully understands the social and political as well as the economic harm inherent in this parasitical growth.

Less known and even less understood is the plight of the union workingman when Government meets the payroll. Few people realize that employment by the State at any level automatically extinguishes hard-won rights and privileges of labor secured by law to private employment. Our own union members, who were formerly employed under union contracts but whose jobs were no longer protected when public power took over, have learned the bitter lesson that

[1] Member, Washington State Legislature; business representative of Local 46, IBEW, Seattle, Wash.

below-scale wages and working conditions have followed when bureaucracy becomes the employer.

Organized labor itself has been tardy in fully recognizing this problem. As recently as 1953, the late D. W. Tracy, president of the International Brotherhood of Electrical Workers, called attention to the growing alarm of unionism as to its status in Government employment:

"Twenty years ago the IBEW was a strong supporter of public power as a check and yardstick on the private power companies. We stood on that position because we believed it was in our own interest and the inteerst of the public. Our experience in recent years has convinced us that it is now necessary to have a check and a yardstick on public power. * * *

"Union conditions and collective bargaining agreements can best be secured if the construction and operation * * * are performed by private utility companies. This is a point of most vital importance for it has been our experience in many localities that public operation of power facilities has meant the destruction of collective bargaining agreements and local unions. In the State of Nebraska, for example, the public power authorities claimed sovereign rights and eliminated the collective bargaining agreements previously held by the IBEW with private companies. The IBEW has had similar adverse experience with public power authorities in other States. Furthermore, in the case of private operation, we have the right to strike if the management becomes arbitrary; we have no such right in the case of public operation—labor has no check on the arbitrary action of public power management."

HOW FEDERAL POWER GREW

Looking back a quarter century, it is easy to understand, in the climate of those times, the ready public acceptance of the suddenly enlarged role of the Federal Government in the eletcric power field. PWA loans and grants for local public power projects were based, in those depression years, on the need for employment relief and economic revival. Federal power development was supposed to offer something for everybody: cheaper power, yardstick competition; reclamation of arid lands, flood control, comprehensive development of natural resources, relief of depressed areas—all to be self-liquidating.

It was not until years later that disillusioned labor came to grips with the problem of labor relations under Government ownership. The conflict came slowly because the Tennessee Valley Authority and other Federal power agencies realized from the beginning that sound national politics required the friendship of union labor. Their policies have been as generous, generally speaking, as private management's—except that all protective Federal labor laws are inoperative and labor's final resort, the right to jointly refuse to work, to strike, is of course denied.

HOW FEDERAL AGENCIES SELL POWER

Except to serve individual industrial customers—the bigtime corporate vested interest in the Federal power subsidy—the U.S. agencies have avoided retail sale. Leaving distribution to preferred local public agencies, they reserve to themselves the role of wholesale—and, where possible, sole—supplier. However, Federal policy is designed to create compelling incentives for the growth of public power at the local level.

The Federal Government has been the fostering agent both by the earlier PWA grants and loans and by the preference clause, applied uniformly to all Federal power projects, which directs that untaxed local public power agencies and tax-exempt cooperatives shall receive preference treatment in the sale of Federal power. Although long-term firm contracts protect the Government's direct-sale industrial customers, growing demands of preference purchasers limit the sale of a rapidly diminishing surplus to private utilities.

The effect of this pernicious clause has been to encourage and even force the spread of local government and cooperative ownership. In fact, the model of nationalization of the electric utility industry has long been established as a partnership between the Federal Government as the generator and the chief, if not the sole, supplier of all power, with retail distribution the chief, if not the sole, function of local public agencies. The pattern was set when TVA area private power companies were forced to sell out to local public distributors in 1939, which had been voted into municipal ownership specifically to qualify for preference clause treatment.

A WORD ABOUT RURAL CO-OPS

At this point a short digression is necessary to fit into the labor-public power picture the role of that curious political hybrid, the rural electrification cooperative, one of the principal sources of labor friction. Their spokesmen stoutly claim the rural electric cooperatives are a part of the free enterprise system. Yet this country would be broke if all free enterprise organizations enjoyed the same special favors of the Federal Government under which the electric co-op system grows fat.

More than a thousand of them have a key to the back door of the Federal Treasury giving them access to virtually unlimited credit at 2 percent interest, half of what Uncle Sam pays for long-term money. Nearly three billions of REA loans are outstanding at that rate. By a special dispensation the income of these outfits goes scot free of Federal taxation. And by a further dispensation they share, exactly as if they were another local government power agency, at the subsidized trough with other purchasers of Federal power.

REA loan funds, authorized by Congress for the electrification of farms, have been diverted to construction of huge steam-generating plants and transmission lines for lease and operation and eventual ownership by Federal power agencies—after Congress had specifically denied funds to these agencies for the same purpose. The neat interagency collusion not only reveals an impudent disrespect for the intent of Congress, but also exposes the thrusting drive of bureaucracy to promote Government ownership at all costs.

In short, although they are clubby little groups of private citizens, less than half of whom are farmers, these co-ops enjoy many of the major benefits of the wall of sovereignty. As might be expected, the REA co-op labor relations record ranks with the poorest among public power groups.

The same can be said for the somewhat similar irrigation district membership organizations of the West where, in at least one instance, mere membership in a labor union is cause for automatic discharge.

EFFECTS OF TAX EXEMPTIONS

The drastic impact of Government ownership was felt first and most severely at the level of local government when the tax-paying unionized private systems were supplanted by tax-exempt, union-busting public power agencies. It was here, for example, that union recognition was wiped out on a sweeping regional basis.

It was at this level, too, that scores of school districts and other taxing units were reduced to extremities from tax losses due to the public power takeover. In my own State of Washington, non-Federal public power will hold title to approximately $1 billion worth of real estate when presently planned construction is completed. Despite the heavy demands on all taxpayers to support our school system, the contributions of these government businesses fall far short of their fair share.

This problem was brought home to me in specific dollars and cents in the last session of the State house of representatives in which I served as vice chairman of the committee on ways and means and on the subcommittee on revenue and taxation. The tax escapement of public power, both Federal and local, has penalized the State's taxpayers by many millions annually.[2]

The nature of the inherent conflict between organized labor and the sovereign as an employer has been brilliantly analyzed by Sterling D. Spero, of the faculty of New York University. In the opening paragraph of his chapter on "The Sovereign Employer" in "Government as Employer," the problem is succinctly stated:

"Government asserts that its relation to those who earn their livelihood in its service is different from the relation of private employers to their employees. To private employees, Government guarantees freedom to organize, to bargain collectively with their employers, to strike. It claims, however, that the means used by workers in private employ to bring pressure upon their employers to improve their conditions have no place in the public service and that their use would represent a derogation of sovereignty and on attack on the authority of the State Government insists that, in order to preserve the integrity of public authority, it must possess the right of final determination in all its employment relations."

As President of the United States, Franklin D. Roosevelt, surely a friend of labor, was explicit on this point. Writing to the president of a Federal employees' union, Luther C. Steward, on August 16, 1937, the President asserted:

"Particularly I want to emphasize my convictions that militant tactics have no place in the functions of any organization of Government employees. Since their own services have to do with the functioning of the Government, a strike of public employees manifects nothing less than an attempt on their part to prevent or obstruct the operations of Government until their demands are satisfied. Such actions looking toward the paralysis of Government by those who have sworn to support it is unthinkable and intolerable."

HIGH WALL OF SOVEREIGNTY

As applied to the usual run of Federal jobs, the Roosevelt no-strike doctrine may be sound public policy. A strike in the Pentagon, for example, would be unthinkable. But the policy is also public law and applies with equal force to government employees even in industrial fields preempted from private enterprise.

The theory of sovereignty as extended to employment is supported by stern law. To strike against the Federal Government or even to belong to a union which professes to support the right to strike is a felony subject, of course, to imprisonment. The same section of the statute dealing with this crime lumps it together with the treasonous and subversive activities of Federal employees and applies the same penalties.[3] Elsewhere the additional penalty of a 3-year blacklist from Federal employment is also added.

That is what can happen to labor when government, protected by this wall of sover-

---

[1] (EDITOR'S NOTE: After a campaign focused on Mr. Perry's opposition to public power, the author led the Democratic ticket in his district to be reelected last November to the State legislature by a handsome 60-percent majority. His constituency is composed entirely of public power patrons of the Seattle municipal electric system.)

[2] See secs. 1 and 3, Public Law 330, 84th Cong., 1st sess. (69 Stat. 62.4, 62.5); see also sec. 305, Labor Management Relations Act of 1947 (61 Stat. 160).

eignty, moves into fields hitherto occupied by private employers.

Although Federal power agencies have tried to keep clear of antilabor bias, Federal policy in a number of directions has made possible the enormous growth of public ownership at lower levels of government where organized labor has suffered serious injuries. Perhaps the largest group in this class are the State-chartered, usually countywide, public utility districts, and the State power authorities.

In addition to the municipal systems in the TVA area, a considerable number of local government agencies purchased private systems forced on the market by the dissolution orders of the Securities and Exchange Commission under the Public Utility Holding Company Act. Chief among these were San Antonio, Tex., and all of the private systems in Nebraska. These agencies were able to issue tax-exempt revenue bonds to be supported by the additional revenues made available by exemption from the Federal corporate income tax of 52 percent in amounts sufficient to far outbid possible private purchasers. (This racket not only further fattened by many millions the purses of certain already fat cats of Wall Street at the expense of the ratepayers, but it also rubbed off some of the synthetic gloss of selfless public interest from the supposedly idealistic public power movement.)

PUD'S IN NEBRASKA

In this context, the Nebraska story requires special emphasis. Almost within the space of 1 year, 1939, all of the 14 privately owned utilities serving the entire State, outside of Omaha, were sold to State-chartered public power districts. Overnight the rights of labor in this industry were wiped out. Once in the saddle, public power promptly shed its cloak of phoney liberalism and stood revealed in its true image of standpat reaction. Union recognition, collective bargaining, and the hard-won beneficial stipulations in the previous contracts were summarily rejected. Relief under the Federal labor laws, the unions suddenly and bitterly learned, was the exclusive privilege of first-class citizens, employees of private management.

In the years that followed, labor-management relations steadily worsened as union officers vainly struggled to retain a semblance of the rights labor had formerly freely possessed. Having exhausted every other resource, the final recourse, the strike, was reluctantly invoked in 1944. Federal troops had not been used against strikers since the bloody Pullman strike of 1892. Yet, despite the orderly and peaceable conduct of the strikers, management threatened them with an Army take over. To make a sad story short, the union was overpowered by the sovereign might, and the strike was broken. Employee morale is still affected by the aftertaste of that defeat.

When a utility district finally took over the Nebraska Power Co., of Omaha, 2 years later, the management, largely retained from the former regime, succeeded in breaking away from the strikebreaking antiunion policies of out-State public power. Harmonious labor relations, accompanied by recognition and collective bargaining, were continued.

SOME IMPORTANT DIFFERENCES

The comparative wage scales for union versus nonunion electrical workers in Nebraska provide a telling deadly parallel. In this business wages are determined from the top figure which is always paid to the most hazardous and most highly skilled job, the experienced lineman. According to the most recent figures available to me—March 1960—the Omaha union lineman was paid $3.12½ an hour. At that time the highest paid nonunion public power lineman in the balance of the State received only $2.39 an hour. For the same job his Omaha colleague received 30.75 percent more. In a year the difference would amount to about $1,600. As recently as December 31, 1958, unorganized Nebraska linemen were receiving as little as $1.80 an hour. In addition, many of the fringe benefits relating to overtime pay, working conditions, and job security long ago won by union negotiations, are a thing of the past in outstate Nebraska. The whole picture reveals a convincing black-against-white study of what can happen when public power takes over. The contrasting fact that Omaha, the lone unionized exception, is itself a public power community only emphasizes the general antiunion posture of the Government ownership movement in general.

Today the local Government-operated utility system that does enjoy good harmonious labor relations is the rare exception that proves the rule. Here are a few interesting figures that prove the point better than a bushel of words: (1) Of the 1,782 municipal electric systems in the United States, only 3 percent even recognize the unions; (2) of the 63 PUD's, 35 percent accord union recognition. The 1,032 tax-exempt REA cooperatives show up with only 17 percent union recognition. The private companies are 92 percent organized. IBEW represents 75 percent of the membership of all organized electric utility workers.

If we are to believe its national advertisements, Nebraska today is the showcase of public power. Its wholesale supply organization, the nonunion Nebraska Public Power System, candidly hooks its nationwide publicity to attract industry with the bait of right to work laws, a docile labor supply, and allegedly ample low-cost electric energy. The executive manager of this system, D. J. DeBoer, is current president and spokesman for the American Public Power Association, a powerful lobby for the promotion of Government ownership.

To Mr. DeBoer, in an interview appearing in the July issue of Public Power, house organ of the national organization, we are indebted for the frank admission that tax-exempt government power can't reach the salary scale of private power.

To make up the difference, Mr. DeBoer complacently continues, the government power employee may enjoy the nonrent-paying compensation of civic pride. "I think a fellow has to have a sense of public service to be successful and satisfied in a public power system," he explains.

COST OF SENSE OF PUBLIC SERVICE

This remark is a callous reflection on the profound sense of public service which, in times of ice and storm, keeps line crews and other workers—no matter who is the boss—to long hours of hazardous and exhausting duty to maintain the essential public service of power supply. Certainly this is a revealing display of the smug hypocrisy of public power liberals. In a word, in addition to his thin pay envelope, the nonunion public power lineman gets a bonus of $1,600 worth of sense of public service—which his union card friends get for free.

The Nebraska Public Power System, show piece of government ownership, sells cheap power only by virtue of exemptions attached to it as an instrument of the sovereign. Not only is it exempted from all Federal taxes, but it is also exempt from that somewhat imperfect Magna Charta for organized labor, the body of Federal labor laws. To organized labor one of the most ironic and most aggravating factors of the local public power labor relations situation arises from the fact that these agencies can thumb their noses at the National Labor Relations Board.

In private industry union recognition and collective bargaining in good faith are mandatory on the vote of a majority of the workers. Moreover, the law requires such elections on the showing of sufficient worker support. If these statutes were effective in this area, most public power employees would be organized today—and their wages and working conditions would not be the worst in the industry.

Exemption of public power from Federal labor laws is a clear example of the similarity of the problems of organized labor and private management when confronted with the wall of sovereignty. Stemming from the same authority, the preferences to public agencies in the sale of Federal electric energy and exemption from labor's Federal labor laws, provide labor and management a powerful common interest. This is particularly true because only a part of the "cheapness" of public power comes from tax exemption. A very real part of the slightly higher price private power must receive is accounted for by the fact that in addition to the full tax load, the companies pay top-scale union wages—while their competitors do neither.

PRIVATE POWER COMPANY WAGES SET STANDARDS

It is small comfort to the dues-paying member of an electrical workers' union to know that the wage scales negotiated by his union with private companies serve as a standard which determines, in most instances, the lower scales established by public power.

To the extent that their wage scales are influenced by the standards set by bona fide union bargains with private management, public power employees are freeloaders in much the same sense and by the same sovereign force as the tax-free beneficiaries of the preference clause. By the same token the very existence of depressed public power wage scales may handicap union negotiators in bargaining with cost-conscious private competitors nearby.

Here in Washington, municipal and public utility districts and electric cooperatives serve 60 percent of the public. Yet wage negotiations with public power never begin until the private companies and the unions conclude their annual bargaining. The scales then set are shaved by the various public agencies according to local factors. The point is that they are always under the standards set by the union with private management. It is true that in the State of Washington most Government power agencies tolerate union recognition. The operative word here is "tolerate." Genuine free negotiations are not possible when one party appears as a supplicant while the other negotiator is at liberty to bestow or withhold as he sees fit.

For all of these reasons it should be amply clear that organized electric utility workers have strong cause to fear and to oppose the spread of Government ownership. Over more than a decade, spokesmen for affected locals of the IBEW and other unions have repeatedly appeared before legislative and appropriating committees of Congress in opposition to every important proposal to extend the scope of Federal power operations.

LABOR UNIONS SUPPORT PRIVATE POWER

Out here in the Pacific Northwest we have recently succeeded in winning wide sympathetic understanding and support of many other union organizations not directly affected by our problem. This was evidenced a year ago when the U.S. Senate Interior Committee held hearings in the region on two pending bills which revolved on the issue of whether the pressure lobby of public power could stop, by Federal legislation, construction of the largest dam ever proposed by private enterprise, High Mountain Sheep on the Snake River. The 18 IBEW witnesses favoring private development, plus a statement by a local of another electric workers' union, represented total coverage from that source, as might have been expected. More significant, perhaps, was the assistance from 13 additional union locals of the region, representing a broad cross

section of organized labor opinion. Even more heartening was a joint statement signed and submitted by a total of 20 local, statewide, and regional groups of all descriptions. One labor witness who professed to speak in favor of public power for his own labor organization was repudiated by it by telegram while he was still in the hearing chamber. Note: The bill died in committee.

As recently as last August 1, reversal of its traditional public power stand by the Oregon AFL–CIO at its biennial convention was a highly indicative sign of the trend on the broad front of organized labor. On the issue of continued endorsement of a proposal to put the State in the utility business by a power authority type of State power commission, the convention withdrew its previous support and resolved neither to sponsor nor support such legislation. When the issue was fully understood, the Oregon house of labor came to our support.

NATIONALIZATION AND FREEDOM ARE INCOMPATIBLE

In conclusion, I think it pertinent to explain why I have apparently ignored the socialistic aspects of the problem since government ownership is the very keystone of Marxist dogma. In a country where socialism can be a political dirty word to the very leaders who—frequently from sincere misconceptions—advocate socialistic practices, it seems to me that the immediate point of attack should first be the pragmatic test of whether such practices provide a system superior to private enterprise. On that basis it is evident that the Government-produced product may appear to be cheaper—if often less reliable—only because of exemptions of the sovereign which permit depressed wage scales and a wide gap of tax avoidance. Exercise of such exemptions in employment of and in competition with the citizen constitutes a self-evident misuse of authority.

Experience has proved that government ownership is only an elaborate, costly, and stupid method of robbing the taxpayer Peter to pay power-using Paul—who would be one and the same person in the event of total socialization of the industry.

However, I should like to point out that all of these considerations only demonstrate the economic and antisocial weaknesses of socialistic practices as an instrument of State policy. I have cited them to illustrate the grave danger to the national economic and political security that would result from partial or total Government ownership of such a basic industry as electric energy—a fundamental tenet of imported state socialism.

It should be understood that socialistic doctrine comes in two parts: First, nationalization of the means of production; second, use the fruits of nationalized production for improvement of the general welfare. Socialism has no monopoly on the general welfare objective which is, in fact, imbedded in our Constitution as one of the essential purposes of the union of our States. After nearly two centuries, the constitutional free enterprise system has proved to be the true horn of plenty which supports a higher standard of life and general welfare than any alternative yet conceived.

Nationalization of industry is the chief identifying feature of socialism. That kind of Marxism is in full retreat among the democracies of Europe. Germany, birthplace of this obsolete doctrine, is now rapidly disposing of its vast nationalized holdings to private ownership. Britain has had its own disillusionment.

Democracies have learned from trial and error that nationalization is not compatible with freedom. It thrives best at pistol point in a police state. In the race for supremacy and even survival between the free and the socialized worlds, can we afford to weaken our free enterprise economy by fastening the dead hand of state socialism on so basic an industry as electric energy? Do we or don't we believe that our American system is best?

Prestige Under President Kennedy

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. DEROUNIAN. Mr. Speaker, this editorial, which appeared in the New York Daily News on May 25, sums up the status of our Nation's prestige today after 4 months of leadership by President Kennedy:

OUR NATION'S PRESTIGE

In general, throughout the first 100 days of President John F. Kennedy's new administration, this newspaper was pleased with him and his team's aims and accomplishments, and said so.

However, one of the most hotly debated issues of the past presidential campaign did revolve around this Nation's international prestige. Mr. Kennedy proclaimed that, during the Eisenhower administration, U.S. prestige had sunk to an alltime low. Mr. Nixon protested that it had not, and that such pronouncements were a low and dangerous form of politics.

Well, that campaign is history. But what, 4-plus months after Mr. Kennedy's inauguration, is the state of our Nation's image today?

Looking around the globe, we can detect pitifully few excuses for national self-congratulation. President Kennedy, true, inherited much of the Far East situation centered on Laos and South Vietnam. But, as of 1961, that tinderbox has not been cooled.

In Korea, we at this moment are in danger of losing the loyalty and friendship of a hitherto stanchly pro-American people. The cause, so far as it can be determined: stiff-necked bumbling by Kennedy administration officials on the Korean scene today—no Eisenhower appointees.

FIASCO IN CUBA

How is our prestige faring in France, Japan, and even Canada? The blunt truth is that President de Gaulle barely talks to us; official Japan has expressed grave doubts of our ability to fend off an aggressive Red China; our Canadian neighbors choose, no matter what anybody in Washington thinks about it, to continue and to expand their trade relations with our declared enemies in Communist China and Cuba.

Our most recent and still almost unbelievable loss of national face, of course, occurred on the beaches of Cuba just weeks ago. Now, as the world groans and Congressmen of his own party protest violently, Mr. Kennedy is urging individual American citizens to pay off the blackmailing dictator of Cuba, to help pull his fumbling administration's chestnuts out of the fire. Again, Castro and his bearded goons took over in the Eisenhower administration.

But Ike and his team didn't mastermind that tragic U.S. letdown of courageous Cuban rebels—a national humiliation matched in recent history only by President H. S. Truman's firing of Gen. Douglas MacArthur for wanting to win the Korean war.

ECHOES OF ALABAMA

On the domestic scene we wish we could find some substantial cheer, but we can't. Ike had his Little Rock school impasse, and was roundly abused by Democrats for solving it on a no-nonsense paratrooper way. But J.F.K.—whose Democratic Party was going to handle our southern situation much better—now has his Alabama, Mississippi, and Louisiana, and the repercussions are echoing around the world.

Obviously, the international prestige and internal morale of this country are at a perilous ebb right now, and something needs to be done. But, to date, Mr. Kennedy's brightest suggestion seems to be that we try to top Comdr. Alan Shepard's magnificent flight by a truly distracting Roman circus, such as a $20 billion or $40 billion landing on the moon.

Maybe we'd better try to make a successful landing on Cuba first.

What About Gross National Product?

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. ALGER. Mr. Speaker, the following article by Holmes Alexander in Human Events, sets forth some very thought-provoking principles regarding our gross national product. I commend it to the Members.

ABOUT GNP

(By Holmes Alexander)

You could say that last autumn candidate John Kennedy indicted the American economy under Eisenhower as being sluggish, wasteful, and inadequate to the challenges of the 1960's.

You may say today that the Kennedy administration is now in the process of trying to convict the American economy on these campaign charges. Treasury Secretary Dillon and Labor Secretary Goldberg have been before the House Ways and Means Committee in the roles of prosecutors. Other Cabinet officers will follow. Thus far the star witness against the Eisenhower-type economy (as much free enterprise and as little government intervention as possible) is an ugly-named monster called gross national product. Here is Dillon calling upon this witness:

"As we look back over the past century, we see that our record of economic growth has been unmatched, of late we have fallen behind. From an historic growth rate of 3 percent per annum in gross national product (GNP), we have fallen to 2 percent in the latter (Eisenhower) part of the 1950's."

Secretary Dillon then goes on to show that the GNP in west Europe has grown twice as fast, and the GNP in Japan has grown three times as fast as ours. Russia's GNP compares with ours in a 7–2 ratio.

All this is alarming—but we should remember that we are not hearing, as yet, much of the other side of the case. How good a witness to our economic health is this GNP? Who is this strange slanderer anyhow?

Well, two Republican Senators, BUTLER and BUSH, with three Republican Representatives, CURTIS, KILBURN and WIDNALL, have been chipping away at the GNP character. GNP is an aggregate of economic activities. It is supposed to be the sum of

all enterprises which add something to the American economy.

But Republicans say that GNP does not include, nor does it measure, many important activities. For example:

If a man stays home on Saturday and improves his mind with reading, this does not appear in the GNP. Nor does GNP reflect the work that a housewife does, such as home-laundering or driving the children to and from school. Nor does the GNP give credit to the homeowning couple whose labor improves the property and community.

GNP is a grossly materialistic way of measuring American status and blessings. It "knows," as Oscar Wilde once defined a cynic, "the price of everything; the value of nothing." Wasteful productions, such as food surpluses and throwaway military items, are added up. But how do you add the satisfactions of a well-cooked meal, a paid vacation, the feeling of security that sound banking, good policing, and congenial neighbors give?

There are several ways to characterize this first year of the Kennedy administration and of the 87th Congress. One way would be to say the administration and majority party are tearing down the American image, while the Republican minority is trying to build it up.

For the Democrats to look good, America must look bad. Unless the New Frontier reveals our sores, it cannot cure them. Unless it exaggerates our misery, it cannot claim to have pulled off political miracles.

For their part, the Republicans are always in danger of appearing to be stand-pat and smug in the face of obvious imperfections. Only the best of Republican spokesmen manage to depict America as we all know her to be. The country is not hurting for schools and hospitals, as the worst of the Democrats say—but, as the best of the Republicans say, we can and should improve the quality of teaching and medical care. Our jobs are not disappearing, as the calamity-howlers say, but are migrating to new industries.

The true picture of America, then, is of a nation which has accomplished all that gross materialism can give. We must now improve, refine, and distribute our blessings. But this is a difficult thing to express in the language of political pleading.

Perhaps Congress Should Be Nudged

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Kansan of Thursday, May 25, 1961. My part of the country is literally devastated now and then by floods, and I call this editorial to the attention of my colleagues because I believe they will be interested in what it says about preventing floods, and what must be done in the Kansas-Kansas City area:

TEN YEARS BETWEEN FLOODS

Flood talk fills the air and floods fill tributary valleys of the Kaw and other streams. Flood talk locally is of a speculative nature. Flood talk in the tributaries centers around facts, the facts of the floods which are real, not speculative.

The excess of rainfall in 1961 prompts comparisons. Is this year like the spring of 1951? Frequent rains fell in 1951 but they were exceedingly heavy, particularly in the northern Kansas, southern Nebraska region. Rains up to 4 inches fell in northern Kansas last weekend.

Weathermen aren't making comparisons. But the Corps of Engineers is relying on Tuttle Creek Dam to hold back any large accumulation such as contributed to the billion-dollar devastation of July 1951 in the Kaw Valley and Kansas City, Mo. Tuttle Creek is not quite complete but it is near enough complete to be capable of impounding water on a temporary basis if the need arises and the Engineers so decide.

Ten years have come and gone rapidly since the disasters of 1951. The average Kansas resident in dry 1952 would hardly have believed that major flood protection works would have been needed before they could be provided. But this is the case. The protective program has been slow in the making. Local levee systems in Salina, Topeka, and Lawrence and Ottawa are still unfinished. The Engineers want the Armourdale-Argentine levees built higher than they are. The Kaw Basin reservoir system is only well started. Perhaps Congress should be nudged.

Oregon Boasts Ghost Town

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1961

Mr. ULLMAN. Mr. Speaker, eastern Oregon is justly famous for its scenic beauty, its rugged grandeur, its wildlife and other outdoor resources. Perhaps less well known is another attraction for tourists in my district, some of the old ghost towns left from the days of the mining boom. My colleagues may be intrested in the following story from the May 8 issue of the Portland Reporter on some of these points of interest:

OREGON BOASTS GHOST TOWNS

(By Joe Kraus)

You sit on the sun-bleached steps of an old dancehall and gaze at a tumbleweed rolling down an empty street. You see it glide gracefully past a crumbling two-story hotel and watch as it comes to rest at the side of an old saloon.

Only the wind can be heard, flapping shutters and whistling through the empty buildings lining the street. You are alone. Here there are only memories to haunt the rare visitor. But most of all there is peace, the solitude that can never be forgotten. This is a ghost town.

Most people don't realize that there are still plenty of old spook camps around. Almost every county of Oregon has its share but probably the most interesting are to be found in Baker County.

Tucked away in high mountain regions and remote areas they lie alone and silent. Their only inhabitants are a few pack rats, lizards, and an occasional rattlesnake. The people are gone. They left only dreams and ambitions. Sometimes even a relative or two under a lone pine tree on a hilltop. But the town they built is still there.

Cornucopia, 10 miles northwest of Halfway, is such a town and well worth a visit. During the winter months and sometimes even into the middle of spring the town lies nearly buried in snow. The only mode of travel is by skis or snowshoes.

But for the adventurer who braves the winter elements, Cornucopia is a thrilling sight. In the summer she can be seen overlooking the rolling green meadows of Pine Valley. A little creek runs nearby and overhead is the 10,000-foot high Wallowa Mountain Range.

In her prime Cornucopia was a bustling community. She boasted of five saloons, one store, two restaurants, a blacksmith shop, livery stable, a barbershop and a hotel—everything a new town needed including a jail.

Two stages ran daily from Baker and Union to Cornucopia. But when snow first hit the valley the stageline traded in its coach wheels for sled runners.

As a mining town Cornucopia rated very well in the West. Twenty million dollars worth of gold, half of Oregon's output came from its mines. Cornucopia had its ups and downs but unlike most boom camps of the era she managed to struggle along until a fairly recent date, October 31, 1941. It was then that the mines came to a standstill and the end came to fabulous Cornucopia.

Within 24 hours a mass exodus was under way. Town officials pulled out without bothering to resign. Seven days later only one person remained, the man who wouldn't say goodby. He is now married and retired but even today he hasn't given that final farewell. Mr. and Mr. Snyder are the sole inhabitants of this ghost in the Wallowas.

Another town with an interesting past is the spooktown of Bonrne, 6½ miles north of Sumpter. It became notorious as a hangout for crooks who sold worthless mining property to unsuspecting easterners. But despite the swindling that took place it was a prosperous community of the 1870's and 1880's.

Four stagelines served the town. But the activity was so great that even this didn't accommodate the travel. She managed to live through until 1906, when most of the producing mines were closed. Today only a few hunters and travelers stay in its old buildings but most of the year she remains a ghost.

Other spooktowns of Baker County worth a visit are Whitney, Granite and Greenhorn. Their locations can be found on nearly all detailed maps of the area.

It is best to inquire from nearby ranchers for the road conditions. Often in the winter and early spring months some roads are hazardous and impossible to conquer. But to the true ghosthunter it is worth the extra effort—to walk into a thrilling chapter of history.

The United States and Canada—Issues That Bind and Separate

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1961

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks I should like to include an article on "The United States and Canada—Issues That Bind and Separate," which was written by John Gerrity for the Sunday Star of May 14, 1961:

(By John Gerrity)

Beneath the warmth and cordiality that will greet President Kennedy as he addresses the Canadian Parliament next Wednesday will run the strong undercurrent of anxieties and fears many Canadians hold today for their neighbors to the south.

Everywhere—from Newfoundland to the Yukon territories—editors, businessmen, politicians, and intellectuals, of the left, right, and center, are critical of what they envisage as the cultural and economic colonization of their nation by the United States.

This apprehension is not prompted by concern over some fanciful territorial encroachment. Nor do Canadians realistically fear any overt international bullying on the part of this Nation. No people have better cause to trust American justice and fairness than do the Canadians.

Rather, the wellsprings of worry and alarm are complex and more sophisticated. They reflect an overriding concern that an expansive, effervescent and beneficent United States, approximately 15 times the size of its neighbor, will ultimately absorb the Canadian identity into its own—and do so with the noblest motivations.

First open warning of the trend toward undesirable homogenization of Canadian and American identities came early in 1950. Lester B. Pearson, then Canadian Secretary of State for External Affairs, remarked that future Canadian-American relations "were not going to continue easy and automatic."

Though most observers on this side of the border have tended to scoff at Mr. Pearson's warnings, events of the past decade have borne out the reasoning behind his admonition.

CAUSE OF FRICTION

What precisely Mr. Pearson had in mind at the time was this:

Friction and clashes would not arise because America and Canada were growing apart. On the contrary, Mr. Pearson felt the affairs of both nations were becoming increasingly intermeshed, so much so they were bound to produce tensions not heretofore experienced.

Mr. Pearson moreover envisaged a United States, heavily engrossed in its emerging role as leader of the West, taking Canada more and more for granted. He foresaw emanating from this Nation to Canada a benevolent "old shoe" indifference. But nonetheless, an indifference.

How Mr. Pearson's fears of absorption have gained substance is clearly apparent today.

American control of Canadian economic life is now so vast that many Canadians genuinely fear they are verging on becoming "just another banana republic."

Since 1955, for example, Canada has been borrowing at a rate of about $1 billion a year. Virtually all of this money has come from private or public sources in the United States. Indeed, the size of the private American investment in Canada, is little realized by most Americans. Of the $44.8 billion of private U.S. investment abroad, $5.8 billion, or 35 percent of the total, is in Canada. Much is said these days about the size of our private investment in the 20 nations of Latin America. Yet our private investments in Canada alone are far greater than in all of Latin America combined.

Specifically, of Canada's total manufacturing industry, 52 percent is foreign owned, and 67 percent is foreign controlled. In petroleum and natural gas, the percentages for the industry as a whole are 67 percent foreign owned and 82 percent foreign controlled. In mining and smelting, 56 percent is foreign owned and 62 percent is foreign controlled.

This list could go on interminably, and virtually unchanged. But James E. Coyne, governor of Canada's Government-owned Bank of Canada, sums it up succinctly. "Our economy," says Mr. Coyne, "is a branch plant economy."

RESENTMENT OVER UNIONS

No less invasion than American capital has been American unionism. The United Steel Workers, the AFL–CIO Electrical Workers, and the Teamsters, to mention only a few, have their Canadian locals, each subject to the will and whim of an American hierarchy. Doubtless, trade and craft union techniques imported from America have bettered the lot of Canadian workers. But it is still a galling thing to have to take orders from a superior who is a foreigner. Or as several Ontario teamsters remarked, "Why do we have to quit work because Jimmy Hoffa calls a strike in California?"

Perhaps more disturbing to Canadians than their economic dominance by America has been the saturation of their public opinion, and even their educational system, by the American communications industry.

For years Canadians have been reading more American magazines than their own. Today four out of five magazine titles on newsstands in Canada are non-Canadian. For every Canadian magazine sold last year in the provinces, three American magazines were sold.

Even the government owned Canadian Broadcasting Corp. has been easy prey to seductions from the south. More than half of its programs (good and bad) are American. Trade and textbooks, for the most part, are American written and manufactured—and printed on paper made from American owned Canadian woodpulp. Every major Canadian newspaper uses at least one American wire service. None is without at least two American columnists.

Late last year the floodtide of American words reached such heavy proportions that a Royal Commission on Publications was set up. Its aim is to halt the muting of native voices and to establish new rules of competition to save indigenous publications from almost total extinction.

To a lesser degree, but in a most vital area—hemispheric defense—the role of subordinate rankles many. Complainants see portions of their homeland as the frontline of defense against possible Russian or Chinese invations from the north. They make political capital of the fact that in the northern defense belt, the U.S. military command is more sovereign than the Canadian Government itself.

DEFENSE COOPERATION

Canada and the United States have set enviable patterns in defense cooperation through their Permanent Joint Defense Committee. This has brought about the distant early warning (DEW) line of radar installation and the North American Defense Command (Norad). Apart from this, Canada, an original member of the Atlantic Alliance, has earmarked some 50 warships for the defense of coastal waters, 12 squadrons of the Royal Canadian Air Force and infantry brigade group, all under the supreme allied commander of NATO. Since 1950 Canada has also provided its NATO allies with more than $1.5 billion in military assistance, and has given more than $4 billion in economic aid to underdeveloped nations under article II of the NATO agreement.

Despite obvious successes in military defense, a growing faction of Canadian neutralists persist in portraying Canada's secondary position as proof of its subservience to this Nation.

Younger members of the Liberal Party and of the Cooperative Commonwealth Federation (it conforms generally to the British Labor Party) are in a sense "surfboarding" on the more legitimate wave of Canadian nationalism. And in this posture their demand that Canada withdraw from NATO and NORAD has gained an audience it would not otherwise have.

Accepting this rising tide of anti-Americanism in its true light, it is fair to ask, "How did Canada get itself into this fix, and how does it hope to get the parity of hemispheric citizenship it wants, without sacrificing the material assistance it wants from the United States?"

Part of the explanation of Canada's problem is that weak nations can seldom dictate their own economic course. In the early days of World War II, when Canada was a combatant and the United States technically at peace, its war needs were so desperate that it could do little bargaining with this or any other nation.

Substantially the same conditions prevailed throughout the war. Once peace was assured and postwar adjustments were in order, Canada, fearful of a depression, opened its doors still wider to outside investors on almost any terms those investors might impose.

As fresh capital poured in, a taste for luxury became an almost insatiable appetite. What few restraints existed on foreign investments were ignored or bypassed.

RISK CAPITAL

Meanwhile, many Canadians refused to risk their own capital in their own country. Rather than chance their money on domestic development projects or in the exploration of natural resources, they salted it away in safe securities.

In more recent years, as foreign investments continued to grow in scope and volume, a political phenomenon not at all unique in Canada came into play.

In the United States wherever a domestic corporation or union becomes too powerful, or violates any law, the Federal Government or any State government cracks down.

Theoretically, the Canadian Parliament has the same power over any company or group within its borders. But psychologically, it would be a risky business if the Canadian Government were to rein in sharply any subsidiary of an American corporation or the local of any American international union.

Were such an action justified, and if Canada were to take it, doubtlessly it would be interpreted in many quarters here as an anti-American, not as an antiorganization move.

It is mainly for this reason that Parliament has hesitated to enact any legislation seriously impeding American subsidiaries or the expansion of other American interests. No one in Canada would welcome the accusation of Castroism.

For none of these basic faults can America be blamed. It is only natural that our industrial pioneers, willing to risk their capital, should expect and receive good profits from their ventures. Similarly, if America must assume the lion's share of the cost of hemispheric defense, it can reasonably exercise the larger voice in the deployment of those defenses.

CONTINUING DEVELOPMENT

Yet within the framework of existing Canadian-American relations ways exist for Canada to generate, from within, the forces it must have for its continuing development.

But the point of origin for change must be in Canada.

For example, no understanding American would object too strenuously if Canada were to impose limits on the size of foreign investments it would accept each year. Indeed, in light of our persistent concern over the outflow of our gold, we would very probably welcome such a proposal.

As for softening the impact of American communication systems on its culture, there is nothing to prevent Canada from restricting right now the import of newspapers, books, magazines, radio and TV programs. For a while culturally hungry Canadians might find the domestic fare sparse. But if the hunger is real—and there is no reason to believe otherwise—Canada will find ways to satisfy it.

To Canadian complaints that Americans are indifferent or too casual the answer lies largely in a healthier, stronger Canadian communications system. Ideas run in all directions. If Canada wishes to excite

Americans, to stimulate our interest in them, and to whet our appetites for things Canadian, then it must set about reversing the very communications process which now offends them by its imbalance.

American industrialists can erase much of the stigma of absentee ownership by using some of the techniques of the subsidiary management they have found so profitable elsewhere in the world.

SUBSIDIARY MANAGEMENT

Standard Oil Co. of New Jersey, for example, credits the successful operation of its subsidiary in Cartagena, Columbia, primarily to the fact that Colombians staff and manage its $40 million South American plant. TWA has performed the same kind of "miracle" in Ethiopia, as has Sears, Roebuck in Mexico, and Bell & Howell in Japan.

Moreover, with new and wider investment opportunities springing up in India, Asia, and Africa, the time may be ripe for a partial and voluntary divestiture of some American holdings in Canada. American corporations could find no better showcase for their good intentions than to limit voluntarily their holdings in Canadian subsidiaries to 49 percent or less.

But whatever develops directly or indirectly as a result of President Kennedy's earlier pledge to respect the sovereignty of Canada, the current debate will rage and grow more intense until the tide has turned visibly. Much of what will be said will be acrimonious, and will offend Americans when it spills across the border.

But rather than bridle, Americans will be better served if they regard the rumblings in the attic of the continent as merely symptomatic of a house being put in order. Self-determination, more often than not, is a rambunctious tenant to accommodate at first.

Canadians are at least entitled to all the strains and stresses—and whatever initial remodeling—their house of the future may require.

American Security Council Urges End to Geneva Test-Ban Negotiations

SPEECH
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1961

Mr. HOSMER. Mr. Speaker, the top-level civilian National Strategy Committee's first recommendations to President Kennedy urge that atomic test-ban negotiations at Geneva be discontinued and that underground nuclear tests be resumed immediately.

The recommendations came from a special 16-page report authorized by committee members and sent to the President by Committee Chairman Loyd Wright, previously Chairman of the bipartisan Commission on Government Security formed by Congress, and past president of the American Bar Association, who said the recommendations were the first of many the committee would send to the White House, Congress, and the public on key issues of national security.

The National Strategy Committee was formed recently by the American Security Council of Chicago to prepare detailed studies and recommendations on key issues of vital interest to all Americans. Its next report will deal with the dangers of admitting Red China to the United Nations and will be ready in a few weeks.

The following distinguished Americans are members of the Committee:

Lt. Gen. Edward M. Almond, U.S. Army, retired; former Chief of Staff of the VI Army Corps; and former Commandant of the Army War College.

Adm. Ben Moreell, U.S. Navy, retired; former chairman of the board, Jones & Laughlin Steel Co.; and now chairman, Americans for Constitutional Action.

Adm. Arthur W. Radford, U.S. Navy, retired; former Chief of Naval Operations; and Chairman, Joint Chiefs of Staff, 1953–57.

Adm. Felix B. Stump, U.S. Navy, retired; former commander in chief, Pacific; and now vice chairman, Freedoms Foundation.

Rear Adm. Chester C. Ward, U.S. Navy, retired; former Judge Advocate General of the Navy; and former professor of international law at George Washington University.

Gen. A. C. Wedemeyer, U.S. Army, retired; former Deputy Chief of Staff, U.S. Army; and former commanding general, Sixth Army.

The Committee arrived at the following conclusions after studying 2½ years of proceedings and results of the test-ban negotiations:

First. The Soviets are not interested in negotiating. The only agreements they have made have been made on their own terms. They have deliberately prolonged the conference because we agreed to suspend our tests as long as the negotiations were in progress.

Second. The United Kingdom has not been too effective because it continually has been after us to make additional concessions toward Soviet positions.

Third. Some American scientists have not been too effective as far as the negotiations are concerned. They have given negotiators inaccurate, hasty and ill-considered advice. For example, they said they had developed a control system to detect any nuclear explosion over 2 kilotons being made by foreign powers. Tests have proven this is not so.

Fourth. On the home front, national security considerations have, for the most part, been disregarded in the almost frantic effort to secure an agreement with the Soviet Union on their terms.

Because of these developments, the Committee said, four definite conditions now exist which directly relate to our survival and which lead it to make it's recommendations:

First. Progress in the development of U.S. nuclear weapons technology, defensive as well as offensive, has been brought to a virtual halt. For all practical purposes, U.S. competence in this vital area of national defense remains at the October 1958 level.

Second. Since it is impossible with present techniques to detect underground tests in the lower yield ranges or tests in outer space, it would be dangerous for the United States to assume that the Soviet Union may not have made important advances in nuclear weapons technology during this period. These advances could have a crucial effect on the relative power position of the United States and the U.S.S.R.

Third. The U.S. offer to refrain voluntarily from any underground tests for another 3 years from the date of signature of the test-ban treaty while the three powers carry out an agreed joint research program for seismic improvements and peaceful uses, would, if accepted, only perpetuate the current situation which is clearly prejudicial to the security of the United States.

Fourth. The present prohibition on all U.S. nuclear weapons tests amounts to a unilateral, unpoliced moratorium which is not in the national interest.

On this basis it specifically recommended:

First. The current test-ban negotiations be discontinued and an orderly program of underground and outer space tests which would not contaminate the earth's atmosphere be started without further delay.

Second. Any future international discussions of a nuclear test-ban be resumed only as an integral part of a broader arms control negotiation and then only with the clear understanding that the U.S. test program will not be impaired by any moratorium arrangement during the course of the negotiations.

As to the National Strategy Committee and its sponsor, the American Security Council, outside the Government itself, there is no group of men better qualified to review national security matters and make considered recommendations on the subjects.

These men have spent their careers in the service of their country and their background and training has not only exposed them to the full spectrum of international communism, but has provided them with intimate knowledge of the organization, capabilities, and limitations of our National Defense Establishment.

The American Security Council, in forming and sponsoring the committee, will be of utmost service to the country if the committee's recommendations are given the attention they merit.

The Council, a bipartisan not-for-profit association, consists of over 2,500 member organizations including every type of business, newspapers, universities, and other institutions throughout the United States. Its primary service is gathering, correlating, and disseminating factual information about Communist strategy and tactics to members and a variety of organizations and individuals.

Billions for Defense—Not One Cent for Tribute

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1691

Mr. SANTANGELO. Mr. Speaker, years ago, Charles Pinckney, our envoy to France, rejected the blackmail threats of the Barbary pirates, with a stirring declaration, "Millions for defense, but

not one cent for tribute." It seems that we today have lost the spirit of our envoy of yesteryear. The submission to the extortionate demands by Fidel Castro cannot be explained away by humanitarian reasons. Our attempts to buy the freedom of 1,200 Cuban freedom fighters is a demonstration of humanitarianism gone astray. I do not approve of paying blackmail for tribute to the Cuban dictator. I recognize the fear and worry of a parent whose child has been kidnapped, and who pays ransom for the return of the child. Our position with Cuba today is the same as that of a parent whose child has been kidnapped. Mr. Castro would not dare kill his 1,200 countrymen who sought to free Cuba from his control. He knows that the Latin American countries, whose opinion he values, would recoil from him and would take concerted action against the Cuban administration. Mr. Castro needs the respect and admiration of Latin Americans, and while he could execute members of the Batista administration, he could justify it on the ground that he had murdered other Cubans. Not so with the Cuban freedom fighters. History could not absolve him if he put these men to death.

Castro has made a big mistake in even offering to accept reparation and indemnification for the release of these 1,200 men. Latin American newspapers have indicated that the Latins are critical of Castro's prisoners of war tractor swap. The reactions of Latin American editorial writers to the demand for tribute and exchange for the release of these men are indicated in the following expressions of opinion. They are self-explanatory. I hope for America's self-respect that the public will not contribute to the blackmail payments demanded by Mr. Castro.

Under permission heretofore granted I include the following article:

[From the Washington Post, May 26, 1961]

LATINS CRITICAL OF CASTRO'S PRISONERS OF WAR-TRACTOR SWAP

Latin American editorial reaction to Fidel Castro's tractors-for-prisoners exchange has been generally critical. Here are some examples:

Argentina: La Capital, Rosario (moderately liberal; a leading provincial daily): "The incredible proposition has again shaken the free world with its brutality and utilitarianism, free of any human feeling."

Brazil: Diario Carioca, Rio de Janeiro (liberal; a leading daily): "The ransom operation now being negotiated in Washington reveals in all its hideousness the inhuman nature of the Cuban revolution."

Colombia: El Espectador, "We believe that it should be accepted."

Costa Rica: La Republica, San Jose (Costa Rica's leading liberal daily): "Fidel Castro committed the mistake of aiming at a target that brought into action the most notable characteristic of the North American people, generosity. This has always been the error of the Communists, they work on numbers and figures, and forget that there are only human beings."

Ecuador: El Telegrafo, Guayaquil (liberal; influential): "Even though this is a filthy blackmail, I believe the sinoids should be given the machines they want because it might be that tomorrow they would want to trade Roa for a still."

Guatemala: El Imparcial, Guatemala City (liberal and often critical of United States; a leading daily): "The totalitarian cynicism has exceeded all limits with two facts that revolt the conscience of all decent men; the first is the sordid valuation of human life made by Castro in offering to trade the prisoners for tractors * * * the mockery is debasing to the Cuban people and to the one who made it."

Nicaragua: La Prensa, Managua (moderately conservative; a leading daily): "It is awful to know that in this America of ours, so far removed in time and space from the Saracen coast, first to emancipate the slaves and first to claim all the freedoms, slavery has now established itself at a level much more materialistic and commercial than that known by the Babylonians, Assyrians, Phoenicians, Greeks, or Romans."

Panama: El Pais, Panama City (moderately liberal, a leading daily): "No one with a particle of respect for his own nationality could think of selling his countrymen for tools. * * * It is paradoxical that the aggressors should be the ones outdoing themselves to collect funds with which to save the lives of the Cuban citizens who are persecuted in their own country."

Peru: Ultima Hora (a leading daily, moderately conservative): "The proposal shows the false apostle in his true light. It shows him to be the vilest huckster among the agents of Soviet imperialism. As if it were not enough that he has tried to sell his country to the Moscow hierarchs, he now makes his cynical offer to trade patriots for tractors."

Uruguay: El Plata, Montevideo (Blanco Party organ, conservative, a leading daily): "One thing should have become clear * * * the Fidel Castro regime has reached a degree of degeneracy and brutality that revolts human understanding."

Venezuela: El Mundo, Caracas (leftist liberal, often critical of United States: "With this offer to trade men for trucks (sic), in addition to the policy of the firing squad, Fidel Castro has enthroned antihumanism in America." (Note: a direct slap at Fidel's claim of "humanismo" for his revolution.)

In Miami, meanwhile, 10 paroled Cuban invaders, scheduled to return to Havana today, still lacked a firm commitment on the tractors-for-prisoners exchange plan.

Unconfirmed reports circulated that the prisoners may seek an extension of their 1-week parole in the United States, United Press International reported. But the prisoners, who have pledged to return, had no comment.

The fund-raising committee, which is headed by Mrs. Eleanor Roosevelt, Labor Leader Walter Reuther, and Milton Eisenhower, planned to send several representatives with the prisoners to obtain precise technical information from Castro about the types of equipment he wants.

More Administration Confusion

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. ALGER. Mr. Speaker, in this editorial from the Wall Street Journal we are made aware of more of the naive thinking of the administration and its theorists regarding our economy. Is it not time those advising the President took time to learn a little bit about what has made America great before trying to lead us off into some unknown economic wilderness?

The editorial follows:

ECONOMIC HASHISH

Sometimes the statistical theorizings of economists get so involved they're funny. But when the economic policies of the U.S. Government come to be based on woozy theories, the thing ceases to be a joke.

We have in mind the President's Council of Economic Advisers, which has propounded an elaborate theory of an "output gap" between the economy's potential and its actual performance. The theory, described on this page recently by Mr. Otten, is a masterpiece of algebraic tripletalk. It is designed to prove a gap, reckoned at $40 billion at the end of last year, and so it does—assuming all its assumptions and mathematics.

Having demonstrated the gap, the Council logically concludes that the country faces not only temporary economic problems like the recession now evaporating, but a persistent slack in production and employment, a slowdown in our rate of growth. We have, it seems, a problem of chronic slack in the economy—the growing gap between what we can produce and what we do produce. Especially since 1955, we learn, the gap has shown a distressing upward trend.

If this were all just idle chatter, no one would particularly mind. But this great and growing output gap naturally becomes part of the justification for the Federal Government to fill it—with the tremendous new domestic spending the administration has already embarked on and with the even more massive public works spending it has in mind. And since the slack is persistent and chronic, the Government has an excuse for trying to take it up indefinitely.

Fortunately the United States still has respected economists who can recognize economic hashish when they smell it. One such is Columbia Prof. Arthur Burns, himself a former Chairman of the Council of Economic Advisers. Mildly but nonetheless devastatingly Dr. Burns has taken apart the gap his successors have so painfully constructed out of thin air.

Among other things, Dr. Burns shows that the Council is not relying on sound, far-reaching historical evidence in projecting its output gap. It rests its case importantly on the fact that unemployment at the business-cycle peak in 1960 was slightly higher than at the business cycle peak in 1957. The Columbia economist suggests that this "gives fragile support" to the theory that "the gap between actual and potential output has a distressing upward trend."

Moreover, Professor Burns quietly notes that it matters a good deal at what period you start drawing a curve of potential output. The Council chose mid-1955, for no more valid reason than it could have chosen the second quarter of 1957 or the second quarter of 1947—all periods of high employment. If the Council economists had chosen 1957, their own reckonings would show a gap of only $20 billion instead of $40 billion.

And, Dr. Burns goes on, "if the curve had been started in the second quarter of 1947, when we likewise had a full employment output, the gap would have vanished. In fact, we would then have to say that actual output in 1960 exceeded potential output by more than $2 billion."

We hope the Council has the grace to say "touché" to that.

But perhaps the most significant part of the Burns analysis is not in exposing the Council's statistical juggling to prove the point it wanted to prove. There is also the attitude behind such output gap theorizing. It is reminiscent of the dominant economic thinking of the thirties, which was that the U.S. economy had become stagnant or mature and therefore required increasingly heavy Federal spending to keep it going.

That theory was proved resoundingly false by events, but here it is again in different form, once again an alibi for massive Fed-

eral intervention. The urge to control the private economy never dies.

Not many of us are trained in the intricacies of economic theory, but it takes only commonsense to see through the Council's unamusing fun and games. We hope the President and Congress are not bemused by the latter-day stagnation theorists. Otherwise some of these people may at last succeed in bringing about Government-managed economic stagnation.

Tribute to Julius I. Kislak

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. RODINO. Mr. Speaker, I want to welcome Julius I. Kislak and his organization to the 10th Congressional District.

Mr. Kislak, a dynamic septuagenarian, has been contributing to the growth of New Jersey for 55 years as the head of J. I. Kislak, Inc., the State's largest real estate, mortgage banking, and insurance firm.

His move to 581 Broad Street in Newark—after 55 years in Hudson County—is significant. It is indicative of the resurgence of downtown Newark and the desire of big business in our State to use Newark as a home base.

Liwe Newark—and the rest of the 10th Congressional District—the Kislak organization is growing. And I am happy that Mr. Kislak has chosen to become a partner in this growth.

I feel that his personal ability, augmented by the hard-driving organization of more than 300 persons, will become a forceful arm in the social and economic betterment of my district and State.

We expect this from J. I., because Mr. Kislak is not the average person by any means. His exceptional real estate accomplishments have been hard won.

Mr. Kislak began his career in the home of his parents at 406 Clinton Street, Hoboken. There, in 1904, Mr. Kislak got his first taste of the real estate business.

His father was an immigrant of little means. However, he had succeeded in accumulating sufficient funds to purchase a $3,500 house in Hoboken, which he traded for five others.

Then his father took a trip to Palestine and the job of managing these units fell to the young Kislak—and so did the problem of getting new mortgages.

Soon, thereafter, he obtained a notary public license and then in 1906 hung out his real estate shingle over his doorstep. In 1909 he rented space in the Jersey Observer building in Hoboken.

During World War I, Mr. Kislak served as a sergeant in the Quartermaster Corps, negotiating industrial leases for the U.S. Army.

It was in the mid 1920's that Mr. Kislak moved his offices from River Street in Hoboken to Journal Square, Jersey City.

The Kislak organization, often referred to as the "department store of the real estate business," is active in chain-store leasing, shopping centers, industrial sales and leases, apartment house investments, commercial property sales, property management, homes, appraisals, mortgages and mortgage banking, general insurance and life insurance.

And Mr. Kislak, his voice booming, is still putting in 18-hour days, keeping a firm grasp on the day-to-day operation of his organization.

He is up at 6:30 daily, checking his work-filled attaché case and planning his tomorrows. His mind is sharp and quick to move on an important deal or philanthropic project.

Mr. Kislak is active in the United Jewish Appeal of Essex County, the American Jewish Committee's Institute of Human Relations, Anti-Defamation League of B'nai B'rith and the Technion Institute of Israel.

He is a member of the Newark Association of Commerce and Industry, New Jersey Historical Society, New Jersey State Chamber of Commerce, and the Jersey City Chamber of Commerce.

I sincerely hope that Mr. Kislak will have many more fruitful and productive years to devote toward his family, his community and his business.

I am confident that his energy, his talents, and his organization, will be of great benefit to the social and economic betterment of the 10th Congressional District and our great State of New Jersey.

Language Service Bureau of Cleveland

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1961

Mr. HOSMER. Mr. Speaker, the May 1961 newsletter of the American Security Council contains the following statements relative to the Language Service Bureau, 3039 East Derbyshire Road, Cleveland, Ohio:

LANGUAGE SERVICE BUREAU

Does your firm have any vital correspondence which must be translated into a foreign language? Have you recently obtained key technical material which should be translated into English? Would you be interested in the services of an organization which can obtain patents from the Soviet Union and other Iron Curtain countries, or set up business contacts with Iron Curtain firms? Or perhaps your interest is more general, and you would like to be advised of what the Russians are doing in space technology, physics, chemistry, missiles, and metallurgy.

All of the above services are offered by the Language Service Bureau, of 3093 East Derbyshire Road, Cleveland, Ohio. A partial list of clients, circulated by this firm for promotional purposes, reads like a "Who's Who" of American industry. Seventy-five percent of the 86 firms listed as clients by the Language Service Bureau are engaged in defense production. The list includes firms engaged in atomic research, electronics, the production of solid and liquid fuel missiles and the production of air frames for both manned aircraft and missiles. What these firms do not know is that they are clients of Dr. Martin Chancey, alias Chauncey, true name Morris Chansky, a top official of the Communist Party of the United States.

Chancey, who owns and operates the Language Service Bureau, has served the Communist conspiracy in a leadership role for virtually all of his adult life. He was born on July 26, 1908, in Brooklyn, N.Y., and attended New York University, where he received a B.S. and a doctor of jurisprudence degree. He joined the Communist Party in 1933, at the age of 25. In 1934, Martin Chancey was a candidate for State assemblyman from the 12th Assembly District of New York on the Communist Party ticket.

From 1936 to 1943, Chancey served as secretary of the Communist Party in the District of Columbia, a key post. On October 7, 1939, Chairman Martin Dies announced that a document disclosing Communist activity in the Washington Navy Yard, the Government Printing Office, and other Federal departments in Washington had been seized by the House Committee on Un-American Activities. Dies described the document as a report made by Martin Chancey. Chancey was subpenaed by the committee. He admitted preparing the document, which told of the activities of the Communist Party in the Navy Yard, Government Printing Office, and other governmental departments. The committee asked Chancey for his membership list, which reportedly contained the names of Government employees. Chancey told the committee that he had destroyed the list the year previous under orders from national headquarters. It might be well to pause here to note that Chancey was head of the open party organization in Washington at the same time that J. Peters directed the very active Washington party underground, with Alger Hiss, Harry Dexter White, William Remington, Henry Hill Collins, and others as participants. Since it was the policy to reintegrate Communists arriving in Washington into the party, it is logical to assume that some degree of coordination between overt and covert activities existed.

In 1942, Chancey married Sadie Sokolove, the membership secretary of the Northeast Club of the Communist Party in Washington, D.C. In 1943, Chancey was inducted into the U.S. Army. He served 20 months in the European theater. Upon release from military service, Chancey was sent to Cleveland, Ohio, by the party. He was made State secretary of the Communist Party of Ohio. In 1946, Chancey was a lecturer at a Communist Party school near Cleveland. He was identified as one of the Communist Party members who was connected with the group of Communists active in the 1948 Univis Lens strike in Dayton, Ohio.

In 1950, because of increasing attacks upon the Communist Party and the political climate brought on by the Korean war, the party felt the need to have an underground apparatus in case of emergency or crackdown by the Government. According to the sworn testimony of David W. Garfield, a former Communist Party member, Garfield was approached in the early summer of 1950 by Martin Chancey. Chancey told Garfield that Gus Hall had designated Garfield as the man who was to head up the Communist Party underground in the State of Ohio. Acting on Chancey's instructions, Garfield severed all connections with the open party, changed his name and obtained a false social security card and driver's license. Garfield testified that he had a contact in New York and that he had a certain telephone number and name that he was to get in touch with if he wanted to contact the national party. Garfield stated that he was in contact with Martin Chancey in the underground. He said that the underground Communist apparatus had hiding places for its members and a secret courier system.

According to the sworn testimony of Isaac Wright, an FBI informant who penetrated

the Communist Party, a supersecret underground board of the Communist Party dictated orders to the party faithful in the Pittsburgh area in 1953. Wright said that the party in Pittsburgh decided to hold conferences in strictest secrecy because of the frequency with which FBI plants were turning up in the party ranks. Wright described a meeting which took place in September of 1953 in an automobile on Route 22 west of Pittsburgh. Wright and three other members of the secret underground board attended. Among the board members attending the meeting was Martin Chancey.

On November 4, 1953, J. Edgar Hoover announced the arrest of Martin Chancey, age 45, on the charge of plotting the violent overthrow of the U.S. Government. Mr. Hoover stated that Chancey was a high-ranking Communist Party official in the eastern section of the United States, and that he had served as a party functionary in New York, Ohio, and Washington, D.C. Chancey was arrested in Pittsburgh, Pa., and held under $50,000 bail. Chancey was convicted on February 10, 1956, under the Smith Act. He admitted to being a Communist during the period covered by his indictment, November 9, 1960, to November 9, 1953, but denied the conspiracy charge.

In January 1957, a Federal grand jury named seven persons as coconspirators on charges of conspiring with union officers to file false non-Communist affidavits with the National Relations Board. Among the conspirators named was Martin Chancey.

Around 1957 Martin Chancey founded the Language Service Bureau, an association of linguists, each of whom has a specialized, up-to-date, scientific training." The business is apparently quite successful, and has been rapidly gaining new clients. According to Chancey, there are 17 part-time linguists available covering different languages when the need arises. According to Chancey's current advertising, the Language Service Bureau is now equipped to handle every written language in the world, including Japanese, Chinese, and Arabic. The bulk of the work handled, however, continues to be Russian.

Winning Essay in Life Line Patriotic Essay Contest

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. ALGER. Mr. Speaker, it is with great pride that I include as a part of my remarks an essay written by a fellow Texan, Mr. Edward L. Kirk, of Abilene, Tex. Mr. Kirk's essay won fifth place, out of over 1,800 entries, in a patriotic essay contest sponsored by the radio program "Life Lines." Because Mr. Kirks' essay gives all Americans food for thought concerning our American heritage, I am glad to include it here:

OUR UNCLE SAM

I want to talk to you about a common ancestor of ours who is in dire need of our assistance and support. This ancestor is our Uncle Sam, the symbol of our democratic American character and spirit, the mirror of the American mind. Uncle Sam is big, sprawling from the Atlantic to the Pacific, 3 million square miles throbbing with industry. He is more than 5 million farms; he is forest, field, mountain, and desert. He is quiet village and teeming city that never sleeps. Uncle Sam is approximately 180 million living souls, and the ghost of millions more who have lived and died for him. Uncle Sam stands as the personification of all that is American, he is the "We the people of the United States of America."

Uncle Sam was born on July 4, 1776, and the Declaration of Independence is his birth certificate. The bloodlines of the world run in his veins, because he offered freedom to the oppressed. When Uncle Sam was young, he sat at the table with men like Thomas Jefferson and Benjamin Franklin and he ate well and enjoyed a robust existence. No crisis was too great for him to overcome; in war and in peace he defended the honor and wealth of America. Uncle Sam remembers the Alamo, the *Maine*, and Pearl Harbor. When freedom called, he answered, and stayed until it was over, over there. He left heroic dead in Flanders Field, on the rock of Corregidor, and on the bleak slopes of Korea.

Uncle Sam is older now and he is becoming a very sick man. His strong constitution has been weakened by a diet of bureaucratic soup and sugar-coated security. Uncle Sam can no longer attend to his interests properly; much of his wealth has been squandered already by foreign aid experts and his resources are being wasted. Uncle Sam can no longer stand on his own two feet; he is ready for the wheel chair which socialistic statism is building for him. Uncle Sam seems to be willing to let the Government push him around wheresoever it desires.

A cancer of complacency has crept into Uncle Sam's body. Quacks, who thrive on his helplessness, are urging Uncle Sam to relax, and give his independence, his individuality and his obligation of self-government a rest; the Government will take care of everything.

Further symptoms of Uncle Sam's illness are evident on every hand. For example, the demoralizing effects of the breakdown of family stability as evidenced by widespread divorces and separations; false and superficial values are being made appealing by high-pressure advertising. Some adults are devoted to materialistic standards of success and some public officials betray their trusts. The unconcern of nearly half of our qualified voters in circumstances which permit universal suffrange, the tendency that many have to take the pathway of least resistance or follow the demagogue, the attitude that cheating the Government is justifiable, that paying taxes is unworthy, and that it is smart to get something for nothing.

Every thinking American must from time to time have been disturbed by the growing evidence that we as a people are in danger of losing through default or hard-won sovereign rights. The abdication of the citizen in favor of an ever-growing bureaucratic leadership has resulted in a crisis which we can no longer ignore. It is somewhat difficult to understand how, in a little more than a generation, the rights of the individual citizen could have been usurped by a galloping socialism as they have. The individual American seems to be shifting his responsibility of self-government to the state, and in so doing he is destroying the precious rights and rewards of his American heritage. It seems that when we grow tired of exercising some of our individual rights and freedoms that we just create another bureau to exercise them for us. We need to realize that a strong, dedicated national and rugged individualism has been the key to America's greatness from the beginning. The individual can rise, by his own efforts, to positions of power and respect.

Six American Presidents were born, literally, in log cabins, and under circumstances of extreme poverty and hardship. Six were sons of farmers and in their youth labored before sunup and beybnd sundown. Never in all history has there been such a succession of men rising from humble origins to responsible power. But the individual can also sink; he can waste his substance, idle away his time, and go from mansion to gutter; no order of nobility or caste protects him. We must not allow our individuality to be scuttled by the subtle and powerful pressures of social, economic, and political conformity. The acid test of successful democratic government is the degree of effective liberty which it makes available to the individual.

* * * * *

Yes, Uncle Sam is a very sick man. He is dying from loss of a special type of rare and vital blood; the type which flowed through the veins of such men as Patrick Henry, Nathan Hale, George Washington, and Abraham Lincoln. Our freedom requires that we search deep within our own hearts, for there and there only, will this blood be found. Our personal liberty demands that each of us donate unstintingly to the great transfusion of strength which Uncle Sam must have to survive.

But, how can we do this? Let me suggest a few ways and I challenge you to think of other ways and to put them into action. 1. Understand our American way of life, our heritage, our political institutions, our problem; what makes us tick as a nation and as a people.

We should understand and appreciate the great men and the great documents which constitute our American heritage. We should rate high the top 10 on the hit parade of freedom: The Ten Commandments and the 10 rights of the Bill of Rights. We must learn the three R's of citizenship: rights, respect, and responsibility.

We must develop an appreciation for the dignity of human labor and endeavor a respect for the worth of every individual, no matter what his social or economic position may be. Abraham Lincoln once said, "It is difficult to make a man miserable while he feels he is worthy of himself and claims kindred to the great God who made him."

We must develop and maintain a deep interest in what takes place in our country and in the political structure of our Government. When a person loses interest in citizenship, he ceases to acquire knowledge about it. We must develop a desire and a will to abide by the laws and to aid in their enforcement. We must have a world outlook to the extent that we can attack world problems in an effort to foster world peace and understanding.

We must be ambitious to become self-supporting citizens who will make the American system of free enterprise operate in the most efficient manner for our own welfare and for the welfare of others.

Know your enemy. Understand the disguises of socialism, know the tactics of communism, understand the implications of paternalism and the welfare state. Don't be content with B's and C's if you can make A's. Jefferson said: "If a nation expects to be ignorant and free, in a state of civilization, it expects what never was and never will be." Don't rob yourself and your country of the productive fruits of your ability.

Become active in government, work for family solidarity, strive for spiritual and moral growth, dedicate a part of every day to citizenship. Oppose error with facts; speak out and speak up. Don't be afraid to challenge a speaker, writer, newspaper, commentator, or even a friend who innocently or unwittingly parrots or echoes ideas hurtful to our liberty and freedom.

Above all, remember that you are Uncle Sam's shadow. He is what you make him and nothing more. He is your belief in yourself, your dream of what our Nation and our people may become. Uncle Sam is all that you hope to be and have the courage to try for. He is no more than what you

believe him to be and is all that you believe he can be.

Let Uncle Sam stand before your eyes in his top hat and striped trousers as a bright and dignified gleam of hope, a symbol of yourself, a pictured suggestion of all that makes this Nation great. Let Uncle Sam be bright with cheer, brilliant with courage, and firm with faith. Help Uncle Sam to possess always the integrity, the courage and the strength to keep himself unshackled, to remain a citadel of freedom and a beacon of hope to the world. Uncle Sam was conceived in freedom and with your help in freedom he will spend the rest of his days. This is his wish, his goal, his prayer, 184 years after he was born.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.
